Socrates:: What, Thrasymachus, do you not observe that no one consents to take upon himself the common state-offices, if he can help it, but that they all ask to be paid on the assumption that the advantages of their government will not accrue to themselves, but to the governed? For answer me this question; Do we not say without hesitation, that every art is distinguished from other arts by having a distinctive faculty? Be so good, my dear sir, as not to answer contrary to your opinion, or we shall make no progress.

Thrasymachus:: Yes; that is what distinguishes it.

Socrates:: And does not each of them provide us with some special and peculiar benefit? the art of healing, for example, giving us health, that of piloting safety at sea, and so on?

Thrasymachus:: Certainly.

Socrates:: Then is there not an art of wages which provides us with wages, this being its proper faculty? Or do you call the art of healing and that of piloting identical? Or, if you choose to employ strict definitions as you engaged to do, the fact of a mans regaining his health while acting as a pilot, through the beneficial effects of the sea-voyage, would not make you call the art of the pilot a healing art, would it?

Thrasymachus:: Certainly not.

Socrates:: Nor would you so describe the art of wages, I fancy, supposing a person to keep his health while in the receipt of wages.

Thrasymachus:: No.

Socrates:: Well then, would you call the physicians art a mercenary art, if fees be taken for medical attendance?

Thrasymachus:: No.

Socrates:: Did we not allow that the benefit of each art was peculiar to itself?

Thrasymachus:: Be it so.

Socrates:: Then whatever benefit accrues in common to the professors of all arts, is clearly derived from a common use of some one and the same thing.

Thrasymachus:: So it would seem.

Socrates:: And we further maintain, that if these persons are benefited by earning wages, they owe it to their use of the art of wages, in addition to that which they profess.

He reluctantly assented.

Then this advantage, the receipt of pay, does not come to each from his own art, but, strictly considered, the art of healing produces health, and the art of wages pay; the art of house-building produces a house, while the art of wages follows it and produces pay; and so of all the rest; each works its own work, and benefits that which is its appointed object. If, however, an art be practiced without pay, does the professor of it derive any benefit from his art?

Thrasymachus:: Apparently not.

Socrates:: Does he also confer no benefit, when he works gratuitously?

Thrasymachus:: Nay, I suppose he does confer benefit.

Socrates:: So far then, Thrasymachus, we see clearly, that ah art or a government never provides that which is profitable for itself, but as we said some time ago, it provides and enjoins what is profitable for the subject, looking to his interest who is the weaker, and not to the interest of the stronger. It was for these reasons that I said just now, my dear Thrasymachus, that no one will voluntarily take office, or assume the duty of correcting the disorders of others, but that all ask wages for the work, because one who is to prosper in his art never practices or prescribes what is best for himself, but only what is best for the subject, so long as he acts within the limits of his art; and on these grounds, apparently, wages must be given to make men willing to hold office, in the shape of money or honor, or of punishment, in case of refusal.

Glaucon:: What do you mean, Socrates? I understand two out of the three kinds of wages; but, what the punishment is, and how you could describe it as playing the part of wages, I do not comprehend.

Socrates:: Then you do not comprehend, the wages of the best men, which induce the most virtuous to hold office, when they consent to do so. Do you not know that to be ambitious and covetous is considered a disgrace, and really is a disgrace?

Glaucon:: I do.

Socrates:: For this reason, then, good men will not consent to hold an office of power, either for the sake of money or for that of honor; for they neither wish to get the name of hirelings by openly exacting hire for their duties, nor of thieves by using their power to obtain it secretly; nor yet will they take office for the sake of honor, for they are not ambitious. Therefore compulsion and the fear of a penalty must be brought to bear upon them, to make them consent to hold office; which is probably the reason why it is thought dishonorable to accept power willingly without waiting to be compelled. Now the heaviest of all penalties is to be governed by a worse man, in case of ones own refusal to govern; and it is the fear of this, I believe, which induces virtuous men to take the posts of government; and when they do so, they enter upon their administration, not with any idea of coming into a good thing, but as an unavoidable necessity, not expecting to enjoy themselves in it, but because they cannot find any person better or no worse than themselves, to whom they can commit it. For the probability is, that if there were a city composed of none but good men, it would be an object of competition to avoid the possession of power, just as now it is to obtain it; and then it would become clearly evident that it is not the nature of the genuine ruler to look to his own interest, but to that of the subject; so that every judicious man would choose to be the recipient of benefits, rather than to have the trouble of conferring them upon others. Therefore I will on no account concede to Thrasymachus that justice is the interest of the stronger. However we will resume this inquiry hereafter, for Thrasymachus now affirms that the life of the unjust man is better than the life of the just man; and this assertion seems to me of much greater importance than the other. Which side do you take, Glaucon? and which do you think the truer statement?

Glaucon:: I for my part hold, that the life of the just man is the more advantageous.

Socrates:: Did you hear, what a long list of attractions Thrasymachus just now attributed to the life of the unjust man?

Glaucon:: I did, but I am not convinced.

Socrates:: Should you then like us to convince him, if we can find any means of doing so, that what he says is not true?

Glaucon:: Undoubtedly I should.

Socrates:: If then we adopt the plan of matching argument against argument, we enumerating all the advantages of being just, and Thrasymachus replying, and we again putting in a rejoinder, it will be necessary to count and measure the advantages which are claimed on both sides; and eventually we shall want a jury to give a verdict between us; but if we proceed in our inquiries, as we lately did, by the method of mutual admissions, we shall combine in our own persons the functions of jury and advocate.

Glaucon:: Precisely so.

Socrates:: Which plan, then, do you prefer?

Glaucon:: The latter.

Socrates:: Come then, Thrasymachus, let us start anew, and oblige us by answering; Do you assert that a perfect, injustice is more profitable than an equally perfect justice?

Thrasymachus:: Most decidedly I do; and I have said why.

Socrates:: Pray how do you describe them under another aspect? Probably you call one of them a virtue, and the other a vice?

Thrasymachus:: Undoubtedly.

Socrates:: That is, justice a virtue, and injustice a vice?

Thrasymachus:: A likely thing, my facetious friend, when I assert that injustice is profitable, and justice the reverse.

Socrates:: Then what do you say?

Thrasymachus:: Just the contrary.

Socrates:: Do you call justice a vice?

Thrasymachus:: No; but I call it very egregious good nature.

Socrates:: Then do you call injustice ill nature?

Thrasymachus:: No; I call it good policy.

Socrates:: Do you think, Thrasymachus, that the unjust are positively wise and good?

Thrasymachus:: Yes, those who are able to practice injustice on the complete scale, having the power to reduce whole cities and nations of men to subjection. You, perhaps, imagine that I am speaking of the cut-purse tribe; and I certainly allow that even deeds like theirs are profitable if they escape detection; but they are not worthy to be considered in comparison with those I have just mentioned.

Socrates:: I quite understand what you mean; but I did wonder at your ranking injustice under the heads of virtue and wisdom, and justice under the opposites.

Thrasymachus:: Well, I do so rank them, without hesitation.

Socrates:: You have now taken up a more stubborn position, my friend, and it is no longer easy to know what to say. If after laying down the position that injustice is profitable, you had still admitted it to be a vice and a baseness, as some others do, we should have had an answer to give, speaking according to generally received notions; but now it is plain enough that you will maintain it to be beautiful, and strong, and will ascribe to it all the qualities which we have been in the habit of ascribing to justice, seeing that you have actually ventured to rank it as a portion of virtue and of wisdom.

Thrasymachus:: You divine most correctly.

Socrates:: Nevertheless, I must not shrink from pursuing the inquiry and the argument, so long as I suppose that you are saying what you think; for if I am not mistaken, Thrasymachus, you are really not bantering now, but saying what you think to be the truth.

Thrasymachus:: What difference does it make to you whether I think it true or not? Can you not assail the argument?

Socrates:: It makes none. But will you Endeavor to answer me one more question? Do you think that a just man would wish to go beyond a just man in anything?

Thrasymachus:: Certainly not; for then he would not be so charmingly simple as he is.

Socrates:: Would a just man go beyond a just line of conduct?

Thrasymachus:: No, not beyond that either.

Socrates:: But would he go beyond an unjust man without scruple, and think it just to do so, or would he not think it just?

Thrasymachus:: He would think it just, and would not scruple to do it, but he would not be able.

Socrates:: Nay, that was not my question; but whether a just man both resolves and desires to go beyond an unjust man, but not beyond a just man?

Thrasymachus:: Well, it is so.

Socrates:: But how is it with the unjust man? Would he take upon himself to go beyond a just man and a just line of conduct?

Thrasymachus:: Undoubtedly, when he takes upon himself to go beyond all and in every thing.

Socrates:: Then will not the unjust man also go beyond another unjust man and an unjust action, and struggle that he may himself obtain more than any one else?

Thrasymachus:: He will.

Socrates:: Then let us put it in this form; The just man goes not beyond his like, but his unlike; the unjust man goes beyond both his like and his unlike?

Thrasymachus:: Very well said.

Socrates:: And further, the unjust man is wise and good, the just man is neither.

Thrasymachus:: Well spoken again.

Socrates:: Does not the unjust man further resemble the wise and the good, whereas the just man does not resemble them?

Thrasymachus:: Why, of course, a man of a certain character must resemble others of that character; whereas one who is of a different character will not resemble them.

Socrates:: Very good; then the character of each is identical with that of those whom he resembles.

Thrasymachus:: Why, what else would you have?

Socrates:: Very well, Thrasymachus; do you call one man musical, and another unmusical?

Thrasymachus:: I do.

Socrates:: Which of them do you call wise, and which unwise?

Thrasymachus:: The musical man, of course, I call wise, and the unmusical, unwise.

Socrates:: Do you also say that wherein a man is wise, in that he is good, and wherein unwise, bad?

Thrasymachus:: Yes.

Socrates:: Do you speak in the same manner of a medical man?

Thrasymachus:: I do.

Socrates:: Do you think then, my excellent friend, that a musician, when he is tuning a lyre, would wish to go beyond a musician in the tightening or loosening of the strings, or would claim to have the advantage of him?

Thrasymachus:: I do not.

Socrates:: Would he wish to have the advantage of an unmusical person?

Thrasymachus:: Unquestionably he would.

Socrates:: How would a medical man act? would he wish to go beyond a medical man or medical practice in a question of diet?

Thrasymachus:: Certainly not.

Socrates:: But beyond an unprofessional man he would?

Thrasymachus:: Yes.

Socrates:: Consider now, looking at every kind of knowledge and ignorance, whether you think that any scientific man whatever would, by his own consent, choose to do or say more than another scientific man, and not the same that one like himself would do in the same matter.

Thrasymachus:: Well, perhaps the latter view is necessarily the true one.

Socrates:: But what do you say to the unscientific person? would he not go beyond the scientific and the unscientific alike?

Thrasymachus:: Perhaps.

Socrates:: And the scientific person is wise?

Thrasymachus:: Yes.

Socrates:: And the wise man is good.

Thrasymachus:: Yes.

Socrates:: Then a good and a wise man will not wish to go beyond his like, but his unlike and opposite?

Thrasymachus:: So it would seem.

Socrates:: But a bad and an ignorant man will go beyond both his like and his opposite.

Thrasymachus:: Apparently.

Socrates:: Well then, Thrasymachus, does not our unjust man go beyond both his like and his unlike? was not that your statement?

Thrasymachus:: It was.

Socrates:: But the just man will not go beyond his like, but only beyond his unlike?

Thrasymachus:: Yes.

Socrates:: Consequently the just man resembles the wise and the good, whereas the unjust man resembles the bad and the ignorant.

Thrasymachus:: So it would seem.

Socrates:: But we agreed, you know, that the character of each of them is identical with the character of those whom he resembles.

Thrasymachus:: We did.

Socrates:: Consequently we have made the discovery, that the just man is wise and good, and the unjust man ignorant and bad.

Thrasymachus had made all these admissions, not in the easy manner in which I now relate them, but reluctantly and after much resistance, in the course of which he perspired profusely, as it was hot weather to boot; on that occasion also I saw what I had never seen before Thrasymachus blushing. But when we had thus mutually agreed that justice was a part of virtue and of wisdom, and injustice of vice and ignorance, I proceeded thus;

Very good; we will consider this point settled; but we said, you know, that injustice was also strong. Do you not remember it, Thrasymachus?

Thrasymachus:: I do; but for my part I am not satisfied with your last conclusions, and I know what I could say on the subject. But if were to express my thoughts, I am sure you would say that I was declaiming. Take your choice then; either allow me to say as much as I please, or if you prefer asking questions, do so; and I will do with you as we do with old women when they tell us stories; I will say

Good, and nod my head or shake it, as the occasion requires.

Socrates:: If so, pray do no violence to your own opinions.

Thrasymachus:: Anything to please you, as you will not allow me to speak. What else would you have?

Socrates:: Nothing, I assure you; but if you will do this, do so; and I will ask questions.

Thrasymachus:: Proceed then.

Socrates:: Well then, I will repeat the question which I put to you just now, that our inquiry may be carried out continuously; namely, what sort of a thing justice is compared with injustice. It was said, I think, that injustice is more powerful and stronger than justice; but now, seeing that justice is both wisdom and virtue, and injustice is ignorance, it may easily be shown, I imagine, that justice is likewise stronger than injustice. No one can now fail to see this. But I do not wish to settle the question in that absolute way, Thrasymachus, but I would investigate it in the following manner; Should you admit that a city may be unjust, and that it may unjustly attempt to enslave other cities, and so succeed in so doing, and hold man in such slavery to itself?

Thrasymachus:: Undoubtedly I should; and this will be more frequently done by the-best city, that is, the one that is most completely unjust, than by any other.

Socrates:: I understand, that this is your position. But the question which I wish to consider is, whether the city that becomes the mistress of another city, will have this power without the aid of justice, or whether justice will be indispensable to it.

Thrasymachus:: If, as you said just now, justice is wisdom, justice must lend her aid; but if it is as I said, injustice must lend hers.

Socrates:: I am quite delighted to find, Thrasymachus, that you are not content merely to nod and shake your head, but give exceedingly good answers.

Thrasymachus:: I do it to indulge you.

Socrates:: You are very good; but pray indulge me so far as to say, whether you think that either a city, or an army, or a band of thieves or robbers, or any other body of men, pursuing certain unjust ends in common, could succeed in any enterprise if they were to deal unjustly with one another?

Thrasymachus:: Certainly not.

Socrates:: If they refrain from such conduct, towards one another, will they not be more likely to succeed?

Thrasymachus:: Yes, certainly.

Socrates:: Because, I presume, Thrasymachus, injustice breeds divisions and animosities and broils between man and man, while justice creates unanimity and friendship; does it not?

Thrasymachus:: Be it so, that I may not quarrel with you.

Socrates:: Truly I am very much obliged to you, my excellent friend; but pray tell me this; if the working of injustice is to implant hatred wherever it exists, will not the presence of it, whether among freemen or slaves, cause them to hate one another, and to form parties, and disable them from acting together in concert?

Thrasymachus:: Certainly.

Socrates:: Well, and if it exist in two persons, will they not quarrel and hate one another, and be enemies each to the other, and both to the just?

Thrasymachus:: They will.

Socrates:: And supposing, my admirable friend, that injustice has taken up its residence in a single individual, will it lose its proper power, or retain it just the same?

Thrasymachus:: We will say it retains it.

Socrates:: And does not its power appear to be of such a nature, as to make any subject in which it resides, whether it be city, or family, or army, or anything else whatsoever, unable to act and moreover hostile both to itself and to everything that opposes it, and to the just? Is it not so?

Thrasymachus:: Certainly it is.

Socrates:: Then, if it appears in an individual also, it will produce all these its natural results; in the first place it will make him unable to act because of inward strife and division; in the next place, it will make him an enemy to himself and to the just, will it not?

Thrasymachus:: It will.

Socrates:: And the gods, my friend, are just?

Thrasymachus:: We will suppose they are.

Socrates:: Then to the gods also will the unjust man be an enemy, and the just a friend.

Thrasymachus:: Feast on your argument, to your hearts content; I will not oppose you, or I shall give offence to the company.

Socrates:: Be so good, as to make my entertainment complete by continuing to answer as you have now been doing. I am aware, indeed, that the just are shown to be wiser, and better, and more able to act than the unjust, who are indeed, incapable of any combined action. Nay, we do not speak with entire accuracy when we say that any party of unjust men ever acted vigorously in concert together; for, had they been thoroughly unjust, they could not have kept their hands off each other. But it is obvious that there was some justice at work in them, which made them refrain at any rate from injuring, at one and the same moment, both their comrades and the objects of their attacks, and which enabled them to achieve what they did achieve; and that their injustice partly disabled them, even in the pursuit of their unjust ends, since those who are complete villains, and thoroughly unjust, are also thoroughly unable to act. I learn that all this is true, and that the doctrine which you at first propounded is not true. But whether the just also live a better life, and are happier than the unjust, is a question which we proposed to consider next, and which we now have to investigate. Now, for my part, I think it is already apparent, from what we have said, that they do; nevertheless, we must examine the point still more carefully. For we are debating no trivial question, but the manner in which a man ought to live.

Thrasymachus:: Pray consider it.

Socrates:: I will. Tell me, do you think there is such a thing as a horses function?

Thrasymachus:: I do.

Socrates:: Would you, then, describe the function of a horse, or of anything else whatever, as that work, for the accomplishment of which it is either the sole or the best instrument?

Thrasymachus:: I do not understand.

Socrates:: Look at it this way. Can you see with anything besides eyes?

Thrasymachus:: Certainly not.

Socrates:: Can you hear with anything besides ears?

Thrasymachus:: No.

Socrates:: Then should we not justly say that seeing and hearing are the functions of these organs?

Thrasymachus:: Yes, certainly.

Socrates:: Again, you might cut off a vine-shoot with a carving knife, or chisel, or many other tools?

Thrasymachus:: Undoubtedly.

Socrates:: But with no tool, I imagine, so well as with the pruning knife made for the purpose.

Thrasymachus:: True.

Socrates:: Then shall we not define pruning to be the function of the pruning knife?

Thrasymachus:: By all means.

Socrates:: Now then, I think, you will better understand what I wished to learn from you just now, when I asked whether the function of a thing is not that work for the accomplishment of which it is either the sole or the best instrument?

Thrasymachus:: I do understand, and I believe that this is in every case the function of a thing.

Socrates:: Very well; do you not also think that everything which has an appointed function has also a proper-virtue? Let us revert to the same instances; we say that the eyes have a function?

Thrasymachus:: They have.

Socrates:: Then have the eyes a virtue also?

Thrasymachus:: They have.

Socrates:: And the ears; did we assign them a function?

Thrasymachus:: Yes.

Socrates:: Then have they a virtue also?

Thrasymachus:: They have.

Socrates:: And is it the same with all other things;

Thrasymachus:: The same.

Socrates:: Attend then; Do you suppose that the eyes could discharge their own function well if they had not their own proper virtue, that virtue being replaced by a vice?

Thrasymachus:: How could they? You mean, probably, if sight is replaced by blindness.

Socrates:: I mean, whatever their virtue be; for I am not come to that question yet. At present I am asking whether it is through their own peculiar virtue that things perform their proper functions well, and through their own peculiar vice that they perform them ill?

Thrasymachus:: You cannot be wrong in that.

Socrates:: Then if the ears lose their own virtue, will they execute their functions ill?

Thrasymachus:: Certainly.

Socrates:: May we include all other things under the same proposition?

Thrasymachus:: I think we may.

Socrates:: Come, then, consider this point next. Has the soul any function which could not be executed by means of anything else whatsoever? For example, could we in justice assign superintendence and government, deliberation and the like, to anything but the soul, or should we pronounce them to be peculiar to it?

Thrasymachus:: We could ascribe them to nothing else.

Socrates:: Again, shall we declare life to be a function of the soul?

Thrasymachus:: Decidedly.

Socrates:: Do we not also maintain that the soul has a virtue?

Thrasymachus:: We do.

Socrates:: Then can it ever so happen, Thrasymachus, that the soul will perform its functions well when destitute of its own peculiar virtue, or is that impossible?

Thrasymachus:: Impossible.

Socrates:: Then a bad soul must needs exercise authority and superintendence ill, and a good soul must do all these things well.

Thrasymachus:: Unquestionably.

Socrates:: Now did we not grant that justice was a virtue of the soul, and injustice a vice?

Thrasymachus:: We did.

Socrates:: Consequently the just soul and the just man will live well, and the unjust man ill?

Thrasymachus:: Apparently, according to your argument.

Socrates:: And you will allow that he who lives well is blessed and happy, and that he who lives otherwise is the reverse.

Thrasymachus:: Unquestionably.

Socrates:: Consequently the just man is happy, and the unjust man miserable.

Thrasymachus:: Let us suppose them to be so.

Socrates:: But surely it is not misery, but happiness, that is advantageous.

Thrasymachus:: Undoubtedly.

Socrates:: Never then, my excellent Thrasymachus, is injustice more advantageous than justice.

Thrasymachus:: Well, Socrates, let this be your entertainment for the feast of Bendis.

Socrates:: I have to thank you for it, Thrasymachus, because you recovered your temper, and left off being angry with me. Nevertheless, I have not been well entertained; but that was my own fault, and not yours; for as your gourmands seize upon every new dish as it goes round, and taste its contents before they have had a reasonable enjoyment of its predecessor, so I seem to myself to have left the question which we were at first examining, concerning the real nature of justice, before we had found out the answer to it, in order to rush to the inquiry whether this unknown thing is a vice and an ignorance, or a virtue and a wisdom; and again, when a new theory, that injustice is more profitable than justice, was subsequently started, I could not refrain from passing from the other to this, so that at present the result of our conversation is that I know nothing; for while I do not know what justice is, I am little likely to know whether it is in fact a virtue or not, or whether its owner is happy or unhappy.

## Book 2.

Socrates:: When I had made these remarks I thought we had done with discussing; whereas it seems it was only a prelude. For Glaucon, with that eminent courage which he displays on all occasions, would not acquiesce in the retreat of Thrasymachus, and began thus;

Glaucon:: Socrates, do you wish really to convince us that it is on every account better to be just than to be unjust, or only to seem to have convinced us?

Socrates:: If it were in my power, I should prefer convincing you really.

Glaucon:: Then, you are not doing what you wish. Let me ask you; Is there, in your opinion, a class of good things of such a kind that we are glad to possess them, not because we desire their consequences, but simply welcoming them for their own sake? Take, for example, the feelings of enjoyment and all those pleasures that are harmless, and that are followed by no result in the after time, beyond simple enjoyment in their possession.

Socrates:: Yes, I certainly think there is a class of this description.

Glaucon:: Well, is there another class, do you think, of those which we value, both for their own sake and for their results? Such as intelligence, and sight, and health; all of which are welcome, I apprehend, on both accounts.

Socrates:: Yes.

Glaucon:: And do you further recognize a third class of good things, which would include gymnastic training, and submission to medical treatment in illness, as well as the practice of medicine, and all other means of making money? Things like these we should describe as irksome, and yet beneficial to us; and while we should reject them viewed simply in themselves, we accept them for the sake of the emoluments, and of the other consequences which result from them.

Socrates:: Yes, undoubtedly there is such a third class also; but what then?

Glaucon:: In which of these classes do you place justice?

Socrates:: I should say in the highest; that is, among the good things which will be valued by one who is in the pursuit of true happiness, alike for their own sake and for their consequences.

Glaucon:: Then your opinion is not that of the many, by whom justice is ranked in the irksome class, as a thing which in itself, and for its own sake, is disagreeable and repulsive, but which it is well to practice for the credit of it, with an eye to emolument and a good name.

Socrates:: I know it is so; and under this idea Thrasymachus has been for a long time disparaging justice and praising injustice. But apparently I am a dull scholar.

Glaucon:: Pray then listen to my proposal, and tell me whether you agree to it. Thrasymachus appears to me to have yielded like a snake to your fascination sooner than he heed have done; but for my part I am not satisfied as yet with the exposition that has been given of justice and injustice; for I long to be told what they respectively are, and what force they exert, taken simply by themselves, when residing in the soul, dismissing the consideration of their rewards and other consequences. This shall be my plan then, if you do not object; I will revive Thrasymachuses argument, and will first state the common view respecting the nature and origin of justice; in the second place, I will maintain that all who practice it do so against their will, because it is indispensable, not because it is a good thing; and thirdly, that they act reasonably in so doing, because the life of the unjust man is, as men say, far better than that of the just. Not that I think so myself, Socrates; only my ears are so dinned with what I hear from Thrasymachus and a thousand others, that I am puzzled. Now I have never heard the argument for the superiority of justice over injustice maintained to my satisfaction; for I should like to hear a panegyric upon it, considered simply in itself; and from you if from any one, I should expect such a treatment of the subject. Therefore I will speak as forcibly as I can in praise of an unjust life, and I shall thus give you a specimen of the manner in which I wish to hear you afterwards censure injustice and commend justice. See whether you approve of my plan.

Socrates:: Indeed I do; for on what other subject could a sensible man like better to talk and to hear others talk, again and again?

Glaucon:: Admirably spoken! So now listen to me while I speak on my first theme, the nature and the origin of justice.

To commit injustice is, they say, in its nature, a good thing, and to suffer it an evil thing; but the evil of the latter exceeds the good of the former; and so, after the twofold experience of both doing and suffering injustice, those who cannot avoid the latter and compass the former find it expedient to make a compact of mutual abstinence from injustice. Hence arose legislation and contracts between man and man, and hence it became the custom to call that which the law enjoined just, as well as lawful. Such, they tell us, is justice, and so it came into being; and it stands midway between that which is best, to commit injustice with impunity, and that which is worst, to suffer injustice without any power of retaliating. And being a mean between these two extremes, the principle of justice is regarded with satisfaction, not as a positive good, but because the inability to commit injustice has rendered it valuable; for they say that one who had it in his power to be unjust, and who deserved the name of a man, would never be so weak as to contract with any one that both the parties should abstain from injustice. Such is the current account, Socrates, of the nature of justice, and of the circumstances in which it originated.

The truth of my second statement that men practice justice unwillingly, and because they lack the power to violate it, will be most readily perceived, if we make a supposition like the following. Let us give full liberty to the just man and to the unjust alike, to do whatever they please, and then let us follow them, and see whither the inclination of each will lead him. In that case we shall surprise the just man in the act of travelling in the same direction as the unjust, owing to that covetous desire, the gratification of which every creature naturally pursues as a good, only that it is forced out of its path by law, and constrained to respect the principle of equality. That full liberty of action would, perhaps, be most effectually realized if they were invested with a power which they say was in old time possessed by the ancestor of Gyges the Lydian. He was a shepherd, so the story runs, in the service of the reigning sovereign of Lydia, when one day a violent storm of rain fell, the ground was rent asunder by an earthquake, and a yawning gulf appeared on the spot where he was feeding his flocks. Seeing what had happened, and wondering at it, he went down into the gulf, and among other marvelous objects he saw, as the legend relates, a hollow brazen horse, with windows in its sides, through which he looked, and beheld in the interior a corpse, apparently of superhuman size; from which he took nothing but a golden ring off the hand, and therewith made his way out. Now when the usual meeting of the shepherds occurred, for the purpose of sending to the king their monthly report of the state of his flocks, this shepherd came with the rest, wearing the ring. And, as he was seated with the company, he happened to turn the hoop of the ring round towards himself, till it came to the inside of his hand. Whereupon he became invisible to his neighbors, who fell to talking about him as if he were gone away. While he was marveling at this, he again began playing with the ring, and turned the hoop to the outside, upon which he became once more visible. Having noticed this effect, he made experiments with the ring, to see whether it possessed this virtue; and so it was, that when he turned the hoop inwards he became invisible, and when he turned it outwards he was again visible. After this discovery, he immediately contrived to be appointed one of the messengers to carry the report to the king; and upon his arrival he seduced the queen, and, conspiring with her, slew the king, and took possession of the throne.

If then there were two such rings in existence, and if the just and the unjust man were each to put on one, it is to be thought that no one would be so steeled against temptation as to abide in the practice of justice, and resolutely to abstain from touching the property of his neighbors, when he had it in his power to help himself without fear to any thing he pleased in the market, or to go into private houses and have intercourse with whom he would, or to kill and release from prison according to his own pleasure, and in every thing else to act among men with the power of a god. And in thus following out his desires the just man will be doing precisely what the unjust man would do; and so they would both be pursuing the same path. Surely this will be allowed to be strong evidence that none are just willingly, but only by compulsion, because to be just is not a good to the individual; for all violate justice whenever they imagine that there is nothing to hinder them. And they do so because every one thinks that, in the individual case, injustice is much more profitable than justice; and they are right in so thinking, as the advocate of this doctrine will maintain. For if any one having this license within his grasp were to refuse to do any injustice, or to touch the property of others, all who were aware of it would think him a most pitiful and irrational creature, though they would praise him before each others faces, to impose on one another, through their fear of being treated with injustice. And so much for this topic.

But in actually deciding between the lives of the two persons in question, we shall be enabled to arrive at a correct conclusion, by contrasting together the thoroughly just and the thoroughly unjust man, and only by so doing. Well then, how are we to contrast them? In this way. Let us make no deduction either from the injustice of the unjust, or from the justice of the just, but let us suppose each to be perfect in his own line of conduct. First of all then, the unjust man must act as skilful craftsmen do. For a first-rate pilot or physician perceives the difference between what is practicable and what is impracticable in his art, and while he attempts the former, he lets the latter alone; and moreover, should he happen to make a false step, he is able to recover himself. In the same way, if we are to form a conception of a consummately unjust man, we must suppose that he makes no mistake in the prosecution of his unjust enterprises, and that he escapes detection; but if he be found out, we must look upon him as a bungler; for it is the perfection of injustice to seem just without really being so. We must therefore grant to the perfectly unjust man, without any deduction, the most perfect injustice; and we must concede to him, that while committing the grossest acts of injustice he has won himself the highest reputation for justice; and that should he make a false step, he is able to recover himself, partly by a talent for speaking with effect, in case he be called in question for any of his misdeeds, and partly because his courage and strength, and his command of friends and money, enable him to employ force with success, whenever force is required. Such being our unjust man, let us, in pursuance of the argument, place the just man by his side, a man of true simplicity and nobleness, resolved, as Aeschylus says, not to seem, but to be, good. We must certainly take away the seeming; for if he be thought to be a just man, he will have honors and gifts on the strength of this reputation, so that it will be uncertain whether it is for justices sake, or for the sake of the gifts and honors, that he is what he is. Yes; we must strip him bare of everything but justice, and make his whole case the reverse of the former. Without being guilty of one unjust act, let him have the worst reputation for injustice, so that his virtue may be thoroughly tested, and shown to be proof against infamy and all its consequences; and let him go on till the day of his death, steadfast in his justice, but with a lifelong reputation for injustice, in order that, having brought both the men to the utmost limits of justice and of injustice respectively, we may then give judgment as to which of the two is the happier.

Socrates:: Good heavens! my dear Glaucon, how vigorously you work, scouring the two characters clean for our judgment, like a pair of statues.

Glaucon:: I do it as well as I can. And after describing the men as we have done, there will be no further difficulty, I imagine, in proceeding to sketch the kind of life which awaits them respectively. Let me therefore describe it. And if the description be somewhat coarse, do not regard it as mine, Socrates, but as coming from those who commend injustice above justice. They will say that in such a situation the just man will be scourged, racked, fettered, will have his eyes burnt out, and at last, after suffering every kind of torture, will be crucified; and thus learn that it is best to resolve, not to be, but to seem, just. Indeed those words of Aeschylus are far more applicable to the unjust man than to the just. For it is in fact the unjust man, they will maintain, inasmuch as he devotes himself to a course which is allied to reality, and does not live with an eye to appearances, who is resolved not to seem, but to be, unjust;

> Reaping a harvest of wise purposes,
> Sown in the fruitful furrows of his mind;

being enabled first of all to hold offices of state through his reputation for justice, and in the next place to choose a wife wherever he will, and marry his children into whatever family he pleases, to enter into contracts and join in partnership with any one he likes, and besides all this, to enrich himself by large profits, because he is not too nice to commit a fraud. Therefore, whenever he engages in a contest, whether public or private, he defeats and overreaches his enemies, and by so doing grows rich, and is enabled to benefit his friends and injure his enemies, and to offer sacrifices and dedicate gifts to the gods in magnificent abundance; and thus having greatly the advantage of the just man in the means of paying court to the gods, as well as to such men as he chooses, he is also more likely than the just man, as far as probabilities go, to enjoy the favor of heaven. And therefore they affirm, Socrates, that a better provision is made both by gods and men for the life of the unjust, than for the life of the just.

Socrates:: When Glaucon had said this, before I could make the reply I was meditating, his brother Adeimantus exclaimed;

Adeimantus:: You surely do not suppose, Socrates, that the doctrine has been satisfactorily expounded.

Socrates:: Why not, pray?

Adeimantus:: The very point which it was most important to urge has been omitted.

Socrates:: Well then, according to the proverb, May a brother be present to help one, it is for you to supply his deficiencies, if there are any, by your assistance. But indeed, for my part, what Glaucon has said is enough to prostrate me, and put it out of my power to come up to the rescue of justice.

Adeimantus:: You are not in earnest; pray listen to the following argument also; for we must now go through those representations which, reversing the declarations of Glaucon, commend justice and disparage injustice, in order to bring out more clearly what I take to be his meaning. Now I apprehend that when parents and others set forth the duty of being just, and impress it upon their children or those in whom they feel an interest, they do not praise justice in itself, but only the respectability which it gives; their object being that a reputation for justice may be gained, and that this reputation may bring in the preferment, the marriages, and the other good things which Glaucon has just told us are secured to the just man by his high character. And these persons carry the advantages of a good name still further; for, by introducing the good opinion of the gods, they are enabled to describe innumerable blessings which the gods, they say, grant to the pious, as the excellent Hesiod tells us, and Homer too; the former saying, that the gods cause the oak-trees of the just

> On their tops to hear acorns, and swarms of bees in the middle;

Also their wool-laden sheep sink under the weight of
their fleeces;

with many other good things of the same sort; while the latter, in a similar passage, speaks of one;

Like to a blameless king, who, godlike in virtue and wisdom,
Justice ever maintains; whose rich land fruitfully yields him
Harvests of barley and wheat, and his orchards are heavy with fruitage;
Strong are the young of his flocks; and the sea gives him fish in abundance.

But the blessings which Musaeus and his son Eumolpus represent the gods as bestowing upon the just, are still more delectable than these; for they bring them to the abode of Hades, and describe them as reclining on couches at a banquet of the pious, and with garlands on their heads spending all eternity in wine-bibbing, the fairest reward of virtue being, in their estimation, an everlasting carousal. Others, again, do not stop even here in their enumeration of the rewards bestowed by the gods; for they tell us that the man who is pious and true to his oath leaves children's children and a posterity to follow him. Such, among others, are the commendations which they lavish upon justice. The ungodly, on the other hand, and the unjust, they plunge into a swamp in Hades, and condemn them to carry water in a sieve; and while they are still alive, they bring them into evil repute, and inflict upon the unjust precisely those punishments which Glaucon enumerated as the lot of the just who are reputed to be unjust, more they cannot. Such is their method of praising the one character and condemning the other.

Once more, Socrates, take into consideration another and a different mode of speaking with regard to justice and injustice, which we meet with both in common life and in the poets. All as with one mouth proclaim, that to be temperate and just is an admirable thing certainly, but at the same time a hard and an irksome one; while intemperance and injustice are pleasant things and of easy acquisition, and only rendered base by law and public opinion. But they say that honesty is in general less profitable than dishonesty, and they do not hesitate to call wicked men happy, and to honor them both in public and in private, when they are rich or possess other sources of power, and on the other hand to treat with dishonor and contempt those who are in any way feeble or poor, even while they admit that the latter are better men than the former. But of all their statements the most wonderful are those which relate to the gods and to virtue; according to which even the gods allot to many good men a calamitous and an evil life, and to men of the opposite character an opposite portion. And there are quacks and soothsayers who flock to the rich mans doors, and try to persuade him that they have a power at command, which they procure from heaven, and which enables them, by sacrifices and incantations performed amid feasting and indulgence, to make amends for any crime committed either by the individual himself or by his ancestors; and. that, should he desire to do a mischief to any one, it may be done at a trifling expense, whether the object of his hostility be a just or an unjust man; for they profess that by certain invocations and spells they can prevail upon the gods to do their bidding. And in support of all these assertions they produce the evidence of poets; some, to exhibit the facilities of vice, quoting the words;

> Whoso wickedness seeks, may even in masses obtain it
> Easily.
> Smooth is the way, and short, for nigh is her dwelling.

> Virtue, Heav’n has ordained, shall be reached by the sweat of the forehead.

and by a long and up-hill road; while others, to prove that the gods may be turned from their purpose by men, adduce the testimony of Homer, who has said;

> Yea, even the gods do yield to entreaty;
> Therefore to them men offer both victims and meek supplications,
> Incense and melting fat, and turn them from anger to mercy;
> Sending up sorrowful prayers, when trespass and sin is committed.

And they produce a host of books written by Musaeus and Orpheus, children, as they say, of Selene and of the Muses, which form their ritual, persuading not individuals merely, but whole cities also, that men may be absolved and purified from crimes, both while they are still alive and even after their decease, by means of certain sacrifices and pleasurable amusements which they call Mysteries; which deliver us from the torments of the other world, while the neglect of them is punished by an awful doom.

Adeimantus:: When views like these, my dear Socrates, are proclaimed and repeated with so much variety, concerning the honors in which virtue and vice are respectively held by gods and men, what can we suppose is the effect produced on the minds of all those young men of good natural parts who are able, after skimming like birds, as it were, over all that they hear, to draw conclusions from it, respecting the character which a man must possess, and the path in which he must walk, in order to live the best possible life? In all probability a young man would say to himself in the words of Pindar, Shall I by justice or by crooked wiles climb to a loftier stronghold, and, having thus fenced myself about, live my life? For common opinion declares that to be just without being also thought just, is no advantage to me, but only entails manifest trouble and loss; whereas if I am unjust and get myself a name for justice, an unspeakably happy life is promised me. Very well then; since the outward semblance, as the wise inform me, overpowers the inward reality, and is the sovereign dispenser of felicity, to this I must of course wholly devote myself; I must draw round about me a picture of virtue to serve as a frontage and exterior, but behind me I must trail the fox, of which that most clever Archilochus tells us, with its cunning and shiftiness. Yes but, it will be objected, it is not an easy matter always to conceal ones wickedness. No, we shall reply, nor yet is anything else easy that is great; nevertheless, if happiness is to be our goal, this must be our path, as the steps of the argument indicate. To assist in keeping up the deception, we will form secret societies and clubs. There are, moreover, teachers of persuasion, who impart skill in popular and forensic oratory; and so by fair means or by foul, we shall gain our ends, and carry on our dishonest proceedings with impunity. Nay but, it is urged, neither evasion nor violence can succeed with the gods. Well, but if they either do not exist, or do not concern themselves with the affairs of men, why need we concern ourselves to evade their observation? But if they do exist, and do pay attention to us, we know nothing and have heard nothing of them from any other quarter than the current traditions and the genealogies of poets; and these very authorities state that the gods are beings who may be wrought upon and diverted from their purpose by sacrifices and meek supplications and votive offerings. Therefore we must believe them in both statements or in neither. If we are to believe them, we will act unjustly, and offer sacrifices from the proceeds of our crimes. For if we are just, we shall, it is true, escape punishment at the hands of the gods, but we renounce the profits which accrue from injustice; but if we are unjust, we shall not only make these gains, but also by putting up prayers when we transgress and sin, we shall prevail upon the gods to let us go unscathed. But then, it is again objected, in Hades we shall pay the just penalty for the crimes committed here, either in our own persons or in those of our children's children. Nay but, my friend, the champion of the argument will continue, the mystic rites, again, are very powerful, and the absolving divinities, as we are told by the mightiest cities, and by the sons of the gods who have appeared as poets and inspired prophets, who inform us that these things are so.

What consideration, therefore, remains which should induce us to prefer justice to the greatest injustice? Since if we combine injustice with a spurious decorum, we shall fare to our liking with the gods and with men, in this life and the next, according to the most numerous and the highest authorities. Considering all that has been said, by what device, Socrates, can a man who has any advantages, either of high talent, or wealth, or personal appearance, or birth, bring himself to honor justice, instead of smiling when he hears it praised? Indeed, if there is any one who is able to show the falsity of what we have said, and who is fully convinced that justice is best, far from being angry with the unjust, he doubtless makes great allowance for them, knowing that, with the exception of those who may possibly refrain from injustice through the disgust of a godlike nature or from the acquisition of genuine knowledge, there is certainly no one else who is willingly just; but it is from cowardice, or age, or some other infirmity, that men condemn injustice, simply because they lack the power to commit it. And the truth of this is proved by the fact, that the first of these people who comes to power is the first to commit injustice, to the extent of his ability.

And the cause of all this is simply that fact, which my brother and I both stated at the very commencement of this address to you, Socrates, saying; With much respect be it spoken, you who profess to be admirers of justice, beginning with the heroes of old, of whom accounts have descended to the present generation, have every one of you, without exception, made the praise of justice and condemnation of injustice turn solely upon the reputation and honor and gifts resulting from them; but what each is in itself, by its own peculiar force as it resides in the soul of its possessor, unseen either by gods or men, has never, in poetry or in prose been adequately discussed, so as to show that injustice is the greatest bane that a soul can receive into itself, and justice the greatest blessing. Had this been the language held by you all from the first, and had you tried to persuade us of this from our childhood, we should not be on the watch to check one another in the commission of injustice, because every one would be his own watchman, fearful lest by committing injustice he might attach to himself the greatest of evils.

All this, Socrates, and perhaps still more than this, would be put forward respecting justice and injustice, by Thrasymachus, and I dare say by others also; thus ignorantly reversing, in my opinion, the inherent efficacy of each. For my own part, I confess (for I do not want to hide anything from you) that I have a great desire to hear you defend the opposite view, and therefore I have exerted myself to speak as forcibly as I can. So do not limit your argument to the proposition, that justice is superior to injustice, but show us what is that influence exerted by each of them on its possessor, whereby the one is in itself a blessing, and the other a bane; and deduct the estimation in which the two are held, as Glaucon urged you to do. For if you omit to withdraw from each quality its true reputation and to add the false, we shall declare that you are praising, not the reality, but the semblance of justice, and blaming, not the reality, but the semblance of injustice; that your advice, in fact, is to be unjust without being found out, and that you hold with Thrasymachus, that justice is another mans good, being for the interest of the stronger; injustice a mans own interest and advantage, but against the interest of the weaker. Since then you have allowed that justice belongs to the highest class of good things, the possession of which is valuable, both for the sake of their results, and also in a higher degree for their own sake, such as sight, hearing, intelligence, health, and everything else which is genuinely good in its own nature and not merely reputed to be good, select for commendation this particular feature of justice, I mean the benefit which in itself it confers on its possessor, in contrast with the harm which injustice inflicts. The rewards and reputations leave to others to praise; because in others I can tolerate this mode of praising justice and condemning injustice, which consists in eulogizing or reviling the reputations and the rewards which are connected with them; but in you I cannot, unless you require it, because you have spent your whole life in investigating such questions, and such only. Therefore do not content yourself with proving to us that justice is better than injustice; but show us what is that influence exerted by each on its possessor, by which, whether gods and men see it or not, the one is in itself a blessing, and the other a bane.

Socrates:: Much as I had always admired the talents both of Glaucon and Adeimantus, I confess that on this occasion I was quite charmed with what I had heard; so I said; Fitly indeed did Glaucon's admirer address you, ye sons of the man there named, in the first line of his elegiac poem, after you had distinguished yourselves in the battle of Megara, saying;

Race of a famous man, ye godlike sons of Ariston.

There seems to me to be great truth in this epithet, my friends; for there is something truly god-like in the state of your minds, if you are not convinced that injustice is better than justice, when you can plead its cause so well. I do believe that you really are not convinced of it. But I infer it from your general character; for judging merely from your statements I should have distrusted you; but the more I place confidence in you, the more I am perplexed how to deal with the case; for though I do not know how I am to render assistance, having learnt how unequal I am to the task from your rejection of my answer to Thrasymachus, wherein I imagined that I had demonstrated that justice is better than injustice; yet, on the other hand, I dare not refuse my assistance; because I am afraid that it might be positively sinful in me, when I hear Justice evil spoken of in my presence, to lose heart and desert her, so long as breath and utterance are left in me. My best plan, therefore, is to succor her in such fashion as I can.

Thereupon Glaucon, and all the rest with him, requested me by all means to give my assistance, and not to let the conversation drop, but thoroughly to investigate the real nature of justice and injustice, and which is the true doctrine with regard to their respective advantages. So I said what I really felt;

The inquiry we are undertaking is no trivial one, but demands a keen sight, according to my notion of it Therefore, since I am not a clever person, I think we had better adopt a mode of inquiry which may be thus illustrated. Suppose we had been ordered to read small writing at a distance, not having very good eye-sight, and that one of us discovered that the same writing was to be found somewhere else in larger letters, and upon a larger space, we should have looked upon it as a piece of luck, I imagine, that we could read the latter first, and then examine the smaller, and observe whether the two were alike.

Adeimantus:: Undoubtedly we should, but what parallel can you see to this, Socrates, in our inquiry after justice?

Socrates:: I will tell you. We speak of justice as residing in an individual mind, and as residing also in an entire city, do we not?

Adeimantus:: Certainly we do.

Socrates:: Well, a city is larger than one man.

Adeimantus:: It is.

Socrates:: Perhaps, then, justice may exist in larger proportions in the greater subject, and thus be easier to discover; so, if you please, let us first investigate its character in cities; afterwards let us apply the same inquiry to the individual, looking for the counterpart of the greater as it exists in the form of the less.

Adeimantus:: Indeed, I think your plan is a good one.

Socrates:: If then we were to trace in thought the gradual formation of a city, should we also see the growth of its justice or of its injustice?

Adeimantus:: Perhaps we should.

Socrates:: Then, if this were done, might we not hope to see more easily the object of our search?

Adeimantus:: Yes, much more easily.

Socrates:: Is it your advice, then, that we should attempt to carry out our plan? It is no trifling task, I imagine; therefore consider it well.

Adeimantus:: We have considered it; yes, do so by all means.

Socrates:: Well then, the formation of a city is due, as I imagine, to this fact, that we are not individually independent, Init have many wants. Or would you assign any other cause for the founding of cities?

Adeimantus:: No, I agree with you.

Socrates:: Thus it is, then, that owing to our many wants, and because each seeks the aid of others to supply his various requirements, we gather many associates and helpers into one dwelling-place, and give to this joint dwelling the name of city. Is it so?

Adeimantus:: Undoubtedly.

Socrates:: And every one who gives or takes in exchange, whatever it be that he exchanges, does so from a belief that he is consulting his own interest.

Adeimantus:: Certainly.

Socrates:: Now then, let us construct our imaginary city from the beginning. It will owe its construction, it appears, to our natural wants.

Adeimantus:: Unquestionably.

Socrates:: Well, but the first and most pressing of all wants is that of sustenance to enable us to exist as living creatures.

Adeimantus:: Most decidedly.

Socrates:: Our second want would be that of a house, and our third that of clothing and the like.

Adeimantus:: True.

Socrates:: Then let us know what will render our city adequate to the supply of so many things. Must we not begin with a husbandman for one, and a house-builder, and besides these a weaver? Will these suffice, or shall we add to them a shoemaker, and perhaps one or two more of the class of people who minister to our bodily wants?

Adeimantus:: By all means.

Socrates:: Then the smallest possible city will consist of four or five men.

Adeimantus:: So we see.

Socrates:: To proceed then; ought each of these to place his own work at the disposal of the community, so that the single husbandman, for example, shall provide food for four, spending four times the amount of time and labor upon the preparation of food, and sharing it with others; or must he be regardless of them, and produce far his own consumption alone the fourth part of this quantity of food, in a fourth part of the time, spending the other three parts, one in making his house, another in procuring himself clothes, and the third in providing himself with shoes, saving himself the trouble of sharing with others, and doing his own business by himself, and for himself?

Adeimantus:: Well, Socrates, perhaps the former plan is the easier of the two.

Socrates:: Really, it is not improbable; for I recollect, myself, after your answer, that, in the first place, no two persons are born exactly alike, but each differs from each in natural endowments, one being suited for one occupation, and another for another. Do you not think so?

Adeimantus:: I do.

Socrates:: Well; when is a man likely to succeed best? When he divides his exertions among many trades, or when he devotes himself exclusively to one?

Adeimantus:: When he devotes himself to one.

Socrates:: Again, it is also clear, I imagine, that if a person lets the right moment for any work go by, it never returns.

Adeimantus:: It is quite clear.

Socrates:: For the thing to be done does not choose. I imagine, to tarry the leisure of the doer, but the doer must be at the beck of the thing to be done, and not treat it as a secondary affair.

Adeimantus:: He must.

Socrates:: From these considerations it follows, that all things will be produced in superior quantity and quality, and with greater ease, when each man works at a single occupation, in accordance with his natural gifts, and at the right moment, without meddling with anything else.

Adeimantus:: Unquestionably.

Socrates:: More than four citizens, then, Adeimantus, are needed to provide the requisites which we named. For the husbandman, it appears, will not make his own plough, if it is to be a good one, nor his mattock, nor any of the other tools employed in agriculture. No more will the builder make the numerous tools which he also requires; and so of the weaver and the shoemaker.

Adeimantus:: True.

Socrates:: Then we shall have carpenters and smiths, and many other artisans of the kind, who will become members of our little state, and create a population.

Adeimantus:: Certainly.

Socrates:: Still it will not yet be very large, supposing we add to them neatherds and shepherds, and the rest of that class, in order that the husbandmen may have oxen for ploughing, and the house-builders, as well as the husbandmen; beasts of burden for draught, and the weavers and shoemakers wool and leather.

Adeimantus:: It will not be a small state, either, if it contains all these.

Socrates:: Moreover, it is scarcely possible to plant the actual city in a place where it will have no need of imports.

Adeimantus:: No, it is impossible.

Socrates:: Then it will further require a new class of persons to bring from other cities all that it requires.

Adeimantus:: It will.

Socrates:: Well, but if the agent goes empty-handed, carrying with him none of the commodities in demand among those people from whom our state is to procure what it requires, he will also come empty-handed away; will he not?

Adeimantus:: I think so.

Socrates:: Then it must produce at home not only enough for itself, but also articles of the right kind and quantity to accommodate those whose services it needs.

Adeimantus:: It must.

Socrates:: Then our city requires larger numbers both of husbandmen and other craftsmen.

Adeimantus:: Yes, it does.

Socrates:: And among the rest it will need more of those agents also, who are to export and import the several commodities; and these are merchants, are they not?

Adeimantus:: Yes.

Socrates:: Then we shall require merchants also.

Adeimantus:: Certainly.

Socrates:: And if the traffic is carried on by sea, there will be a further demand for a considerable number of other persons, who are skilled in the practice of navigation.

Adeimantus:: A considerable number, undoubtedly.

Socrates:: But now tell me; in the city itself how are they to exchange their several productions? For it was to promote this exchange, you know, that we formed the community, and so founded our state.

Adeimantus:: Manifestly, by buying and selling.

Socrates:: Then this will give rise to a market and a currency, for the sake of exchange.

Adeimantus:: Undoubtedly.

Socrates:: Suppose then that the husbandman, or one of the other craftsmen, should come with some of his produce into the market, at a time when none of those who wish to make an exchange with him are there, is he to leave his occupation and sit idle in the market-place?

Adeimantus:: By no means; there are persons who, with an eye to this contingency, undertake the service required; and these in well-regulated states are, generally speaking, persons of excessive physical weakness, who are of no use in other kinds of labor. Their business is to remain on the spot in the market, and give money for goods to those who want to sell, and goods for money to those who want to buy.

Socrates:: This demand, then, causes a class of retail dealers to spring up in our city. For do we not give the name of retail dealers to those who station themselves in the market, to minister to buying and selling, applying the term merchants to those who go about from city to city?

Adeimantus:: Exactly so.

Socrates:: In addition to these, I imagine, there is also another class of operatives, consisting of those whose mental qualifications do not recommend them as associates, but whose bodily strength is equal to hard labor; these, selling the use of their strength and calling the price of it hire, are thence named, I believe, hired laborers. Is it not so?

Adeimantus:: Precisely.

Socrates:: Then hired laborers also form, as it seems, a complementary portion of a state.

Adeimantus:: I think so.

Socrates:: Shall we say then, Adeimantus, that our city has at length grown to its full stature?

Adeimantus:: Perhaps so.

Socrates:: Where then, I wonder, shall we find justice and injustice in it? With which of these elements that we have contemplated, has it simultaneously made its entrance?

Adeimantus:: I have no notion, Socrates, unless perhaps it be discoverable somewhere in the mutual relations of these same persons.

Socrates:: Well, perhaps you are right. We must investigate the matter, and not flinch from the task.

Let us consider then, in the first place, what kind of life will be led by persons thus provided. I presume they will produce corn and wine, and clothes and shoes, and build themselves houses; and in summer, no doubt, they will generally work without their coats and shoes, while in winter they will be suitably clothed and shod. And they will live, I suppose, on barley and wheat, baking cakes of the meal, and kneading loaves of the flour. And spreading these excellent cakes and loaves upon mats of straw or on clean leaves, and themselves reclining on rude beds of yew or myrtle-boughs, they will make merry, themselves and their children, drinking their wine, wearing garlands, and singing the praises of the gods, enjoying one another's society, and not begetting children beyond their means, through a prudent fear of poverty or war.

Glaucon here interrupted me, remarking;

Glaucon:: Apparently you describe your men as feasting without anything to relish their bread.

Socrates:: True, I had forgotten; of course they will have something to relish their food; salt, no doubt, and olives and cheese, together with the country fare of boiled onions and cabbage. We shall also set before them a dessert, I imagine, of figs and peas and beans; and they may roast myrtle-berries and beech-nuts at the fire, taking wine with their fruit in moderation. And thus passing their days in tranquility and sound health, they will, in all probability, live to an advanced age, and dying, bequeath to their children a life in which their own will be reproduced.

Glaucon:: Why Socrates, if you were founding a community of swine, this is just the style in which you would feed them up!

Socrates:: How then, would you have them live, Glaucon?

Glaucon:: In a civilized manner. They ought to recline on couches, I should think, if they are not to have a hard life of it, and dine off tables, and have the usual dishes and dessert of a modern dinner.

Socrates:: Very good; I understand. Apparently we are considering the growth not of a city merely, but of a luxurious city. I dare say it is not a bad plan; for by this extension of our inquiry we shall perhaps discover how it is that justice and injustice take root in cities. Now it appears to me that the city which we have described is the genuine and, so to speak, healthy city. But if you wish us also to contemplate a city that is suffering from inflammation, there is nothing to hinder us. Some people will not be satisfied, it seems, with the fare or the mode of life which we have described, but must have, in addition, couches and tables and every other article of furniture, as well as viands, and fragrant oils, and perfumes, and courtesans, and confectionery; and all these in plentiful variety. Moreover, we must not limit ourselves now to essentials in those articles which we specified at first, I mean houses and clothes and shoes, but we must set painting and embroidery to work, and acquire gold and ivory, and all similar valuables; must we not?

Glaucon:: Yes.

Socrates:: Then we shall also have to enlarge our city, for our first or healthy city will not now be of sufficient size, but requires to be increased in bulk, and filled out with a multitude of callings, which do not exist in cities to satisfy any natural want; for example, the whole class of hunters, and all who practice imitative arts, including many who use forms and colors, and many who use music, poets also, with those of whom the poet makes use, rhapsodists, actors, dancers, contractors; lastly, the manufacturers of all sorts of articles, and among others those which form part of a woman's dress. We shall similarly require more personal servants, shall we not? that is to say, tutors, wet-nurses, dry-nurses, tire-women, barbers, and cooks moreover and confectioners? Swineherds again are among the additions we shall require, a class of persons not to be found, because not wanted, in our former city, but needed among the rest in this. We shall also need great quantities of all kinds of cattle, for those who may wish to eat them; shall we not?

Glaucon:: Of course we shall.

Socrates:: Then shall we not experience the need of medical men also, to a much greater extent under this than under the former regime?

Glaucon:: Yes, indeed.

Socrates:: The country too, I presume, which was formerly adequate to the support of its then inhabitants will be now too small, and adequate no longer. Shall we say so?

Glaucon:: Certainly.

Socrates:: Then must we not cut ourselves a slice of our neighbors territory, if we are to have land enough both for pasture and tillage, while they will do the same to ours, if they, like us, permit themselves to overstep the limit of necessaries, and plunge into the unbounded acquisition of wealth?

Glaucon:: It must inevitably be so, Socrates.

Socrates:: Will our next step be to go to war, Glaucon, or how will it be?

Glaucon:: As you say.

Socrates:: At this stage of our inquiry let us avoid asserting either that war does good or that it does harm, confining ourselves to this statement, that we have further traced the origin of war to causes which are the most fruitful sources of whatever evils befall a state, either in its corporate capacity, or in its individual members.

Glaucon:: Exactly so.

Socrates:: Once more then, my friend, our state must receive an accession of no trifling extent, I mean that of a whole army, which must go forth and do battle with all invaders in defense of its entire property, and of the persons whom we were just now describing.

Glaucon:: How? are not those persons sufficient of themselves?

Socrates:: They are not, if you and all the rest of us were right in the admissions which we made, when we were modeling our state. We admitted, I think, if you remember, that it was impossible for one man to work well at many professions.

Glaucon:: True.

Socrates:: Well then, is not the business of war looked upon as a profession in itself?

Glaucon:: Undoubtedly.

Socrates:: And have we not as much reason to concern ourselves about the trade of war as about the trade of shoemaking?

Glaucon:: Quite as much.

Socrates:: But we cautioned the shoemaker, you know, against attempting to be an agriculturist or a weaver or a builder besides, with a view to our shoemaking work being well done; and to every other artisan we assigned in like manner one occupation, namely, that for which he was naturally fitted, and in which, if he let other things alone, and wrought at it all his time without neglecting his opportunities, he was likely to prove a successful workman. Now is it not of the greatest moment that the work of war should be well done? Or is it so easy, that any one can succeed in it and be at the same time a husbandman or a shoemaker or a laborer at any other trade whatever, although there is no one in the world who could become a good draught-player or dice-player by merely taking up the game at unoccupied moments, instead of pursuing it as his especial study from his childhood? And will it be enough for a man merely to handle a shield or any other of the arms and implements of war, to be straightway competent to play his part well that very day in an engagement of heavy troops or in any other military service, although the mere handling of any other instrument will never make any one a true craftsman or athlete, nor will such instrument be even useful to one who has neither learnt its capabilities nor exercised himself sufficiently in its practical applications.

Glaucon:: If it were so, these implements of war would be very valuable.

Socrates:: In proportion, then, to the importance of the work which these guardians have to do, will, it require peculiar freedom from other engagements, as well as extraordinary skill and attention.

Adeimantus:: I quite think so.

Socrates:: Will it not also require natural endowments suited to this particular occupation?

Glaucon:: Undoubtedly.

Socrates:: Then, apparently, it will belong to us to choose out, if we can, that especial order of natural endowments which qualifies its possessors for the guardianship of a state.

Glaucon:: Certainly; it belongs to us.

Socrates:: Then, I assure you, we have taken upon ourselves no trifling task; nevertheless, there must be no flinching, so long as our strength holds out.

Glaucon:: No, there must not.

Socrates:: Do you think then, that there is any difference, in the qualities required for keeping guard, between a well-bred dog and a gallant young man?

Glaucon:: I do not quite understand you.

Socrates:: Why, I suppose, for instance, they ought both of them to be quick to discover an enemy, and swift to overtake him when discovered, and strong also, in case they have to fight when they have come up with him.

Glaucon:: Certainly, all these qualities are required.

Socrates:: Moreover, they must be brave if they are to fight well.

Glaucon:: Undoubtedly.

Socrates:: But will either a horse, or a dog, or any other animal, be likely to be brave if it is not spirited? or have you failed to observe what an irresistible and unconquerable thing spirit is, so that under its influence every creature will be fearless and unconquerable in the face of any danger?

Glaucon:: I have observed it.

Socrates:: We know then what bodily qualities are required in our guardian.

Glaucon:: We do.

Socrates:: And also what qualities of the mind, namely, that he must be spirited.

Glaucon:: Yes.

Socrates:: How then, Glaucon, if such be their natural disposition, are they to be kept from behaving fiercely to one another, and to the rest of the citizens?

Glaucon:: Really it will be difficult to obviate that.

Socrates:: Nevertheless, they certainly ought to be gentle to their friends, and dangerous only to their enemies; else they will not wait for others to destroy them, but will be the first to do it for themselves.

Glaucon:: True.

Socrates:: What then shall we do? Where shall we find a character at once gentle and high-spirited? For I suppose a gentle nature is the opposite of a spirited one?

Glaucon:: Apparently it is.

Socrates:: Nevertheless a man who is devoid of either gentleness or spirit cannot possibly make a good guardian. And as they seem to be incompatible, the result is, that a good guardian is an impossibility.

Glaucon:: It looks like it.

Socrates:: Here then I was perplexed, but having reconsidered our conversation, I said, We deserve, my friend, to be puzzled; for we have deserted the illustration which we set before us.

Glaucon:: How so?

Socrates:: It never struck us, that after all there are natures, though we fancied there were none, which combine these opposite qualities.

Glaucon:: Pray where is such a combination to be found?

Socrates:: You may see it in several animals, but particularly in the one which we ourselves compared to our guardian. For I suppose you know that it is the natural disposition of well-bred dogs to be perfectly gentle to their friends and acquaintance, but the reverse to strangers.

Glaucon:: Certainly I do.

Socrates:: Therefore the thing is possible; and we are not contradicting nature in our endeavor to give such a character to our guardian.

Glaucon:: So it would seem.

Socrates:: Then is it your opinion, that in one who is to make a good guardian it is further required that his character should be philosophical as well as high-spirited?

Glaucon:: How so? I do not understand you.

Socrates:: You will notice in dogs this other trait, which is really marvelous in the creature.

Glaucon:: What is that?

Socrates:: Whenever they see a stranger they are irritated before they have been provoked by any ill-usage; but when they see an acquaintance they welcome him, though they may never have experienced any kindness at his hands. Has this never excited your wonder?

Glaucon:: I never paid any attention to it hitherto; but no doubt they do behave so.

Socrates:: Well, but this instinct is a very clever thing in the dog, and a genuine philosophic symptom.

Glaucon:: How so, pray?

Socrates:: Why, because the only mark by which he distinguishes between the appearance of a friend and that of an enemy is, that he knows the former and is ignorant of the latter. How, I ask, can the creature be other than fond of learning when it makes knowledge and ignorance the criteria of the familiar and the strange?

Glaucon:: Beyond a question, it must be fond of learning.

Socrates:: Well, is not the love of learning identical with a philosophical disposition?

Glaucon:: It is.

Socrates:: Shall we not then assert with confidence in the case of a man also, that if he is to show a gentle disposition towards his relatives and acquaintances, he must have a turn for learning and philosophy?

Glaucon:: Be it so.

Socrates:: Then in our judgment the man whose natural gifts promise to make him a perfect guardian of the state will be philosophical, high-spirited, swift-footed, and strong.

Glaucon:: Undoubtedly he will.

Socrates:: This then will be the original character of our guardians. But in what way shall we rear and educate them? And will the investigation of this point help us on towards discovering that which is the object of all our speculations, namely, the manner in which justice and injustice grow up in a state? For I wish us neither to omit anything useful, nor to occupy ourselves with anything redundant, in our inquiry.

Hereupon Glaucon’s brother observed;

Adeimantus:: Well, for my part, I fully anticipate that this inquiry will promote our object.

Socrates:: If so, we must certainly not give it up, my dear Adeimantus, even though it should prove somewhat long.

Adeimantus:: Indeed we must not.

Socrates:: Come then, like idle story-tellers in a story, let us describe the education of our men.

Adeimantus:: Yes, let us do so.

Socrates:: What then is the education to be? Perhaps we could hardly find a better than that which the experience of the past has already discovered, which consists, I believe, in gymnastic for the body, and music for the mind.

Adeimantus:: It does.

Socrates:: Shall we not then begin our course of education with music rather than with gymnastic?

Adeimantus:: Undoubtedly we shall.

Socrates:: Under the term music, do you include narratives, or not?

Adeimantus:: I do.

Socrates:: And of narratives there are two kinds, the true and the false.

Adeimantus:: Yes.

Socrates:: And must we instruct our pupils in both, but in the false first?

Adeimantus:: I do not understand what you mean.

Socrates:: Do you not understand that we begin with children by telling them fables? And these, I suppose, to speak generally, are false, though they contain some truths; and we employ such fables in the treatment of children at an earlier period than gymnastic exercises.

Adeimantus:: True.

Socrates:: That is what I meant when I said that music ought to be taken up before gymnastic.

Adeimantus:: You are right.

Socrates:: Then are you aware, that in every work the beginning is the most important part, especially in dealing with anything young and tender? for that is the time when any impression, which one may desire to communicate, is most readily stamped and taken.

Adeimantus:: Precisely so.

Socrates:: Shall we then permit our children without scruple to hear any fables composed by any authors indifferently, and so to receive into their minds opinions generally the reverse of those which, when they are grown to manhood, we shall think they ought to entertain?

Adeimantus:: No, we shall not permit it on any account.

Socrates:: Then apparently our first duty will be to exercise a superintendence over the authors of fables, selecting their good productions, and rejecting the bad. And the selected fables we shall advise our nurses and mothers to repeat to their children, that they may thus mould their minds with the fables even more than they shape their bodies with the hand. But we shall have to repudiate the greater part of those which are now in vogue.

Adeimantus:: Which do you mean?

Socrates:: In the greater fables, we shall also discern the less. For the general character and tendency of both the greater and the less must doubtless be identical Do you not think so?

Adeimantus:: I do; but I am equally uncertain which you mean by the greater.

Socrates:: I mean the stories which Hesiod, and Homer, and the other poets, tell us. For they, I imagine, have composed fictitious narratives which they told, and yet tell, to men.

Adeimantus:: Pray what kind of fables do you mean, and what is the fault that you find with them?

Socrates:: A fault, which deserves the earliest and gravest condemnation, especially if the fiction has no beauty.

Adeimantus:: What is this fault?

Socrates:: It is whenever an author gives a bad representation of the characters of gods and heroes, like a painter whose picture should bear no resemblance to the objects he wishes to imitate.

Adeimantus:: Yes, it is quite right to condemn such faults; but pray explain further what we mean, and give some instances.

Socrates:: In the first place, the poet who conceived the boldest fiction on the highest subjects invented an ugly story, when he told how Uranus acted as Hesiod declares he did, and also how Cronus had his revenge upon him. And again, even if the deeds of Cronus, and his sons treatment of him, were authentic facts, it would not have been right, I should have thought, to tell them without the least reserve to young and thoughtless persons; on the contrary, it would be best to suppress them altogether; or, if for some reason they must be told, they should be imparted under the seal of secrecy to as few hearers as possible, and after the sacrifice, not of a pig, but of some rare and costly victim, which might aid to the utmost in restricting their number.

Adeimantus:: Certainly, these are offensive stories.

Socrates:: They are; and therefore, Adeimantus, they must not be repeated in our city. No; we must not tell a youthful listener that he will be doing nothing extraordinary if he commit the foulest crimes, nor yet if he chastise the crimes of a father in the most unscrupulous manner, but will simply be doing what the first and greatest of the gods have done before him.

Adeimantus:: I assure you, I quite agree with you as to the impropriety of such stories.

Socrates:: Nor yet, is it proper to say in any case what is indeed untrue that gods wage war against gods, and intrigue and fight among themselves; that is, if the future guardians of our state are to deem it a most disgraceful thing to quarrel lightly with one another; far less ought we to select as subjects for fiction and embroidery, the battles of the giants, and numerous other feuds of all sorts, in which gods and heroes fight against their own kith and kin. But if there is any possibility of persuading them, that to quarrel with ones fellow is a sin of which no member of a state was ever guilty, such ought rather to be the language held to our children from the first, by old men and old women, and all elderly persons; and such is the strain in which our poets must be compelled to write. But stories like the chaining of Hera by her son, and the flinging of Hephasstus out of heaven for trying to take his mothers part when his father was beating her, and all those battles of the gods which are to be found in Homer, must be refused admittance into our state, whether they be allegorical or not. For a child cannot discriminate between what is allegory and what is not; and whatever at that age is adopted as a matter of belief, has a tendency to become fixed and indelible, and therefore, perhaps, we ought to esteem it of the greatest importance that the fictions which children first hear should be adapted in the most perfect manner to the promotion of virtue.

Adeimantus:: There is certainly reason in this. But if any one were to proceed to ask us what these fictions are, and what the fables which convey them, how should we answer him?

Socrates:: My dear Adeimantus, you and I are not poets, n the present occasion, but founders of a state. And founders ought certainly to know the moulds in which their poets are to cast their fictions, and from which they must not be suffered to deviate; but they are not bound to compose tales themselves.

Adeimantus:: You are right; but to use your own words, what should these moulds be in the case of Theology?

Socrates:: I think they may be described as follows; It is right, I presume, always to represent God as he really is, whether the poet describe him in an epic or a lyrical or a dramatic poem.

Adeimantus:: Yes, it is right.

Socrates:: Then surely God is good in reality, and is to be so represented?

Adeimantus:: Unquestionably.

Socrates:: Well, but nothing that is good is hurtful, is it?

Adeimantus:: I think not.

Socrates:: And does that which is not hurtful hurt?

Adeimantus:: By no means.

Socrates:: And does that which hurts not, do any evil?

Adeimantus:: I answer as before, no.

Socrates:: And that which does no evil cannot be the cause of any evil either?

Adeimantus:: How should it be?

Socrates:: Well; is that which is good beneficial?

Adeimantus:: Yes.

Socrates:: Then it is a cause of well-being?

Adeimantus:: Yes.

Socrates:: Then that which is good is not the cause of all things, but only of what is as it should be, being guiltless of originating evil.

Adeimantus:: Exactly so.

Socrates:: If that be so, then God, inasmuch as he is good, cannot be the cause of all things, according to the common doctrine. On the contrary, he is the author of only a small part of human affairs; of the larger part he is not the author; for our evil things far outnumber our good things; and the good things we must ascribe to no other than God, while we must seek elsewhere, and not in him, the causes of the evil things.

Adeimantus:: That seems to me the exact truth.

Socrates:: Then we must express our disapprobation, if Homer, or any other poet, is guilty of such a foolish blunder about the gods, as to tell us that two jars

> By Zeus at his threshold are planted;

> All good fortunes the one, all evil the other contained!

And that he for whom Zeus mixes and gives of both;

> One day lighteth on evil, and one day meeteth with blessing;

but as for the man for whom there is no mixture, but who receives of one sort only;

> Him over Gods wide earth fell ravenous hunger pursueth.

Nor must we admit that;

> Zeus hath been made unto men both of weal and of woe the dispenser.

And if any one assert that the violation of oaths and treaties, of which Pandarus was the author, was brought about by Athene and Zeus, we shall refuse our approbation; nor can we allow it to be said that the strife and trial of strength between the gods was instigated by Themis and Zeus, nor, again, must we let our young people hear that, in the words of Aeschylus;

> When to destruction God will plague a house,
> He plants among its members guilt and sin.

But if a poet writes about the sufferings of Niobe, as Aeschylus does in the play from which I have taken these lines, or the calamities of the house of Pelops, or the disasters at Troy, or any similar occurrences, either we must not allow him to call them the work of a god, or if they are to be so called, he must find out a theory to account for them, such as that for which we are now searching, and must say, that what the god did was righteous and good, and the sufferers were chastened for their profit; but we cannot allow the poet to say, that a god was the author of a punishment which made the objects of it miserable. No; if he should say that because the wicked are miserable, these men needed chastisement, and the infliction of it by the god was a benefit to them, we shall make no objection; but as to asserting that God, who is good, becomes the author of evil to any, we must do battle uncompromisingly for the principle, that fictions conveying such a doctrine as this, whether in verse or in prose, shall neither be recited or heard in the city, by any member of it, young or old, if it is to be a well-regulated city; because such language may not be used without irreverence, and is moreover both injurious to us and self-contradictory.

Adeimantus:: I vote with you, for this law, which pleases me.

Socrates:: Then one of those theological laws or moulds, in accordance with which we shall require our speakers to speak, and our authors to write, will be to this effect, that God is not the author of all things, but only of such as are good.

Adeimantus:: You have proved it quite satisfactorily.

Socrates:: Well, here is a second for you to consider. Do you think that God is a wizard, and likely to appear for special purposes in different forms at different times, some times actually assuming such forms, and altering his own person into a variety of shapes, and sometimes deceiving us and making us believe that such a transformation has taken place; or do you think that he is of a simple essence, and that it is the most unlikely thing that he should ever go out of his own proper form?

Adeimantus:: I cannot answer you all at once.

Socrates:: Then answer me this; If anything passes out of its proper form must not the change be produced either by itself or some other thing?

Adeimantus:: It must.

Socrates:: And is it not the case that changes and motions, communicated by any thing else, affect least the things that are best? For instance, the body is changed by meat and drink and exertion, and every plant by sunshine and wind, and similar influences; but is not the change slightest in the plant or the body which is healthiest and strongest?

Adeimantus:: Undoubtedly it is.

Socrates:: So of the mind, is it not the bravest and the wisest that will be the least disturbed and altered by any influence from without?

Adeimantus:: Yes.

Socrates:: Moreover, I conceive that the same principle applies to all manufactured things, such as furniture, houses, and clothes; those that are well made and in good condition, are least altered by time and other influences.

Adeimantus:: That is true.

Socrates:: So that everything which is good either by nature or by art, or by both, is least liable to be changed by another thing.

Adeimantus:: So it would seem.

Socrates:: But surely God and the things of God are in every way most excellent.

Adeimantus:: Unquestionably.

Socrates:: Then God will be very unlikely to assume many shapes through external influence.

Adeimantus:: Very unlikely indeed.

Socrates:: But will he change and alter himself?

Adeimantus:: Clearly he must, if he alters at all.

Socrates:: Does he then, by changing himself, attain to something better and fairer, or to something worse and less beautiful than himself?

Adeimantus:: Something worse, necessarily, if he alters at all; for we shall not, I presume, affirm that there is any imperfection in the beauty or the goodness of God.

Socrates:: You are perfectly correct; and this being the case, do you think, Adeimantus, that any god or any man would voluntarily make himself worse than he is, in any respect?

Adeimantus:: It is impossible.

Socrates:: Then it is also impossible for a god to be willing to change himself, and therefore it would seem that every god, inasmuch as he is perfect to the utmost in beauty and goodness, abides ever simply and without variation in his own form.

Adeimantus:: The inference is inevitable, I think.

Socrates:: Then, my dear friend, let no poet tell us that;

> Gods in the likeness of wandering strangers,
> Bodied in manifold forms, go roaming from city to city.

And let no one slander Proteus and Thetis, or introduce in tragedies or any other poems, Hera transformed, collecting in the guise of a priestess;

> Alms for the life-giving children of Inachus, river of Argos.

Not to mention many other similar falsehoods, which we must interdict. And once more, let not our mothers be persuaded by these poets into scaring their children by injudicious stories, telling them how certain gods go about by night in the likeness of strangers from every land; that they may not by one and the same act defame the gods, and foster timidity in their children.

Adeimantus:: No, let that be forbidden.

Socrates:: But perhaps, though the gods have no tendency to change in themselves, they induce us, by deception and magic, to believe that they appear in various forms.

Adeimantus:: Perhaps they do.

Socrates:: Would a god consent to lie, think you, either in word, or by an act, such as that of putting a phantom before our eyes?

Adeimantus:: I am not sure.

Socrates:: Are you not sure that a genuine lie, if I may be allowed the expression, is hated by all gods and by all men?

Adeimantus:: I do not know what you mean.

Socrates:: I mean, that to lie with the highest part of himself, and concerning the highest subjects, is what no one voluntarily consents to do; on the contrary, every one fears above all things to harbor a lie in that quarter.

Adeimantus:: I do not even yet understand you.

Socrates:: Because you think I have some mysterious meaning; whereas what I mean is simply this; that to lie, or be the victim of a lie, and to be without knowledge, in the mind and concerning absolute realities, and in that quarter to harbor and possess the lie, is the last thing any man would consent to; for all men hold in especial abhorrence an untruth in a place like that.

Adeimantus:: Yes, in most especial abhorrence.

Socrates:: Well, but, as I was saying just now, this is what might most correctly be called a genuine lie, namely, ignorance residing in the mind of the deluded person. For the spoken lie is a kind of imitation and embodiment of the anterior mental affection, and not a pure, unalloyed falsity; or am I wrong?

Adeimantus:: No, you are perfectly right.

Socrates:: Then a real lie is hated not only by gods, but likewise by men.

Adeimantus:: So I think.

Socrates:: Once more; when and to whom is the verbal falsehood useful, and therefore undeserving of hatred? Is it not when we are dealing with an enemy? Or when those that are called our friends attempt to do something mischievous in a fit of lunacy or madness of any kind, is it not then that a lie is useful, like a medicine, to turn them from their purpose? And in the legendary tales of which we were talking just now, is it not our ignorance of the true history of ancient times which renders falsehood useful to us, as the closest attainable copy of the truth?

Adeimantus:: Yes, that is exactly the case.

Socrates:: Then on which of these grounds is lying useful to God? Will he lie for the sake of approximation, because he knows not the things of old?

Adeimantus:: No; that would be indeed ridiculous.

Socrates:: Then there is no place in God for the poets falsehood.

Adeimantus:: I think not.

Socrates:: Then will he lie through fear of his enemies?

Adeimantus:: Far from it.

Socrates:: Or because his friends are foolish or mad?

Adeimantus:: Nay; no fool or madman is a friend of the gods.

Socrates:: Then there is no inducement for a god to lie.

Adeimantus:: There is not.

Socrates:: In every way then the nature of gods and godlike beings is incapable of falsehood.

Adeimantus:: Yes, wholly so.

Socrates:: God then is a Being of perfect simplicity and truth, both in deed and word, and neither changes in himself nor imposes upon others, either by apparitions, or by words, or by sending signs, whether in dreams or in waking moments.

Adeimantus:: I believe it to be so myself, after what you have stated.

Socrates:: Then do you grant that a second principle, in accordance with which all speaking and writing about the gods must be molded, is this; That the gods neither metamorphose themselves like wizards, nor mislead us by falsehoods expressed either in word or act?

Adeimantus:: I do grant it.

Socrates:: Then while we commend much in Homer, we shall refuse to commend the story of the dream sent by Zeus to Agamemnon, as well as that passage in Aeschylus, where Thetis says that Apollo singing at her marriage;

Dwelt on my happy motherhood,
The life from sickness free, and lengthened years.
Then ail-inclusively he blest my lot,
Favored of heaven, in strains that cheer'd my soul.
And I too fondly deem'd those lips divine
Sacred to truth, fraught with prophetic skill;
But he himself who sang, the marriage-guest
Himself, who spoke all this, t'was even he
That slew my son.

When a poet holds such language concerning the gods, we shall be angry with him, and refuse him a chorus, neither shall we allow our teachers to use his writings for the instruction of the young, if we would have our guardians grow up to be as godlike and god-fearing as it is possible for man to be.

Adeimantus:: I entirely acquiesce. in the propriety of these principles, and would adopt them as laws.

## Book 3.

Socrates:: Concerning the gods, then, such, as it would appear, is the language to be held, and such the language to be forbidden, in the hearing of all, from childhood upwards, who are hereafter to honour the gods and their parents, and,, to set no small value on mutual friendship.

Adeimantus:: Yes; and I think our views are correct.

Socrates:: To proceed then; if we intend our citizens to be brave, must we not add to this such lessons as arc likely to preserve them most effectually from being afraid of death? or do you think a man can ever become brave who is haunted by the fear of death?

Adeimantus:: No, indeed, I do not.

Socrates:: Well, do you imagine that a believer in Hades and its terrors will be free from all fear of death, and in the day of battle will prefer it to defeat and slavery?

Adeimantus:: Certainly not.

Socrates:: Then apparently we must assume a control over those who undertake to set forth these fables, as well as the others, requesting them not to revile the other world in that unqualified manner, but rather to speak well of it, because such language is neither true, nor beneficial to men who are intended to be warlike.

Adeimantus:: We certainly must.

Socrates:: Then we shall expunge the following passage, and with it all that are like it;

> I would e'en be a villein, and drudge on the lands of a master,
> Under a portionless wight, whose garner was scantily furnished,
> Sooner than reign supreme in the realm of the dead that have perished.

And this;

> And those chambers be seen both by mortal men and immortals,
> Terrible, dank, and moldering, even to gods an abhorrence.

And;

> Well-a-day! Truly there are, yea e’en in the dwellings of Hades,
> Souls and phantom forms; but no understanding is in them.

And;

> Wisdom is his alone, mid the flitting and shadowy phantoms.

And;

> Vanish'd the soul from the limbs, and flew to the nethermost Hades,
> Sadly her destiny wailing, cut off in the ripeness of manhood.

And;

> Gibbering, under the ground his spirit fled, like a vapor.

And;

> As when bats, in the depth of a caverns awful recesses,
> Haply if one fall off from the rock where they hang in a cluster,
> Squealing flutter about, and still cling fast to each other,
> Thus did the ghosts move squealing together.

These verses, and all that are like them, we shall entreat Homer and the other poets not to be angry if we erase, not because they are unpoetical, or otherwise than agreeable to the ear of most men; but because, in proportion as they are more poetical, so much the less ought they to be recited in the hearing of boys and men, whom we require to be freemen, fearing slavery more than death.

Adeimantus:: By all means let us do so.

Socrates:: Then we must likewise cast away all those terrible and alarming names which belong to these subjects, the Cocytuses, and Styxes, and infernals, and anatomies, and all other words coined after this stamp, the mention of which makes men shudder to the last degree with fear. I dare say that for some other purpose they may be useful; but we are afraid for our guardians, lest the terrors in question should render them more spiritless and effeminate than they ought to be.

Adeimantus:: And our fears are not groundless.

Socrates:: So then we are to discard those expressions, are we?

Adeimantus:: Yes.

Socrates:: And to speak and write after the model which is the reverse of this?

Adeimantus:: Clearly so.

Socrates:: Then shall we also strike out the weeping and the wailings of the heroes of renown?

Adeimantus:: Yes, we must, if we strike out the former.

Socrates:: Just consider, whether we shall be right or not in striking them out. What we maintain is, that a good man will not look upon death as a dreadful thing for another good man, whose friend he also is, to undergo.

Adeimantus:: We do maintain it.

Socrates:: Then if so, he will not lament over such a person as if some dreadful disaster had befallen him.

Adeimantus:: Certainly not.

Socrates:: Moreover, we say this also, that such a man contains within himself, in the highest degree, whatever is necessary for a happy life, and is distinguished from the rest of the world by his peculiar independence of external resources.

Adeimantus:: True.

Socrates:: Then it is less dreadful to him than to any one to lose a son, or a brother, or worldly wealth, or anything else of that kind.

Adeimantus:: Indeed it is.

Socrates:: If so, he is also less likely than any one to complain, and will rather bear it with all meekness, whenever any such calamity has overtaken him.

Adeimantus:: Yes, quite so.

Socrates:: Then we shall do well to strike out the dirges put in the mouths of famous men, and make them over to women (and those not the best of their sex), and to the baser sort of men, in order that those whom we profess to be training up to be the guardians of their country may scorn to act like such persons.

Adeimantus:: It will be well to do so.

Socrates:: Then once more, we shall request Homer and the other poets not to represent Achilles, the son of a goddess, as tossing now on his side, and now once more on his back, now on his face; and then as rising up and pacing in frenzy the shore of the waste untamable ocean; nor yet as taking in both hands black burnt-out ashes, and pouring them over his head; nor as otherwise indulging in all that weeping and wailing which Homer has attributed to him; and not to describe Priam, whose near ancestor was a god, as making supplication, and;

> Rolling in dung, and by name to every man loudly appealing;

and still more earnestly we shall beg them, whatever they do, not to represent the gods as complaining and saying;

> Wretch that I am! who bare to my sorrow the bravest of children.

or, if they will not so far respect all the gods, at least we shall entreat them not to presume to draw so unlike a picture of the highest of the gods, as to make him say;

> Well-a-day! Him whom I love, pursued round the walls of the city.

Thus with these eyes I behold, and my heart is troubled within me.

And;

> Ah! woes me for the doom, that the dearest of mortals, Sarpedon,
> Must by Patroclus, Menoetius son, be slain in the combat.

For if, my dear Adeimantus, our young men were to listen seriously to such accounts, instead of laughing at them as unworthy descriptions, it would be very unlikely that any one of them should look upon himself, that is but a man, as above such behavior, and rebuke himself if he were ever betrayed into it, either in word or act, nay rather, unchecked by shame or fortitude, he will chant a multitude of dirges and laments over even trivial misfortunes.

Adeimantus:: You speak with great truth.

Socrates:: But he ought not so to do, as we have just been taught by our argument; to which we must give heed, until some one can persuade us by another and a better one.

Adeimantus:: Certainly, he ought not.

Socrates:: Again, our guardians ought not to be given to laughter, for when any one indulges in violent laughter, such excess almost universally invites an equally violent reaction.

Adeimantus:: I think so.

Socrates:: Then if a poet represents even men of any consideration as overcome by laughter, our approval must be with; held; much more if gods are so described.

Adeimantus:: Much more indeed.

Socrates:: That being the case, we shall not allow Homer to speak of the gods in such terms as the following;

> Straight mid the blessed gods brake forth unquenchable laughter,
> When they beheld Hephaestus go bustling from chamber to chamber.

We must not sanction such language, according to your principles.

Adeimantus:: If you like to call them mine; no doubt we must not sanction them.

Socrates:: But again, a high value must be set also upon truth. For if we were right in what we said just now, and falsehood is really useless to the gods, and only useful to men in the way of a medicine, it is plain that such an agent must be kept in the hands of physicians, and that unprofessional men must not meddle with it.

Adeimantus:: Evidently.

Socrates:: To the rulers of the state then, if to any, it belongs of right to use falsehood, to deceive either enemies or their own citizens, for the good of the state; and no one else may meddle with this privilege. Nay, for a private person to tell a lie to such magistrates, we shall maintain to be at least as great a mistake as for a patient to deceive his physician, or a pupil his training-master, concerning the state of his own body; or for a sailor to tell an untruth to a pilot concerning the ship and the crew, in describing his own condition or that of any of his fellow-sailors.

Adeimantus:: Most true.

Socrates:: If then the authorities find any one else guilty of lying in the city;

> Any of those that be craftsmen,
> Prophet and seer, or healer of hurts, or worker in timber.

they will punish him for introducing a practice as pernicious and subversive in a state as in a ship.

Adeimantus:: Yes, if performance follow upon profession.

Socrates:: Once more, will not our young men need to be temperate?

Adeimantus:: Undoubtedly they will.

Socrates:: And does not sobriety, as generally understood, imply the following principal elements; first, that men be obedient to their governors; and secondly, that they be themselves able to govern the pleasures which are gratified in eating, and drinking, and love?

Adeimantus:: I think so.

Socrates:: Then we shall approve, I imagine, of all language like that which Homer puts in the mouth of Diomedes;

> Friend, sit down in silence, and give good heed to our sayings.

and of the lines that follow;

> Wrath-breathing march'd the Achaians,
> Silently dreading their captains;

and of every thing else of the same kind.

Adeimantus:: Yes, we shall.

Socrates:: But can we approve of such language as this;

> Drunken sot, who the face of a dog and the heart of a deer hast.

and of what follows, and all the other insolent expressions which in prose or in poetry are put into the mouths of inferiors towards those in authority?

Adeimantus:: No, we cannot.

Socrates:: Because, I imagine, they do not tend to promote sobriety in youth. If on other accounts they give any gratification we need not be surprised. Is this your opinion?

Adeimantus:: It is.

Socrates:: But tell me; when the wisest of men is represented as saying that it appears to him the finest sight in the world, when

> Tables are loaded Both with bread and with flesh, and the cup-bearers draw from the wine-bowl
>
> Sparkling draughts, which they carry around, and replenish the goblets;

do you think that being told this will aid a young man in acquiring self-control? or this

> Tis most wretched by famine to die, and ones doom to encounter.

Or what do you think of representing Zeus as so readily forgetting, in the eagerness of his desire, all that he had been meditating, as he watched alone, while all others, gods and men, were asleep; and so smitten at the sight of Hera, that he would not even defer the gratification of his passion till they should enter into their chamber, saying that he was possessed by a stronger passion than even then, when at first they met without the knowledge of their dear parents? And what say you to the story a how Ares and Aphrodite were bound in fetters by Hephaestus in consequence of a similar proceeding?

Adeimantus:: Upon my word, such stories strike me as. very improper to be told.

Socrates:: But whatever acts of fortitude under all trials in deed and word are ascribed to men of renown, these we will contemplate and listen to, as for instance;

> Smiting his breast, to his heart thus spoke he in accents of chiding,
> Patience, I pray thee, my heart; thou hast borne even worse provocation.

Adeimantus:: Yes, by all means.

Socrates:: Further, we must not permit our men, I presume, to be receivers of bribes or lovers of money?

Adeimantus:: Certainly not.

Socrates:: Then we must not sing to them that

> Gods are persuaded by gifts, by gifts dread kings are persuaded.

Nor must we praise Phoenix, the tutor of Achilles, or allow that he spoke with wisdom when he advised him to aid the Achasans if he received presents from them, but without presents not to dismiss his anger. And we shall not believe or allow that Achilles himself was so avaricious as to take gifts from Agamemnon, and at another time to give up a dead body only on condition of receiving a price for it.

Adeimantus:: No; it is not right to commend such stories.

Socrates:: It is only my regard to Homer, that makes me slow to assert that it is a positive sin to say these things of Achilles, or to believe them when others say them; or again, to believe that he said to Apollo;

> Thou, far-worker, hast harmed me, no god so destructive as thou art;
> Verily, had I the power, I would take vengeance upon thee;

and that he behaved in so refractory a manner to the river, who was a god, as to be prepared to fight with him; and that he said of the hair that was consecrated to the other river Spercheius;

> Fain would I offer this hair as a gift to the hero Patroclus.

who was then a corpse, and that he fulfilled his purpose; all these tales are not to be believed. And again, all the stories of his dragging Hector round the tomb of Patroclus, and of his immolation of the captives on the funeral pile, we shall unhesitatingly declare untrue; and we shall not allow our young men to be persuaded that Achilles, the son of a goddess and of Peleus, who was a most discreet prince, and third in descent from Zeus, and the pupil of Cheiron, that wisest of teachers, was yet such a compound of confusions, as to combine in himself two such opposite maladies as mean covetousness and arrogant contempt of gods and men.

Adeimantus:: You are right.

Socrates:: Then let us not believe, once more, or allow it to be said, that Theseus the son of Poseidon, and Peirithous the son of Zeus, went forth to commit so dire a rape; nor that any other god-sprung hero could have ventured to perpetrate such dreadful impieties as at the present day are falsely ascribed to them; rather let us oblige our poets to admit, either that the deeds in question were not their deeds, or else that they were not children of gods; but let them beware of combining the two assertions, and of attempting to make our young men believe that the gods are parents of evil, and that heroes are no better than common men; for, as we said above, these statements are at once irreverent and untrue; for we have proved, I believe, that evils cannot originate with the gods.

Adeimantus:: Undoubtedly we have.

Socrates:: And besides, such language is pernicious to the hearers; for every one will be indulgent to vice in himself, if he is convinced that such were and still are the practices of those who are;

> Kinsfolk of gods, not far from Zeus himself,
> Whose is the altar to ancestral Zeus
> Upon the hill of Ida, in the sky;
> And still within their veins flows blood divine.

On these accounts we must suppress such fables, lest they engender in our young men a great aptitude for wickedness.

Adeimantus:: I entirely agree with you.

Socrates:: What class then still remains, to complete our description of the kinds of narratives which may or may not be circulated? We have already stated what rules must be regarded in speaking of the gods, and the demigods, and heroes, and the souls of the departed.

Adeimantus:: We have.

Socrates:: Then the mode of speaking about men will be the remaining subject, will it not?

Adeimantus:: Yes, obviously.

Socrates:: It is quite impossible, my friend, to settle this at the present stage of our inquiry.

Adeimantus:: How so?

Socrates:: Because, I imagine, we shall assert that in fact poets and writers of prose are alike in error in the most important particulars, when they speak of men, making out that many are happy, though unjust, and many just, yet miserable, and that injustice is profitable if it be not found out, whereas justice is a gain to your neighbor, but a loss to yourself; and I imagine we shall forbid the use of such language, and lay our commands on all writers to express the very opposite sentiments in their songs and their legends. Do you not think so?

Adeimantus:: Nay, I am sure of it.

Socrates:: Then, as soon as you admit that I am right in that, shall I not fairly maintain that you have admitted the very proposition which is the subject of our inquiry?

Adeimantus:: Your assumption is correct.

Socrates:: Then must we not postpone coming to an agreement as to the terms to be employed in speaking of men, till we have first discovered the real nature of justice, and proved that it is naturally profitable to its possessor, whether he have the character of being just or not?

Adeimantus:: You are perfectly right.

Socrates:: Let us then here close our discussion of the subject matter of narratives; our next task, I imagine, is to investigate the question of their form; and this done, we shall have thoroughly considered both what ought to be said, and the mode of saying it.

Adeimantus:: I do not understand what you mean by that.

Socrates:: Well, but it is important that you should. Perhaps you will see it better when I put it in this way. May not all the compositions of poets or legend-writers be described as narrations of past, present, or future events?

Adeimantus:: What else could they be?

Socrates:: Then does not the author obtain his object, either by narration simple, or by narration conveyed through the medium of imitation, or by a mixture of both?

Adeimantus:: This also, still requires to be made more intelligible to me.

Socrates:: Apparently I am a ridiculously unintelligible teacher. I will therefore proceed like a man who has not the gift of making speeches; I will not attempt the general question, but I will detach a particular instance, and endeavor thereby to make my meaning clear to you. Tell me then, are you well acquainted with the beginning of the Iliad, in which the poet tells us that Chryses besought Agamemnon to release his daughter, and that Agamemnon was angry with him; whereupon Chryses, finding his suit denied, prayed to his god to avenge him on the Achaeans?

Adeimantus:: I am.

Socrates:: You know then that down to the lines;

> He petitioned all the Achaeans,
> Chiefly the twain that marshaled the host, the children of Atreus.

the poet speaks in his own person, and does not even attempt to divert our thoughts into supposing that the speaker is any other than himself; but in what follows he speaks in the person of Chryses, and endeavors, so far as he can, to make us believe that it is not Homer who is speaking, but the aged priest. And in this style, as nearly as may be, he has constructed all the rest of his narrative of the Trojan war, as well as of the events that took place in Ithaca, and throughout the Odyssey.

Adeimantus:: Just so.

Socrates:: It is equally narration, is it not, whether the poet is reciting the occasional speeches, or describing the intermediate events?

Adeimantus:: Undoubtedly it is.

Socrates:: But when he delivers a speech in the character of another man, shall we not say that on every such occasion he aims at the closest resemblance in style to the person introduced as the speaker?

Adeimantus:: We shall, of course.

Socrates:: And when one man assumes a resemblance to another, in voice or look, is not that imitation?

Adeimantus:: Undoubtedly it is.

Socrates:: Then in such a case it appears that both Homer and other poets carry on the narration through the medium of imitation.

Adeimantus:: Certainly they do.

Socrates:: But if the poet nowhere concealed his own personality, he would have completed his composition and narration wholly without imitation. That you may not say again that you do not understand how this would be, I will tell you. If Homer, after saying that Chryses came, bringing his daughters ransom, in the character of a suppliant to the Achaeans, and above all to the kings, had continued to speak, not as if he had become Chryses, but as if he were Homer still, that, you know, would have been not imitation, but simple narration. The story would have run in something like the following manner. I shall tell it in prose, for I am no poet. The priest came and prayed that the gods might grant to the Greeks the capture of Troy, and a safe return, if only they would release unto him his daughter, accepting the ransom, and reverencing his god. And when he had thus spoken, all the rest were moved with awe, and were willing to consent; but Agamemnon was wroth, and charged him to depart, and come again no more, lest the staff and the wreaths of the god should avail him naught; and ere his daughter should be set free, he said, she should grow old with him in Argos; so he bade him be gone, and avoid provoking him, if he wished to reach home unhurt. And the old man, when he heard it, was afraid, and went away in silence; but when he was clear of the camp he prayed much to Apollo, calling upon the god by his titles, and putting him in remembrance, and asking to be repaid, if ever he had presented an acceptable offering to him in the building of temples or the sacrifice of oblations; in consideration of which things he prayed that he would avenge his tears upon the Achaeans, by shooting his arrows among them. In this, my friend, we have simple narration without imitation.

Adeimantus:: I understand.

Socrates:: I would further have you understand, that the opposite result ensues, when you strike out the poets own words that stand between the speeches, leaving only the alternate dialogue.

Adeimantus:: Yes, I understand; tragedies are a case of this sort.

Socrates:: You are perfectly right in your supposition. Now I think I can make you see clearly what before I could not, that one branch of poetry and legend-writing consists wholly of imitation, that is, as you say, tragedy and comedy; another branch employs the simple recital of the poet in his own person, and is chiefly to be found, I imagine, in dithyrambic poetry; while a third employs both recital and imitation, as is seen in the construction of epic poems, and in many other instances, if I make you understand me.

Adeimantus:: Yes, I quite comprehend now what you meant by that first remark.

Socrates:: Now then recall what we said previously; which was, that having settled the question of the matter of composition, it only remained for us to consider the manner.

Adeimantus:: I remember.

Socrates:: This then was precisely what I meant; that it was incumbent on us to come to an agreement, whether we should allow our poets, in telling their story, to employ imitation exclusively, or partially, (and, if so, by what criterion they should be guided,) or not at all.

Adeimantus:: I divine, that you are speculating whether we shall admit tragedy and comedy into our city, or not.

Socrates:: It may be so; and it may be that other claims will be questioned besides those of tragedy and comedy; in fact, I do not yet know myself; but we must go where the argument carries us, as a vessel runs before the wind.

Adeimantus:: You are quite right.

Socrates:: Here then is a question for you to consider, Adeimantus, Ought our guardians to be apt imitators, or not? Or does it follow, from our previous admissions, that any individual may pursue with success one calling, but not many; or, if he attempts this, by his meddling with many he will fail in all, so far as to gain no distinction in any?

Adeimantus:: That would undoubtedly be the case.

Socrates:: Does not the same principle apply to imitation, or can the same person imitate many things as well as he can imitate one?

Adeimantus:: Certainly he cannot.

Socrates:: It is very improbable, then, that one who is engaged in any important calling, will at the same time know how to imitate a variety of things, and be a successful imitator; for even two branches of imitation, which are thought to be closely allied, are more, I believe, than can be successfully pursued together by the same person; as, for instance, the writing of comedy and of tragedy, which you described just now as imitations, did you not?

Adeimantus:: I did; and you are right in saying that the same persons cannot succeed in both.

Socrates:: Nor yet can a man combine the professions of a reciter of epic poetry and an actor.

Adeimantus:: True.

Socrates:: Nay, the same actor cannot even play both Tragedy and Comedy; and all these are arts of imitation, are they not?

Adeimantus:: They are.

Socrates:: And human nature appears to me, Adeimantus, to be split up into yet more minute subdivisions than these, so that a man is unable to imitate many things well, or to do the things themselves of which the imitations are likenesses.

Adeimantus:: Most true.

Socrates:: If then we are to maintain our first view, that our guardians ought to be released from every other craft, that they may acquire consummate skill in the art of creating their countries freedom, and may follow no other occupation but such as tends to this result, it will not be desirable for them either to practice or to imitate anything else; or if they do imitate, let them imitate from very childhood whatever is proper to their profession, brave, sober, religious, honorable men, and the like, but meanness, and every other kind of baseness, let them neither practice nor be skilled to imitate, lest from the imitation they be infected with the reality. For have you not perceived that imitations, whether of bodily gestures, tones of voice, or modes of thought, if they be persevered in from an early age, are apt to grow into habits and a second nature?

Adeimantus:: Certainly I have.

Socrates:: Then we shall not permit those in whom we profess to take an interest, and whom we desire to become good men, to imitate a woman, being themselves men, whether she be young or old, either reviling a man, or striving and vaunting against the gods, in the belief of her own felicity; or taken up with misfortunes, and griefs, and complaints; much more shall we forbid them to imitate one that is ill, or in love, or in labor.

Adeimantus:: Exactly so.

Socrates:: Again, they must not be permitted to imitate slaves of either sex engaged in the occupations of slaves.

Adeimantus:: No, they must not.

Socrates:: Nor yet bad men, it would seem, such as cowards, and generally those whose conduct is the reverse of what we described just now; men in the act of abusing and caricaturing one another, and uttering ribaldry, whether drunk or sober, or committing any of those offences against others, or amongst themselves, of which such men both in word and in deed are wont to be guilty. I think also that we must not accustom them to liken themselves to madmen, in word or in act. For though it is right they should know mad and wicked people of both sexes, they ought not to act like them, nor give imitations of them.

Adeimantus:: Most true.

Socrates:: Again, may they imitate smiths or any other craftsmen, working at their trade, or rowers pulling at the oars in a galley, or their strokesmen, or anything else of the kind?

Adeimantus:: Impossible, since they are not to be permitted even to pay attention to any of these occupations.

Socrates:: Once more, shall they give imitations of horses neighing and bulls bellowing, or of roaring rivers and sounding seas, and claps of thunder, or of any such phenomena?

Adeimantus:: Nay, we have forbidden them either to be mad themselves, or to liken themselves to madmen.

Socrates:: If then I understand what you mean, there is a certain kind of style in narration which an honorable and accomplished man will adopt, whenever he is called upon to narrate anything; and another kind, unlike the former, to which a man who by nature and education is of the opposite character, will on such occasions always adhere.

Adeimantus:: Pray what are the two kinds?

Socrates:: The former, or the man of well-regulated character, when he comes, in telling a story, to a speech or action of a good man, will, I think, like to report it as if he were himself the subject of the narrative, and will not be ashamed of this kind of imitation, preferring to imitate the good man when his conduct is steady and sensible, and doing so less frequently and faithfully when he has been thrown off his balance by sickness or love, or it may be by intoxication or some other misfortune; but when he comes to a character that is unworthy of him, instead of being willing seriously to liken himself to his inferior, except perhaps for a short time, when the man is performing a good action, he will be ashamed to do it, partly because he has had no practice in imitating such characters, and partly, because in his deliberate contempt for them he disdains to mould and cast himself after the models of baser men, unless it be for mere pastime.

Adeimantus:: So one would expect.

Socrates:: Then will he not use that style of narration which we described a little while since by referring to the poems of Homer, so that his style will partake both of imitation and of ordinary narration, the former however making but a small part of a long discourse? Or am I quite wrong?

Adeimantus:: Nay, you describe accurately what must be the model of such a speaker.

Socrates:: Then again, the man who is not of this character, the more contemptible he is, will be the more inclined to omit nothing in his narration, and to think nothing too low for him, so that he will attempt, seriously and in the presence of many hearers, to imitate everything without exception, even the phenomena we mentioned just now, claps of thunder and the noise of wind and of hail, and of wheels and pulleys, and the sounds of trumpets and flutes and pipes and all manner of instruments; nay, even the barking of dogs, the bleating of sheep, and the notes of birds; and his style will either consist wholly of the imitation of sounds and forms, or will comprise but a small modicum of narration.

Adeimantus:: This must also inevitably be the case.

Socrates:: These then are the two kinds of style which I meant.

Adeimantus:: True, there are two such styles.

Socrates:: Do you see then that the transitions which occur in one of the two are trifling; and if you can adapt a suitable harmony and rhythm to the style, it is nearly possible for correct recitation to proceed without change of style and in one harmony, the transitions being inconsiderable, and also in a similarly unchanging rhythm?

Adeimantus:: That is precisely the case.

Socrates:: Well, and does not the other kind require, on the contrary, all sorts of harmonies and rhythms, if in its turn it is to be appropriately recited, owing to the infinite variety of its transitions?

Adeimantus:: Most decidedly it does.

Socrates:: Then do all poets and all who narrate anything fall into one or other of these two types of style, or else into one which is formed by blending these two together?

Adeimantus:: They must.

Socrates:: What shall we do then? Shall we admit all the three types into our state, or only one of them, that is to say, either the composite type, or else one or other of the uncompounded?

Adeimantus:: If my judgment is to prevail, we shall admit only the pure and simple type which imitates the virtuous man.

Socrates:: Nevertheless, Adeimantus, there is an attraction about the composite type; while by far the most attractive of all, to children and the attendants of children and to the vulgar mass, is the opposite of that which you prefer.

Adeimantus:: It is true.

Socrates:: But perhaps you will say that it is not in harmony with the genius of our commonwealth, because with us there is no twofold or manifold man, since every one has one single occupation.

Adeimantus:: You are quite right; it would not be in harmony.

Socrates:: And is not this the reason why in a state like ours, and in no other, we shall find the shoemaker a shoemaker, and not a pilot in addition, and the husbandman a husbandman, and not a juryman in addition, and the soldier a soldier, and not a tradesman in addition; and so on throughout?

Adeimantus:: True.

Socrates:: It is probable then, that if a man should arrive in our city, so clever as to be able to assume any character and imitate any object, and should propose to make a public display of his talents and his productions, we shall pay him reverence as a sacred, admirable, and charming personage, but we shall tell him that in our state there is no one like him, and that our law excludes such characters, and we shall send him away to another city after pouring perfumed oil upon his head, and crowning him with woolen fillets; but for ourselves, we shall employ, for the sake of our real good, that more austere and less fascinating poet and legend-writer, who will imitate for us the style of the virtuous man, and will cast his narratives in those moulds which we prescribed at the outset, when we were engaged with the training of our soldiers.

Adeimantus:: We shall certainly do so, if it be in our power.

Socrates:: Now then, my dear friend, it would seem that we have completely done with that branch of music which relates to fabulous and other narratives; for we have described both what is to be said, and how it is to be said.

Adeimantus:: I think so too.

Socrates:: Then our next subject, is that of melody and songs, is it not?

Adeimantus:: Clearly it is.

Socrates:: Then can it be difficult now for any one to discover what we ought to say about them and their proper character, if we are to be consistent with our previous conclusions?

Here Glaucon smiled, and said;

Glaucon:: Then I am afraid that I, Socrates, do not come under the term any one; that is, I cannot this moment come to a satisfactory conclusion as to what kinds we must sanction, though I have my suspicions.

Socrates:: I presume, at all events, you feel quite able to affirm so much as this, that a song consists of three parts, the words, the harmony, and the rhythm.

Glaucon:: Yes, I can affirm that.

Socrates:: Then I presume that between the words of a song and words not set to music there is no difference, so far as concerns the propriety of their being composed in accordance with the types which we lately appointed, and in the same manner.

Glaucon:: True.

Socrates:: And you will grant that the harmony and the rhythm ought to follow the words.

Glaucon:: Undoubtedly.

Socrates:: But we said, you know, that in the case of words we did not require dirges and complaints.

Glaucon:: No, we do not.

Socrates:: Which then are the plaintive harmonies? tell me, for you are musical.

Glaucon:: Mixed Lydian and Hyperlydian, and such as are like these.

Socrates:: These then must be discarded; for they are useless even to women that are to be virtuously given, not to say to men.

Glaucon:: Quite so.

Socrates:: And you will grant that drunkenness, effeminacy, and idleness are most unbecoming things in guardians.

Glaucon:: Undoubtedly they are.

Socrates:: Which of the harmonies then are effeminate and convivial?

Glaucon:: The Ionian and the Lydian, which are called lax.

Socrates:: Will you employ these then, my friend, in the training of men of war?

Glaucon:: By no means; and if I mistake not, you have only the Dorian and the Phrygian left you.

Socrates:: I do not know the harmonies myself; only see you leave me that particular harmony which will suitably represent the tones and accents of a brave man engaged in a feat of arms, or in any violent operation, who, if he fails of success, or encounters wounds and death, or falls into any other calamity, in all such contingencies with unflinching endurance parries the blows of fortune; leave me also another harmony, expressive of the feelings of one who is engaged in an occupation not violent, but peaceful and unconstrained; it may be, using persuasion and entreaty, addressing either a prayer to a god, or instruction and advice to a man; or, on the other hand, lending himself to the prayers or advice or persuasion of another, and after this succeeding to his wish; and not behaving arrogantly, but acting in all these circumstances with soberness and moderation, and in the same spirit acquiescing in every result. Leave me these two harmonies, the one violent, the other tranquil, such as shall best imitate the tones of men in adversity and in prosperity, in a temperate and in a courageous mood.

Glaucon:: Well, you are recommending me to leave precisely those which I just mentioned.

Socrates:: Then we shall not require for our songs and instrumental accompaniments a variety of strings, or an instrument embracing all harmonies.

Glaucon:: I believe not.

Socrates:: Then we shall not maintain the makers of harps or dulcimers, or any instrument that has many strings and serves for many harmonies.

Glaucon:: Apparently not.

Socrates:: But will you admit into your city flute-makers and flute-players? or am I right in saying that the flute has more strings than any other instrument, and that the panharmonium itself is only an imitation of the flute?

Glaucon:: Manifestly you are right.

Socrates:: Then you have the lyre and the guitar remaining, which will be of service in the town; while in the country the herdsmen will have some kind of pipe.

Glaucon:: So at least the argument indicates to us.

Socrates:: Surely we are guilty of no innovation, my friend, in preferring Apollo and Apollos instruments to Marsyas and his instruments.

Glaucon:: No, I really think we are not.

Socrates:: Well, I protest, we have been unconsciously purging the city, which we said just now was in too Luxurious a condition.

Glaucon:: And we have done wisely.

Socrates:: Come then, let us finish our purgation. Next after the harmonies will follow our law of rhythms, to the effect that we must not aim at a variety of them, or study all movements indiscriminately, but observe what are the natural rhythms of a well-regulated and manly life, and when we have discovered these we must compel the foot and the music to suit themselves to the sense of such a life, and not the sense to suit itself to the foot and the music. But what these rhythms may be, it is your business to explain, as you did the harmonies.

Glaucon:: Nay, but in good faith, I cannot tell. I certainly could say, from what I have observed, that there are three principal kinds into which all movements may be analyzed, as in the case of sounds there are four kinds into which all harmonies may be resolved; but which kinds of rhythm express which kinds of life, I cannot say.

Socrates:: Well, we will call in Damon to our counsels upon the question, what movements are akin to meanness and insolence, or to madness and other vices, and what rhythms are to be left as expressive of the opposite qualities. But I fancy that I have heard him indistinctly alluding to a certain complex warlike rhythm, and another that was daclylic, and a third heroic, arranging them I know not how, and showing that the rise and fall of each foot balance one another, by resolving them into short and long syllables; and he gave the name iambus to a certain foot, if I am not wrong, and trochee to another, affixing to them long and short marks. And in some of these, I think, he would blame or praise the march of the foot no less than the rhythm, or perhaps the two taken together; for I cannot speak positively. But let these questions, as I said before, be referred to Damon; for to settle them would require no short discussion; or do you think differently?

Glaucon:: No, indeed I do not.

Socrates:: But this point at least you can settle, that grace and awkwardness accompany a good or a bad rhythm?

Glaucon:: Of course they do.

Socrates:: And good and bad rhythm are, by a process of assimilation, results of a good style and its opposite respectively; and the same may be said of good and bad harmony, that is to say, if rhythm and harmony are to suit themselves to the words, as was asserted just now, and not the words to them.

Glaucon:: No doubt they must suit themselves to the words.

Socrates:: But what do you say of the style and the words? are they not determined by the moral disposition of the soul?

Glaucon:: Undoubtedly they are.

Socrates:: And is all the rest determined by the style?

Glaucon:: Yes.

Socrates:: Then good language and good harmony and grace and good rhythm all depend upon a good nature, by which I do not mean that silliness which by courtesy we call Good-nature, but a mind that is really well and nobly constituted in its moral character.

Glaucon:: Precisely so.

Socrates:: Then must not our young men on all occasions pursue these qualities, if we intend them to perform their proper work?

Glaucon:: Yes, they must.

Socrates:: And such qualities, I presume, enter largely into painting and all similar workmanship, into weaving and embroidery, into architecture, as well as the whole manufacture of utensils in general; nay, into the constitution of living bodies, and of all plants; for in all these things gracefulness or ungracefulness finds place. And the absence of grace, and rhythm, and harmony, is closely allied to an evil style, and an evil character; whereas their presence is allied to, and expressive of, the opposite character, which is brave and sober-minded.

Glaucon:: You are entirely right.

Socrates:: This being the case, ought we to confine ourselves to superintending our poets, and compelling them to impress on their productions the likeness of a good moral character, on pain of not composing among us; or ought we to extend our superintendence to the professors of every other craft as well, and forbid them to impress those signs of an evil nature, of dissoluteness, of meanness, and of ungracefulness, either on the likenesses of living creatures, or on buildings, or any other work of their hands; altogether interdicting such as cannot do otherwise from working in our city, that our guardians may not be reared amongst images of vice, as upon unwholesome pastures, culling much every day by little and little from many places, and feeding upon it, until they insensibly accumulate a large mass of evil in their inmost souls? Ought we not, on the contrary, to seek out artists of another stamp, who by the power of genius can trace out the nature of the fair and the graceful, that our young men, dwelling as it were in a healthful region, may drink in good from every quarter, whence any emanation from noble works may strike upon their eye or their ear, like a gale wafting health from salubrious lands, and win them imperceptibly from their earliest childhood into resemblance, love, and harmony with the true beauty of reason?

Glaucon:: Such a nurture, would be by far the best.

Socrates:: Is it then, Glaucon, on these accounts that we attach such supreme importance to a musical education, because rhythm and harmony sink most deeply into the recesses of the soul, and take most powerful hold of it, bringing gracefulness in their train, and making a man graceful if he be rightly nurtured, but if not, the reverse? and also because he that has been duly nurtured therein will have the keenest eye for defects, whether in the failures of art, or the misgrowths of nature; and feeling a most just disdain for them, will commend beautiful objects, and gladly receive them into his soul, and feed upon them, and grow to be noble and good; whereas he will rightly censure and hate all repulsive objects, even in his childhood, before he is able to be reasoned with; and when reason comes, he will welcome her most cordially who can recognize her by the instinct of relationship, and because he has been thus nurtured?

Glaucon:: I have no doubt, that such are the reasons for a musical education.

Socrates:: You know, that in learning to read we were considered tolerably perfect, as soon as we could be sure of recognizing the few letters there are, scattered about in all existing words, and that we never treated them with disrespect in either a small word or a great, as if it did not signify to notice them, but were anxious to distinguish them everywhere, believing that we should be no scholars till we were thus qualified.

Glaucon:: True.

Socrates:: Is it not also true that we shall not know the images of letters, as reflected either in still water or in a mirror, until we know the letters themselves, because the knowledge of both the reflections and the originals belongs to the same art and study?

Glaucon:: It is perfectly true.

Socrates:: Tell me then, I pray you, to pass from my illustration to the things illustrated, shall we in like manner never become truly musical, neither ourselves, nor the guardians whom we say we are to instruct, until we know the essential forms Of temperance and courage and liberality and munificence, and all that are akin to these, and their opposites also, wherever they are scattered about, and discern them wherever they are to be found, themselves and their images, never slighting them either in small things or in great, but believing the knowledge of the forms and of their images to belong to the same art and study?

Glaucon:: It must inevitably be so.

Socrates:: Surely, then, to him who has an eye to see, there can be no fairer spectacle than that of a man who combines the possession of moral beauty in his soul with outward beauty of form, corresponding and harmonizing with the former, because the same great pattern enters into both. There can be none so fair. And you will grant that what is fairest is loveliest?

Glaucon:: Undoubtedly it is.

Socrates:: Then the truly musical person will love those who combine most perfectly moral and physical beauty, but will not love any one in whom there is dissonance.

Glaucon:: No, not if there be any defect in the soul; but if it is only a bodily blemish, he may so bear with it as to be willing to regard it with complacency.

Socrates:: I understand, that you have now, or have had, a favorite of this kind; so I give way. But tell me this; has pleasure in excess any fellowship with temperance?

Glaucon:: How can it have, when it unsettles the mind no less than pain?

Socrates:: Has it any with virtue generally?

Glaucon:: Certainly not.

Socrates:: Well; has it anything in common with wantonness and licentiousness?

Glaucon:: Most assuredly it has.

Socrates:: Can you mention any pleasure that is greater and more violent than that which accompanies the indulgence of the passion of love?

Glaucon:: I cannot; nor yet one that is more akin to madness.

Socrates:: But is it not the nature of legitimate love to desire an orderly and beautiful object in a sober and harmonious temper?

Glaucon:: Certainly it is.

Socrates:: Then nothing akin to madness or licentiousness must approach legitimate love?

Glaucon:: It must not.

Socrates:: Then the pleasure in question must not approach it, nor must a lover and his beloved, whose affections are rightly given and returned, have anything to do with it.

Glaucon:: They must not, indeed, Socrates.

Socrates:: Apparently then, in the state we are organizing, you will legislate to this effect, that though a lover may be attached to a favorite, and frequent his society, and embrace him as a son, for his beauties sake, if he can gain his consent; yet in other matters he shall so regulate his intercourse with the person he affect, as that he shall never be suspected of extending his familiarity beyond this, on pain of being censured for vulgarity and want of taste, if he acts otherwise.

Glaucon:: We shall do so.

Socrates:: Do you then think with me that our theory of music is now complete? At all events, it has ended where it ought to end; for music, I imagine, ought to end in the love of the beautiful.

Glaucon:: I agree with you.

Socrates:: Gymnastic will hold the next place to music in the education of our young men.

Glaucon:: Certainly.

Socrates:: No doubt a careful training in gymnastic, as well as in music, ought to begin with their childhood, and go on through all their life. But the following is the true view of the case, in my opinion; see what you think of it. My belief is, not that a good body will by its own excellence, make the soul good; but on the contrary, that a good soul will by its excellence render the body as perfect as it can be; but what is your view?

Glaucon:: The same as yours.

Socrates:: Then if we were first to administer the requisite treatment to the mind, and then to charge it with the task of prescribing details with reference to the body, contenting ourselves with indicating no more than the general principles, in order to avoid prolixity, should we be doing right?

Glaucon:: Quite so.

Socrates:: We have already said that the persons in question must refrain from drunkenness; for a guardian is the last person in the world, I should think, to be allowed to get drunk, and not know where he is.

Glaucon:: Truly it would be ridiculous for a guardian to require guard.

Socrates:: But about eating; our men are combatants in a most important arena, are they not?

Glaucon:: They are.

Socrates:: Then will the habit of body which is cultivated by the trained fighters of the palaestra be suitable to such persons?

Glaucon:: Perhaps it will.

Socrates:: Well, but this is a sleepy kind of regimen, and produces a precarious state of health. For do you not observe that men in the regular training sleep their life away, and if they depart only slightly from the prescribed diet, are attacked by serious maladies in their worst form?

Glaucon:: I do.

Socrates:: Then a better conceived regimen is required for our athletes of war, who must be wakeful like watch-dogs, and possess the utmost quickness both of eye and ear, and who are so exposed, when on service, to variations in the water they drink and the rest of their food, and to vicissitudes of sultry heats and wintry storms, that it will not do for them to be of precarious health.

Glaucon:: I believe you are right.

Socrates:: Then will the best gymnastic be sister to the music which we described a little while ago?

Glaucon:: How do you mean?

Socrates:: It will, I imagine, be a simple moderate system, especially that assigned to our fighting men.

Glaucon:: What will it be like?

Socrates:: On these points we may take a lesson even from Homer. You know that at the repasts of his heroes, when they are in the field, he never sets fish before them, although they are upon the shore of the Hellespont, nor yet boiled meat, but only roast, which soldiers could of course procure most readily; for anywhere, one may say, there is less difficulty in using mere fire than in carrying about pots and pans.

Glaucon:: Certainly.

Socrates:: Neither has Homer, if I remember right, ever said a word about sauces. However, this is as well known, I believe, to all that are in training, as to Homer, that a man who desires to be in good condition must abstain from all such indulgences; is it not?

Glaucon:: They do know it, and are right in abstaining from them.

Socrates:: Then apparently, my good friend, you do not approve of a Syracusan table, and of a Sicilian variety of dishes, if you hold such abstinence to be right.

Glaucon:: I think I do not.

Socrates:: Then you also disapprove of a taste for the damsels of Corinth, in men who are to be in good bodily condition.

Glaucon:: Most assuredly I do.

Socrates:: Then do you also condemn those celebrated delicacies, our Athenian confectionery?

Glaucon:: Of course I do.

Socrates:: In fact, it would not be amiss, I imagine, to compare this whole system of feeding and living to that kind of music and singing which is adapted to the panharmonium, and composed in every variety of rhythm.

Glaucon:: Undoubtedly it would be a just comparison.

Socrates:: Is it not true, then, that as in music variety begat dissoluteness in the soul, so here it begets disease in the body, while simplicity in gymnastic is as productive of health, as in music it was productive of temperance?

Glaucon:: Most true.

Socrates:: But when dissoluteness and diseases abound in a city, are not law-courts and surgeries opened in abundance, and do not law and physic begin to hold their heads high, when numbers even of well-born persons devote themselves with eagerness to these professions?

Glaucon:: What else can we expect?

Socrates:: But where can you find a more signal proof that a low and vicious education prevails in a state, than in the fact that first-rate physicians and jurymen are in request, not merely among base-born mechanics, but even among those who lay claim to the birth and breeding of gentlemen? Does it not seem to you a scandalous thing, and a strong proof of defective education, to be obliged to import justice from others, in the character of lords and judges, in consequence of the scanty supply at home?

Glaucon:: Nothing can be more scandalous.

Socrates:: Do you think it at all less scandalous, when a man not only consumes the greater part of his life in courts of law as plaintiff or defendant, but actually has the vulgarity to plume himself upon this very fact, boasting of being an adept in crime, and such a master of tricks and turns, of maneuver and evasion, as always to be able to wriggle out of the grasp of justice, and escape from punishment, and that for the sake of worthless trifles, not knowing how much nobler and better it were so to order his life as never to stand in need of a sleepy judge?

Glaucon:: Nay, this is even a greater scandal than the other.

Socrates:: And do you not hold it disgraceful to require medical aid, unless it be for a wound, or an attack of illness incidental to the time of year, to require it, I mean, owing to our laziness, and the life we lead, and to get ourselves so stuffed with humors and wind, like quagmires, as to compel the clever sons of Asclepius to call diseases by such names as flatulence and catarrh.

Glaucon:: To be sure these are very strange and newfangled names for disorders.

Socrates:: Such as did not exist, I imagine, in Asclepius's time. So I infer, because at Troy, when Eurypylus was wounded, his sons did not blame the woman who gave him a draught of Pramnian wine, with a plentiful sprinkling of barley-meal, and with cheese grated over it, which you know would be thought an inflammatory mixture, nor did they rebuke Patroclus who dressed his wounds.

Glaucon:: Certainly, it was a strange potion for a man in his state.

Socrates:: Not if you consider that formerly, till the time of Herodicus, as we are told, the disciples of Asclepius did not employ our present system of medicine, which waits upon diseases as the son of a rich man is waited on by his attendant. But Herodicus, who was a training-master, and fell into bad health, made such a compound of physic and gymnastic, that he first and chiefly worried out himself, and then many others after him.

Glaucon:: How so?

Socrates:: By rendering his death a lingering one. For he followed his disease, which was a mortal one, step by step, and while he was unable, as I imagine, to cure himself, he devoted his whole time to the business of doctoring himself; living continually in torment, if ever he deviated from his usual diet; and thus struggling against death, was brought by his cleverness to old age.

Glaucon:: A noble prize for his art to win him!

Socrates:: It is what one might expect, from a person ignorant that it was not because Asclepius did not know, or had not tried this kind of medical treatment, that he never discovered it to his descendants; but because he was aware that in all well-regulated communities each has a work assigned to him in the state, which he must needs do, and that no one has leisure to spend his life as an invalid in the doctors hands; a fact which we perceive in the case of the laboring population, but which, with ludicrous inconsistency, we fail to detect in the case of those who are reputed rich and happy.

Glaucon:: How is that?

Socrates:: When a carpenter is ill, he expects to receive a draught from his doctor, that will expel the disease by vomiting or purging, or else to get rid of it by cauterizing, or a surgical operation; but if any one were to prescribe to him a long course of diet, and to order bandages for his head, with other treatment to correspond, he would soon tell such a medical adviser that he had no time to be ill, and that it was not worth his while to live in this way, devoting his mind to his malady, and neglecting his proper occupation; and then wishing the physician a good morning, he would enter upon his usual course of life, and either regain his health and live in the performance of his business; or, should his constitution prove unable to bear up, death puts an end to his troubles.

Glaucon:: Yes; and for a man in that station of life this is thought the proper use to make of medical assistance.

Socrates:: Is it because he had a work to do, which, if he failed to perform, it was not worth his while to live?

Glaucon:: Manifestly.

Socrates:: But the rich man, as we say, has no appointed work of such a character, that, if compelled to leave it undone, life is to him not worth having.

Glaucon:: No; it is supposed he has not.

Socrates:: Then you do not listen to Phocylides, when he says;

> that so soon as a man has got whereon to live, then he ought to practice virtue.

Glaucon:: Yes, and before that too, I should think.

Socrates:: Let us have no quarrel with him on this subject; but let us inform ourselves whether the rich have to practice virtue so that, if they do not, life is worthless to them; or, whether valetudinarianism, though an obstacle to mental application in carpentering and the other arts, forms no impediment to the fulfillment of the precept of Phocylides.

Glaucon:: Nay, in very truth, I believe there is no greater impediment to it than that excessive care of the body which extends beyond gymnastic; for it is alike harassing to a man, whether he be engaged in domestic business, or serving in the field, or sitting as a magistrate at home.

Socrates:: But quite the worst of it is, that it is a grievous hindrance to studies of all kinds, and reflection, and inward meditation, being ever apprehensive of some headache, or dizziness, which it accuses philosophy of producing; and therefore in so far as virtue is practiced and proved by intellectual study, it is a sheer obstacle to it; for it makes a man always fancy himself ill, and never lets him rest from the pangs of anxiety about his health.

Glaucon:: Yes, that is the natural effect of it.

Socrates:: Then must we not maintain that Asclepius, knowing all this, revealed the healing art for the benefit of those whose constitutions were naturally sound, and had not been impaired by their habits of life, but who were suffering from some specific complaint, and that he used to expel their disorders by drugs and the use of the knife, without interrupting their customary avocations, that he might not damage the interests of the state; but that where the constitution was thoroughly diseased to the core, he would not attempt to protract a miserable existence by a studied regimen, drawing off from the system, and again pouring into it a little at a time, and suffer his patients to beget children, in all probability as diseased as themselves; thinking medical treatment ill bestowed on one who could not live in his regular round of duties, since such a person is of no use either to himself or to the state?

Glaucon:: You make out Asclepius to have been a profound statesman.

Socrates:: Clearly so; and because he was a man of that description, his sons, as you must have observed, proved themselves brave men in the battle before Troy, and also employed the healing art in the manner I have described. Or have you forgotten that when Menelaus had been wounded by the spear of Pandarus;

> Sucking the blood from the gash, they laid mild simples
> upon it.

But what he was to eat or drink after this, they no more prescribed in his case than that of Eurypylus, knowing that the simples were sufficient to cure men who before receiving the wounds were healthy and regular in their mode of life, even if they happened to drink the next moment a compound of meal, wine, and cheese; but as for the constitutionally diseased and the intemperate, they thought the existence of such a man no gain either to himself or to others, believing that their art was not meant for persons of that sort, and that it would be wrong to attempt their cure, even if they were richer than Midas.

Glaucon:: The sons of Asclepius were, by your account, very shrewd fellows.

Socrates:: And it was meet they should be. And yet the tragedians, and Pindar, dissent from us; and while they assert that Asclepius was the son of Apollo, declare that he was induced by a bribe of gold to raise to life a rich man who was already dead, which was indeed the cause of his being smitten by a thunderbolt. But we, agreeably to our principles, cannot believe both these statements of theirs; on the contrary, we shall maintain, that if he was the son of a god, he was not covetous; if he was covetous, he was not the son of a god.

Glaucon:: In that, we shall be perfectly right. But what say you, Socrates, on this point? ought we not to have good physicians in our city? Now the best physicians, I imagine, will be those who have had the largest practice both among the healthy and among the diseased; just as the best jurors in like manner will be those who have mixed with men of all varieties of character.

Socrates:: Decidedly, I am for having good ones; but do you know whom I consider such?

Glaucon:: I shall if you inform me.

Socrates:: I will try to do so; but your question, I must premise, spoke of two dissimilar things in the same words.

Glaucon:: How so?

Socrates:: Physicians, it is true, would acquire the greatest expertness if from their childhood upwards they not only studied their profession, but also came in contact with the greatest number of the worst cases, and had personal experience of every kind of malady, and were naturally not very healthy. For it is not the physicians body, I imagine, which cures the bodies of others; if it were, it could not-be suffered at any time to be, or to become, diseased; but his mind, which cannot direct any treatment skillfully, if it has become, or always was, depraved.

Glaucon:: You are right.

Socrates:: But a juror, my friend, governs mind by mind; his mind therefore cannot be suffered to be reared from a tender age among vicious minds, and to associate with them,, and to run the whole round of crimes in its own experience, in order to be quick at inferring the guilt of others from its own self-knowledge, as is allowable in the case of bodily disorders; on the contrary, it ought from his early youth to have been free from all experience and taint of evil habits, if it is to be qualified by its own thorough excellence to administer sound justice. And this is the reason why good people, when young, appear to be simple and easy victims to the impositions of bad men, because they have not in their own consciousness examples of like passions with the wicked.

Glaucon:: Yes, they are exceedingly liable to such imposition.

Socrates:: Therefore, to make a good juror a man must not be young, but old; and his knowledge of what injustice is should be acquired late in life, not by observing it as an inmate of his own soul, but by long practice in discerning its baneful nature, as it exists out of himself in the souls of others; in other words, guided by knowledge, not by personal experience.

Glaucon:: Certainly, that would seem to be the noblest style of juror.

Socrates:: Yes, and a good one too, which is the point in question; for he that has a good soul is good. But your smart and suspicious juryman, who has been guilty himself of many crimes, and fancies himself knowing and clever, so long as he has to deal with men like himself, betrays astonishing wariness, thanks to those inward examples which he has ever in sight; but when he comes into communication with men of years and virtue, he shows himself to be no better than a fool, with his mistimed suspicions, and his ignorance of a healthy character, which are the consequences of his not possessing any example of such a phenomenon. But as he falls in oftener with wicked than with good men, he seems both to himself and others to be rather clever than foolish.

Glaucon:: That is most true.

Socrates:: It is not then in a man of this stamp that we must look for our good and wise juror, but in one of the former class. For vice can never know both itself and virtue; but virtue, in a well-instructed nature, will in time acquire a knowledge at once of itself and of vice. The virtuous man therefore, in my opinion, and not the vicious man, will make the wise judge.

Glaucon:: I quite agree with you.

Socrates:: Then will you not establish in your city the two faculties, of medicine and of law, each having the character we have described, to bestow their services on those only of the citizens whose bodily and mental constitutions are sound and good, leaving those that are otherwise in body to die, and actually putting to death those who are naturally corrupt and incurable in soul?

Glaucon:: Yes; this has been proved to be the best course both for the patients themselves and for the state.

Socrates:: As for the young men, it is clear that they will be cautious how they incur any need of law, so long as they use that simple kind of music which, as we stated, generates sobriety in the soul.

Glaucon:: Undoubtedly.

Socrates:: If then the accomplished student of music follow this same track in the pursuit of gymnastic, may he not, if he pleases, so far succeed as to be independent of the medical art except in extreme cases?

Glaucon:: I think he may.

Socrates:: Moreover, in the exercises and toils which he imposes upon himself, his object will be rather to stimulate the spirited element of his nature than to gain strength; and he will not, like athletes in general, take the prescribed food and exercise merely for the sake of muscular power.

Glaucon:: You are quite right.

Socrates:: Then, Glaucon, am I also right in saying that those who establish a system of education in music and gymnastic, are not actuated by the purpose which some persons attribute to them, of applying the one to the improvement of the soul, the other to that of the body?

Glaucon:: Why what can be their object, if this is not?

Socrates:: Probably they introduce both mainly for the sake of the soul.

Glaucon:: How so?

Socrates:: Do you not observe the characteristics which distinguish the minds of those who have been familiar with gymnastic all their lives, without any acquaintance with music? and again, of those whose condition is the reverse of this?

Glaucon:: To what do you allude?

Socrates:: To the roughness and hardness which mark the one, and the softness and gentleness which mark the other.

Glaucon:: O yes. Those who have devoted themselves to gymnastic exclusively, become ruder than they ought to be; while those who have devoted themselves to music are made softer than is good for them.

Socrates:: We know, however, that rudeness is the natural product of the spirited element, which, if rightly nurtured, will be brave; but, if strained to an improper pitch, will in all probability become harsh and disagreeable.

Glaucon:: I think so.

Socrates:: Well, and will not gentleness be a property of the philosophic temperament? and a property which, if too much indulged, will produce in it an excess of softness; but which, rightly nurtured, will render it gentle and orderly?

Glaucon:: True.

Socrates:: But we say that our guardians ought to combine both these temperaments.

Glaucon:: They ought.

Socrates:: Then must they not be mutually harmonized?

Glaucon:: Unquestionably.

Socrates:: And where this harmony exists, the soul is both temperate and brave?

Glaucon:: Certainly.

Socrates:: And where it is wanting, the soul is cowardly and coarse?

Glaucon:: Very much so.

Socrates:: Accordingly, when a man surrenders himself to music and flute-playing, and suffers his soul to be flooded through the funnel of his ears with those sweet and soft and plaintive harmonies of which we just spoke, and spends his whole life in warbling and delighting himself with song, such a man at the outset tempers like steel whatever portion of the spirited element he possesses, and makes it useful instead of brittle and useless; if, however, he relaxes not in his devotion, but yields to the enchantment, he then begins to liquefy and waste away, till the spirit is melted out of him, and the sinews of his soul are extirpated, and he is made a feeble wielder of the lance.

Glaucon:: Exactly so.

Socrates:: And if he has received a spiritless soul originally from the hand of nature, this result is soon brought to pass; but if the contrary, he so enfeebles his spirit as to render it easily swayed, quickly kindled and quickly slaked by trifling causes. Consequently, such persons, instead of being spirited, are made choleric and irritable, and the prey of morose tempers.

Glaucon:: Precisely so.

Socrates:: Well, but if, on the other hand, he devotes himself to hard labor in gymnastic, and indulges to his hearts content in good living, while he keeps aloof from music and philosophy, does not the excellent condition of his body at first inspire him with self-confidence and spirit, and make him surpass himself in courage?

Glaucon:: Yes, that it does.

Socrates:: But what is the consequence of thus engaging in this one occupation, to the total exclusion of the Muses influence? Even supposing him to have possessed at first some taste for learning, yet if that taste is never fed with knowledge or inquiry, and takes no part in rational discourse or any intellectual pursuits, does it not become weak and deaf and blind, from the want of stimulus and nourishment, and because its senses are never thoroughly purged?

Glaucon:: Just so.

Socrates:: Consequently such a man becomes a hater of discussion, I imagine, and an illiterate person; and abandoning the use of rational persuasion, he settles all his business like a wild beast by violence and roughness, and lives in ignorance and awkwardness, with no symmetry and no grace.

Glaucon:: That is exactly the case.

Socrates:: To correct; then, as it would appear, these two exclusive temperaments, the spirited and the philosophic, some god, as I for my part shall maintain, has given to men two arts, music and gymnastic, not for soul and body distinctively, except in a secondary way, but expressly for those two temperaments, in order that by the increase or relaxation of the tension to the due pitch they may be brought into mutual accord.

Glaucon:: So it would appear.

Socrates:: Then whosoever can best blend gymnastic with music, and bring both to bear on the mind most judiciously, such a man we shall justly call perfect in music, and a master of true harmony, much rather than the artist who tunes the strings of the lyre.

Glaucon:: Yes, and with good reason, Socrates.

Socrates:: Then will not some such overseer be always needed in our state, Glaucon, if our commonwealth is designed to endure?

Glaucon:: Yes, indeed, such an officer will be quite indispensable.

Socrates:: Such then will be the outlines of our system of education and training. For why should one enter into details respecting the dances which will be in vogue in a state like ours, the hunting and field-exercises, or the sports of the gymnasium and the race-course? It is tolerably clear that these must correspond with the foregoing outlines, and there will be no further difficulty in discovering them.

Glaucon:: Perhaps not.

Socrates:: Very good; then what will be the next point for us to settle? is it not this, which of the persons so educated are to be the rulers, and which the subjects?

Glaucon:: Unquestionably it is.

Socrates:: There can be no doubt that the rulers must be the elderly men, and the subjects the younger.

Glaucon:: True.

Socrates:: And also that the rulers must be the best men among them.

Glaucon:: True again.

Socrates:: Are not the best agriculturists those who are most agricultural?

Glaucon:: Yes.

Socrates:: In the present case, as we require the best guardians, shall we not find them in those who are most capable of guarding a state?

Glaucon:: Yes.

Socrates:: Then for this purpose must they not be intelligent and powerful, and, moreover, careful of the state?

Glaucon:: They must.

Socrates:: And a man will be most careful of that which he loves?

Glaucon:: Of course.

Socrates:: And assuredly he will love that most whose interests he regards as identical with his own, and in whose prosperity or adversity he believes his own fortunes to be involved.

Glaucon:: Just so.

Socrates:: Then we must select from the whole body of guardians those individuals who appear to us, after due observation, to be remarkable above others for the zeal with which, through their whole life, they have done what they have thought advantageous to the state, and inflexibly refused to do what they thought the reverse.

Glaucon:: Yes, these are the suitable persons.

Socrates:: Then I think we must watch them at every stage of their life, to see if they are tenacious guardians of this conviction, and never bewitched or forced into a forgetful abandonment of the belief that they ought to do what is best for the state.

Glaucon:: What is this abandonment you speak of?

Socrates:: I will tell you. Opinions appear to me to quit the mind either by a voluntary or involuntary act; a false opinion by a voluntary act, when the holder learns his error; but a true opinion invariably by an involuntary act.

Glaucon:: I understand the notion of a voluntary abandonment, but I have yet to learn the meaning of the involuntary.

Socrates:: Well, then, do you not agree with me, that men are deprived of good things against their will, of evil things with their will? And is it not an evil thing to be the victim of a lie, and a good thing to possess the truth? And do you not think that a man is in possession of the truth when his opinions represent things as they are?

Glaucon:: Yes, you are right; and I believe that men are deprived of a true opinion against their will.

Socrates:: Then, when this happens, must it not be owing either to theft, or witchcraft, or violence?

Glaucon:: I do not even now understand.

Socrates:: I am afraid I use language as obscure as tragedy. By those who have a theft practiced on them, I mean such as are argued out of, or forget, their belief, because, in the one case argument, and in the other, time, privily carries off their opinion. Now, I fancy, you understand?

Glaucon:: Yes.

Socrates:: By those who have violence done to them I mean all whose opinions are changed by pain or grief.

Glaucon:: That too I understand, and I think you are right.

Socrates:: And those who are bewitched, you would yourself, I believe, assert to be those who change their opinion either through the seductions of pleasure or under the pressure of fear.

Glaucon:: Yes; everything that deceives may be said to bewitch.

Socrates:: Then, as I said just now, we must inquire who are the best guardians of this inward conviction, that they must always do that which they think best for the state. We must watch them, I say, from their earliest childhood, giving them actions to perform in which people would be most likely to forget, or be beguiled of, such a belief, and then we must select those whose memory is tenacious, and who are proof against deceit, and exclude the rest. Must we not?

Glaucon:: Yes.

Socrates:: We must also appoint them labors, and vexations, and contests, in which we must watch for the same symptoms of character.

Glaucon:: Rightly so.

Socrates:: And, as a third kind of test, we must try them with witchcraft, and observe their behavior; and, just as young horses are taken into the presence of noise and tumult, to see whether they are timid, so must we bring our men, while still young, into the midst of objects of terror, and presently transfer them to scenes of pleasure, trying them much more thoroughly than gold is tried in the fire, to find whether they show themselves under all circumstances inaccessible to witchcraft, and seemly in their bearing, good guardians of themselves and of the music which they have been taught, approving themselves on every occasion true to the laws of rhythm and harmony, and acting in such a way as would render them most useful to themselves and the state. And whoever, from time to time, after being put to the proof, as a child, as a youth, and as a man, comes forth uninjured from the trial, must be appointed a ruler and guardian of the city, and must receive honors in life and in death, and be admitted to the highest privileges, in the way of funeral rites and other tributes to his memory. And all who are the reverse of this character must be rejected. Such appears to me, Glaucon, to be the true method of selecting and appointing our rulers and guardians, described simply in outline, without accuracy in detail.

Glaucon:: I am pretty much of your mind.

Socrates:: Is it then really most correct to give to these the name of perfect guardians, as being qualified to take care that their friends at home shall not wish, and their enemies abroad not be able, to do any mischief; and to call the young men, whom up to this time we entitled guardians, auxiliaries, whose office it is to support the resolutions of the rulers?

Glaucon:: I quite think so.

Socrates:: This being the case, can we contrive any ingenious mode of bringing into play one of those seasonable falsehoods of which we lately spoke, so that, propounding a single spirited fiction, we may bring even the rulers themselves, if possible, to believe it, or if not them, the rest of the city?

Glaucon:: What kind of fiction?

Socrates:: Nothing new, but a Phoenician story, which has been realized often before now, as the poets tell and mankind believe, but which in our time has not been, nor, so far as I know, is likely to be realized, and for which it would require large powers of persuasion to obtain credit.

Glaucon:: You seem very reluctant to tell it.

Socrates:: You will think my reluctance very natural when I have told it.

Glaucon:: Speak out boldly and without fear.

Socrates:: Well I will; and yet I hardly know where I shall find the courage or where the words to express myself. I shall try, I say, to persuade first the rulers themselves and the military class, and after them the rest of the city, that when we were training and instructing them, they only fancied, as in dreams, that all this was happening to them and about them, while in reality they were in course of formation and training in the bowels of the earth, where they themselves, their armor, and the rest of their equipments were manufactured, and from whence, as soon as they were thoroughly elaborated, the earth, their real mother, sent them up to its surface; and, consequently, that they ought now to take thought for the land in which they dwell, as their mother and nurse, and repel all attacks upon it, and to feel towards their fellow-citizens as brother children of the soil.

Glaucon:: It was not without reason that you were so long ashamed to tell us your fiction.

Socrates:: I dare say; nevertheless, hear the rest of the story. We shall tell our people, in mythical language; You are doubtless all brethren, as many as inhabit the city, but the God who created you mixed gold in the composition of such of you as are qualified to rule, which gives them the highest value; while in the auxiliaries he made silver an ingredient, assigning iron and copper to the cultivators of the soil and the other workmen. Therefore, inasmuch as you are all related to one another, although your children will generally resemble their parents, yet sometimes a golden parent will produce a silver child, and a silver parent a golden child, and so on, each producing any. The rulers therefore have received this in charge first and above all from the gods, to observe nothing more closely, in their character of vigilant guardians, than the children that are born, to see which of these metals enters into the composition of their souls; and if a child be born in their class with an alloy of copper or iron, they are to have no manner of pity upon it, but giving it the value that belongs to its nature, they are to thrust it away into the class of artisans or agriculturists; and if again among these a child be born with any admixture of gold or silver, when they have assayed it, they are to raise it either to the class of guardians, or to that of auxiliaries; because there is an oracle which declares that the city shall then perish when it is guarded by iron or copper. Can you suggest any device by which we can make them believe this fiction?

Glaucon:: None at all by which we could persuade the men with whom we begin our new state; but I think their sons, and the next generation, and all subsequent generations, might be taught to believe it.

Socrates:: Well, even this might have a good effect towards making them care more for the city and for one another; for I think I understand what you mean. However, we will leave this fiction to its fate; but for our part, when we have armed these children of the soil, let us lead them forward under the command of their officers, till they arrive at the city; then let them look around them to discover the most eligible position for their camp, from which they may best coerce the inhabitants, if there be any disposition to refuse obedience to the laws, and repel foreigners, if an enemy should come down like a wolf on the fold. And when they have pitched their camp, and offered sacrifices to the proper divinities, let them arrange their sleeping-places. Is all this right?

Glaucon:: It is.

Socrates:: And these sleeping-places must be such as will keep out the weather both in winter and summer, must they not?

Glaucon:: Certainly; you mean dwelling-houses, if I am not mistaken.

Socrates:: I do; but the dwelling-houses of soldiers, not of moneyed men.

Glaucon:: What is the difference which you imply?

Socrates:: I will endeavor to explain it to you. I presume it would be a most monstrous and scandalous proceeding in shepherds to keep for the protection of their flocks such a breed of dogs, or so to treat them, that owing to unruly tempers, or hunger, or any bad propensity whatever, the dogs themselves should begin to worry the sheep, and behave more like wolves than dogs.

Glaucon:: It would be monstrous, undoubtedly.

Socrates:: Then must we not take every precaution that our auxiliary class, being stronger than the other citizens, may not act towards them in a similar fashion, and so resemble savage monsters rather than friendly allies?

Glaucon:: We must.

Socrates:: And will they not be furnished with the best of safeguards, if they are really well educated?

Glaucon:: Nay, but they are that already.

Socrates:: It is not worth while now to insist upon that point, my dear Glaucon; but it is most necessary to maintain what we said this minute, that they must have the right education, whatever it may be, if they are to have what will be most effectual in rendering them gentle to one another, and to those whom they guard.

Glaucon:: True.

Socrates:: But besides this education a rational man would say that their dwellings and their circumstances generally should be arranged on such a scale as shall neither prevent them from being perfect guardians, nor provoke them to do mischief to the other citizens.

Glaucon:: He will say so with truth.

Socrates:: Consider then, whether the following plan is the right one for their lives and their dwellings, if they are to be of the character I have described. In the first place, no one should possess any private property, if it can possibly be avoided; secondly, no one should have a dwelling or storehouse into which all who please may not enter; whatever necessaries are required by temperate and courageous men, who are trained to war, they should receive by regular appointment from their fellow-citizens, as wages for their services, and the amount should be such as to leave neither a surplus on the years consumption nor a deficit; and they should attend common messes and live together as men do in a camp; as for gold and silver, we must tell them that they are in perpetual possession of a divine species of the precious metals placed in their souls by the gods themselves, and therefore have no need of the earthly ore; that in fact it would be profanation to pollute their spiritual riches by mixing them with the possession of mortal gold, because the worlds coinage has been the cause of countless impieties, whereas theirs is undefiled; therefore to them, as distinguished from the rest of the people, it is forbidden to handle or touch gold and silver, or enter under the same roof with them, or to wear them on their dresses, or to drink out of the precious metals. If they follow these rules, they will be safe themselves and the saviors of the city; but whenever they come to possess lands, and houses, and money of their own, they will be householders and cultivators instead of guardians, and will become hostile masters of their fellow-citizens rather than their allies; and so they will spend their whole lives, hating and hated, plotting and plotted against, standing in more frequent and intense alarm of their enemies at home than of their enemies abroad; by which time they and the rest of the city will be running on the very brink of ruin. On all these accounts, shall we say that the foregoing is the right arrangement of the houses and other concerns of our guardians, and shall we legislate accordingly; or not?

Glaucon:: Yes, by all means.

## Book 4.

Socrates:: Here Adeimantus interposed, inquiring;

Adeimantus:: Then what defense will you make, Socrates, if any one protests that you are not making the men of this class particularly happy? when it is their own fault, too, if they are not; for the city really belongs to them, and yet they derive no advantage from it, as others do, who own lands and build fine large houses, and furnish them in corresponding style, and perform private sacrifices to the gods, and entertain their friends, and, in fact, as you said just now, possess gold and silver, and everything that is usually considered necessary to happiness; nay, they appear to be posted in the city, as it might be said, precisely like mercenary troops, wholly occupied in garrison duties.

Socrates:: Yes, and for this they are only fed, and do not receive pay in addition to their rations, like the rest, so that it will be out of their power to take any journeys on their own account, should they wish to do so, or to make presents to mistresses, or to lay out money in the gratification of any other desire, after the plan of those who are considered happy. These and many similar counts you leave out of the indictment.

Adeimantus:: Well, let us suppose these to be included in the charge. What defense then shall we make, say you?

Socrates:: Yes. By travelling the same road as before, we shall find, I think, what to say. We shall reply that, though it would not surprise us, if even this class in the given circumstances were very happy, yet that our object in the construction of our state is not to make any one class preeminently happy, but to make the whole state as happy as it can be made. For we thought that in such a state we should be most likely to discover justice, as, on the other hand, in the worst-regulated state we should be most likely to discover injustice, and that after having observed them we might decide the question we have been so long investigating. At present, we believe we are forming the happy state, not by selecting a few of its members and making them happy, but by making the whole so. Presently we shall examine a state of the opposite kind. Now, if some one came up to us while we were painting statues, and blamed us for not putting the most beautiful colors on the most beautiful parts of the body, because the eyes, being the most beautiful part, were not painted purple, but black, we should think it a sufficient defense to reply, Pray, sir, do not suppose that we ought to make the eyes so beautiful as not to look like eyes, nor the other parts in like manner, but observe whether, by giving to every part what properly belongs to it, we make the whole beautiful. In the same way do not, in the present instance, compel us to attach to our guardians such a species of happiness as shall make them anything but guardians. For we are well aware that we might, on the same principle, clothe our cultivators in long robes, and put golden coronets on their heads, and bid them till the land at their pleasure; and that we might stretch our potters at their ease on couches before the fire, to drink and make merry, placing the wheel by their side, with directions to ply their trade just so far as they should feel it agreeable; and that we might dispense this kind of bliss to all the rest, so that the entire city might thus be happy. But give not such advice to us; since, if we comply with your recommendation, the cultivator will be no cultivator, the potter no potter; nor will any of those professions, which make up a state, maintain its proper character. For the other occupations it matters less; for in cobblers, incompetency and degeneracy and pretence without the reality, are not dangerous to a state; but when guardians of the laws and of the state are such in appearance only, and not in reality, you see that they radically destroy the whole state, as, on the other hand, they alone can create public prosperity and happiness. If then, while we aim at making genuine guardians, who shall be as far as possible from doing mischief to the state, the supposed objector makes a class who would be cultivators and as it were jovial feasters at a holiday gathering, rather than citizens of a state, he will be describing something which is not a state. We should examine then whether our object in constituting our guardians should be to secure to them the greatest possible amount of happiness, or whether our duty, as regards happiness, is to see if our state as a whole enjoys it, persuading or compelling these our auxiliaries and guardians to study only how to make themselves the best possible workmen at their own occupation, and treating all the rest in like manner, and thus, while the whole city grows and becomes prosperously organized, permitting each class to partake of as much happiness as the nature of the case allows to it.

Adeimantus:: I think, that what you say is quite right.

Socrates:: I wonder whether you will think the proposition that is sister to the last satisfactory also.

Adeimantus:: What may that be?

Socrates:: Consider whether the other craftsmen are similarly injured and spoiled by these agencies.

Adeimantus:: What agencies do you mean?

Socrates:: Wealth, and poverty.

Adeimantus:: How so?

Socrates:: Thus; Do you think that a potter after he has grown rich will care to attend to his trade any longer?

Adeimantus:: Certainly not.

Socrates:: But he will become more idle and careless than he was before?

Adeimantus:: Yes, much more.

Socrates:: Then does he not become a worse potter?

Adeimantus:: Yes, a much worse potter too.

Socrates:: On the other hand, if he is prevented by poverty from providing himself with tools or any other requisite of his trade, he will produce inferior articles, and his sons or apprentices will not be taught their trade so well.

Adeimantus:: Inevitably.

Socrates:: Then both these conditions, riches and poverty, deteriorate the productions of the artisans, and the artisans themselves.

Adeimantus:: So it appears.

Socrates:: Then apparently we have found some other objects for the vigilance of our guardians, who must take every precaution that they may never evade their watch and steal into the city.

Adeimantus:: What are these?

Socrates:: Wealth, and poverty; because the former produces luxury and idleness and innovation, and the latter, meanness and bad workmanship as well as innovation.

Adeimantus:: Exactly so. But on the other hand, consider, Socrates, how our city will be able to go to war, if it possesses no wealth, especially in the case of its being compelled to take the field against a rich and populous state.

Socrates:: Obviously, against one such state it will be hard for it to carry on war, but against two it will be easier.

Adeimantus:: How so?

Socrates:: In the first place, if they are obliged to fight, will not their antagonists be rich men, while they themselves are trained soldiers?

Adeimantus:: Yes, that is true so far.

Socrates:: What then, Adeimantus? Do you not believe that one pugilist trained in the most perfect manner to his work would find it easy to fight with two rich and fat men, who do not understand boxing?

Adeimantus:: Not with both at once, perhaps.

Socrates:: What not if he were able to give ground till one of his assailants was in advance of the other, and then to rally and attack him, repeating these tallies frequently under a burning sun? Could not such a combatant worst even more than two such antagonists?

Adeimantus:: Indeed, there would be nothing very surprising in it.

Socrates:: And do you not think that the rich are better acquainted, both theoretically and practically, with boxing, than with the art of war?

Adeimantus:: I do.

Socrates:: Then in all probability our trained soldiers will find no difficulty in fighting double or treble their own number.

Adeimantus:: I shall give in to you; for I believe you are right.

Socrates:: But suppose they were to send an embassy to one of the two cities, and to say, what would be true, We make no use of gold and silver, nor is it allowed among us, though it is among you; therefore join your forces with ours, and let the property of the other people be yours; do you think that any persons, after being told this, would choose to wage war against lean and wiry dogs, instead of making common cause with the dogs against fat and tender sheep?

Adeimantus:: I fancy not. But may not the accumulation of the wealth of the other party in one city be fraught with danger to the city which is not wealthy?

Socrates:: I congratulate you, on your idea, that it is proper to describe as a city any that is not the counterpart of that which we were organizing.

Adeimantus:: Why, what would you have?

Socrates:: The others ought to be called by some grander name; for each of them is very many cities, and not a city, as they say in the game. In any case, there are two, hostile one to the other, the city of the poor, and the city of the rich; and each of these contains very many cities; and if you deal with them as one, you will find yourself thoroughly mistaken; but if you treat them as many, and give to one class the property and the power, or even the persons of another, you will always have many allies and few enemies. And so long as your city is governed discreetly on the principles recently laid down, it will be very large; I do not mean that it will enjoy that reputation, but really and truly it will be very large, even if its army consists of no more than a thousand men. For you will not easily find one city as large as that, either among the Greeks or among the barbarians, though you may find many cities which seem to be several times as large. Do you think differently?

Adeimantus:: No, indeed.

Socrates:: This then, will also serve as the best standard for our governors to adopt, in regulating the size of the state, and the amount of land which they should mark off for a state of the due size, leaving the rest alone.

Adeimantus:: What is the standard?

Socrates:: The following I conceive; so long as the city can grow without abandoning its unity, up to that point it may be allowed to grow, but not beyond it.

Adeimantus:: A very good rule;

Socrates:: Then we shall lay this additional injunction upon our guardians, to take every precaution that the city be neither small nor in appearance large, but characterized by sufficiency and unity.

Adeimantus:: A trivial duty, perhaps, to impose upon them.

Socrates:: We will add, another yet more trivial than this, which we touched upon before, when we said that it would be right to send away any inferior child that might be born among the guardians, and place it in another class; and if a child of peculiar excellence were born in the other classes, to place him among the guardians. This was intended to intimate that the other citizens also ought to be set to the work for which nature has respectively qualified them, each to some one work, that so each practicing his single occupation may become not many men, but one, and that thus the whole city may grow to be one city and not many cities.

Adeimantus:: Yes, this is a smaller affair than the former.

Socrates:: Really, my good Adeimantus, these injunctions of ours are not, as one might suppose, a number of arduous tasks, but they will all be inconsiderable, if the guardians diligently observe the one great point, as the saying is, though it should rather be called sufficient than great.

Adeimantus:: What is that?

Socrates:: Education, and rearing. For if by a good education they be made reasonable men, they will readily see through all these questions, as well as others which we pass by for the present, such as the relations between the sexes, marriage, and the procreation of children; in all which things they will see that the proverb ought, as far as possible, to be followed, which says that among friends everything is common property.

Adeimantus:: Yes, that would be the most correct plan.

Socrates:: And indeed, if a state has once started well, it exhibits a kind of circular progress in its growth. Adherence to a good system of nurture and education creates good natures, and good natures, receiving the assistance of a good education, grow still better than they were, their breeding qualities improving among the rest, as is also seen in the lower animals.

Adeimantus:: Yes, naturally so.

Socrates:: To speak briefly, therefore, the overseers of the state must hold fast to this principle, not allowing it to be impaired without their knowledge, but guarding it above everything; the principle, I mean, which forbids any innovation, in either gymnastic or music, upon the established order, requiring it, on the contrary, to be most strictly maintained, from a fear lest, when it is said that men care most for the song;

> Which being newest is sung, and its music encircleth the singers.

it might perhaps be imagined that the poet is speaking not of new songs, but of a new style of music, and novelty should accordingly be commended. Whereas novelty ought not to be commended, nor ought the words to be so understood. For the introduction of a new kind of music must be shunned as imperiling the whole state; since styles of music are never disturbed without affecting the most important political institutions; at least so Damon affirms, and I believe him.

Adeimantus:: Pray include me too among the believers in this doctrine.

Socrates:: Then to all appearance, it is here in music that our guardians should erect their guard-house.

Adeimantus:: At any rate, it is here that lawlessness easily creeps in unawares.

Socrates:: Yes, in the guise of amusement, and professing to do no mischief.

Adeimantus:: No, and it does none, except that gradually gaining a lodgment it quietly insinuates itself into manners and customs; and from these it issues in greater force, and makes its way into mutual compacts; and from compacts it goes on to attack laws and constitutions, displaying the utmost impudence, Socrates, until it ends by overturning every thing, both in public and in private.

Socrates:: Good; is this so?

Adeimantus:: I think it is.

Socrates:: Then, as we said in the beginning, must not our children from the very first be restricted to more lawful amusements, because when amusements are lawless, and children take after them, it is impossible for such children to grow into loyal and virtuous men?

Adeimantus:: Unquestionably.

Socrates:: Accordingly, when our children, beginning with right diversions, have received loyalty into their minds by the instrumentality of music, the result is the exact reverse of the former; for loyalty accompanies them into every thing and promotes their progress, and raises up again any state institution which might happen to have been cast down.

Adeimantus:: Yes, that is true.

Socrates:: Consequently such persons make the discovery even of those trifling regulations, as they are held to be, which had all been lost by those whom we described before.

Adeimantus:: What regulations do you mean?

Socrates:: Those, for example, which require the young to maintain a decorous silence in the presence of their elders, stooping to them, and rising up at their entrance, and paying every attention to their parents; together with regulations as to the mode of wearing the hair, the style of dress and shoes, and personal decoration in general, and every thing else of the same kind. Is not this your opinion?

Adeimantus:: It is.

Socrates:: But to legislate on these matters would be foolish, I think; it is never done, I believe; nor could express verbal legislation on such points ever be permanent.

Adeimantus:: How could it be?

Socrates:: At any rate, it is probable, Adeimantus, that the bent given by education will determine all that follows. For does not like always invite like?

Adeimantus:: Undoubtedly it does.

Socrates:: And so we should expect our system at last, I fancy, to end in some complete and grand result, whether this result be good or the reverse.

Adeimantus:: We certainly should.

Socrates:: On these grounds I should not attempt to extend our legislation to points like those.

Adeimantus:: With good reason.

Socrates:: But again, do tell me, as to those common business transactions between private individuals in the market, including, if you please, the contracts of artisans, libels, assaults, law-proceedings, and the impaneling of juries, or again, questions relating to tariffs, and the collection of such customs as may be necessary in the markets or in the harbors, and generally all regulations of the market, the police, the custom-house, and the like; shall we condescend to legislate at all on such matters?

Adeimantus:: No, it is not worth while to give directions on these points to good and cultivated men; for in most cases they will have little difficulty in discovering all the legislation required.

Socrates:: Yes, my friend, if God enable them to maintain the laws which we have already discussed.

Adeimantus:: Otherwise, they will spend their lives in continually enabling and amending numerous laws on such subjects, expecting to attain to perfection.

Socrates:: You mean that such persons will live as those do who are in bad health, and yet, from their want of self-restraint, cannot make up their minds to relinquish a pernicious course of life.

Adeimantus:: Precisely so.

Socrates:: And truly such people lead a charming life! always in the doctors hands, they make no progress, but only complicate and aggravate their maladies; and yet they are always hoping that some one will recommend them a medicine which shall cure them.

Adeimantus:: Yes, that is just the case with invalids of this kind.

Socrates:: Again, is it not charming that they should regard as their greatest enemy any one who tells them the truth, and assures them that till they give up their drunkenness, gluttony, and debauchery, and laziness, no drugs, nor any use of caustic or the knife, nor yet charms, or amulets, or any thing of the kind, will do them any good?

Adeimantus:: It is not so very charming; for there is no charm in being angry with one who gives good advice.

Socrates:: You do not seem to approve of such people.

Adeimantus:: No, indeed, I do not.

Socrates:: Then, if so, should a whole city, as we were saying just now, act. in a similar manner, it will not receive your approbation; and does it not appear to you that states do act like such individuals, when having a bad form of government they forewarn their citizens not to disturb the constitution, under pain of death to all who attempt to do so; while any one who can serve them most agreeably under their existing polity, and curry favor by fawning upon them and anticipating their wishes, being also clever in satisfying these wishes, he forsooth will be esteemed an excellent man, and full of profound wisdom, and will be honored at their hands?

Adeimantus:: Yes; for my part, I see no difference between the two cases, and I cannot in the least approve of such conduct.

Socrates:: On the other hand, do you not admire the courage and dexterity of those who are willing and anxious to serve such cities?

Adeimantus:: I do, except when they are deluded by them into fancying themselves real statesmen, because they are praised by the many.

Socrates:: What do you say? Do you not make allowances for them? do you suppose it is possible for a man who knows nothing of measurement, when many other equally ignorant persons tell him that he is six feet high, not to believe it himself?

Adeimantus:: No, that is impossible.

Socrates:: Then be not angry with them; for indeed these are the most amusing people in the world, who imagine that with their everlasting enactments and amendments concerning the matters we lately described, they will find some way of putting down the knaveries that are practiced in contracts, and those other embarrassments which I detailed just now, little thinking that they are in reality only cutting off the heads of a Hydra.

Adeimantus:: It is true, they are no better employed.

Socrates:: For my part, therefore, I should not have thought it incumbent upon the genuine legislator to trouble himself with these branches of law and government, whether his state be ill or well organized; in the former case, because such regulations are useless, and do no good; and in the latter, because some of them may be discovered by any person whatever, and others will follow spontaneously as a result of previous training.

Adeimantus:: What then, still remains for us as legislators to do?

Socrates:: For us, nothing; but for the Delphian Apollo there will remain the most important, the noblest, and the highest acts of legislation.

Adeimantus:: What are these?

Socrates:: The erection of temples and the appointment of sacrifices and other ceremonies in honor of the gods and demigods and heroes, and likewise the mode of burning the dead, and all the observances which we must adopt, in order to propitiate the inhabitants of the other world. These are subjects which we do not understand ourselves, and about which, in founding a state, we shall, if we are wise, listen to no other advice or exposition, except that of our ancient national expositor. For it is this God, I apprehend, expounding from his seat on the Omphalos, at the earths centre, who is the national expositor to all men on such subjects.

Adeimantus:: You are quite right; this is what we ought to do.

Socrates:: Then the organization of our state is now complete, son of Ariston; and the next thing for you to do is to examine it, furnishing yourself with the necessary light from any quarter you can, and calling to your aid your brother and Polemarchus and the rest, in order to try if we can see where justice may be found in it, and where injustice, and wherein they differ the one from the other, and which of the two the man who desires to be happy ought to possess, whether all gods and men know it or not.

Glaucon:: That will not do; it was you that engaged to make the inquiry, on the ground that you would be guilty of a sin if you refused to justice all the aid in your power.

Socrates:: I recoiled that it was as you say; and I must so do, but you also must assist me.

Glaucon:: We will.

Socrates:: I am in hopes, then, that we may find the object of our search thus. I imagine that our state, being rightly organized, is a perfectly good state.

Glaucon:: It must be.

Socrates:: Then obviously it is wise and brave and temperate and just.

Glaucon:: Obviously.

Socrates:: Then if we can find some of these qualities in the state, there will be a remainder consisting of the undiscovered qualities.

Glaucon:: Undoubtedly.

Socrates:: Suppose then that there were any other four things, contained in any subject, and that we were in search of one of them. If we discovered this before the other three, we should be satisfied; but if we recognized the other three first, the thing sought for would by this very fact have been found; for it is plain that it could only be the remainder.

Glaucon:: You are right.

Socrates:: Ought we not to adopt this mode of inquiry in the case before us, since the qualities in question are also four in number?

Glaucon:: Clearly we ought.

Socrates:: To begin then; in the first place wisdom seems to be plainly discernible in our subject; and in connection with it a paradoxical fact presents itself.

Glaucon:: What is that?

Socrates:: The state which we have described is really wise, if I am not mistaken, inasmuch as it is prudent in counsel, is it not?

Glaucon:: It is.

Socrates:: And this very quality, prudence in counsel, is evidently a kind of knowledge; for it is not ignorance, I imagine, but knowledge, that makes men deliberate prudently.

Glaucon:: Evidently.

Socrates:: But there are many different kinds of knowledge in the state.

Glaucon:: Unquestionably there are.

Socrates:: Is it then in virtue of the knowledge of its carpenters that the state is to be described as wise, or prudent in counsel?

Glaucon:: Certainly not; for in virtue of such knowledge it could only be called a city of good carpentry.

Socrates:: Then it is not the knowledge it employs in considering how vessels of wood may best be made, that will justify us in calling our city wise.

Glaucon:: Certainly not.

Socrates:: Well, is it the knowledge which has to do with vessels of brass, or any other of this kind?

Glaucon:: No, none whatever.

Socrates:: Neither will a knowledge of the mode of raising produce from the soil give a state the claim to the title of wise, but only to that of a successful agricultural state.

Glaucon:: So I think.

Socrates:: Tell me, then, does our newly-organized state contain any kind of knowledge, residing in any section of the citizens, which takes measures, not in behalf of anything in the state, but in behalf of the state as a whole, devising in what manner its internal and foreign relations may best be regulated?

Glaucon:: Certainly it does.

Socrates:: What is this knowledge, and in whom does it reside?

Glaucon:: It is our protective science, and it resides in that governing class whom we denominated just now perfect guardians.

Socrates:: Then in virtue of this knowledge what do you call the state?

Glaucon:: I call it prudent in counsel and truly wise.

Socrates:: Which do you suppose will be the more numerous class in our state, the braziers, or these genuine guardians?

Glaucon:: The braziers will far outnumber the others.

Socrates:: Then will the guardians be the smallest of all the classes possessing this or that branch of knowledge, and bearing this or that name in consequence?

Glaucon:: Yes, much the smallest.

Socrates:: Then it is the knowledge residing in its smallest class or section, that is to say, in the predominant and ruling body, which entitles a state, organized agreeably to nature, to be called wise as a whole; and that class whose right and duty it is to partake of the knowledge which alone of all kinds of knowledge is properly called wisdom, is naturally, as it appears, the least numerous body in the state.

Glaucon:: Most true.

Socrates:: Here then we have made out, in some way or other, one of the four qualities, and the part of the state in which it is seated.

Glaucon:: To my mind, it has been made out satisfactorily.

Socrates:: Again, there can assuredly be no great difficulty in discerning the quality of courage, and the class in which it resides, and which entitles the state to be called brave.

Glaucon:: How so?

Socrates:: In pronouncing a city to be cowardly or brave, who would look to any but that portion of it which fights in its defense and takes the field in its behalf?

Glaucon:: No one would look to anything else.

Socrates:: No; and for this reason, I imagine, that the cowardice or courage of the state itself is not necessarily implied in that of the other classes.

Glaucon:: No, it is not.

Socrates:: Then a city is brave as well as wise, in virtue of a certain portion of itself, because it has in that portion a power which can without intermission keep safe the right opinion concerning things to be feared, which teaches that they are such as the legislator has declared in the prescribed education.. Is not this what you call courage?

Glaucon:: I did not quite understand what you said; be so good as to repeat it.

Socrates:: I say that courage is a kind of safe keeping.

Glaucon:: What kind of safe keeping?

Socrates:: The safe keeping of the opinion created by law through education, which teaches what things and what kind of things are to be feared. And when I spoke of keeping it safe without intermission, I meant that it was to be thoroughly preserved alike in moments of pain and of pleasure, of desire and of fear, and never to be cast away. And if you like, I will illustrate it by a comparison which seems to me an apt one.

Glaucon:: I should like it.

Socrates:: Well then, you know that dyers, when they wish to dye wool so as to give it the true sea-purple, first select from the numerous colors one variety, that of white wool, and then subject it to much careful preparatory dressing, that it may take the color as brilliantly as possible; after which they proceed to dye it. And when the wool has been dyed on this system, its color is indelible, and no washing either with or without soap can rob it of its brilliancy. But when this course has not been pursued, you know the results, whether this or any other color be dyed without previous preparation.

Glaucon:: I know that the dye washes out in a ridiculous way.

Socrates:: You may understand from this what we were laboring. to the best of our ability, to bring about, when we were selecting our soldiers and training them in music and gymnastic. Imagine that we were only contriving how they might be best wrought upon to take as it were the color of the laws, in order that their opinion concerning things to be feared, and on all other subjects, might be indelible, owing to their congenial nature and appropriate training, and that their color might not be washed out by such terribly efficacious detergents as pleasure, which works more powerfully than any potash or lye, and pain, and fear, and desire, which are more potent than any other solvent in the world. This power, therefore, to hold fast continually the right and lawful opinion concerning things to be feared and things not to be feared, I define to be courage, and call it by that name, if you do not object.

Glaucon:: No, I do not; for when the right opinion on these matters is held without education, as by beasts and slaves, you would not, I think, regard it as altogether legitimate, and you would give it some other name than courage.

Socrates:: Most true.

Glaucon:: Then I accept this account of courage.

Socrates:: Do so, at least as an account of the courage of citizens, and you will be right. On a future occasion, if you like, we will go into this question more fully; at present it is beside our inquiry, the object of which is justice; we have done enough therefore, I imagine, for the investigation of courage.

Glaucon:: You are right.

Socrates:: Two things, I proceeded, now remain, that we must look for in the state, temperance, and that which is the cause of all these investigations, justice.

Glaucon:: Exactly so.

Socrates:: Well, not to trouble ourselves any further about temperance, is there any way by which we can discover justice?

Glaucon:: For my part, I do not know, nor do I wish justice to be brought to light first, if we are to make no further inquiry after temperance; so, if you wish to gratify me, examine into the latter, before you proceed to the former.

Socrates:: Indeed, I do wish it, as I am an honest man.

Glaucon:: Proceed then with the examination.

Socrates:: I will; and from our present point of view, temperance has more the appearance of a concord or harmony, than the former qualities had.

Glaucon:: How so?

Socrates:: Temperance is, I imagine, a kind of order and a mastery, as men say, over certain pleasures and desires. Thus we plainly hear people talking of a mans being master of himself, in some sense or other; and other similar expressions are used, in which we may trace a print of the thing. Is it not so?

Glaucon:: Most certainly it is.

Socrates:: But is not the expression master of himself a ridiculous one? For the man who is master of himself will also, I presume, be the slave of himself, and the slave will be the master. For the subject of all these phrases is the same person.

Glaucon:: Undoubtedly.

Socrates:: Well, it appears to me that the meaning of the expression is, that in the man himself, that is, in his soul, there resides a good principle and a bad, and when the naturally good principle is master of the bad, this state of things is described by the term master of himself; certainly it is a term of praise; but when in consequence of evil training, or the influence of associates, the smaller force of the good principle is overpowered by the superior numbers of the bad, the person so situated is described in terms of reproach and condemnation, as a slave of self, and a dissolute person.

Glaucon:: Yes, this seems a likely account of it.

Socrates:: Now turn your eyes towards our new state, and you will find one of these conditions realized in it; for you will allow that it may fairly be called master of itself, if temperance and self-mastery may be predicated of that in which the good principle governs the bad.

Glaucon:: I am looking as you direct, and I acknowledge the truth of what you say.

Socrates:: It will further be admitted that those desires, and pleasures, and pains, which are many and various, will be chiefly found in children, and women, and servants; and in the vulgar mass also among nominal freemen.

Glaucon:: Precisely so.

Socrates:: On the other hand, those simple and moderate desires, which go hand in hand with intellect and right opinion, under the guidance of reasoning, will be found in a small number of men, that is, in those of the best natural endowments, and the best education.

Glaucon:: True.

Socrates:: Do you not see that the parallel to this exists in your state; in other words, that the desires of the vulgar many are there controlled by the desires and the wisdom of the cultivated few?

Glaucon:: I do.

Socrates:: If any state then may be described as master of itself, its pleasures and its desires, ours may be so characterized.

Glaucon:: Most certainly.

Socrates:: May we not then also call it temperate, on all these accounts?

Glaucon:: Surely we may.

Socrates:: And again, if there is any city in which the governors and the governed are unanimous on the question who ought to govern, such unanimity will exist in ours. Do you not think so?

Glaucon:: Most assuredly I do.

Socrates:: In which of the two classes of citizens will you say that temperance resides, when they are in this condition? in the rulers or in the subjects?

Glaucon:: In both I fancy.

Socrates:: Do you see, then, that we were not bad prophets when we divined just now that temperance resembled a kind of harmony?

Glaucon:: Why, pray?

Socrates:: Because it does not operate like courage and wisdom, which, by residing in particular sections of the state, make it brave and wise respectively; but spreads throughout the whole in literal diapason, producing a unison between the weakest and the strongest and the middle class, whether you measure by the standard of intelligence, or bodily strength, or numbers, or wealth, or anything else of the kind; so that we shall be fully justified in pronouncing temperance to be that unanimity, which we described as a concord between the naturally better element and the naturally worse, whether in a state or in a single person, as to which of the two has the right to govern.

Glaucon:: I fully agree with you.

Socrates:: Very well; we have discerned in our state three out of the four principles; at least such is our present impression. Now what will that remaining principle be through which the state will further participate in virtue? for this, we may be sure, is justice.

Glaucon:: Evidently it is.

Socrates:: Now then, Glaucon, we must be like hunters surrounding a cover, and must give close attention that justice may nowhere escape us and disappear from our view; for it is manifest that she is somewhere here; so look for her, and strive to gain a sight of her, for perhaps you may discover her first, and give the alarm to me.

Glaucon:: I wish I might; but you will use me quite well enough, if, instead of that, you will treat me as one who is following your steps, and is able to see what is pointed out to him.

Socrates:: Follow me then, after joining your prayers with mine.

Glaucon:: I will do so; only do you lead the way.

Socrates:: Truly, the ground seems to be hard to traverse, and covered with wood; at all events it is dark and difficult to explore; but still we must on.

Glaucon:: Yes, that we must.

Socrates:: Here I caught a glimpse, and exclaimed, Ho! ho! Glaucon, here is something that looks like a track, and I believe the game will not altogether escape us.

Glaucon:: That is good news.

Socrates:: Upon my word, we are in a most foolish predicament.

Glaucon:: How so?

Socrates:: Why, my good sir, it appears that what we were looking for has been all this time rolling before our feet, and we never saw it, but did the most ridiculous thing. Just as people at times go about looking for something which they hold in their hands, so we, instead of fixing our eyes upon the thing itself, kept gazing at some point in the distance, and this was probably the reason why it eluded our search.

Glaucon:: What do you mean?

Socrates:: This; that I believe we were conversing of it together, without understanding that we were in a manner describing it ourselves.

Glaucon:: Your preface seems long to one who is anxious for the explanation.

Socrates:: Well then, listen, and judge whether I am right or not. What at the commencement we laid down as a universal rule of action, when we were founding our state, this, if I mistake not, or some modification of it, is justice. I think we affirmed, if you recollect, and frequently repeated, that every individual ought to have some one occupation in the state, which should be that to which his natural capacity was best adapted.

Glaucon:: We did say so.

Socrates:: And again, we have often heard people say, that to mind ones own business, and not be meddlesome, is justice; and we have often said the same thing ourselves.

Glaucon:: We have said so.

Socrates:: Then it would seem, my friend, that to do ones own business, in some shape or other, is justice. Do you know whence I infer this?

Glaucon:: No; be so good as to tell me.

Socrates:: I think that the remainder left in the state, after eliminating the qualities which we have considered, I mean temperance, and courage, and wisdom, must be that which made their entrance into it possible, and which preserves them there so long as they exist in it. Now we affirmed that the remaining quality, when three out of the four were found, would be justice.

Glaucon:: Yes, unquestionably it would.

Socrates:: If, however, it were required to decide which of these qualities will have most influence in perfecting by its presence the virtue of our state, it would be difficult to determine; whether it will be the harmony of opinion between the governors and the governed, or the faithful adherence on the part of the soldiers to the lawful belief concerning the things which are, and the things which are not, to be feared; or the existence of wisdom and watchfulness in the rulers; or whether the virtue of the state may not be chiefly traced to the presence of that fourth principle in every child and woman, in every slave, freeman, and artisan, in the ruler and in the subject, requiring each to do his own work, and not meddle with many things.

Glaucon:: It would be a difficult point to settle, unquestionably.

Socrates:: Thus it appears that, in promoting the virtue of a state, the power that makes each member of it do his own work, may compete with its wisdom, and its temperance, and its courage.

Glaucon:: Decidedly it may.

Socrates:: But if there is a principle which rivals these qualities in promoting the virtue of a state, will you not determine it to be justice?

Glaucon:: Most assuredly.

Socrates:: Consider the question in another light, and see whether you will come to the same conclusion. Will you assign to the rulers of the state the adjudication of law-suits?

Glaucon:: Certainly.

Socrates:: Will not their judgments be guided, above everything, by the desire that no one may appropriate what belongs to others, nor be deprived of what is his own?

Glaucon:: Yes, that will be their main study.

Socrates:: Because that is just?

Glaucon:: Yes.

Socrates:: Thus, according to this view also, it will be granted that to have and do what belongs to us and is our own, is justice.

Glaucon:: True.

Socrates:: Now observe whether you hold the same opinion that I do. If a carpenter should undertake to execute the work of a shoemaker, or a shoemaker that of a carpenter, either by interchanging their tools and distinctions, or by the same person undertaking both trades, with all the changes involved in it, do you think it would greatly damage the state?

Glaucon:: Not very greatly.

Socrates:: But when one whom nature has made an artisan, or a producer of any other kind, is so elated by wealth, or a large connection, or bodily strength, or any similar advantages, as to intrude himself into the class of the warriors; or when a warrior intrudes himself into the class of the senators and guardians, of which he is unworthy, and when these interchange their tools and their distinctions, or when one and the same person attempts to discharge all these duties at once, then, I imagine, you will agree with me, that such change and meddling among these will be ruinous to the state.

Glaucon:: Most assuredly they will.

Socrates:: Then any intermeddling in the three classes, or change from one to another, would inflict great damage on the state, and may with perfect propriety be described as in the strongest sense a doing of evil.

Glaucon:: Quite so.

Socrates:: And will you not admit that evil-doing of the worst kind towards ones own state is injustice?

Glaucon:: Unquestionably.

Socrates:: This then is injustice. On the other hand, let us state that, conversely, adherence to their own business on the part of the industrious, the military, and the guardian classes, each of these doing its own work in the state, is justice, and will render the state just.

Glaucon:: I fully coincide, in this view.

Socrates:: Let us not state it yet quite positively; but if we find, on applying this conception to the individual man, that there too it is admitted to constitute justice, we will then yield our assent for what more can we say? but if not, in that case we will institute a new inquiry. At present, however, let us complete the investigation which we undertook in the belief that, if we first endeavored to contemplate justice in some larger subject which contains it, we should find it easier to discern its nature in the individual man. Such a subject we recognized in a state, and accordingly we organized the best we could, being sure that justice must reside in a good city. The view, therefore, which presented itself to us there, let us now apply to the individual; and if it be admitted, we shall be satisfied; but if we should find something different in the case of the individual, we will again go back to our city, and put our theory to the test. And perhaps by considering the two cases side by side, and rubbing them together, we may cause justice to flash out from the contact, like fire from dry bits of wood, and when it has become visible to us, may settle it firmly in our own minds.

Glaucon:: There is method in your proposal, and so let us do.

Socrates:: I proceeded therefore to ask; When two things, a greater and a less, are called by a common name, are they, in so far as the common name applies, unlike or like?

Glaucon:: Like.

Socrates:: Then a just man will not differ from a just state, so far as the idea of justice is involved, but the two will be like.

Glaucon:: They will.

Socrates:: Well, but we resolved that a state was just, when the three classes of characters present in it were severally occupied in doing their proper work; and that it was temperate, and brave, and wise, in consequence of certain affections and conditions of these same classes.

Glaucon:: True.

Socrates:: Then, my friend, we shall also adjudge, in the case of the individual man, that, supposing him to possess in his soul the same generic parts, he is rightly entitled to the same names as the state, in virtue of affections of these parts identical with those of the classes in the state.

Glaucon:: It must inevitably be so.

Socrates:: Once more then, my excellent friend, we have stumbled on an easy question concerning the nature of the soul, namely, whether it contains these three generic parts or not.

Glaucon:: Not so very easy a question, I think; but perhaps, Socrates, the common saying is true, that the beautiful is difficult.

Socrates:: It would appear so; and I tell you plainly, Glaucon, that in my opinion we shall never attain to exact truth on this subject, by such methods as we are employing in our present discussion. However, the path that leads to that goal is too long and toilsome; and I dare say we may arrive at the truth by our present methods, in a manner not unworthy of our former arguments and speculations. Shall we not be content with that?

Glaucon:: For my part it would satisfy me for the present.

Socrates:: Well, certainly it will be quite enough for me.

Glaucon:: Do not flag then, but proceed with the inquiry.

Socrates:: Tell me then, can we possibly refuse to admit that there exist in each of us the same generic parts and characteristics as are found in the state? For I presume the state has not received them from any other source. It would be ridiculous to imagine that the presence of the spirited element in cities is not to be traced to individuals, wherever this character is imputed to the people, as it is to the natives of Thrace, and Scythia, and generally speaking, of the northern countries; or the love of knowledge, which would be chiefly attributed to our own country; or the love of riches, which people would especially connect with the Phoenicians and the Egyptians.

Glaucon:: Certainly.

Socrates:: This then is a fact so far, and one which it is not difficult to apprehend.

Glaucon:: No, it is not.

Socrates:: But here begins a difficulty. Are all our actions alike performed by the one predominant faculty, or are there three faculties operating severally in our different actions? Do we learn with one internal faculty, and become angry with another, and with a third feel desire for all the pleasures connected with eating and drinking, and the propagation of the species; or upon every impulse to action, do we perform these several operations with the whole soul? The difficulty will consist in settling these points in a satisfactory manner.

Glaucon:: I think so too.

Socrates:: Let us try therefore the following plan, in order to ascertain whether the faculties engaged are distinct or identical.

Glaucon:: What is your plan?

Socrates:: It is manifest that the same thing cannot do two opposite things, or be in two opposite states, in the same part of it, and with reference to the same object; so that where we find these phenomena occurring, we shall know that the subjects of them are not identical, but more than one.

Glaucon:: Very well.

Socrates:: Now consider what I say.

Glaucon:: Speak on.

Socrates:: Is it possible for the same thing to be at the same time, and in the same part of it, at rest and in motion?

Glaucon:: Certainly not.

Socrates:: Let us come to a still more exact understanding, lest we should chance to differ as we proceed. If it were said of a man who is standing still, but moving his hands and his head, that the same individual is at the same time at rest and in motion, we should not, I imagine, allow this to be a correct way of speaking, but should say, that part of the man is at rest, and part in motion; should we not?

Glaucon:: We should.

Socrates:: And if the objector should indulge in yet further pleasantries, so far refining as to say, that at any rate a top is wholly at rest and in motion at the same time, when it spins with its peg fixed on a given spot, or that anything else revolving in the same place, is an instance of the same thing, we should reject his illustration, because in such cases the things are not both stationary and in motion in respect of the same parts of them; and we should reply, that they contain an axis and a circumference, and that in respect of the axis they are stationary, inasmuch as they do not lean to any side; but in respect of the circumference they are moving round and round; but if, while the rotatory motion continues, the axis at the same time inclines to the right or to the left, forwards or backwards, then they cannot be said in any sense to be at rest.

Glaucon:: That is true.

Socrates:: Then no objection of that kind will alarm us, or tend at all to convince us that it is ever possible for one and the same thing, at the same time, in the same part of it, and relatively to the same object, to be acted upon in two opposite ways, or to be two opposite things, or to produce two opposite effects.

Glaucon:: I can answer for myself.

Socrates:: However, that we may not be compelled to spend time in discussing all such objections, and convincing ourselves that they are unsound, let us assume this to be the fact, and proceed forwards, with the understanding that, if ever we take a different view of this matter, all the conclusions founded on this assumption will fall to the ground.

Glaucon:: Yes, that will be the best way.

Socrates:: Well then, would you place assent and dissent, the seeking after an object and the refusal of it attraction and repulsion, and the like, in the class of mutual opposites? Whether they be active or passive processes will not affect the question.

Glaucon:: Yes, I should.

Socrates:: Well, would you not, without exception, include hunger and thirst, and the desires generally, and likewise willing and wishing, somewhere under the former of those general terms just mentioned? For instance, would you not say that the mind of a man under the influence of desire always either seeks after the object of desire, or attracts to itself that which it wishes to have; or again, so far as it wills the possession of anything, it assents inwardly thereto, as though it were asked a question, longing for the accomplishment of its wish?

Glaucon:: I should.

Socrates:: Again; shall we not class disinclination, unwillingness, and dislike, under the head of mental rejection and repulsion, and of general terms wholly opposed to the former?

Glaucon:: Unquestionably.

Socrates:: This being the case, shall we say that desires form a class, the most marked of which are what we call thirst and hunger?

Glaucon:: We shall.

Socrates:: The one being a desire of drink, and the other of food?

Glaucon:: Yes.

Socrates:: Can thirst then, so far as it is thirst, be an internal desire of anything more than drink? That is to say, is thirst, as such, a thirst for hot drink or cold, for much or little, or, in one word, for any particular kind of drink? Or, will it not rather be true that, if there be heat combined with the thirst, the desire of cold drink will be superadded to it, and if there be cold, of hot drink; and if owing to the presence of muchness the thirst be great, the desire of much will be added, and if little, the desire of little; but that thirst in itself cannot be a desire of anything else than its natural object, which is simple drink, or again, hunger, of anything but food?

Glaucon:: You are right; every desire in itself has to do with its natural object in its simply abstract form, but the accessories of the desire determine the quality of the object.

Socrates:: Let not any one, for want of consideration on our part, disturb us by the objection, that no one desires drink simply, but good drink, nor food simply, but good food; because, since all desire good things, if thirst is a desire, it must be a desire of something good, whether that something, which is its object, be drink or anything else; an argument which applies to all the desires.

Glaucon:: True, there might seem to be something in the objection.

Socrates:: Recollect, however, that in the case of all essentially correlative terms, when the first member of the relation is qualified, the second is also qualified, if I am not mistaken; when the first is abstract, the second is also abstract.

Glaucon:: I do not understand you.

Socrates:: Do you not understand that greater is a relative term, implying another term?

Glaucon:: Certainly.

Socrates:: It implies a less, does it not?

Glaucon:: Yes.

Socrates:: And a much greater implies a much less, does it not?

Glaucon:: Yes.

Socrates:: Does a once greater also imply a once less, and a future greater a future less?

Glaucon:: Inevitably.

Socrates:: Does not the same reasoning apply to the correlative terms, more and fewer, double and half, and all relations of quantity; also to the terms, heavier and lighter, quicker and slower; and likewise to cold and hot land all similar epithets?

Glaucon:: Certainly it does.

Socrates:: But how is it with the various branches of scientific knowledge? Does not the same principle hold? That is, knowledge in the abstract is knowledge simply of the knowable, or of whatever that be called which is the object of knowledge; but a particular science, of a particular kind, has a particular object of a particular kind. To explain my meaning; as soon as a science of the construction of houses arose, was it not distinguished from other sciences, and therefore called the science of building?

Glaucon:: Undoubtedly.

Socrates:: And is it not because it is of a particular character, which no other science possesses?

Glaucon:: Yes.

Socrates:: And is not its particular character derived from the particular character of its object? and may we not say the same of all the other arts and sciences?

Glaucon:: We may.

Socrates:: This then you are to regard as having been my meaning before; provided, that is, you now understand that in the case of all correlative terms, if the first member of the relation is abstract, the second is also abstract; if the second is qualified, the first is also qualified. I do not mean to say that the qualities of the two are identical, as for instance, that the science of health is healthy, and the science of disease diseased; or that the science of evil things is evil, and of good things good; but as soon as science, instead of limiting itself to the abstract object of science, became related to a particular kind of object, namely, in the present case, the conditions of health and disease, the result was that the science also came to be qualified in a certain manner, so that it was no longer called simply science, but, by the addition of a qualifying epithet, medical science.

Glaucon:: I understand, and I think what you say is true.

Socrates:: To recur to the case of thirst, I continued, do you not consider this to be one of the things whose nature it is to have an object correlative with themselves, assuming that there is such a thing as thirst?

Glaucon:: I do, and its object is drink.

Socrates:: Then, for any particular kind of drink there is a particular kind of thirst; but thirst in the abstract is neither for much drink, nor for little, neither for good drink nor for bad, nor, in one word, for any kind of drink, but simply and absolutely thirst for drink, is it not?

Glaucon:: Most decidedly so.

Socrates:: Then the soul of a thirsty man, in so far as he is thirsty, has no other wish than to drink; but this it desires, and towards this it is impelled.

Glaucon:: Clearly so.

Socrates:: Therefore, whenever anything pulls back a soul that is under the influence of thirst, it will be something in the soul distinct from the principle which thirsts, and which drives it like a beast to drink; for we hold it to be impossible that the same thing should, at the same time, with the same part of itself, in reference to the same object, be doing two opposite things.

Glaucon:: Certainly it is.

Socrates:: Just as, I imagine, it would not be right to say of the bowman, that his hands are at the same time drawing the bow towards him, and pushing it from him; the fact being, that one of his hands pushes it from him, and the other pulls it to him.

Glaucon:: Precisely so.

Socrates:: Now, can we say that people sometimes are thirsty, and yet do not wish to drink?

Glaucon:: Yes, certainly; it often happens to many people.

Socrates:: What then can one say of them, except that their soul contains one principle which commands, and another which forbids them to drink, the latter being distinct from and stronger than the former?

Glaucon:: That is my opinion.

Socrates:: Whenever the authority which forbids such indulgences grows up in the soul, is it not engendered there by reasoning; while the powers which lead and draw the mind towards them, owe their presence to passive and morbid states?

Glaucon:: It would appear so.

Socrates:: Then we shall have reasonable grounds for assuming that these are two principles distinct one from the other, and for giving to that part of the soul with which it reasons the title of the rational principle, and to that part with which it loves and hungers and thirsts, and experiences the flutter of the other desires, the title of the irrational and concupiscent principle, the ally of sundry indulgences and pleasures.

Glaucon:: Yes; it will not be unreasonable to think so.

Socrates:: Let us consider it settled, then, that these two specific parts exist in the soul. But now, will spirit, or that by which we feel indignant, constitute a third distinct part? If not, with which of the two former has it a natural affinity?

Glaucon:: Perhaps with the concupiscent principle.

Socrates:: But I was once told a story, which I can quite believe, to the effect, that Leontius, the son of Aglaion, as he was walking up from the Piraeus, and approaching the northern wall from the outside, observed some dead bodies on the ground, and the executioner standing by them. He immediately felt a desire to look at them, but at the same time loathing the thought he tried to divert himself from it. For some time he struggled with himself, and covered his eyes, till at length, over-mastered by the desire, he opened his eyes wide with his fingers, and running up to the bodies, exclaimed, There! you wretches! gaze your fill at the beautiful spectacle!

Glaucon:: I have heard the anecdote too.

Socrates:: This story, however, indicates that anger sometimes fights against the desires, which implies that they arc two distinct principles.

Glaucon:: True, it does indicate that.

Socrates:: And do we not often observe in other cases that when a man is overpowered by the desires against the dictates of his reason, he reviles himself, and resents the violence thus exerted within him, and that, in this struggle of contending parties, the spirit sides with the reason? But that it should make common cause with the desires, when the reason pronounces that they ought not to act against itself, is a thing which I suppose you will not profess to have experienced yourself, nor yet, I imagine, have you ever noticed it in any one else.

Glaucon:: No, I am sure I have not.

Socrates:: Well, and when any one thinks he is in the wrong, is he not, in proportion to the nobleness of his character, so much the less able to be angry at being made to surfer hunger or cold or any similar pain at the hands of him whom he thinks justified in so treating him; his spirit, as I describe it, refusing to be roused against his punisher?

Glaucon:: True.

Socrates:: On the other hand, when any one thinks he is wronged, does he not instantly boil and chafe, and enlist himself on the side of what he thinks to be justice; and whatever extremities of hunger and cold and the like he may have to suffer, does he not endure till he conquers, never ceasing from his noble efforts, till he has either gained his point, or perished in the attempt, or been recalled and calmed by the voice of reason within, as a dog is called off by a shepherd?

Glaucon:: Yes, the case answers very closely to your description; and in fact, in our city we made the auxiliaries, like sheep-dogs, subject to the rulers, who are as it were the shepherds of the state.

Socrates:: You rightly understand my meaning. But try whether you also apprehend my next observation.

Glaucon:: What is it?

Socrates:: That our recent view of the spirited principle is exactly reversed. Then we thought it had something of the concupiscent character, but now we say that, far from this being the case, it much more readily takes arms on the side of the rational principle in the party conflict of the soul.

Glaucon:: Decidedly it does.

Socrates:: Is it then distinct from this principle also; or is it only a modification of it, thus making two instead of three distinct principles in the soul, namely, the rational and the concupiscent? Or ought we to say that, as the state was held together by three great classes, the producing class, the auxiliary, and the deliberative, so also in the soul the spirited principle constitutes a third element, the natural ally of the rational principle, if it be not corrupted by evil training?

Glaucon:: It must be a third.

Socrates:: Yes; if it shall appear to be distinct from the rational principle, as we found it different from the concupiscent.

Glaucon:: Nay, that will easily appear. For even in little children any one may see this, that from their very birth they have plenty of spirit, whereas reason is a principle to which most men only attain after many years, and some, in my opinion, never.

Socrates:: Upon my word you have well said. In brute beasts also one may see what you describe exemplified.

And besides, that passage in Homer, which we quoted on a former occasion, will support our view;

> Smiting his breast, to his heart thus spoke he in accents
> of chiding.

For in this line Homer has distinctly made a difference between the two principles, representing that which had considered the good or the evil of the action as rebuking that which was indulging in unreflecting resentment.

Glaucon:: You are perfectly right.

Socrates:: Here then, after a hard struggle, we have, though with difficulty, reached the land; and we are pretty well satisfied that there are corresponding divisions, equal in number, in a state, and in the soul of every individual.

Glaucon:: True.

Socrates:: Then does it not necessarily follow that, as and whereby the state was wise, so and thereby the individual is wise?

Glaucon:: Without doubt it does.

Socrates:: And that as and whereby the individual is brave, so and thereby is the state brave; and that everything conducing to virtue which is possessed by the one, finds its counterpart in the other?

Glaucon:: It must be so.

Socrates:: Then we shall also assert. I imagine, Glaucon, that a man is just, in the same way in which we found the state to be just.

Glaucon:: This too is a necessary corollary.

Socrates:: But surely we have not allowed ourselves to forget, that what makes the state just, is the fact of each of the three classes therein doing its own work.

Glaucon:: No; I think we have not forgotten this.

Socrates:: We must bear in mind, then, that each of us also, if his inward faculties do severally their proper work, will, in virtue of that, be a just man, and a doer of his proper work.

Glaucon:: Certainly, it must be borne in mind.

Socrates:: Is it not then essentially the province of the rational principle to command, inasmuch as it is wise, and has to exercise forethought in behalf of the entire soul, and the province of the spirited principle to be its subject and ally?

Glaucon:: Yes, certainly.

Socrates:: And will not the combination of music and gymnastic bring them, as we said, into unison; elevating and fostering the one with lofty discourses and scientific teachings, and lowering the tone of the other by soothing address, till its wildness has been tamed by harmony and rhythm?

Glaucon:: Yes, precisely so.

Socrates:: And so these two, having been thus trained, and having truly learnt their parts and received a real education, will exercise control over the concupiscent principle, which in every man forms the largest portion of the soul, and is by nature most insatiably covetous. And they will watch it narrowly, that it may not so batten upon what are called the pleasures of the body, as to grow large and strong, and forthwith refuse to do its proper work, and even aspire to absolute dominion over the classes which it has no right according to its kind to govern, thus overturning fundamentally the life of all.

Glaucon:: Certainly they will.

Socrates:: And would not these two principles be the best qualified to guard the entire soul and body against enemies from without; the one taking counsel, and the other fighting its battles, in obedience to the governing power, to whose designs it gives effect by its bravery?

Glaucon:: True.

Socrates:: In like manner, I think, we call an individual brave, in virtue of the spirited element of his nature, when this part of him holds fast, through pain and pleasure, the instructions of the reason as to what is to be feared, and what is not.

Glaucon:: Yes, and rightly.

Socrates:: And we call him wise, in virtue of that small part which reigns within him, and issues these instructions, and which also in its turn contains within itself a true knowledge of what is advantageous for the whole community composed of these three principles, and for each member of it.

Glaucon:: Exactly so.

Socrates:: Again, do we not call a man temperate, in virtue of the friendship and harmony of these same principles, that is to say, when the two that are governed agree with that which governs in regarding the rational principle as the rightful sovereign, and set up no opposition to its authority?

Glaucon:: Certainly; temperance is nothing else than this, whether in state or individual.

Socrates:: Lastly, a man will be just, in the way and by the means which we have repeatedly described.

Glaucon:: Unquestionably he will.

Socrates:: Tell me then, do we find any indistinctness in our view of justice, which makes us regard it as something different from what we found it to be in the state?

Glaucon:: I do not think so.

Socrates:: Because we might thoroughly confirm our opinion, if we have any lingering doubts in our minds, by applying commonplace examples to it.

Glaucon:: What kind of examples do you mean?

Socrates:: For example, if in speaking of our ideal state, and of an individual who in nature and training resembles it, we were required to declare whether we think that such an individual would repudiate a deposit of gold or silver committed to his charge, do you suppose that any one would think him more likely to do such a deed than other men who are not such as he is?

Glaucon:: No one would think so.

Socrates:: And will he not also be clear of suspicion of sacrilege, and of theft, and of being either false to his friends, or a traitor to his country?

Glaucon:: He will.

Socrates:: Moreover, he will be wholly incapable of bad faith, in the case of an oath or of any other kind of compact.

Glaucon:: Clearly he will.

Socrates:: Again, he is the last person in the world to be guilty of adultery, or neglect of parents, or indifference to the worship of the gods.

Glaucon:: Certainly he is.

Socrates:: And is not all this attributable to the fact that each of his inward principles keeps to his own work in regard to the relations of ruler and subject?

Glaucon:: Yes, it may be entirely attributed to this.

Socrates:: Do you still seek then for any other account of justice than that it is the power which creates such men and such states?

Glaucon:: No, assuredly I do not.

Socrates:: Then our dream is completely realized, or that suspicion which we expressed, that at the very commencement of the work of constructing our state we were led by some divine intervention, as it would seem, to a kind of rudimentary type of justice.

Glaucon:: Yes, it certainly is.

Socrates:: And so there really was, Glaucon, a rude outline of justice (and hence its utility) in the principle that it is right for a man whom nature intended for a shoemaker to confine himself to shoemaking, and for a man who has a turn for carpentering to do carpenters work, and so on.

Glaucon:: It appears so.

Socrates:: The truth being that justice is indeed, to all appearance, something of the kind, only that, instead of dealing with a mans outward performance of his own work, it has to do with that inward performance of it which truly concerns the man himself, and his own interests; so that the just man will not permit the several principles within him to do any work but their own, nor allow the distinct classes in his soul to interfere with each other, but will really set his house in order; and having gained the mastery over himself, will so regulate his own character as to be on good terms with himself, and to set those three principles in tune together, as if they were verily three chords of a harmony, a higher and a lower and a middle, and whatever may lie between these; and after he has bound all these together, and reduced the many elements of his nature to a real unity, as a temperate and duly harmonized man, he will then at length proceed to do whatever he may have to do, whether it involve the acquisition of property or attention to the wants of his body, whether it be a state affair or a business transaction of his own; in all which he will believe and profess that the just and honorable course is that which preserves and assists in creating the aforesaid habit of mind, and that the genuine knowledge which presides over such conduct is wisdom; while on the other hand, he will hold that an unjust action is one which tends to destroy this habit, and that the mere opinion which presides over unjust conduct, is folly.

Glaucon:: What you say is thoroughly true, Socrates.

Socrates:: Very good; if we were to say we have discovered the just man and the just state, and what justice is as found in them, it would not be thought, I imagine, to be an altogether false statement.

Glaucon:: No, indeed, it would not.

Socrates:: Shall we say so then?

Glaucon:: We will.

Socrates:: Be it so. In the next place we have to investigate, I imagine, what injustice is.

Glaucon:: Evidently we have.

Socrates:: Must it not then, as the reverse of justice, be a state of strife between the three principles, and the disposition to meddle and interfere, and the insurrection of a part of the mind against the whole, this part aspiring to the supreme power within the mind, to which it has no right, its proper place and destination being, on the contrary, to do service to any member of the rightfully dominant class? Such doings as these, I imagine, and the confusion and bewilderment of the aforesaid principles, will, in our opinion, constitute injustice, and licentiousness, and cowardice, and folly, and, in one word, all vice.

Glaucon:: Yes, precisely so.

Socrates:: And is it not now quite clear to us what it is to act unjustly, and to be unjust, and, on the other hand, what it is to act justly, knowing as we do the nature of justice and injustice?

Glaucon:: How so?

Socrates:: Because these phenomena in the soul are exactly like the phenomena of health and disease in the body.

Glaucon:: In what way?

Socrates:: The conditions of health, I presume, produce health, and those of disease engender disease.

Glaucon:: Yes.

Socrates:: In the same way, does not the practice of justice beget the habit of justice, and the practice of injustice the habit of injustice?

Glaucon:: Inevitably.

Socrates:: Now to produce health is so to constitute the bodily forces as that they shall master and be mastered by one another in accordance with nature; and to produce disease is to make them govern and be governed by one another in a way which violates nature.

Glaucon:: True.

Socrates:: Similarly, will it not be true that to beget justice is so to constitute the powers of the soul that they shall master and be mastered by one another in accordance with nature, and that to beget injustice is to make them govern and be governed by one another in a way which violates nature?

Glaucon:: Quite so.

Socrates:: Then virtue, it appears, will be a kind of health and beauty, and good habit of the soul; and vice will be a disease, and deformity, and sickness of it.

Glaucon:: True.

Socrates:: And may we not add that all fair practices tend to the acquisition of virtue, and all foul practices to that of vice?

Glaucon:: Undoubtedly they do.

Socrates:: What now remains for us, apparently, is to inquire whether it is also profitable to aft justly, and to pursue honorable aims, and to be just, whether a man be known to be such or not, or to act unjustly, and to be unjust, if one suffer no punishment, and be not made a better man by chastisement.

Glaucon:: Nay, Socrates, to me, I confess, the inquiry begins to assume a ludicrous appearance, now that the real nature of justice and injustice has presented itself to us in the light described above. Do people think that when the constitution of the body is ruined, life is not worth having, though you may command all varieties of food and drink, and possess endless wealth and power; and shall we be told that, when the constitution of that very principle whereby we live is going to rack and ruin, life is still worth having, let a man do what he will, if that is excepted which will enable him to get rid of vice and injustice, and to acquire virtue and justice?

Socrates:: Yes, it is ludicrous; still, as we have arrived at this point, we must not lose heart, till we have ascertained, in the clearest possible manner, the correctness of our conclusions.

Glaucon:: No, indeed; anything rather than lose heart.

Socrates:: Come with me, then, that you may see how many varieties of vice there are, according to my belief, looking only at those which are worth the survey.

Glaucon:: I follow you; only tell me.

Socrates:: Well, I can see as it were from a watch-tower, now that we have ascended to this lofty stage in the argument, that while there is only one form of virtue, there are infinite varieties of vice, of which four in particular deserve to be noticed.

Glaucon:: How do you mean?

Socrates:: It would seem that there are as many characters of mind, as there are distinctive forms of government.

Glaucon:: Pray how many are they?

Socrates:: There are five forms of government, and five characters of mind.

Glaucon:: Tell me what these are.

Socrates:: I will; one form of government will be that which we have been describing, and it may be called by two different names; should there arise among the governing body one man excelling the rest, it will be called a kingdom; if there be more than one of equal excellence, it will be entitled an aristocracy.

Glaucon:: True.

Socrates:: This then I call one form; for whether the supreme power be in the hands of one or many, the important laws of the state will not be disturbed, if their training and education be such as we have described.

Glaucon:: So we may justly expect.

## Book 5.

Socrates:: Such then is the state or constitution which I call good and right, and such is the good man; and if this one be right, I must call the rest bad and wrong; applying these terms both to the organization of states, and to the formation of individual character; and the vicious forms are reducible to four varieties.

Glaucon:: Pray, what are these?

Socrates:: Hereupon I was proceeding to speak of them in order, as they appeared to me to pass severally into one another; when Polemarchus, who was seated a little further off than Adeimantus, put out his hand to take hold of his brothers dress high up near the shoulder, drew him towards himself, and leaning forwards whispered a few words into his ear, of which we only caught the following;

Adeimantus:: Shall we let him off then, or what shall we do?

Socrates:: Adeimantus, beginning to speak aloud.

Adeimantus:: Certainly not.

Socrates:: Pray what may that be which you are not going to let off?

Adeimantus:: You.

Socrates:: And why, pray?

Adeimantus:: We have an idea that you are lagging, and stealing a whole section, and that a very important one, out of the subject, in order to avoid handling it; and we suppose you fancied that we should not notice your passing it over with the very slight remark, that every one would see that the rule, among friends every thing is common property, would apply to the women and children.

Socrates:: Well, and was I not right, Adeimantus?

Adeimantus:: Yes; but this word right, like the rest, needs explanation. We must be told on what plan, among the many possible ones, this community of property is to be carried out. Do not therefore omit to tell us what plan you propose. For we have been long waiting in the expectation that you would specify the conditions under which children are to be begotten, and the manner of rearing them after they are born, and, in fact, that you would give a complete description of the community of women and children intended by you; for we are of opinion, that the mode of carrying out this idea, according as it is right or wrong, will be a matter of great, or rather of vital importance, to a commonwealth. So, finding that you are taking in hand another form of government, before you have satisfactorily settled these points, we have come to the resolution which you overheard, not to let you go till you have discussed all these questions as fully as the others.

Glaucon:: Add my vote also, as a supporter of this motion.

Thrasymachus:: In short, Socrates, you may look upon us as unanimous in this resolution.

Socrates:: What a deed have you done! in thus laying hands upon me. What a large question are you again raising, as if we were beginning anew, on the subject of our commonwealth! I was rejoicing in the idea of having already done with it, and was only too glad that those points should be let alone, and accepted as they were then delivered. You little know what a swarm of questions you are rousing by calling in these topics; but I saw at the time how the case stood, and therefore let the subject go by, lest it should occasion us endless trouble.

Thrasymachus:: How? do you suppose that we are come here on a gold-hunting errand, and not expressly to hear a philosophical discussion?

Socrates:: Yes, one of reasonable length.

Glaucon:: True, Socrates; and in the eyes of sensible people their whole life is but a reasonable time for hearing such discussions. So never mind us; but pray do not grow tired yourself of stating your views on the subjects about which we were asking, I mean, as to the nature of this community of wives and children, which is to subsist among our guardians; and as to the training of the young, in the interval between their birth and education, which is considered the most troublesome business of all. Try to explain to us on what principle this is to be conducted.

Socrates:: It is no easy matter, my gifted friend, to discuss this question; for it is beset by incredulity, even more than our previous doctrines. In the first place, the practicability of our plans will not be believed; and in the next place, supposing them to be most completely carried out, their desirableness will be questioned. And that is why I feel a reluctance to grapple with the subject, lest I should be thought, my dear friend, to be indulging in a merely visionary speculation.

Glaucon:: You need feel no reluctance; for your auditors are neither stupid, nor incredulous, nor unfriendly.

Socrates:: My excellent friend, did you wish to encourage me by your assurance?

Glaucon:: I did.

Socrates:: Then, let me tell you, you have done just the contrary. If I were confident of my own knowledge of the subject, your encouragement would have been well and good; for to speak on the most momentous and interesting topics in the company of intelligent friends, is a thing that may be done with courage and safety, if one really knows the subject; but to broach a theory while one is still in the position of a doubting inquirer, as I am going to do, is a slippery course, and makes me afraid, not of being laughed at, that would be childish, but lest I should miss my footing upon the truth, and falling, drag my friends down with me, and that upon ground on which a false step is especially to be dreaded. I pray that the divine Nemesis may not overtake me, Glaucon, for what I am going to say; for I verily believe it is a more venial offence to be the involuntary cause of death to a man, than to deceive him concerning noble and good and just institutions. Such a risk it were better to run among enemies than among friends; so that you are happy in your choice of encouragement.

At this Glaucon laughed, and said;

Glaucon:: Well, Socrates, should your theory do us any harm, our blood shall not be upon your head; we absolve you from the guilt of deceiving us; therefore speak boldly.

Socrates:: To be sure, the law tells us that, when a man has been absolved from an offence, he is clean even in the next world; and therefore, in all probability, in this world also.

Glaucon:: Very well then, let not this fear hinder you from proceeding.

Socrates:: I must recur, then, to a portion of our subject which perhaps I ought to have discussed before in its proper place. But after all, the present order may be the best; the men having quite played out their piece, we proceed with the performance of the women; especially since this is the order of your challenge.

For men born and educated as we have described, the only right method, in my opinion, of acquiring and treating children and wives will be found in following out that original impulse which we communicated to them. The aim of our theory was, I believe, to make our men as it were guardians of a flock.

Glaucon:: Yes.

Socrates:: Let us keep on the same track, and give corresponding rules for the propagation of the species, and for rearing the young; and let us observe whether we find them suitable or not.

Glaucon:: How do you mean?

Socrates:: Thus. Do we think that the females of watch-dogs ought to guard the flock along with the males, and hunt with them, and share in all their other duties; or that the females ought to stay at home, because they are disabled by having to breed and rear the cubs, while the males are to labor and be charged with all the care of the flocks?

Glaucon:: We expect them to share in whatever is to be done; only we treat the females as the weaker, and the males as the stronger.

Socrates:: Is it possible to use animals for the same work, if you do not give them the same training and education?

Glaucon:: It is not.

Socrates:: If then we are to employ the women in the same duties; as the men, we must give them the same instructions.

Glaucon:: Yes.

Socrates:: To the men we gave music and gymnastic.

Glaucon:: Yes.

Socrates:: Then we must train the women also in the same two arts, giving them besides a military education, and treating them in the same way as the men.

Glaucon:: It follows naturally from what you say.

Socrates:: Perhaps many of the details of the question before us might appear unusually ridiculous, if carried out in the manner proposed.

Glaucon:: No doubt they would.

Socrates:: Which of them do you find the most ridiculous? Is it not obviously the notion of the women exercising naked in the schools with the men, and not only the young women, but even those of an advanced age, just like those old men in the gymnasia, who, in spite of wrinkles and ugliness, still keep up their fondness for active exercises?

Glaucon:: Yes, indeed; at the present day that would appear truly ridiculous.

Socrates:: Well then, as we have started the subject, we must not be afraid of the numerous jests which worthy men may make upon the notion of carrying out such a change in reference to the gymnasia and music; and above all, in the wearing of armor and riding on horseback.

Glaucon:: You are right.

Socrates:: On the contrary, as we have begun the discussion, we must travel on to the rougher ground of our law, entreating these witty men to leave off their usual practice, and try to be serious; and reminding them that not long since it was thought discreditable and ridiculous among the Greeks, as it is now among most barbarian nations, for men to be seen naked. And when the Cretans first, and after them the Lacedaemonians, began the practice of gymnastic exercises, the wits of the time had it in their power to make sport of those novelties. Do you not think so?

Glaucon:: I do.

Socrates:: But when experience had shown that it was better to strip than to cover up the body, and when the ridiculous effect, which this plan had to the eye, had given way be fore the arguments establishing its superiority, it was at the same time, as I imagine, demonstrated, that he is a fool who thinks anything ridiculous but that which is evil, and who attempts to raise a laugh by assuming any object to be ridiculous but that which is unwise and evil; or who chooses for the aim of his serious admiration any other mark save that which is good.

Glaucon:: Most assuredly.

Socrates:: Must we not then first come to an agreement as to whether the regulations proposed are practicable or not, and give to any one, whether of a jocose or serious turn, an opportunity of raising the question, whether the nature of the human female is such as to enable her to share in all the employments of the male, or whether she is wholly unequal to any, or equal to some and not to others; and if so, to which class military service belongs? Will not this be the way to make the best beginning, and, in all probability, the best ending also?

Glaucon:: Yes, quite so.

Socrates:: Would you like, then, that we should argue against ourselves in behalf of an objector, that the adverse position may not be undefended against our attack?

Glaucon:: There is no reason why we should not.

Socrates:: Then let us say in his behalf, Socrates and Glaucon, there is no need for others to advance anything against you; for you yourselves, at the beginning of your scheme for constructing a state, admitted that every individual therein ought, in accordance with nature, to do the one work which belongs to him. We did admit this, I imagine; how could we do otherwise? Can you deny that there is a very marked difference between the nature of woman and that of man?

Glaucon:: Of course there is a difference.

Socrates:: Then is it not fitting to assign to each sex a different work, appropriate to its peculiar nature?

Glaucon:: Undoubtedly.

Socrates:: Then if so, you must be in error now, and be contradicting yourselves when you go on to say, that men and women ought to engage in the same occupations, when their natures are so widely diverse? Shall you have any answer to make to that objection, my clever friend?

Glaucon:: It is not so very easy to find one at a moments notice; but I shall apply to you, and I do so now, to state what the arguments on our side are, and to expound them for us.

Socrates:: These objections, Glaucon, and many others like them, are what I anticipated all along; and that is why I was afraid and reluctant to meddle with the law that regulates the possession of the women and children, and the rearing of the latter.

Glaucon:: To say the truth, it does seem no easy task.

Socrates:: Why no; but the fact is, that whether you fall into a small swimming-bath, or into the middle of the great ocean, you have to swim all the same.

Glaucon:: Exactly so.

Socrates:: Then is it not best for us, in the present instance, to strike out and endeavor to emerge in safety from the discussion, in the hope that either a dolphin may take us on his back, or some other unlooked-for deliverance present itself?

Glaucon:: It would seem so.

Socrates:: Come then, let us see if we can find the way out. We admitted, you say, that different natures ought to have different occupations, and that the natures of men and women are different; but now we maintain that these different natures ought to engage in the same occupations. Is this your charge against us?

Glaucon:: Precisely.

Socrates:: Truly, Glaucon, the power of the art of controversy is a very extraordinary one.

Glaucon:: Why so?

Socrates:: Because it seems to me that many fall into it even against their will, and fancy they are discussing, when they are merely debating, because they cannot distinguish the meanings of a term, in their investigation of any question, but carry on their opposition to what is stated, by attacking the mere words, employing the art of debate, and not that of philosophical discussion.

Glaucon:: This is no doubt the case with many; does it apply to us at the present moment?

Socrates:: Most assuredly it does; at any rate there is every appearance of our having fallen unintentionally into a verbal controversy.

Glaucon:: How so?

Socrates:: We are pressing hard upon the mere letter of the dogma, that different natures ought not to engage in the same pursuits, in the most courageous style of verbal debate, but we have wholly forgotten to consider in what senses the words the same nature and different natures were employed, and what we had in view in our definition, when we assigned different pursuits to different natures, and the same pursuits to the same natures.

Glaucon:: It is true we have not considered that.

Socrates:: That being the case, it is open to us apparently to ask ourselves whether bald men and long-haired men are of the same or of opposite natures, and after admitting the latter to be the case, we may say that if bald men make shoes, long-haired men must not be suffered to make them, or if the long-haired men make them, the others must be forbidden to do so.

Glaucon:: Nay, that would be ridiculous.

Socrates:: Would it be ridiculous, except for the reason that we were not then using the words, the same and different, in a universal sense, being engaged only with that particular species of likeness and difference which applied directly to the pursuits in question? For example, we said that two men who were mentally qualified for the medical profession, possessed the same nature. Do you not think so?

Glaucon:: I do.

Socrates:: And that a man who would make a good physician had a different nature from one who would make a good carpenter.

Glaucon:: Of course he has.

Socrates:: If, then, the male and the female sex appear to differ in reference to any art, or other occupation, we shall say that such occupation must be appropriated to the one or the other; but if we find the difference between the sexes to consist simply in the parts they respectively bear in the propagation of the species, we shall assert that it has not yet been by any means demonstrated that the difference between man and woman touches our purpose;

on the contrary, we shall still think it proper for our guardians and their wives to engage in the same pursuits.

Glaucon:: And rightly.

Socrates:: Shall we not proceed to call upon our opponents to inform us what is that particular art or occupation connected with the organization of a state, in reference to which the nature of a man and a woman are not the same, but diverse?

Glaucon:: We certainly are entitled to do so.

Socrates:: Well, perhaps it might be pleaded by others, as it was a little while ago by you, that it is not easy to give a satisfactory answer at a moments notice; but that, with time for consideration, it would not be difficult to do so.

Glaucon:: True, it might.

Socrates:: Would you like us then to beg the author of such objections to accompany us, to see if we can show him that no occupation which belongs to the ordering of a state is peculiar to women?

Glaucon:: By all means.

Socrates:: Well then, we will address him thus; Pray tell us whether, when you say that one man possesses talents for a particular study, and that another is without them, you mean that the former learns it easily, the latter with difficulty; and that the one with little instruction can find out much for himself in the subject he has studied, whereas the other after much teaching and practice cannot even retain what he has learnt; and that the mind of the one is duly aided, that of the other thwarted, by the bodily powers? Are not these the only marks by which you define the possession and the want of natural talents, for any pursuit?

Glaucon:: Every one will say yes.

Socrates:: Well then, do you know of any branch of human industry in which the female sex is not inferior in these respects to the male? or need we go the length of specifying the art of weaving, and the manufacture of pastry and preserves, in which women are thought to excel, and in which their discomfiture is most laughed at?

Glaucon:: You are perfectly right, that in almost every employment the one sex is vastly superior to the other. There are many women, no doubt, who are better in many things than many men; but, speaking generally, it is as you say.

Socrates:: I conclude then, my friend, that none of the occupations which comprehend the ordering of a state belong to woman as woman, nor yet to man as man; but natural gifts are to be found here and there, in both sexes alike; and, so far as her nature is concerned, the woman is admissible to all pursuits as well as the man; though in all of them the woman is weaker than the man.

Glaucon:: Precisely so.

Socrates:: Shall we then appropriate all duties to men, and none to women?

Glaucon:: How can we?

Socrates:: On the contrary, we shall hold, I imagine, that one woman may have talents for medicine, and another be without them; and that one may be musical, and another unmusical.

Glaucon:: Undoubtedly.

Socrates:: And shall we not also say, that one woman may have qualifications for gymnastic exercises, and for war, and another be unwarlike, and without a taste for gymnastics?

Glaucon:: I think we shall.

Socrates:: Again, may there not be a love of knowledge in one, and a distaste for it in another? and may not one be spirited, and another spiritless?

Glaucon:: True again.

Socrates:: If that be so, there are some women who are fit, and others who are unfit, for the office of guardians. For were not those the qualities that we selected, in the case of the men, as marking their fitness for that office?

Glaucon:: Yes, they were.

Socrates:: Then as far as the guardianship of a state is concerned, there is no difference between the natures of the man and of the woman, but only various degrees of weakness and strength.

Glaucon:: Apparently there is none.

Socrates:: Then we shall have to select duly qualified women also, to share in the life and official labors of the duly qualified men; since we find that they are competent to the work, and of kindred nature with the men.

Glaucon:: Just so.

Socrates:: And must we not assign the same pursuit to the same natures?

Glaucon:: We must.

Socrates:: Then we are now brought round by a circuit to our former position, and we admit that it is no violation of nature to assign music and gymnastic to the wives of our guardians.

Glaucon:: Precisely so.

Socrates:: Then our intended legislation was not impracticable, or visionary, since the proposed law was in accordance with nature; rather it is the existing usage, contravening this of ours, that to all appearance contravenes nature.

Glaucon:: So it appears.

Socrates:: Our inquiry was, whether the proposed arrangement would be practicable, and whether it was the most desirable one. was it not?

Glaucon:: It was.

Socrates:: Are we quite agreed that it is practicable?

Glaucon:: Yes.

Socrates:: Then the next point to be settled is, that it is also the most desirable arrangement?

Glaucon:: Yes, obviously.

Socrates:: Very well; if the question is how to render a woman fit for the office of guardian, we shall not have one education for men, and another for women, especially as the nature to be wrought upon is the same in both cases.

Glaucon:: No. the education will be the same.

Socrates:: Well then, I should like to have your opinion on the following question.

Glaucon:: Pray what is it?

Socrates:: On what principle do you in your own mind estimate one man as better than another? or do you look upon all as equal?

Glaucon:: Certainly I do not.

Socrates:: Then in our ideal state which of the two classes have, in your opinion, been made the better men, the guardians educated as we have described, or the shoemakers brought up to shoemaking?

Glaucon:: It is ridiculous to ask.

Socrates:: I understand you; but tell me, are not these the best of all the citizens?

Glaucon:: Yes, by far.

Socrates:: And will not these women be better than all the other women?

Glaucon:: Yes, by far, again.

Socrates:: Can there be anything better for a state than that it should contain the best possible men and women?

Glaucon:: There cannot.

Socrates:: And this result will be brought about by music and gymnastic Employed as we described?

Glaucon:: Undoubtedly.

Socrates:: Then our intended regulation is not only practicable, but also one most desirable for the state.

Glaucon:: It is.

Socrates:: Then the wives of our guardians must strip for their exercises, inasmuch as they will put on virtue instead of raiment, and must bear their part in war and the other duties comprised in the guardianship of the state, and must engage in no other occupations; though of these tasks the lighter parts must be given to the women rather than to the men, in consideration of the weakness of their sex. But as for the man who laughs at the idea of undressed women going through gymnastic exercises, as a means of realizing what is most perfect, his ridicule is but unripe fruit plucked from the tree of wisdom, and he knows not, to all appearance, what he is laughing at or what he is doing; for it is and ever will be a most excellent maxim, that the useful is noble, and the hurtful base.

Glaucon:: Most assuredly it is.

Socrates:: Here then is one wave, as I may call it, which we may perhaps consider ourselves to have surmounted, in our discussion of the law relating to women; so that, instead of our being altogether swamped by our assertion that it is the duty of our male and female guardians to have all their pursuits in common, our theory is found to be in a manner at one with itself as to the practicability and advisableness of its plan.

Glaucon:: Yes indeed, it is no insignificant wave that you have surmounted.

Socrates:: You will not call it a large one, when you see the next.

Glaucon:: Pray go on, and let me see it.

Socrates:: The last law and those which preceded it involve, as I conceive, another to this effect.

Glaucon:: What is it?

Socrates:: That these women shall be, without exception, the common wives of these men, and that no one shall have a wife of his own; likewise that the children shall be common, and that the parent shall not know his child, nor the child his parent.

Glaucon:: This law, is much more likely than the former to excite distrust both as to its practicability and as to its advisableness.

Socrates:: As to the latter, I think no one could deny that it would be an immense advantage for the wives and children to be common to all, if it were possible; but I expect there would be most controversy about the practicability of the scheme.

Glaucon:: Both points might very well be controverted.

Socrates:: Then there will be a junction of discussions. I thought I should run away and get off from one of them, if you agreed to the utility of the plan, so that I should only have to discuss its feasibility.

Glaucon:: But you were found out in your attempt to escape; so please to render an account on both heads.

Socrates:: I must submit to justice. Grant me however this one favor; permit me to take a holiday, like one of those men of indolent minds, who are wont to feast themselves on their own thoughts, whenever they travel alone. Such persons, you know, before they have found out any means of effecting their wishes, pass that by, to avoid the fatigue of thinking whether such wishes are practicable or not, and assume that what they desire is already theirs; after which they proceed to arrange the remainder of the business, and please themselves with running over what they mean to do under the assumed circumstances, thus aggravating the indolence of an already indolent mind. So at this moment I too am yielding to laziness, and am desirous of putting off for subsequent investigation the question of possibility; and for the present assuming the possibility, I shall inquire, if you will give me leave, what arrangements the governing body will make when our rule is carried out, endeavoring also to show that in practice it would be the most advantageous of all things, both to the state and to its guardians. These points I will first endeavor to examine thoroughly in company with you, and take the others afterwards, if you give me your leave.

Glaucon:: You have my permission. So proceed with the inquiry.

Socrates:: I think then, that if our rulers shall prove worthy of the name, and their auxiliaries likewise, the latter will be willing to execute the orders they receive, and the former, in issuing those orders, will themselves yield implicit obedience to our laws; and in whatever cases we have left the details to them, will endeavor to carry out their spirit.

Glaucon:: So we may expect.

Socrates:: It will be your duty, therefore, as their lawgiver, to select the women just as you selected the men, and to place them together, taking care, as far as possible, that they shall be of similar nature. Now inasmuch as the dwellings and mess-tables are all common, and no one possesses anything in the shape of private property, both sexes will live together, and in consequence of their indiscriminate association in active exercises, and in the rest of their daily life, they will be led, I imagine, by a constraining instinct to form alliances. Do you not think this will be inevitable?

Glaucon:: The necessity truly will not be that of mathematical demonstration, but that of love, which perhaps is more constraining than the other in its power to persuade and draw after it the mass of men.

Socrates:: Quite so. But in the next place, Glaucon, irregular alliances, or indeed irregularity of any kind, would be a profanation among the members of a happy city, and will not be permitted by the magistrates.

Glaucon:: And rightly so.

Socrates:: Manifestly then our next care will be to make the marriage-union as sacred a thing as we possibly can; and this sanctity will attach to the marriages which are most for the public good.

Glaucon:: Precisely so.

Socrates:: Then tell me, Glaucon, how this end is to be attained. For I know you keep in your house both sporting dogs, and a great number of game birds. I conjure you, therefore, to inform me whether you have paid any attention to the intercourse and the breeding of these animals.

Glaucon:: In what respect?

Socrates:: In the first place, though all are well-bred, are there not some which are, or grow to be, superior to the rest?

Glaucon:: There are.

Socrates:: Do you then breed from all alike, or are you anxious to breed as much as possible from the best?

Glaucon:: From the best.

Socrates:: And at what age? when they are very young, or very old, or when they are in their prime?

Glaucon:: When they are in their prime.

Socrates:: And if you were to pursue a different course, do you think your breed of birds and dogs would degenerate very much?

Glaucon:: I do.

Socrates:: Do you think it would be different with horses, or any other animals?

Glaucon:: Certainly not; it would be absurd to suppose it.

Socrates:: Good heavens! my dear friend, what very first-rate men our rulers ought to be, if the analogy hold with regard to the human race.

Glaucon:: Well, it certainly does; but why first-rate?

Socrates:: Because they will be obliged to use medicine to a great extent. Now you know when invalids do not require medicine, but are willing to submit to a regimen, we think an ordinary doctor good enough for them; but when it is necessary to administer medicines, we know that a more able physician must be called in.

Glaucon:: True; but how does this apply?

Socrates:: Thus. It is probable that our rulers will be compelled to have recourse to a good deal of falsehood and deceit for the benefit of their subjects. And, if you recollect, we said that all such practices were useful in the character of medicine.

Glaucon:: Yes, and we were right.

Socrates:: Well then, it appears that this right principle applies particularly to the questions of marriage and propagation.

Glaucon:: How so?

Socrates:: It follows from what has been already granted, that the best of both sexes ought to be brought together as often as possible, and the worst as seldom as possible, and that the issue of the former unions ought to be reared, and that of the latter abandoned, if the flock is to attain to first-rate excellence; and these proceedings ought to be kept a secret from all but the magistrates themselves, if the herd of guardians is also to be as free as possible from internal strife.

Glaucon:: You are perfectly right.

Socrates:: Then we shall have to ordain certain festivals, at which we shall bring together the brides and the bridegrooms, and we must have sacrifices performed, and hymns composed by our poets in strains appropriate to the occasion; but the number of marriages we shall place under the control of the magistrates, in order that they may, as far as they can, keep the population at the same point, taking into consideration the effects of war and disease, and all such agents, that our city may, to the best of our power, be prevented from becoming either too great or too small.

Glaucon:: You are right.

Socrates:: We must therefore contrive an ingenious system of lots, I fancy, in order that those inferior persons, of whom I spoke, may impute the manner in which couples are united, to chance, and not to the magistrates.

Glaucon:: Certainly.

Socrates:: And those of our young men who distinguish themselves in the field or elsewhere, will receive, along with other privileges and rewards, more liberal permission to associate with the women, in order that, under color of this pretext, the greatest number of children may be the issue of such parents.

Glaucon:: You are right.

Socrates:: And, as fast as the children are born, they will be received by the officers appointed for the purpose, whether men or women, or both; for I presume that the state-offices also will be held in common both by men and women.

Glaucon:: They will.

Socrates:: Well, these officers, I suppose, will take the children of good parents, and place them in the general nursery under the charge of certain nurses, living apart in a particular quarter of the city; while the issue of inferior parents, and all imperfect children that are born to the others, will be concealed, as is fitting, in some mysterious and unknown hiding-place.

Glaucon:: Yes, if the breed of the guardians is to be kept pure.

Socrates:: And will not these same officers have to superintend the rearing of the children, bringing the mothers to the nursery when their breasts are full, but taking every precaution that no mother shall know her own child, and providing other women that have milk, if the mothers nave not enough; and must they not take care to limit the time during which the mothers are to suckle the children, committing the task of sitting up at night, and the other troubles incident to infancy, to nurses and attendants?

Glaucon:: You make child-bearing a very easy business for the wives of the guardians.

Socrates:: Yes, and so it ought to be. Now let us proceed to the next object of our interest. We said, you remember, that the children ought to be the issue of parents who are still in their prime.

Glaucon:: True.

Socrates:: And do you agree with me that the prime of life may be reasonably reckoned at a period of twenty years for a woman, and thirty for a man?

Glaucon:: Where do you place these years?

Socrates:: I should make it the rule for a woman to bear children to the state from her twentieth to her fortieth year; and for a man, after getting over the sharpest burst in the race of life, thenceforward to beget children to the state until he is fifty-five years old.

Glaucon:: Doubtless, in both sexes, this is the period of their prime, both of body and mind.

Socrates:: If then a man who is either above or under this age shall meddle with the business of begetting children for the commonwealth, we shall declare his act to be an offence against religion and justice; inasmuch as he is raising up a child for the state, who, should detection be avoided, instead of having been begotten under the sanction of those sacrifices and prayers, which are to be offered up at every marriage ceremonial, by priests and priestesses, and the whole city, to the effect that the children to be born may ever be more virtuous and more useful than their virtuous and useful parents, will have been conceived under cover of darkness by the aid of dire incontinence.

Glaucon:: You are right.

Socrates:: The same law will hold should a man, who is still of an age to be a father, meddle with a woman, who is also of the proper age, without the introduction of the magistrate; for we shall accuse him of raising up to the state an illegitimate, unsponsored, and unhallowed child.

Glaucon:: You are perfectly right.

Socrates:: But as soon as the women and the men are past the prescribed age, we shall allow the latter, I imagine, to associate freely with whomsoever they please, so that it be not a daughter, or mother, or daughters child, or grandmother; and in like manner we shall permit the women to associate with any man, except a son or a father, or one of their relations in the direct line, ascending or descending; but only after giving them strict orders to do their best, if possible, to prevent any child, haply so conceived, from seeing the light, but if that cannot sometimes be helped, to dispose of the infant on the understanding that the fruit of such a union is not to be reared.

Glaucon:: That too is a reasonable plan; but how are they to distinguish fathers, and daughters, and the relations you described just now?

Socrates:: Not at all; only, all the children that are born between the seventh and tenth month from the day on which one of their number was married, are to be called by him, if male, his sons, if female, his daughters; and they shall call him father, and their children he shall call his grandchildren; these again shall call him and his fellow-bridegrooms and brides, grandfathers and grandmothers; likewise all shall regard as brothers and sisters those that were born in the period during which their own fathers and mothers were bringing them into the world; and as we said just now, all these shall refrain from touching one another.

But the law will allow intercourse between brothers and sisters, if the lot chances to fall that way, and if the Delphian priestess also gives it her sanction.

Glaucon:: That is quite right.

Socrates:: Such will be the character, Glaucon, of the community of women and children that is to prevail among the guardians of your state. The argument must now go on to establish that the plan is in keeping with the rest of our polity, and quite the best conceivable arrangement. Or can you propose any other course?

Glaucon:: Do as you say, by all means.

Socrates:: Will not the first step to an agreement on this point between us be, to ask ourselves what we can name as the highest perfection in the constitution of a state, at which the legislator ought to aim in making his laws, and what as the greatest evil; and the next, to inquire whether the plan we described just now fits into our outline of the perfection, and is out of keeping with our sketch of the evil?

Glaucon:: Most decidedly.

Socrates:: Do we know then of any greater evil to the state, than that which should tear it asunder, and make it into a multitude of states instead of one? Or of any higher perfection than that which should bind it together, and make it one?

Glaucon:: We do not.

Socrates:: Well, then, does not a community of feeling in pleasure and pain bind the citizens together, when they all, so far as is possible, rejoice and grieve alike, at the same gains and the same losses?

Glaucon:: Most assuredly it does.

Socrates:: And does not isolation in these feelings produce disunion, when some are much pleased and others equally grieved, at the same events affecting the city and its inmates?

Glaucon:: Of course it does.

Socrates:: And does not this state of things arise when the words mine and not mine are not pronounced by all simultaneously in the city? and when there is the same discrepancy in the use of the word another's?

Glaucon:: Precisely so.

Socrates:: That city then is best conducted in which the largest proportion of citizens apply the words mine and not mine similarly to the same objects.

Glaucon:: Yes, much the best.

Socrates:: Or, in other words, that city which comes nearest to the condition of an individual man. Thus, when one of our fingers is hurt, the whole fellowship that spreads through the body up to the soul, and there forms an organized unity under the governing principle, is sensible of the hurt, and there is a universal and simultaneous feeling of pain in sympathy with the wounded part; and therefore we say that the man has a pain in his finger; and in speaking of any part of our frame whatsoever, the same account may be given of the pain felt when it suffers, and the pleasure felt when it is easy.

Glaucon:: The same, no doubt; and to return to your question, there is a very close analogy between such a case and the condition of the best-governed state.

Socrates:: Then I fancy that, when any good or evil happens to one of the citizens, a state such as we are describing will be more likely than another to regard the affected member as a part of itself, and to sympathize as a whole with his pleasure or his pain.

Glaucon:: It must do so, if it be well ordered.

Socrates:: It will now be time, for us to go back to our state, and to take notice whether it possesses in the highest degree the qualities to which our inquiry has unanimously brought us, or is surpassed therein by some other state.

Glaucon:: We had better do so.

Socrates:: Well then, other states, and ours like the rest, contain magistrates and a commonalty, do they not?

Glaucon:: They do.

Socrates:: And they will all address one another as citizens?

Glaucon:: Of course.

Socrates:: But besides calling them citizens, how does the commonalty in other states style its magistrates?

Glaucon:: In most cases it styles them masters, but in democracies simply magistrates.

Socrates:: But in our state, what name besides that of citizens does the commonalty bestow on the magistrates?

Glaucon:: It calls them preservers and auxiliaries.

Socrates:: And what do they call the people?

Glaucon:: Paymasters and maintainers.

Socrates:: And in other states the magistrates call the people, what?

Glaucon:: Servants.

Socrates:: And what do the magistrates call one another?

Glaucon:: Fellow-magistrates.

Socrates:: And ours?

Glaucon:: Fellow-guardians.

Socrates:: Can you say whether in other states a magistrate, speaking of his fellow-magistrates, might describe one of them as a relative, and another as a stranger?

Glaucon:: Yes, many might.

Socrates:: And in so doing, does he not regard and speak of the former as belonging to himself, and the latter as not belonging to himself?

Glaucon:: He does.

Socrates:: Well, could any of your guardians regard or describe one of his fellow-guardians as a stranger?

Glaucon:: Certainly not; for they must look upon every one whom they meet as either a brother, or a sister, or a father, or a mother, or a son, or a daughter, or one of the children or parents of these.

Socrates:: Excellently said; but answer me one more question; shall you be satisfied with instituting family names, or shall you further require them to act in every instance in accordance with the names, enjoining in the treatment of the fathers, all that it is usual to enjoin towards fathers, as that a child shall honor, succor, and be subject to his parents, otherwise it will be worse for him both before heaven and before men; inasmuch as his conduct, if he acts differently, will be an outrage upon religion and justice? Will you have these commandments, or any others, sounded from the first by all the citizens in the ears of the children, with reference to those who are pointed out to them as fathers, and to all other relations?

Glaucon:: These, certainly; for it would be ridiculous if family names were merely uttered with the lips, without actions to correspond.

Socrates:: This then is the state, above all others, in which, when good or evil betides an individual, every member will with one accord apply the expressions spoken of just now, saying, It is well with mine, or It is ill with mine.

Glaucon:: Most true.

Socrates:: And did we not say that a general sympathy in pleasure and in pain goes hand in hand with this mode of thinking and speaking?

Glaucon:: Yes, and we said so rightly.

Socrates:: Then will not our citizens be remarkable for sharing in the same interest, which they will call mine, and, having this common interest, thereby possess in a remarkable degree a community in pleasure and pain?

Glaucon:: Yes, in a very remarkable degree.

Socrates:: Well, is not this owing, among the other features of our constitution, to the fact that our guardians hold their wives and children in common?

Glaucon:: Yes, mainly to this.

Socrates:: But, if you remember, we admitted this to be the highest perfection in a state, comparing the condition of a well-ordered state to the relation of a body to its members in the matter of pleasure and pain.

Glaucon:: Yes; and we were right in our admission.

Socrates:: Then we have discovered that the highest perfection of the state is due to the community of wives and children, which is to prevail among our auxiliaries.

Glaucon:: Exactly so.

Socrates:: And in this arrangement we were moreover consistent with our former conclusions; for I believe we said that all private property, whether in houses, or lands, or any thing else, must be forbidden to our guardians, who are to receive a maintenance from the rest of the citizens, as the wages of their office, and to lay it out in common, if they are destined to be guardians indeed.

Glaucon:: True.

Socrates:: Well then, will not the regulations laid down before, and still more those we are now describing, make men genuine guardians, and prevent them from tearing the city asunder by applying the term mine each to a different object, instead of all to the same, and by severally dragging to their several distinct abodes whatever they can acquire independently of the rest, and, amongst other things, separate wives and children, thus creating exclusive pleasures and pains by their exclusive interests; causing them, on the contrary, to tend unitedly to a common centre, by the fact of holding but one opinion concerning what is their own, and thus to be, as far as is possible, simultaneously affected by pleasure and pain?

Glaucon:: Precisely so.

Socrates:: Further, will not all lawsuits and prosecutions disappear, so to speak, from among them, seeing that there is nothing which a man can call his own except his body, all other things being common property? And will not this deliver them from all those feuds which are occasioned among men by the separate possession of money and children and kindred?

Glaucon:: They cannot fail to be rid of them.

Socrates:: Moreover, there will be, by rights, no actions for forcible seizure, or for assault and battery among them. For we shall probably maintain that to defend oneself against an assailant of ones own age, is consistent both with honor and justice, recognizing the necessity of taking care of the person.

Glaucon:: Rightly so.

Socrates:: There is also this advantage, in such a law; if any one should happen to fall into a passion with another, he would find a vent for his anger by a personal encounter, and thus the quarrel will be less likely to assume a more serious character.

Glaucon:: Certainly.

Socrates:: An older person, however, will be authorized to command and chastise any that are younger than himself.

Glaucon:: Clearly.

Socrates:: And surely it is to be expected that no younger man will presume either to strike or otherwise do violence to an elder, unless the magistrates commission him to do so. Nor yet, I think, will a young man insult his seniors in any other way; for there are two warders that will effectually interpose, namely, fear and shame; shame restraining him from laying violent hands on one whom he regards as a parent, and fear, lest the person attacked should be succored by the rest, in the character of sons, brothers, and fathers.

Glaucon:: Yes, those will be the results of our regulations.

Socrates:: Then in every way the laws will secure mutual peace among our men.

Glaucon:: Yes, in a high degree.

Socrates:: But if the men of this class be free from internal dissensions, there is no danger that the rest of the citizens will quarrel either with them or with one another.

Glaucon:: No, there is not.

Socrates:: There are, moreover, evils of a very petty nature, and so mean that I scruple even to mention them, from which they will be exempt; I allude to the flatteries paid by the poor to the rich, and those embarrassments and vexations which beset men in rearing a family, and in the acquisition of the money that is needed for the bare maintenance of domestics, now borrowing and now repudiating, and by indiscriminate means procuring property which they place in the hands of their wives and servants, and entrust to their management; all the troubles that these circumstances occasion, my dear friend, are obvious enough, and besides they are ignoble, and do not deserve to be described.

Glaucon:: True, they are obvious even to the blind.

Socrates:: While they are free from all these evils, they will live a life more blessed than that blissful life which is the lot of conquerors at the Olympian games.

Glaucon:: How so?

Socrates:: Why, the happiness ascribed to these comprehends but a small part of the blessings enjoyed by our men, whose victory is as much more glorious as their public maintenance is more complete. The victory they win is the preservation of the whole state, and while living they receive crowns and privileges from their country in the shape of maintenance and all that life requires, themselves and their children, and when they die they are admitted to an honorable interment.

Glaucon:: Yes, indeed, these are glorious privileges.

Socrates:: Do you remember then, that some time back we were accused by some objector of not making our guardians happy, because, with the power to take all that the citizens had, they possessed nothing of their own? To which we replied, I believe, that we would consider that point hereafter, if it should fall in our way; but that our object then was to make our guardians really guardians, and the state itself as happy as we could, without any idea of fixing our attention on any one class, and providing happiness for it?

Glaucon:: I remember.

Socrates:: Well, but as we have now found that the life of the auxiliaries is much more glorious and more desirable than that of Olympian victors, can it be thought that the life of the shoemakers or any other artisans, or that of the agriculturists, is in any sense comparable to it?

Glaucon:: I think not.

Socrates:: However it is but right to repeat here what I said at the time, that if ever our guardians attempt to make themselves happy in such a way that they cease to be guardians, if, instead of being satisfied with a life merely moderate and stable, such as we think the best, they become possessed with a silly and childish notion of happiness, impelling them to use their power to appropriate all the good things in the city, they will discover that Hesiod was truly wise when he said that in a certain sense the half is more than the whole.

Glaucon:: If they take my advice they will abide by the life assigned to them.

Socrates:: Then you concede the principle, that the women are to be put upon the same footing as the men, according to our description, in education, in bearing children and in watching over the other citizens, and that, whether they remain at home or are sent into the field, they are to share the duties of guardianship with the men, and join with them in the chase like dogs, and have every thing in common with them so far as is at all possible, and that in so doing they will be following the most desirable course, and not violating the natural relation which ought to govern the mutual fellowship of the sexes?

Glaucon:: I do concede all this.

Socrates:: Then does it not remain for us, to determine whether this community can possibly subsist among men, as it can among other animals, and what are the conditions of its possibility?

Glaucon:: You have anticipated me in a suggestion I was about to make.

Socrates:: As for their warlike operations, I suppose it is easy to see how they will be conducted.

Glaucon:: How?

Socrates:: Why, both sexes will take the field together, and they will also carry with them to the wars such of their children as are strong enough, in order that, like the children of all other craftsmen, they may be spectators of those occupations in which, when grown up, they will themselves be engaged; and they will require them, besides looking on, to act as servants and attendants in all the duties of war, and to wait upon their fathers and mothers. You have doubtless observed in the various trades, how the children of potters, for example, look on and fetch and carry for their parents, long before they put their own hand to the making of pots.

Glaucon:: Certainly, I have.

Socrates:: Shall potters then show more carefulness than our guardians in educating their children, by making them see and practice their proper duties?

Glaucon:: No, that would be indeed ridiculous.

Socrates:: Then, again, every creature will fight with peculiar courage in the presence of its offspring.

Glaucon:: True; but there is considerable danger, Socrates, in case of one of those reverses which are common in war, that the children may be sacrificed with the parents, and so the rest of the city be weakened beyond the power of recovery.

Socrates:: That is quite true. But let me ask you, in the first place, whether you think we are bound to take measures to avoid every possible danger?

Glaucon:: By no means.

Socrates:: Well, if danger is ever to be encountered, ought it not to be in a case in which success will be a means of improvement?

Glaucon:: Manifestly it ought.

Socrates:: And do you regard it as a point too unimportant to justify the risk, whether those whose manhood is to be passed in the profession of arms, see something of war in their childhood, or not?

Glaucon:: Nay, it is certainly important for the purpose you describe.

Socrates:: Then it must be a fixed rule to make the children spectators of war, and also to contrive some plan for insuring their safety; and then all will be well, will it not?

Glaucon:: It will.

Socrates:: Now, in the first place, will not their fathers be intelligent and sagacious judges, so far as men can be, as to what campaigns are likely to prove dangerous and what the reverse?

Glaucon:: In all probability they will.

Socrates:: If so, they will carry their children to the latter, while they will be cautious about taking them to the former.

Glaucon:: Rightly so.

Socrates:: And I presume they will set officers over them, not chosen for their worthlessness, but men qualified by experience and age to be their guides and tutors.

Glaucon:: It is fit they should.

Socrates:: Still we must admit that many people have met with results contradicting their expectation.

Glaucon:: Yes, very frequently.

Socrates:: Then, to meet such emergencies, my dear friend, we must provide our children from the first with wings, to enable them, in case of necessity, to fly away and escape.

Glaucon:: What do you mean?

Socrates:: We must put them on horseback at the earliest possible age, and when we have had them taught to ride, we must take them to see the fighting, mounted, not on spirited animals, or good chargers, but on horses selected for speed and docility. For by this plan they will obtain the best view of their future occupation, and at the same time will be most secure of making good their escape in case of need, following in the train of leaders of mature years.

Glaucon:: I think your plan is the right one.

Socrates:: To come now to the rules of military service; on what footing are your soldiers to be, both among themselves, and as regards the enemy? Tell me whether I am right in my views or not.

Glaucon:: Let me know what they may be.

Socrates:: If one of the soldiers deserts his rank or throws away his arms, or is guilty of any such act of cowardice, must we not degrade him to the rank of an artisan, or an agricultural laborer?

Glaucon:: Decidedly.

Socrates:: And if a soldier falls alive into the hands of the enemy, ought we not to make a present of him to any one that will have him, to do what he pleases with his booty?

Glaucon:: Yes, by all means.

Socrates:: But if a soldier highly distinguishes himself and gains himself credit, ought he not, think you, in the first place, while the army is still in the field, to be crowned with a garland by each of the youths and children in turn, among his comrades in arms?

Glaucon:: Yes, I think so.

Socrates:: And shaken by the hand?

Glaucon:: Yes, and shaken by the hand.

Socrates:: But I suppose you will hardly extend your approbation to my next proposition.

Glaucon:: What is that?

Socrates:: That he should kiss and be kissed by them all.

Glaucon:: Most certainly I do; and I would add to the law, that during the continuance of the campaign, no one whom he has a mind to kiss be permitted to refuse him the satisfaction; in order that, if any soldier happens to entertain an admiration for either a male or a female comrade, he may be the more stimulated to carry off the meed of velour.

Socrates:: Good; and we have already said that a brave man will be allowed to enter into marriage-relations more frequently than others will, and to exercise more than the usual liberty of choice in such matters, so that as many children as possible may be obtained from a father of this character.

Glaucon:: True, we did say so.

Socrates:: Again there are other honors with which, even according to Homer, it is just to reward those young men that distinguish themselves by good conduct. Homer says that Ajax having won renown in the war, received by way of distinction whole chines of beef; it being considered that an honor which, besides the glory of it, would augment his physical strength, was peculiar!, appropriate to a brave man in the prime of his manhood.

Glaucon:: A very just idea.

Socrates:: Then in this point at least we will follow the suggestion of Homer. We too, at our sacrificial feasts and all similar entertainments, will honor our meritorious soldiers, according to the degree of merit they have displayed, not only with hymns and the privileges we have just slated, but also with goblets full to the brim, and meats and places of honor, intending thereby not only to do honor to our brave men and women, but also to promote their training.

Glaucon:: An excellent plan.

Socrates:: Very good; and when there are any killed in a campaign, shall we not in the first place give out that those who fell with honor belong to the golden race?

Glaucon:: Most assuredly we shall.

Socrates:: And shall we not believe in Hesiods doctrine, that when any of this race die;

> They into spirits are changed, earth-haunting,
> beneficent, holy,
> Mighty to screen us from harm,
> and of speech-gifted men the protectors?

Glaucon:: Yes, certainly we shall.

Socrates:: Shall we then inquire of the oracle how and with what distinctions we ought to inter men of superhuman and godlike mould, and then proceed to inter them, in the manner and with the ceremonies that the oracle prescribes?

Glaucon:: Of course we shall.

Socrates:: And for the future, shall we regard their sepulchers as those of superior beings, and pay them the due respect; and worship? and shall we observe these same practices, whenever any citizen, who has been esteemed eminent for his bravery during his lifetime, dies of old age or from any other cause?

Glaucon:: Certainly, it is but just to do so.

Socrates:: Again, what will be the conduct of our soldiers in dealing with their enemies?

Glaucon:: In what respects?

Socrates:: In the first place, take the custom of making slaves. Does it seem just for Greeks to make slaves of the freemen of Grecian cities? Ought they not rather to do what they can to prevent the practice, and to introduce the custom of sparing their own race, from a prudent fear of being reduced to bondage by the barbarians?

Glaucon:: The latter is the better course beyond all comparison.

Socrates:: Then it is better also not even to have Greek slaves in their possession, and to advise the other Greeks against the practice.

Glaucon:: Decidedly so; their thoughts would then be more turned against the barbarians, and they would be less likely to molest one another.

Socrates:: Again; is it well to strip the slain, after a victory, of any thing except their arms? Or does not the practice offer an excuse to cowards for not facing those who are still fighting, so long as they can pretend that they are in the way of their duty, when they are stooping to rifle a dead body? and have not many armies before now been destroyed through this habit of pillaging?

Glaucon:: No doubt of it.

Socrates:: And does it not seem a piece of ignoble avarice to plunder the dead, and is it not the sign of a womanish and petty mind to regard with hostile feelings the body of a dead man, when the real enemy has flown away, leaving only the instrument wherewith he fought? Are those who thus act any better, think you, than dogs which growl at the stones that have been thrown at them, but let the person who threw them alone?

Glaucon:: No, not one bit better.

Socrates:: Then must we banish the practices of stripping the dead, and interfering with the removal of the bodies?

Glaucon:: Yes, we must indeed.

Socrates:: Neither, I presume, shall we carry the arms of our enemies to the temples, to dedicate them there, especially the arms of Greeks, if we care to cultivate a good understanding with the rest of the Greeks; on the contrary, we shall be fearful of desecrating a temple, if we carry to it such trophies won from our own brethren; that is to say, unless the god of the oracle shall pronounce a different judgment.

Glaucon:: You are quite right.

Socrates:: Well, and how will your soldiers behave towards their enemies in the matter of ravaging the lands and burning the houses of Greeks?

Glaucon:: I should like to hear your own opinion en the subject.

Socrates:: For my part, then, I confess I disapprove of both these practices, and should only allow the annual crop to be carried off. Would you like me to tell you my reasons?

Glaucon:: I should.

Socrates:: It appears to me, that as there are two names in use, war and sedition, so there are two things representing two distinct kinds of disagreement. In the one case the parties are friends and relations, in the other, aliens and foreigners. Now when hostility exists among the former, it is called sedition; when between strangers, it is called war.

Glaucon:: There is nothing unreasonable in what you say.

Socrates:: Observe whether what I am going to add is equally reasonable; I affirm that all the members of the Greek race are brethren and kinsmen to one another, but aliens and foreigners to the barbarian world.

Glaucon:: True.

Socrates:: Therefore when Greeks and barbarians fight together, we shall describe them as natural enemies, warring against one another; and to this kind of hostility we shall give the name of war; but when Greeks are on this sort of footing with Greeks, we shall say that they are natural friends, but that in the case supposed Greece is in a morbid state of civil conflict; and to this kind of hostility we shall give the name of sedition.

Glaucon:: I quite assent to this view.

Socrates:: Then bear in mind, that in what is now confessedly called sedition, wherever this state of things arises and a city is divided, if each party ravage the lands and burn the houses of the other, the conflict is thought a sinful one, and both parties are looked upon as unpatriotic; for had they been patriotic, they would never have had the heart to mangle their nurse and mother. But it is thought that the victorious party cannot in fairness do more than carry off the crops of its adversaries, and ought to feel that they will one day be reconciled again, and not continue at war for ever.

Glaucon:: Yes; this feeling betokens a far more humanized condition than the other.

Socrates:: Very good, and is not the city you are founding to be a Grecian city?

Glaucon:: It certainly should be.

Socrates:: Then will not its citizens be gentle and humane?

Glaucon:: Certainly they will.

Socrates:: And will they not be patriotic Greeks, looking upon all Hellas as their own country, and sharing with their fellow-countrymen in the rites of a common religion?

Glaucon:: Most certainly they will.

Socrates:: Thus regarding all the Greeks as their brethren, will they not look upon a quarrel with them in the light of a sedition, and refuse it the name of a war?

Glaucon:: They will.

Socrates:: And therefore feel, throughout the quarrel, like persons who are presently to be reconciled?

Glaucon:: Exactly so.

Socrates:: They will, therefore, correct them in a friendly spirit, and chastise them without any thought of enslaving or destroying them, simply as schoolmasters, not as enemies.

Glaucon:: Just so.

Socrates:: Then being Greeks, they will not devastate Greece, nor burn houses, nor admit that all the men, women, and children in a city are their foes; always confining this name to those few who were the authors of the quarrel. And on all these accounts they will refrain from laying waste the land, or razing the houses, because the owners are in most cases their friends; and they will push the quarrel only thus far, till the innocent have done justice upon the guilty who plague them.

Socrates:: I readily admit, that our citizens ought to adopt these rules in their conduct towards their adversaries; while I would have them behave to barbarians as the Greeks now behave to one another.

Glaucon:: Then are we to add to our enactments a law forbidding our guardians either to ravage lands or set houses on fire?

Socrates:: Let us do so; and let us assume that both this and our former regulations are right.

Glaucon:: But I really think, Socrates, that if you be permitted to go on in this way, you will never recollect what you put aside some time ago before you entered on all these questions, namely, the task of showing that this constitution of things is possible, and how it might be realized. For in proof of the assertion that, if it were realized, it would ensure all kinds of advantages to a city which was the seat of it, I can myself adduce facts which you have omitted, as, that such soldiers would fight to perfection against their enemies, in consequence of the unwillingness to desert one another which would arise from their knowing one another as brothers, fathers, or sons, and using these endearing names familiarly; and if the female sex were to serve in the army, whether in the same ranks with the men, or posted as a reserve behind, to strike terror into the enemy and render assistance at any point in case of need, I know that this would render them quite invincible; moreover, I see all the advantages, omitted by you, which they would enjoy at home. But as I fully admit the presence of all these merits and a thousand others in this constitution, if it were brought into existence, you need describe it no further. Rather let us try now to convince ourselves of this, that the thing is practicable, and how it is practicable, leaving all other questions to themselves.

Socrates:: What a sudden onslaught, you have made upon my argument! you have no compassion upon my uneasy loitering. Perhaps you do not know that after I have barely surmounted the first two waves, you are now bringing down upon me the third breaker, which is the most mountainous and formidable of the three; but when you have seen or rather heard it, you will think my conduct quite excusable, and you will allow that I had good reasons for hesitating and trembling to broach a theory so startling, and to undertake the investigation of it.

Glaucon:: The more you talk in this strain, the less likely shall we be to let you off from explaining how this constitution is possible. So proceed with your explanation, and let us have no more delay.

Socrates:: Well, then, in the first place we ought not to forget that we have been brought to this point by an inquiry into the nature of justice and injustice.

Glaucon:: True; but what of that?

Socrates:: Why nothing. But, if we find out what justice is, shall we expect the character of a just man not to differ in any point from that of justice itself, but to be its perfect counterpart? Or shall we be content provided he comes as near it as is possible, and partakes more largely of it than the rest of the world?

Glaucon:: The latter; we shall be content.

Socrates:: Then the design of our investigations into the nature of justice in itself, and the character of the perfectly just man, as well as the possibility of his existence, and likewise into the nature of injustice, and the character of the perfectly unjust man, was to use them as patterns, so that by looking upon the two men, and observing how they stand in reference to happiness and its opposite, we might be compelled to admit in our own case, that he who resembles them most closely in character, will also have a lot most closely resembling theirs; but it was not our intention to demonstrate the possibility of these things in practice.

Glaucon:: That is quite true.

Socrates:: Do you think any the worse of the merits of an artist, who has painted a beau ideal of human beauty, and has left nothing lacking in the picture, because he cannot prove that such a man as he has painted might possibly exist?

Glaucon:: No, indeed, I do not.

Socrates:: Well, were not we likewise professing to construct in theory the pattern of a perfect state?

Glaucon:: Yes, certainly.

Socrates:: Then will our theory suffer at all in your good opinion, if we cannot prove that it is possible for a city to be organized in the manner proposed?

Glaucon:: Certainly not.

Socrates:: This then is the true state of the case; but if for your gratification I am to exert myself also to show in what especial way and on what conditions our ideal might best be realized, I must ask you, with a view to this demonstration, to grant over again your former admissions.

Glaucon:: Which do you mean?

Socrates:: In any case, can a theoretical sketch be perfectly realized in practice? or is it a law of nature that performance can never hit the truth so closely as theory?

Never mind if some think otherwise; but tell me whether you admit the fact or not.

Glaucon:: I do admit it.

Socrates:: Then do not impose upon me the duty of exhibiting all our theory realized with precise accuracy in fact; but if we succeed in finding out how a state may be organized in very close accordance with our description, you must admit that we have discovered the possibility of realizing the plan which you require me to consider. Shall you not be content if you gain thus much? for my own part I shall be.

Glaucon:: So shall I.

Socrates:: Then our next step apparently must be, to endeavor to search out and demonstrate what there is now amiss in the working of our states, preventing their being regulated in the manner described, and what is the smallest change that would enable a state to assume this form of constitution, confining ourselves, if possible, to a single change; if not, to two; or else, to such as are fewest in number and least important in their influence.

Glaucon:: Let us by all means endeavor so to do.

Socrates:: Well, there is one change by which, as I think we might show, the required revolution would be secured; but it is certainly neither a small nor an easy change, though it is a possible one.

Glaucon:: What is it?

Socrates:: I am now on the point of confronting that very statement which we compared to the huge wave. Nevertheless it shall be spoken, even if it is to deluge me, literally like an exploding wave, with laughter and infamy. Pay attention to what I am going to say.

Glaucon:: Say on.

Socrates:: Unless it happen either that philosophers acquire the kingly power in states, or that those who are now called kings and potentates, be imbued with a sufficient measure of genuine philosophy, that is to say, unless political power and philosophy be united in the same person, most of those minds which at present pursue one to the exclusion of the other being peremptorily debarred from either, there will be no deliverance, my dear Glaucon, for cities, nor yet, I believe, for the human race; neither can the commonwealth, which we have now sketched in theory, ever till then grow into a possibility, and see the light of day. But a consciousness how entirely this would contradict the common opinion made me all along so reluctant to give expression to it; for it is difficult to see that there is no other way by which happiness can be attained, by the state or by the individual.

Glaucon:: The language and sentiments, Socrates, to which you have just given utterance, are of such a nature, that you may expect large numbers of by no means contemptible assailants to rush desperately upon you without a moments delay, after throwing off their upper garments, as it were, and grasping, in that state, the first offensive weapon that comes in their way, to do signal execution upon you; so that if you fail to repel them with the weapons of argument, and make your escape, you will certainly suffer the penalty of being well jeered.

Socrates:: Well, was it not you that brought all this upon me?

Glaucon:: Yes, and I did quite right. But I promise not to desert you; on the contrary, I will assist you with the weapons at my disposal, which are, good-will and encouragement; and perhaps in my answers I may show more address than another. Therefore, relying on this assistance, endeavor to show to the incredulous that what you say is true.

Socrates:: I must make the attempt, since you offer me such a valuable alliance. Now, if we are to have a chance of escaping from the assailants you speak of, I think it essential to give them our definition of philosophers, and show whom we mean, when we venture to assert that such persons ought to govern; in order that, their character having been made thoroughly apparent, we may be able to defend ourselves by demonstrating that it is the natural province of these men to embrace philosophy, and take the lead in a state, and the province of all others to let philosophy alone, and follow the lead of the former.

Glaucon:: Yes, it is a fit time, to give this definition.

Socrates:: Come then, follow my steps, and let us try if we can in some way or other satisfactorily expound our notion.

Glaucon:: Lead on.

Socrates:: Will it be necessary to remind you, or do you remember without it, that when we state that a man loves some object, we are bound to show, if the statement be correct, that he does not love one part of that object to the exclusion of another, but that he takes delight in the whole?

Glaucon:: I require to be reminded, it seems; for I do not quite understand you.

Socrates:: Such a confession, Glaucon, would have been more appropriate in another person. A man of your amorous nature ought not to forget that a boy-loving, susceptible person is in some way or other attracted and excited by the charms of all who are in their bloom, and thinks they all deserve his attentions and addresses. Is not this the manner in which you behave to your favorites? You will praise a boy with a turned-up nose as having a winning look; the hooked nose of another you consider kinglike; while a third, whose nose is between the two extremes, has a beautifully-proportioned face; the dark, you say, have a manly look, the fair are children of the gods; and who do you suppose coined the phrase olive pale but a lover who could palliate and easily put up with paleness, when he found it on the cheek of youth? In one word, you invent all kinds of excuses, and employ every variety of expression, sooner than reject any that are in the flower and prime of life.

Glaucon:: If you wish, to found on my case an assertion that the amatively disposed thus act, I will allow you to do so for the arguments sake.

Socrates:: To take another illustration; do you not observe that those who are fond of wine behave in a precisely similar manner, finding some excuse or other to admire every sort of wine?

Glaucon:: Yes, certainly.

Socrates:: And you doubtless have seen how persons who love honor will command a company, if they cannot lead an army, and in default of being honored by great and important personages, are glad to receive the respect of the little and the insignificant; so covetous are they of honor in any shape.

Glaucon:: Precisely so.

Socrates:: Then answer me yes or no to this; when we describe a man as having a longing for something, are we to assert that he longs after the whole class that the term includes, or only after one part, to the exclusion of another?

Glaucon:: He longs after the whole.

Socrates:: Then shall we not maintain that the philosopher, or the lover of wisdom, is one who longs for wisdom, not partially, but wholly?

Glaucon:: True.

Socrates:: So that if a person makes difficulties about his studies, especially while he is young and unable to discriminate between what is profitable and what is not, we shall pronounce him to be no lover of learning or of wisdom; just as when a man is nice about his eating, we deny that he is hungry or desirous of food, and instead of describing him as fond of eating, we call him a bad feeder.

Glaucon:: Yes, and we shall be right in doing so.

Socrates:: On the other hand, when a man is ready and willing to taste every kind of knowledge, and addresses himself joyfully to his studies with an appetite which never can be satiated, we shall justly call such a person a philosopher, shall we not?

Glaucon:: You will find your description includes a great number and a strange company. All the lovers of sights, I conclude, are philosophers, because they take pleasure in acquiring knowledge; and those who delight in hearing are a very singular set to reckon among philosophers, those, I mean, who will never, if they can help it, be present at a philosophical discussion, or any similar entertainment, but are unfailing attendants at every Dionysian festival, whether held in town or country, and run about as if they had let out their ears on hire to listen to all the choruses of the season. Are we then to give the title of philosophers to all these people, as well as to others who have a taste for any similar studies, and to the professors of small arts?

Socrates:: Certainly not; we must call them counterfeit philosophers.

Glaucon:: And whom, do you call genuine philosophers?

Socrates:: Those who love to see truth.

Glaucon:: In that, you cannot be wrong; but will you explain what you mean?

Socrates:: That would be not at all easy, with a different questioner; but you, I imagine, will make me the admission I require.

Glaucon:: What is it?

Socrates:: That since beauty is the opposite of deformity, they are two things.

Glaucon:: Of course they are.

Socrates:: Then since they are two, each of them taken separately is one thing.

Glaucon:: That also is true.

Socrates:: The same thing may be said likewise of justice and injustice, good and evil, and all general conceptions. Each of them in itself is one thing, but by the intermixture with actions and bodies and with one another, through which they are everywhere made visible, each appears to be many things.

Glaucon:: You are right.

Socrates:: By the help of this principle, then, I draw a distinction between those whom you described just now as lovers of sights, lovers of arts, and practical persons, on the one hand, and on the other, those about whom we are now inquiring, to whom alone we can rightly give the name of philosophers.

Glaucon:: Explain what you mean.

Socrates:: Why, I suppose that those who love seeing and hearing admire beautiful sounds, and colors, and forms, and all artistic products into which these enter; but the nature of beauty in itself their understanding is unable to behold and embrace.

Glaucon:: Yes, it certainly is as you say.

Socrates:: But those who are capable of reaching to the independent contemplation of abstract beauty will be rare exceptions, will they not?

Glaucon:: They will indeed.

Socrates:: Therefore if a man recognizes the existence of beautiful things, but disbelieves in abstract beauty, and has not the power to follow should another lead the way to the knowledge of it, is his life, think you, a dreaming or a waking one? Just consider. Is it not dreaming when a person, whether asleep or awake, mistakes the likeness of anything for the real thing of which it is a likeness?

Glaucon:: I confess I should say that a person in that predicament was dreaming.

Socrates:: Take again the opposite case, of one who acknowledges an abstract beauty, and has the power to discern both this essence and the objects into which it enters, and who never mistakes such objects for the essence, nor the essence for the objects; does such a person, think you, live a dreaming or a waking life?

Glaucon:: A waking life, undoubtedly.

Socrates:: If so, shall we not be right in calling the mental process of the latter knowledge, because he really knows; and that of the former, opinion, because he merely opines?

Glaucon:: Yes, perfectly right.

Socrates:: Well then, should this person, whom we describe as opining, but not knowing, grow wroth with us, and contend that what we say is not true, shall we be able to appease his indignation and gently convince him, disguising from him the fact that he is in an unsound state?

Glaucon:: That were certainly desirable.

Socrates:: Come then, consider what we are to say to him. Would you like us to make certain inquiries of him, premising that if he really does know anything, we shall not in the least grudge him his knowledge? on the contrary, we shall be truly glad to find that it is so. But answer us this question, we shall say; When a man knows, does he know something or nothing? Be so good, Glaucon, as to make answer in his behalf.

Glaucon:: My answer will be, that he knows something.

Socrates:: Something that exists, or does not exist?

Glaucon:: Something that exists; for how could a thing that does not exist be known?

Socrates:: Are we then quite sure of this fact, in whatever variety of ways we might examine it, that what completely exists may be completely known, whereas that which has no existence at all must be wholly unknown?

Glaucon:: We are perfectly sure of it.

Socrates:: Good; now, if there be anything so constituted, as at the same time to be and not to be, must it not lie somewhere between the purely existent and the absolutely nonexistent?

Glaucon:: It must.

Socrates:: Well then, as knowledge is correlative to the existent, and the negation of knowledge necessarily to the nonexistent, must we not try to find something intermediate between science and ignorance, if there is anything of the kind, to correspond to this that is intermediate between the existent and the non-existent?

Glaucon:: Yes, by all means.

Socrates:: Do we speak of opinion as a something?

Glaucon:: Undoubtedly we do.

Socrates:: Do we consider it a faculty distinct from science or identical with it?

Glaucon:: Distinct from it.

Socrates:: Therefore opinion is appointed to one province and science to another, each acting according to its own peculiar power.

Glaucon:: Just so.

Socrates:: Is it not the nature of science, as correlative to the existent, to know how the existent exists? But first there is a distinction which I think it necessary to establish.

Glaucon:: What is that?

Socrates:: We shall hold that faculties, as a certain general class, are the things whereby we, and every other thing, are able to do whatever we can do; for example, I call sight and hearing faculties, if you happen to understand the special conception which I wish to describe.

Glaucon:: I do understand it.

Socrates:: Then let me tell you what view I take of them. In a faculty I do not see either color, or form, or any of those qualities that I observe in many other things, by regarding which I can in many cases distinguish to myself between one thing and another. No, in a faculty I look only to its province and its function, and thus I am led to call it in each case by this name, pronouncing those faculties to be identical whose provinces and functions are identical, and those diverse whose provinces and functions are diverse. But pray, how do you proceed?

Glaucon:: Just in the same way.

Socrates:: Now then, return with me, my excellent friend. Under what general term do you class science? Do you make it a faculty?

Glaucon:: Yes I do; it is of all the faculties the most powerful.

Socrates:: Well, is opinion a faculty; or are we to refer it to some other denomination?

Glaucon:: Not to any other; for that whereby we are able to opine, can only be opinion.

Socrates:: Well, but a little while ago you admitted that science and opinion are not identical.

Glaucon:: Why how could a sensible man identify the fallible with the infallible?

Socrates:: Very good; so we are clearly agreed that opinion is a thing distinct, from science?

Glaucon:: It is.

Socrates:: If so, each of them has by its nature a different province, and a different efficacy.

Glaucon:: The inference is inevitable.

Socrates:: Science, I believe, has for its province to know the nature of the existent.

Glaucon:: Yes.

Socrates:: And the province of opinion is, we say, to opine.

Glaucon:: Yes.

Socrates:: Does opinion take cognizance of precisely that material which science knows? In other words, is the object matter of opinion identical with that of science? or is that impossible?

Glaucon:: It is impossible, after the admissions we have made; that is, if it be granted that different faculties have different provinces, and that both opinion and science are faculties, and that the two are distinct, all which we affirm. These premises make it impossible to identify the object-matter of science and that of opinion.

Socrates:: Then, if the existent is the object-matter of knowledge, that of opinion must be something other than the existent?

Glaucon:: It must.

Socrates:: Well then, does opinion exercise itself upon the nonexistent, or is it impossible to apprehend even in opinion that which does not exist? Consider does not the person opining carry his thought towards something? Or is it possible to have an opinion, but an opinion about nothing?

Glaucon:: It is impossible.

Socrates:: Then the person who opines has an opinion about some one thing?

Glaucon:: Yes.

Socrates:: Well, but the non-existent could not be called some one thing; it might, on the contrary; with the greatest truth be styled nothing.

Glaucon:: Just so.

Socrates:: But to the non-existent we were constrained to assign ignorance, and to the existent, knowledge.

Glaucon:: And rightly.

Socrates:: Then neither the existent nor the non-existent is the object of opinion?

Glaucon:: No.

Socrates:: Therefore opinion cannot be either ignorance or knowledge.

Glaucon:: Apparently not.

Socrates:: Then does it lie beyond either of these, so as to surpass either knowledge in certainty or ignorance in uncertainty?

Glaucon:: It does neither.

Socrates:: Then tell me, do you look upon opinion as something more dusky than knowledge, more luminous than ignorance?

Glaucon:: Yes, it is strongly so distinguished from either.

Socrates:: And does it lie within these extremes?

Glaucon:: Yes.

Socrates:: Then opinion must be something between the two.

Glaucon:: Precisely so.

Socrates:: Now a little while back, did we not say, that if anything could be found so constituted as at the same time to be and not to be, it must lie between the purely existent and the absolutely not existent, and must be the object neither of science nor yet of ignorance, but of a third faculty, which should be similarly discovered in the interval between science and ignorance?

Glaucon:: We did.

Socrates:: But now we have discovered between these two a faculty which we call opinion.

Glaucon:: We have.

Socrates:: It will remain then for us, apparently, to find what that is which partakes both of being and of not being, and which cannot be rightly said to be either of these absolutely; in order that, should it discover itself to us, we may justly proclaim it to be the object of opinion; thus assigning extremes to extremes, and means to means. Am I not right?

Glaucon:: You are.

Socrates:: These positions then being laid down, I shall proceed to interrogate that worthy man who denies the existence of anything absolutely beautiful, or any form of abstract beauty, which for ever continues the same and unchangeable, though he acknowledges a variety of beautiful objects, that lover of sights, who cannot endure to be told that beauty is one, and justice one, and so on of the rest; My good sir, I shall say, of all these beautiful things, is there one which may not appear ugly? Of all these just things, is there one which may not appear unjust? Or of these holy things, one which may not appear unholy?

Glaucon:: No; they must inevitably appear in a certain sense both fair and foul, both just and unjust, both holy and unholy.

Socrates:: Again, may not the many double things be considered halves just as well as doubles?

Glaucon:: Just as well.

Socrates:: In the same way, have the things which we describe as great, small, light, heavy, any better claim to these titles, than to their opposites?

Glaucon:: No, they will always be equally entitled to either.

Socrates:: Would it be more correct, then, to predicate of those many objects, that each of them is, or is not, that which it is said to be?

Glaucon:: You remind me of the conundrums with a contradiction in them, that are proposed at table, and of the children’s riddle about the eunuch who threw at the bat, hinting darkly with what he hit it, and on what it sat; for the things in question have the same ambiguous character, and one cannot positively conceive of them as either being or not being, as both being and not being, or as neither.

Socrates:: Can you tell then, what to do with them, or where they may be better put than in the interspace between being and not being? For I presume they will not appear either darker than the non-existent, and so more non-existent, or more luminous than the existent, and therefore more existent.

Glaucon:: You are perfectly right.

Socrates:: Hence we have discovered, apparently, that the mass of notions, current among the mass of men, about beauty, justice, and the rest, roam about between the confines of pure existence and pure non-existence.

Glaucon:: We have.

Socrates:: And we before admitted, that if anything of this kind should be brought to light, it ought to be described as the object of opinion, and not of knowledge, these intermediate rovers being caught by the intermediate faculty.

Glaucon:: We did make this admission.

Socrates:: Therefore, when people have an eye for a multitude of beautiful objects, but can neither see beauty in itself, nor follow those who would lead them to it, when they behold number of just things, but not justice in itself, and so in every instance, we shall say they have in every case an opinion, but no real knowledge of the things about which they opine.

Glaucon:: It is a necessary inference.

Socrates:: But what, on the other hand, must we say of those who contemplate things as they are in themselves, and as they exist ever permanent and immutable? Shall we not speak of them as knowing, not opining?

Glaucon:: That also is a necessary inference.

Socrates:: Then shall we not assert that such persons admire and love the objects of knowledge, the others, the objects of opinion? For we have not forgotten, have we, that we spoke of these latter as loving and looking upon beautiful sounds and colors and the like, while they will not hear of the existence of an abstract beauty?

Glaucon:: We have not forgotten it.

Socrates:: Shall we commit any fault then, if we call these people philodoxical rather than philosophical, that is to say, lovers of opinion rather than lovers of wisdom? And will they be very much offended with us for telling them so?

Glaucon:: No, not if they will take my advice; for it is wrong to be offended with the truth.

Socrates:: Those therefore that set their affections on that which in each case really exists, we must call not philodoxical, but philosophical?

Glaucon:: Yes, by all means.

## Book 6.

Socrates:: Thus, Glaucon, after pursuing a lengthened inquiry we have, not without difficulty, discovered who are true philosophers and who are not.

Glaucon:: Yes; probably it was not easy to abridge the inquiry.

Socrates:: Apparently not. However that may be, I think, for my part, that the result would have been brought out still more clearly, if we had to speak of this only, without discussing the many points that still await our notice, if we wish to ascertain wherein the superiority of a righteous over an unrighteous life consists.

Glaucon:: Then what are we to do next?

Socrates:: We have only to take the step next in order. Since those who are able to apprehend the eternal and immutable, are philosophers, while those who are incapable of this and who wander in the region of change and multiformity, are not philosophers, which of the two, tell me, ought to be governors of a state?

Glaucon:: What must I reply, if I am to do justice to the question?

Socrates:: Ask yourself which of the two are to be thought capable of guarding the laws and customs of states, and let these be appointed guardians.

Glaucon:: You are right.

Socrates:: Can there be any question as to whether a blind man, or one with quick sight, is the right person to guard and keep any thing?

Glaucon:: There can be no question about it.

Socrates:: Then do you think that there is a particle of difference between the condition of blind persons, and the state of those who are absolutely destitute of the knowledge of things as they really are, and who possess in their Soul no distinct exemplar, and cannot, like painters, fix; their eyes on perfect truth as a perpetual standard of reference, to be contemplated with the minutest care, before they proceed to deal with earthly canons about things beautiful and just and good, laying them down where they are required, and where they already exist watching over their preservation?

Glaucon:: No, indeed, there is not much difference.

Socrates:: Shall we then appoint such persons to the office of guardians, in preference to those who not only have gained a knowledge of each thing in its reality, but in practical skill are not inferior to the former, and come behind them in no other department of excellence?

Glaucon:: Why, if these latter are not wanting in the other qualifications, it would be perfectly absurd to choose any others. For just the point in which they are superior may be said to be the most important of all.

Socrates:: Then shall we proceed to explain how the same persons will be enabled to possess both qualifications?

Glaucon:: By all means.

Socrates:: If so, we must begin by gaining a thorough insight into their proper character, as we said at the outset of this discussion. And I think, if we agree tolerably on that point, we shall also agree that the two qualifications may be united in the same persons, and that such characters, and no others, are the proper governors of states.

Glaucon:: How so?

Socrates:: With regard to the philosophic nature, let us take for granted that its possessors are ever enamored of all learning, that will reveal to them somewhat of that real and permanent existence, which is exempt from the vicissitudes of generation and decay.

Glaucon:: Let it be granted.

Socrates:: Again, let us also assume that they are enamored of the whole of that real existence, and willingly resign no part of it, be it small or great, honored or slighted; as we showed on a previous occasion, in speaking of the ambitious and the amorous.

Glaucon:: You are right.

Socrates:: Now then proceed to consider, whether we ought not to find a third feature in the character of those who are to realize our description.

Glaucon:: What feature do you mean?

Socrates:: I mean truthfulness, that is, a determination never to admit falsehood in any shape, if it can be helped, but to abhor it, and love the truth.

Glaucon:: Yes, it is probable we shall find it.

Socrates:: Nay, my friend, it is not only probable, but absolutely inevitable, that one who is by nature prone to any passion, should be well pleased with everything that is bound by the closest ties to the beloved object.

Glaucon:: True.

Socrates:: And can you find any thing allied to wisdom more closely than truth?

Glaucon:: Certainly not.

Socrates:: And is it possible for the same nature to love wisdom, and at the same time love falsehood?

Glaucon:: Unquestionably it is not.

Socrates:: Consequently, the genuine lover of knowledge must, from his youth up, strive intensely after all truth.

Glaucon:: Yes, he must thoroughly.

Socrates:: Well, but we cannot doubt that when a persons desires set strongly in one direction, they run with corresponding feebleness in every other channel, like a stream whose waters have been diverted into another bed.

Glaucon:: Undoubtedly they do.

Socrates:: So that when the current has set towards science, and all its branches, a mans desires will, I fancy, hovel around pleasures that are purely mental, abandoning those in which the body is instrumental, provided that the mans love of wisdom is real, not artificial.

Glaucon:: It cannot be otherwise.

Socrates:: Again, such a person will be temperate and thoroughly uncovetous; for he is the last person in the world to value those objects, which make men anxious for money at any cost.

Glaucon:: True.

Socrates:: Once more, there is another point which you ought to take into consideration, when you are endeavoring to distinguish a philosophic from an unphilosophic character.

Glaucon:: What is that?

Socrates:: You must take care not to overlook any taint of meanness. For surely little-mindedness thwarts above everything the soul that is destined ever to aspire to grasp truth, both divine and human, in its integrity and universality.

Glaucon:: That is most true.

Socrates:: And do you think that a spirit full of lofty thoughts, and privileged to contemplate all time, and all existence, can possibly attach any great importance to this life?

Glaucon:: No, it is impossible.

Socrates:: Then such a person will not regard death as a formidable thing, will he?

Glaucon:: Certainly not.

Socrates:: So that a mean and cowardly character can have no part, as it seems, in true philosophy.

Glaucon:: I think it cannot.

Socrates:: What then? Can the man whose mind is well-regulated, and free from covetousness, meanness, pretentiousness, and cowardice, be by any possibility hard to deal with or unjust?

Glaucon:: No; it is impossible.

Socrates:: Therefore, when you are noticing the indications of a philosophical or unphilosophical temper, you must also observe in early youth whether the mind is just and gentle, or unsociable and fierce.

Glaucon:: Quite so.

Socrates:: There is still another point, which I think you must certainly not omit.

Glaucon:: What is that?

Socrates:: Whether the mind in question is quick or slow at learning. For you can never expect; a person to take a decent delight in an occupation which he goes through with pain, and in which he makes small progress with great exertion?

Glaucon:: No, it would be impossible.

Socrates:: Again, if he can remember nothing of what he has learned, can he fail, being thus full of forgetfulness, to be void of knowledge?

Glaucon:: No, he cannot.

Socrates:: Then, will not his fruitless toil, think you, compel him at last to hate both himself and such employment?

Glaucon:: Doubtless it will.

Socrates:: Let us never, then, admit a forgetful mind into the ranks of those that are counted worthy of philosophy; but let us look out for a good memory as a requisite for such admission.

Glaucon:: Yes, by all means.

Socrates:: Again, we should certainly say that the tendency of an unrefined and awkward nature is wholly towards disproportion.

Glaucon:: Certainly.

Socrates:: And do you think that truth is akin to disproportion, or to proportion?

Glaucon:: To proportion.

Socrates:: In addition, then, to our other acquirements, let us search for a mind naturally well-proportioned and graceful, whose native instincts will permit it to be easily led to apprehend the Forms of things as they really are.

Glaucon:: By all means.

Socrates:: What then? Do you think that the qualities which we have enumerated are in any way unnecessary or inconsistent with one another, provided the soul is to attain unto full and satisfactory possession of real existence?

Glaucon:: On the contrary, they are most strictly necessary.

Socrates:: Then can you find any fault with an employment which requires of a man who would pursue it satisfactorily, that nature shall have given him a retentive memory, and made him quick at learning, lofty-minded and graceful, the friend and brother of truth, justice, fortitude, and temperance?

Glaucon:: No; the very Genius of criticism could find no fault with such an employment.

Socrates:: Well, can you hesitate to entrust such characters with the sole management of state affairs, when time and education have made them ripe for the task?

Here Adeimantus interposed and said;

Adeimantus:: It is true, Socrates, that no one can dispute these conclusions; but still, every time that such theories are propounded by you, the hearers feel certain misgivings of the following kind. They fancy that, from want of practice in your method of question and answer, they are at each question led a little astray by the reasoning, until, at the close of the discussion, these little divergences are found to amount to a serious false step, which makes them contradict their original notions. And, as unskillful draught-players are in the end hemmed into a corner by the skilful, till they cannot make a move, just in the same way your hearers conceive themselves to be at last hemmed in and reduced to silence by this novel kind of draughts, played with words instead of counters. For they are not at all the more convinced that the conclusion to which they are brought is the true one. And, in saying this, I have the present occasion before my eye. For at this moment a person will tell you, that though at each question he cannot oppose you with words, yet in practice he sees that all the students of philosophy, who have devoted themselves to it for any length of time, instead of taking it up for educational purposes and relinquishing it while still young, in most cases become exceedingly eccentric, not to say quite depraved, while even those who appear the most respectable are notwithstanding so far the worse for the pursuit which you commend, that they become useless to their country.

Socrates:: When he had said this;

Then do you think this objection untrue?

Adeimantus:: I am not sure; but I should be glad to hear what you think of it.

Socrates:: Let me tell you, that I hold it to be a true objection.

Adeimantus:: How then can it be right to assert that the miseries of our cities will find no relief, until those philosophers who, on our own admission, are useless to them, become their rulers?

Socrates:: You are asking a question, which I must answer by the help of an illustration.

Adeimantus:: And you, I suppose, have not been in the habit of employing illustrations.

Socrates:: Ah! you rally me, do you, now that you have got me upon a subject in which demonstration is so difficult? However, listen to the illustration, that you may see still better how stingy I am with the work. So cruel is the position in which those respectable men are placed, in reference to their states, that there is no single thing whose position is analogous to theirs. Consequently I have to collect materials from several quarters for the imaginary case which I am to use in their defense, like painters when they paint goat-stags and similar monsters.

Figure to yourself a fleet, or a single ship, in which the state of affairs on board is as follows. The captain, you are to suppose, is taller and stronger than any of the crew, but rather deaf, and rather short-sighted, and correspondingly deficient in nautical skill; and the sailors are quarrelling together about the pilotage, each of them thinking he has a right to steer the vessel, although up to that moment he has never studied the art, and cannot name his instructor, or the time when he served his apprenticeship; more than this, they assert that it is a thing which positively cannot be taught, and are even ready to tear in pieces the person who affirms that it can; meanwhile they crowd incessantly round the person of the captain, begging and beseeching him with every importunity to entrust the helm to them; and occasionally, failing to persuade him, while others succeed better, these disappointed candidates kill their successful rivals, or fling them overboard, and, after binding the high-spirited captain hand and foot with mandragora or strong drink, or disabling him by some other contrivance, they remain masters of the ship, and apply its contents to their own purposes, and pass their time at sea in drinking and feasting, as you might expect with such a crew; and besides all this, they compliment with the title of able seaman, excellent pilot, skilful navigator, any sailor that can second them cleverly in either persuading or forcing the captain into installing them in command of the ship, while they condemn as useless every one whose talents are of a different order, having no notion that the true pilot must devote his attention to the year and its seasons, to the sky, and the stars, and the winds, and all that concerns his art, if he intends to be really fit to command a ship; and thinking it impossible to acquire and practice, along with the pilots art, the art of maintaining the pilots authority whether some of the crew like it or not. Such being the state of things on board, do you not think that the pilot who is really master of his craft is sure to be called a useless, star-gazing babbler by the mariners who form the crews of ships so circumstanced?

Adeimantus:: Yes, that he will.

Socrates:: Well, I suppose you do not require to see my illustration passed in review, to remind you that it is a true picture of our cities in so far as their disposition towards philosophers is concerned; on the contrary, I think you understand my meaning.

Adeimantus:: Yes, quite.

Socrates:: That being the case, when a person expresses his astonishment that philosophers are not respected in our cities, begin by telling him our illustration, and endeavor to persuade him that it would be far more astonishing if they were respected.

Adeimantus:: Well, I will.

Socrates:: And go on to tell him that he is right in saying that the most respectable of the proficients in philosophy are of no use to the world; only recommend him to lay the fault of it not on these good people themselves, but upon those who decline their services. For it is not in the nature of things that a pilot should petition the sailors to submit to his authority, or that the wise should wait at the rich mans door. No, the author of that witticism was wrong; for the real truth is, that, just as a sick man, be he rich or poor, must attend at the physicians door, so all who require to be governed must attend at the gate of him who is. able to govern, it being against nature that the ruler, supposing him to be really good for anything, should have to entreat his subjects to submit to his rule. In fact, you will not be wrong, if you compare the statesmen of our time to the sailors whom we were just now describing, and the useless visionary talkers, as they are called by our politicians, to the veritable pilots.

Adeimantus:: You are perfectly right.

Socrates:: Under these circumstances, and amongst men like these, it is not easy for that noblest of occupations to be in good repute with those to whose pursuits it is directly opposed. But far the most grievous and most obstinate misconstruction, under which Philosophy labors, is due to her professed followers; who are doubtless the persons meant by the accuser of Philosophy, when he declares, as you tell us, that most of those who approach her are utterly depraved, while even her best pupils are useless; to the truth of which remark I assented, did I not?

Adeimantus:: Yes, you did.

Socrates:: We have explained the reason why the good are useless, have we not?

Adeimantus:: Certainly we have.

Socrates:: Would you have us proceed next to discuss the question, why the majority are inevitably depraved, and to endeavor to show, if we can, that of this also philosophy is guiltless?

Adeimantus:: Yes, by all means.

Socrates:: Let us then speak and listen alternately, recurring to the point where we were describing what ought to be the natural character of one who is to turn out a perfectly accomplished and virtuous man. The first and leading feature in such a persons character was, if you recollect, truth, which he was bound to pursue with the most absolute devotion, at the risk, should he be found an impostor, of being denied all share in true philosophy.

Adeimantus:: Yes, we said so.

Socrates:: Well, does not this point, for one, run strongly counter to the received opinion upon the subject?

Adeimantus:: Certainly it does.

Socrates:: Then shall we not be making a reasonably good defense, if we say that the natural tendency of the real lover of knowledge is to strain every nerve to reach real existence; and that far from resting at those multitudinous particular phenomena whose existence falls within the region of opinion, he presses on, undiscouraged, and desists not from his passion, till he has apprehended the nature of each thing as it really is, with that part of his soul whose property it is to lay hold of such objects, in virtue of its affinity to them; and that having, by means of this, verily approached and held intercourse with that which verily exists, he begets wisdom and truth, so that then, and not till then, he knows, enjoys true life, and receives true nourishment, and is at length released from his travail-pangs?

Adeimantus:: The defense will be the best possible.

Socrates:: Well, will such a person be tinged with any love of falsehood? Will he not. on the contrary, be imbued with a positive hatred of it?

Adeimantus:: He will.

Socrates:: Now, if truth leads the way, we can never admit that a train of evils follows her steps.

Adeimantus:: Certainly not.

Socrates:: On the contrary, we shall assert that she is attended by a sound and just disposition, followed in its turn by sobriety.

Adeimantus:: True.

Socrates:: And surely we need not repeat our demonstrations, and marshal over again the remaining retinue of the philosophic character. For we found, as you doubtless remember, that the natural accompaniments of the preceding are manliness, loftiness of spirit, a quick apprehension, and a good memory. Upon this you objected, that, though every one will be compelled to assent to our conclusions, still when one comes to drop the argument and turn his eyes simply to the persons who are the subjects of it, he will assert his conviction that a few are merely useless, the majority totally depraved. We therefore inquired into the grounds of this prejudice, and have now arrived at the question, why are the majority depraved? And this was the reason why we took up again the character of the real philosophers and found ourselves compelled to define it.

Adeimantus:: True.

Socrates:: We must, therefore, study the pernicious influences which destroy this character in many persons, and from which only a few escape, who, you tell me, are styled useless, though not depraved. And then we must take into consideration the natures which imitate the truly philosophical, and settle down into the same pursuits, showing what they are mentally, and how they enter upon a profession which is too good and too high for them, and commit such a variety of blunders, that they have everywhere and with all the world attached to philosophy the reputation you describe.

Adeimantus:: But what, are the pernicious influences to which you refer?

Socrates:: I will try to describe them to you, if I can. Every one will agree with us in this, I think, that such a character, possessing all those qualities which we assigned to it but now as essential to a full capacity for philosophy, is of rare and uncommon growth amongst men. Or do you think otherwise?

Adeimantus:: No, indeed I do not.

Socrates:: Then consider how many fatal dangers beset these rare characters.

Adeimantus:: Pray what are they?

Socrates:: The thing which sounds most marvelous is this, that every one of the qualities commended by us has a tendency to vitiate and distract from philosophy the soul which possesses it. I allude to manliness, temperance, and all the characteristics which we have discussed.

Adeimantus:: It does sound strange.

Socrates:: And then, in addition to this, all the reputed advantages of beauty, wealth, strength of body, powerful connections in a state, and all their accompaniments, exercise a corrupting and a distracting influence. Now I have given you an outline of my meaning.

Adeimantus:: You have; and I shall be glad to learn it more in detail.

Socrates:: Only grasp it as a whole aright, and it will present itself to you in a clear light, and my previous remarks will not appear so strange.

Adeimantus:: What do you tell me to do?

Socrates:: In the case of all seeds, and of everything that grows, whether vegetable or animal, we know that whatever fails to find its appropriate nourishment, season, and soil, will lack its proper virtues the more, in proportion as it is more vigorous. For evil is, I presume, more opposed to what is good than to what is not good.

Adeimantus:: Certainly.

Socrates:: Hence I think we may reasonably conclude that the finest natures get more harm, than those of an inferior sort, when exposed to an ungenial nutriment.

Adeimantus:: Yes, we may.

Socrates:: Then may we not assert, Adeimantus, that minds, naturally of the highest order, do in like manner, if they happen to be ill-trained, become peculiarly wicked? Or do you think that great crimes and unalloyed depravity spring, not, as I suppose, from a splendid character ruined by improper treatment, but from a worthless one; and that a feeble nature will ever produce anything great, whether good or evil?

Adeimantus:: No, I think with you.

Socrates:: Well then, the nature which we appropriated to the philosopher, must, I think, provided it meets with proper instruction, grow and attain to all excellence; but if it be sown, planted, and nourished on an ungenial soil, it is sure to run into the very opposite vices, unless some deity should providentially interpose. Or do you hold, with the multitude, that there are certain individuals corrupted by sophists in their youth, and certain individual sophists who corrupt in a private- capacity to any considerable extent? Do you not rather think that those who hold this language are themselves the greatest of sophists, training most elaborately, and finishing to their own liking, both young and old, men and women?

Adeimantus:: Pray when?

Socrates:: Whenever they crowd to the popular assembly, the law-courts, the theatres, the camp, or any other public gathering of large bodies, and there sit in a dense and uproarious mass to censure some of the things said or done, and applaud others, always in excess; shouting and clapping, till, in addition to their own noise, the rocks and the place wherein they are echo back redoubled the uproar of their censure and applause. At such a moment, how is a young man, think you, to retain his self possession? Can any private education that he has received hold out against such a torrent of censure and applause, and avoid being swept away down the stream, wherever it may lead, until he is brought to adopt the language of these men as to what is honorable and dishonorable, and to imitate all their practices, and to become their very counterpart?

Adeimantus:: It is the sure consequence, Socrates.

Socrates:: However, I proceeded, we have not yet mentioned the surest influence at work.

Adeimantus:: What is that?

Socrates:: It is one which these schoolmasters and sophists bring into actual practice, if their words fail of success. For you cannot be ignorant that they chastise the disobedient with disfranchisement, and fines, and death.

Adeimantus:: They do, most decidedly.

Socrates:: Then what other sophist, think you, or what private instructions of an opposite tenor, can prevail over these influences?

Adeimantus:: None can, I imagine.

Socrates:: No, they cannot; nay, the very attempt would be mere folly. For there is not, has not been, and indeed there never can be, a character that will regard virtue with different feelings, if trained in close contact with the education which popular assemblies impart. I am speaking humanly, my friend; for by all means let us except Providence, as the proverb says. For you may be well assured, that you will not be wrong in asserting that whatever has been preserved, and made what it ought to be, while the constitution of states is what it is, has been preserved by a divine interposition.

Adeimantus:: I am quite of that opinion.

Socrates:: Then I would further have you add the following to the list of your opinions.

Adeimantus:: What is it?

Socrates:: That all those mercenary adventurers who, as we know, are called sophists by the multitude, and regarded as rivals, really teach nothing but the opinions of the majority to which expression is given when large masses are collected, and dignify them with the title of wisdom. As well might a person investigate the caprices and desires of some huge and powerful monster in his keeping, studying how it is to be approached, and how handled, at what times and under what circumstances it becomes most dangerous, or most gentle on what occasions it is in the habit of uttering its various cries, and further, what sounds uttered by another person soothe or exasperate it, and when he has mastered all these particulars, by long continued intercourse, as well might he call his results wisdom, systematize them into an art, and open a school, though in reality he is wholly ignorant which of these humors and desires is fair, and which foul, which good and which evil, which just and which unjust; and therefore is content to affix all these names to the fancies of the huge animal, calling what it likes good, and what it dislikes evil, without being able to render any other account of them, nay, giving the titles of just and fair to things done under compulsion, because he has not discerned himself, and therefore cannot point out to others, that wide distinction which really holds between the nature of the compulsory and the good. Tell me, in heavens name, do you not think that such a person would make a strange instructor?

Adeimantus:: Yes, I do think so.

Socrates:: And do you think that there is any difference between such a person and the man who makes wisdom consist in having studied the whim and pleasures of the assembled many-headed multitude, whether in painting, or in music, or finally in politics? For though it be true, that if a man mix with the many, and ask their judgment on some poem, or other work of art, or service rendered to the state, thus putting himself in their power further than he is obliged, he finds himself irresistibly compelled to do whatever they command; yet tell me if you have ever in your life heard any one of them offer an argument which was not ridiculous, to prove that what the multitude commands is really good and fair?

Adeimantus:: No; and I think I never shall.

Socrates:: Then if you have laid all this to heart, let me remind you of another point; will it be possible for the multitude to tolerate or believe in the existence of an essential beauty, as opposed to the multiplicity of beautiful objects; or in the existence of any essential Form, as opposed to the variety of its particular manifestations?

Adeimantus:: Certainly not.

Socrates:: Then the multitude cannot be philosophical.

Adeimantus:: It cannot.

Socrates:: And consequently the professors of philosophy are sure to be condemned by it.

Adeimantus:: They are.

Socrates:: And of course by those private adventurers who associate with the mob, and desire to please it.

Adeimantus:: Clearly.

Socrates:: Such being the case, what salvation do you see for a philosophic character that will enable it to persist in its vocation till it has reached the goal? Take our previous conclusions into your consideration; we agreed, you know, that a quick apprehension, a good memory, a manly and a lofty spirit, are qualities of the philosophic character.

Adeimantus:: Yes, we did.

Socrates:: Then, will not such a person, from his childhood, be first in everything; especially if his bodily are equal to his mental endowments?

Adeimantus:: To be sure he will.

Socrates:: Then, I fancy, his friends and fellow-citizens will wish, when he grows older, to use him for their own purposes.

Adeimantus:: Doubtless.

Socrates:: Consequently they will fall down at his feet with prayers and compliments, securing and flattering by anticipation his future power.

Adeimantus:: Yes, it is certainly a common case.

Socrates:: Then how do you expect such a person to behave under these circumstances, above all, if he happen to be a rich and high-born member of a powerful state, and of a tall and goodly presence besides? Will he not be full of extravagant hopes, and conceive himself competent to direct the affairs of Greeks and foreigners, and make that an excuse for giving himself lofty airs, till he is swollen with self-importance and empty senseless conceit?

Adeimantus:: Undoubtedly he will.

Socrates:: While he is in this frame of mind, suppose some one approaches him gently, and tells him, what is quite true, that there is no real wisdom in him, and that he stands in need of it, and that without slaving for its acquisition it cannot be gained; do you think it an easy matter to gain his attention in the midst of such evil influences?

Adeimantus:: No, it is very far from easy.

Socrates:: If, however, thanks to an excellent nature and an inborn taste for philosophic inquiry, one such individual shall haply take heed, and allow himself to be bent and drawn towards philosophy, what do we think will be the behavior of those who count upon losing his services and his companionship? Will they leave a word unsaid, or a deed undone, that can possibly prevent the pupil from yielding, or the master from succeeding in his persuasions, calling in private machinations and public prosecutions? Will it be possible, then, for such a person to be a student of philosophy?

Adeimantus:: Certainly not.

Socrates:: Thus you see, do you not, how right we were in saying, that in fact the very ingredients of the philosophic character, when subjected to an injurious treatment, are in a manner the causes of a mans falling away from the pursuit of philosophy; to which result the reputed advantages of wealth, and all outward pomp and state, likewise contribute.

Adeimantus:: Yes, indeed, it was a true observation.

Socrates:: This, then, my excellent friend, is the ruin, such and so grievous is the corruption of the finest character with reference to the noblest pursuit, a character too which is, besides, rarely to be met with, as we affirm. And in the ranks of this class, beyond a doubt, are to be found both those men who inflict the greatest injury on states and individuals, and also those who labor for their good, when the tide turns that way; whereas a little mind never influences in any great degree either individuals or states.

Adeimantus:: That is very true.

Socrates:: Thus it comes to pass that those, who, as her nearest relatives, are most bound to espouse Philosophy, fall away, and leave her desolate and inconsummate; and while for their part they live a life unsuited to them and unreal. Philosophy, bereft as it were of relatives, is exposed to the advances of a different class of persons unworthy of her, who bring her to shame, and fasten on her those reproaches, with which you tell me she is loaded, to the effect that her associates are either worth nothing, or, as in the majority of cases, deserving of heavy punishment.

Adeimantus:: Why certainly that is the common remark.

Socrates:: Yes, and a natural remark. For other puny men, seeing this field open, albeit rich in grand names and showy titles, are only too thankful to desert their trades and rush into philosophy, like criminals who break out of prison and run for refuge to a temple, whenever they happen to show remarkable address in their own despicable profession. For though all this is come upon philosophy, nevertheless the rank and splendor which she still retains far transcend those of any other profession; and these are coveted by many whose natural talents were defective from the first, and whose souls have since been so grievously marred and enervated by their life of drudgery, as their bodies have been disfigured by their trades and crafts. Must not that be the case?

Adeimantus:: Certainly it must.

Socrates:: And does their appearance strike you as much better than that of a little bald-headed tinker, who has made some money, has had his chains just knocked off, has been washed in a bath, dressed out in a new coat, and got up as a bridegroom, in which character, owing to his masters poverty and destitution, he is on the point of marrying his daughter?

Adeimantus:: I see no difference at all between the two cases.

Socrates:: Then what may we expect the issue of such a match to be like? Will it not be a baseborn and worthless progeny?

Adeimantus:: It cannot be otherwise.

Socrates:: Well, and when those, who are all unworthy of instruction, draw near and hold intercourse with her beyond their deserts, how must we describe the character of those notions and opinions which are the issue of such a connection? May they not be called, with the utmost propriety, sophisms a spurious brood, without one trace of genuine insight?

Yes, precisely so.

Socrates:: Hence, Adeimantus, those who worthily associate with philosophy form a very small remainder, made up, I conceive, either of noble and well-trained characters, condemned to exile, who, in the absence of all pernicious influences, have been true to their nature, and continued steadfast to philosophy; or of some large-minded men, bred in petty states, who have looked down with contempt upon the politics of their country. Possibly, too, a small section may have come to her from other professions, which natural gifts have justified them in despising. Moreover, the bridle which curbs our friend Theages may be equally efficacious in other instances. For Theages is kept in check by ill-health, which excludes him from a public life, though in all other respects he has every inducement to desert philosophy. I need not mention the supernatural sign, which restrains me; for I fancy it has been granted to few, if any, before my time. Now he who has become a member of this little band, and has tasted how sweet and blessed his treasure is, and has watched the madness of the many, with the full assurance that there is scarcely a person who takes a single judicious step in his public life, and that there is no ally with whom he may safely march to the succor of the just; nay, that, should he attempt it, he will be like a man that has fallen among wild beasts, unwilling to join in their iniquities, and unable singly to resist the fury of all, and therefore destined to perish before he can be of any service to his country or his friends and do no good to himself or any one else; having, I say, weighed all this, such a man keeps quiet and confines himself to his own concerns, like one who takes shelter behind a wall on a stormy day, when the wind is driving before it a hurricane of dust and rain; and when from his retreat he sees the infection of lawlessness spreading over the rest of mankind, he is well content, if he can in any way live his life here untainted in his own person by unrighteousness and unholy deeds, and, when the time for his release arrives, take his departure amid bright hopes with cheerfulness and serenity.

Adeimantus:: Well, he will certainly have effected before his departure not the least important objects. Nor yet, the most important, if he fail to find a political constitution suited to him; for under such a constitution, he will not only himself reach a higher stage of growth, but he will also secure his countries welfare together with his own.

Socrates:: Well then, the causes of the prejudice against philosophy, and the injustice of this prejudice, have in my opinion been satisfactorily disposed of, unless you have anything to add.

Adeimantus:: No, I have nothing more to say on this head; but which of the constitutions of our time is the one that you call suited to philosophy?

Socrates:: There is not one that I can call so; nay, what I complain of is precisely this, that no state, as now constituted, is a worthy sphere for a philosophic nature. Hence that nature becomes warped and deteriorated. For just as the seed of a rare exotic when sown in a foreign soil, habitually becomes enfeebled and loses its essential character, and eventually passes into a common plant of the country; so this kind of character at the present day, failing to preserve its peculiar virtues, degenerates into tendencies that are not its own; but if it could only find the most perfect constitution, answering to itself as the most perfect of characters, it will then give proof that it is the true divine type; whereas all other kinds of character and of vocation are merely human. Now I make no doubt you will proceed to ask me what this constitution is.

Adeimantus:: You are mistaken; what I was going to ask was, whether you were thinking of this constitution, whose organization we have discussed, or of another.

Socrates:: The same, in all points but one; and this one point was alluded to during the discussion, when we said that it would be necessary to have constantly present in the state some authority, that should view the constitution in the very light in which you, the legislator, viewed it, when you framed the laws.

Adeimantus:: True, it was alluded to.

Socrates:: But it was not sufficiently developed, because I was alarmed by your objections, which showed that the demonstration of it would be tedious and difficult; for it is by no means the easiest part of the discussion that is left.

Adeimantus:: What is that part?

Socrates:: To show in what way a state may handle philosophy without incurring utter destruction. For we know that all great things are hazardous, and, according to the proverb, beautiful things are indeed hard of attainment.

Adeimantus:: Nevertheless, let this point be cleared up, in order that the demonstration may be complete.

Socrates:: The hindrance, if any, will arise, not from want of will, but from want of power. My zeal, at any rate, you shall see with your own eyes. For observe at once with what reckless zeal I proceed to assert, that a state ought to deal with the pursuit of philosophy on a plan the very reverse of that now in vogue.

Adeimantus:: How so?

Socrates:: At present, those who pursue philosophy at all are mere  striplings just emerged from boyhood, who take it up in the intervals of housekeeping and business; and, after just dipping into the most abstruse part of the study, (by which I mean Dialectic), abandon the pursuit altogether, and these are the most advanced philosophers; and ever afterwards, if. on being invited, they consent to listen to others whose attention is devoted to it, they think it a great condescension, because they imagine that philosophy ought to be made a mere secondary occupation; and on the approach of old age, all but a very few are extinguished far more effectually than the sun of Heracleitus, inasmuch as they are not, like it, rekindled.

Adeimantus:: And pray what is the right plan?

Socrates:: Just the opposite. In youth and boyhood they ought to be put through a course of training in philosophy, suited to their years; and while their bodies are growing up to manhood, especial attention should be paid to them, as a serviceable acquisition in the cause of philosophy. At the approach of that period, during which the mind begins to attain its maturity, the mental exercises ought to be rendered more severe. Finally, when their bodily powers begin to fail, and they are released from public duties and military service, from that time forward they ought to lead a dedicated life, and consecrate themselves to this one pursuit, if they are to live happily on earth, and after death to crown the life they have led with a corresponding destiny in another world.

Adeimantus:: Well, indeed, Socrates, I do not doubt your zeal. But I expect most of your hearers, beginning with Thrasymachus, to oppose you with still greater zeal, and express their unqualified dissent.

Socrates:: Do not make a quarrel between me and Thrasymachus, when we have just become friends; though I do not mean to say that we were enemies before. I shall leave nothing untried, until I have either won him over to my way of thinking, along with the rest, or have achieved something for their good in that future state, should they ever happen, in a second existence, to encounter similar discussions.

Adeimantus:: Truly a trifling adjournment!

Socrates:: Rather speak of it as a nothing, compared with all time. However, it need not surprise us that most people disbelieve in my doctrines; for they have never yet seen our present theory realized. No, what is much more likely is, that they have met with proposals somewhat resembling ours, but forced expressly into appearing of a piece with one another, instead of falling spontaneously into agreement, as in the present case. They have never yet seen, in either one or more instances, a man molded into the most perfect possible conformity and likeness to virtue, both in words and in works, reigning in a state as perfect. as himself. Or do you think they have?

Adeimantus:: No, indeed I do not.

Socrates:: And further, my dear friend, they have not listened often enough to discussions of an elevated and liberal tone, confined to the strenuous investigation of truth by all possible means, simply for the sake of knowing it; and which therefore will, both in private disquisitions and in public trials, keep at a respectful distance from those subtleties and special pleadings, whose sole aim it is to prolong debate, and elicit applause.

Adeimantus:: You are right again.

Socrates:: It was for these reasons, and in anticipation of these results, that, notwithstanding my fears, I was constrained by the force of truth on a former occasion to assert, that no state, or constitution, or individual either, can ever become perfect, until these few philosophers, who are at present described as useless though not depraved, find themselves accidentally compelled, whether they like it or not, to accept the charge of a state, which in its turn finds itself compelled to be obedient to them; or until the present sovereigns and kings, or their sons, are divinely inspired with a genuine love of genuine philosophy. Now to assert the impossibility of both or either of these contingencies, I for my part pronounce irrational. If they are impossible, we may fairly be held up to derision as mere visionary theorists. Am I not right?

Adeimantus:: You are.

Socrates:: If, then, persons of first-rate philosophical attainments, either in the countless ages that are past have been, or in some foreign clime, far beyond the limits of our horizon, at the present moment are, or hereafter shall be, constrained by some fate to undertake the charge of a state, I am prepared to argue to the death in defense of this assertion, that the constitution described has existed, does exist, yea and will exist, wherever the Muse aforesaid has become mistress of a state. For its realization is no impossibility, nor are our speculations impracticable; though their difficulty is even by us acknowledged.

Adeimantus:: I am of the same opinion.

Socrates:: But are you prepared to say, that the majority, on the contrary, entertain a different opinion?

Adeimantus:: Perhaps so.

Socrates:: My excellent friend, beware how you bring so heavy a charge against the multitude. No doubt they will change their minds, if you avoid controversy, and endeavor with all gentleness to remove their prejudice against the love of learning, by showing them whom you understand by philosophers, and defining, as we have just done, their nature and cultivation, that they may not suppose you to mean such characters as are uppermost in their own thoughts; or shall you venture to maintain that, even if they look at them from your point of view, they will entertain a different opinion from yours, and return another sort of answer? In other words, do you think that an unmalicious and gentle person can quarrel with one who is not quarrelsome, or feel malice towards one who is not malicious? I will anticipate you with the declaration that, in my opinion, a disposition so perverse may be found in some few cases, but not in the majority of mankind.

Adeimantus:: I am myself entirely of your opinion.

Socrates:: Then are you not also of my opinion on just this point, that the ill-will which the multitude bear to philosophy is to be traced to those who have forced their way in, like tipsy men, where they had no concern, and who abuse one another and delight in picking quarrels, and are always discoursing about persons, conduct peculiarly unsuitable to philosophy?

Adeimantus:: Very unsuitable.

Socrates:: For surely, Adeimantus, he who has his thoughts truly set on the things that really exist, cannot even spare time to look down upon the occupations of men, and, by disputing with them, catch the infection of malice and hostility. On the contrary, he devotes all his time to the contemplation of certain well-adjusted and changeless objects; and beholding how they neither wrong nor are wronged by each other, but are all obedient to order and in harmony with reason, he studies to imitate and resemble them as closely as he can. Or do you think it possible for a man to avoid imitating that with which he reverently associates?

Adeimantus:: No, it is impossible.

Socrates:: Hence the philosopher, by associating with what is godlike and orderly, becomes, as far as is permitted to man, orderly and godlike himself; though here, as everywhere, there is room for misconstruction.

Adeimantus:: Indeed, you are right.

Socrates:: So that, if he ever finds himself compelled to study how he may introduce into the habits of men, both in public and in private life, the things that draw his notice in that higher region, and to mould others as well as himself, do you think that he will prove an indifferent artist in the production of temperance and justice and all public virtue?

Adeimantus:: Certainly not.

Socrates:: Well, but if the multitude are made sensible that our description is a correct one, will they really be angry with the philosophers, and will they discredit our assertion, that a state can only attain to true happiness, if it be delineated by painters who copy the divine original?

Adeimantus:: They will not be angry, if they are made sensible of the fact. But pray how do you mean them to sketch it?

Socrates:: They will take for their canvas, a state and the moral nature of mankind, and begin by making a clean surface; which is by no means an easy task. However you are aware, that at the very outset they will differ from all other artists in this respect, that they will refuse to meddle with man or city, and hesitate to pencil laws, until they have either found a clear canvas, or made it clear by their own exertions.

Adeimantus:: Yes, and they are right.

Socrates:: In the next place, do you not suppose that they will sketch in outline the form of their constitution?

Adeimantus:: Doubtless they will.

Socrates:: Their next step, I fancy, will be to fill up this outline; and in doing this they will often turn their eyes to this side and to that, first to the ideal forms of justice, beauty, temperance, and the like, and then to the notions current among mankind; and thus, by mingling and combining the results of their studies, they will work in the true human complexion, guided by those realizations of it among men, which, if you remember, even Homer has described as godly and godlike.

Adeimantus:: You are right.

Socrates:: And, I imagine, they will go on rubbing out here and repainting there, until they have done all in their power to make the moral character of men as pleasing as may be in the eye of heaven.

Adeimantus:: Well, certainly their picture will be a very beautiful one.

Socrates:: Do we then, make any progress in persuading those assailants, who by your account were marching stoutly to attack us, that such a painter of constitutions is to be found in the man whom we praised lately in their hearing, and who occasioned their displeasure, because we proposed to deliver up our cities into his hands? And do they feel rather less exasperation at being told the same thing now?

Adeimantus:: Yes, much less, if they are wise.

Socrates:: I think so too; for pray, how will they be able to dispute our position? Can they deny that philosophers are enamored of real existence and of truth?

Adeimantus:: No, it would be indeed ridiculous to do that.

Socrates:: Well; can they maintain that their character, such as we have described it, is not intimately allied to perfection?

Adeimantus:: No, they cannot.

Socrates:: Once more; will they tell us that such a character, placed within reach of its appropriate studies, will fail to become as thoroughly good and philosophical as any character can become? Or will they give the preference to those whom we discarded?

Adeimantus:: Surely not.

Socrates:: Will they then persist in their anger, when I assert that, till the class of philosophers be invested with the supreme authority in a state, such state and its citizens will find no deliverance from evil, and the fabulous constitution which we are describing will not be actually realized?

Adeimantus:: Probably they will grow less angry.

Socrates:: What do you say to our assuming, not merely that they are less angry, but that they are perfectly pacified and convinced, in order that we may shame them into acquiescence, if nothing else will do?

Adeimantus:: By all means assume it.

Socrates:: Well then, let us regard these persons as convinced so far. But, in the next place, will anybody maintain that kings and sovereigns cannot by any possibility beget sons gifted with a philosophic nature?

Adeimantus:: No one in the world will maintain that.

Socrates:: And can any one assert, that, if born with such a nature, they must necessarily be corrupted? I grant that their preservation is a difficult matter; but I ask, is there any one who will maintain that in the whole course of time not one of all the number can ever be preserved from contamination?

Adeimantus:: Who could maintain that?

Socrates:: Well but, one such person, with a submissive state, has it in his power to realize all that is now discredited.

Adeimantus:: True, he has.

Socrates:: For, surely, if a ruler establishes the laws and customs which we have detailed, it is, I presume, not impossible for the citizens to consent to carry them out.

Adeimantus:: Certainly not.

Socrates:: And, pray, would it be a miracle, beyond the verge of possibility, if what we think right were thought right by others also?

Adeimantus:: For my part I think not.

Socrates:: But I believe we have quite convinced ourselves, in the foregoing discussion, that our plan, if possible, is the best.

Adeimantus:: Yes, quite.

Socrates:: So that the conclusion, apparently, to which we are now brought with regard to our legislation, is, that what we propose is best, if it can be realized; and that to realize it is difficult, but certainly not impossible.

Adeimantus:: True, that is our conclusion.

Socrates:: Well, then, this part of the subject having been laboriously completed, shall we proceed to discuss the questions still remaining, in what way, and by the help of what pursuits and studies, we shall secure the presence of a body of men capable of preserving the constitution unimpaired, and what must be the age at which these studies are severally undertaken?

Adeimantus:: Let us do so by all means.

Socrates:: I have gained nothing, by my old scheme of omitting the troublesome questions involved in the treatment of the women and children, and the appointment of the magistrates; which 1 was induced to leave out from knowing what odium the perfectly correct method would incur, and how difficult it would be to carry into effect. Notwithstanding all my precautions, the moment has now arrived when these points must be discussed. It is true the question of the women and children has been already settled, but the inquiry concerning the magistrates must be pursued quite afresh. In describing them, we said, if you recollect, that, in order to place their patriotism beyond the reach of suspicion, they must be tested by pleasure and by pain, and proved never to have deserted their principles in the midst of toil and danger and every vicissitude of fortune, on pain of forfeiting their position if their powers of endurance fail; and that whoever comes forth from the trial without a flaw, like gold tried in the fire, must be appointed to office, and receive, during life and after death, privileges and rewards. This was pretty nearly the drift of our language, which, from fear of awakening the question now pending, turned aside and hid its face.

Adeimantus:: Your account is quite correct; I remember perfectly.

Socrates:: Yes, my friend, I shrank from making assertions which 1 have since hazarded; but now let me venture upon this declaration, that we must make the most perfect philosophers guardians.

Adeimantus:: We hear you.

Socrates:: Now consider what a small supply of these men you will, in all probability, find. For the various members of that character, which we described as essential to philosophers, will seldom grow incorporate; in most cases that character grows disjointed.

Adeimantus:: What do you mean?

Socrates:: You are aware that persons endowed with a quick comprehension, a good memory, sagacity, acuteness, and their attendant qualities, do not readily grow up to be at the same time so noble and lofty-minded, as to consent to live a regular, calm, and steady life; on the contrary, such persons are drifted by their acuteness hither and thither, and all steadiness vanishes from their life.

Adeimantus:: True.

Socrates:: On the other hand, those steady and invariable characters, whose trustiness makes one anxious to employ them, and who in war are slow to take alarm, behave in the same way when pursuing their studies; that is to say, they are torpid and stupid, as if they were benumbed, and are constantly dozing and yawning, whenever they have to toil at anything of the kind.

Adeimantus:: That is true.

Socrates:: But we declare that, unless a person possesses a pretty fair amount of both qualifications, he must be debarred all access to the strictest education, to honor, and to government.

Adeimantus:: We are right.

Socrates:: Then do you not anticipate a scanty supply of such characters?

Adeimantus:: Most assuredly I do.

Socrates:: Hence we must not be content with testing their behavior in the toils, dangers, and pleasures, which we mentioned before; but we must go on to try them in ways which we then omitted, exercising them in a variety of studies, and observing whether their character will be able to support the highest subjects, or whether it will flinch from the trial, like those who flinch under other circumstances.

Adeimantus:: No doubt it is proper to examine them in this way. But pray which do you mean by the highest subjects?

Socrates:: I presume you remember, that, after separating the soul into three specific parts, we deduced the several natures of justice, temperance, fortitude, and wisdom?

Adeimantus:: Why, if I did not remember, I should deserve not to hear the rest of the discussion.

Socrates:: Do you also remember the remark which preceded that deduction?

Adeimantus:: Pray what was it?

Socrates:: We remarked, I believe, that to obtain the best possible view of the question, we should have to take a different and a longer route, which would bring us to a thorough insight into the subject; still that it would be possible to subjoin a demonstration of the question, flowing from our previous conclusions. Thereupon you said that such a demonstration would satisfy you; and then followed those investigations, which, to my own mind, were deficient in exactness; but you can tell me whether they contented you.

Adeimantus:: Well, to speak for myself, I thought them fair in point of measure; and certainly the rest of the party held the same opinion.

Socrates:: But, my friend, no measure of such a subject, which falls perceptibly short of the truth, can be said to be quite fair; for nothing imperfect is a measure of anything; though people sometimes fancy that enough has been done, and that there is no call for further investigation.

Adeimantus:: Yes, that is a very common habit, and arises from indolence.

Socrates:: Yes, but it is a habit remarkably undesirable in the guardian of a state and its laws.

Adeimantus:: So I should suppose.

Socrates:: That being the case, my friend, such a person must go round by that longer route, and must labor as devotedly in his studies as in his bodily exercises. Otherwise, as we were saying just now, he will never reach the goal of that highest science, which is most peculiarly his own.

Adeimantus:: What! are not these the highest? Is there still something higher than justice and those other things which we have discussed?

Socrates:: Even so; and here we must not contemplate a rude outline, as we have been doing; on the contrary, we must be satisfied with nothing short of the most complete elaboration. For would it not be ridiculous to exert oneself on other subjects of small value, taking all imaginable pains to bring them to the most exact and spotless perfection; and at the same time to ignore the claim of the highest subjects to a corresponding exactitude of the highest order?

Adeimantus:: The sentiment is a very just one. But do you suppose that any one would let you go without asking what that science is which you call the highest, and of what it treats?

Socrates:: Certainly not; so put the question yourself. Assuredly you have heard the answer many a time; but at this moment either you have forgotten it, or else you intend to find me employment by raising objections. 1 incline to the latter opinion; for you have often been told that the essential Form of the Good is the highest object of science, and that this essence, by blending with just things and all other created objects, renders them useful and advantageous. And at this moment you can scarcely doubt that I am going to assert this, and to assert, besides, that we are not sufficiently acquainted with this essence. And if so, if, I say, we know everything else perfectly, without knowing this, you are aware that it will profit us nothing; just as it would be equally profitless to possess everything without possessing what is good. Or do you imagine it would be a gain to possess all possessible things, with the single exception of things good; or to apprehend every conceivable object, without apprehending what is good, in other words, to be destitute of every good and beautiful conception?

Adeimantus:: Not I, believe me.

Socrates:: Moreover, you doubtless know besides, that the chief good is supposed by the multitude to be pleasure, by the more enlightened, insight?

Adeimantus:: Of course I know that.

Socrates:: And you are aware, my friend, that the advocates of this latter opinion are unable to explain what they mean by insight, and are compelled at last to explain it as insight into that which is good.

Adeimantus:: Yes, they are in a ludicrous difficulty.

Socrates:: They certainly are; since they reproach us with ignorance of that which is good, and then speak to us the next moment as if we knew what it was. For they tell us that the chief good is insight into good, assuming that we understand their meaning, as soon as they have uttered the term good.

Adeimantus:: It is perfectly true.

Socrates:: Again; are not those, whose definition identifies pleasure with good, just as much infected with error as the preceding? For they are forced to admit the existence of evil pleasures, are they not?

Adeimantus:: Certainly they are.

Socrates:: From which it follows, I should suppose, that they must admit the same thing to be both good and evil. Does it not?

Adeimantus:: Certainly it does.

Socrates:: Then is it not evident that this is a subject often and severely disputed?

Adeimantus:: Doubtless it is.

Socrates:: Once more; is it not evident, that though many persons would be ready to do and seem to do, or to possess and seem to possess, what seems just and beautiful, without really being so; yet, when you come to things good, no one is content to acquire what only seems such; on the contrary, everybody seeks the reality, and semblances are here, if nowhere else, treated with universal contempt?

Adeimantus:: Yes, that is quite evident.

Socrates:: This good, then, which every soul pursues, as the end of all its actions, divining its existence, but perplexed and unable to apprehend satisfactorily its nature, or to enjoy that steady confidence in relation to it, which it does enjoy in relation to other things, and therefore doomed to forfeit any advantage which it might have derived from those same things; are we to maintain that, on a subject of such overwhelming importance, the blindness we have described is a desirable feature in the character of those best members of the state in whose hands even-thing is to be placed?

Adeimantus:: Most certainly not.

Socrates:: At any rate, if it be not known in what way just things and beautiful things come to be also good, I imagine that such things will not possess a very valuable guardian in the person of him who is ignorant on this point. And I. surmise that none will know the just and the beautiful satisfactorily till he knows the good.

Adeimantus:: You are right in your surmises.

Socrates:: Then will not the arrangement of our constitution be perfect, provided it be overlooked by a guardian who is scientifically acquainted with these subjects?

Adeimantus:: Unquestionably it will. But pray, Socrates, do you assert the chief good to be science or pleasure or something different from either?

Socrates:: Ho, ho, my friend! I saw long ago that you would certainly not put up with the opinions of other people on these subjects.

Adeimantus:: Why, Socrates, it appears to me to be positively wrong in one who has devoted so much time to these questions, to be able to state the opinions of others, without being able to state his own.

Socrates:: Well, do you think it right to speak with an air of information on subjects on which one is not well informed?

Adeimantus:: Certainly not with an air of information; but I think it right to be willing to state ones opinion for what it is worth.

Socrates:: Well, but have you not noticed that opinions divorced from science are all ill-favored? At the best they are blind. Or do you conceive that those who, unaided by the pure reason, entertain a correct opinion, are at all superior to blind men, who manage to keep the straight path?

Adeimantus:: Not at all superior.

Socrates:: Then is it your desire to contemplate objects that are ill-favored, blind, and crooked, when it is in your power to learn from other people about bright and beautiful things?

Glaucon:: I implore you, Socrates, not to hang back, as if you had come to the end. We shall be content even if you only discuss the subject of the chief good in the style in which you discussed justice, temperance, and the rest.

Socrates:: Yes, my friend, and I likewise should be thoroughly content. But I distrust my own powers, and I feel afraid that my awkward zeal will subject me to ridicule. No, my good sirs; let us put aside, for the present at any rate, all inquiry into the real nature of the chief good. For, methinks, it is beyond the measure of this our enterprise to find the way to what is, after all, only my present opinion on the subject. But I am willing to talk to you about that which appears to be an off-shoot of the chief good, and bears the strongest resemblance to it, provided it is also agreeable to you; but if it is not, I will let it alone.

Glaucon:: Nay, tell us about it. You shall remain in our debt for an account of the parent.

Socrates:: I wish that could pay, and you receive, the parent sum, instead of having to content ourselves with the interest springing from it. However, here I present you with the fruit and scion of the essential good. Only take care that I do not involuntarily impose upon you by handing in a forged account of this offspring.

Glaucon:: We will take all the care we can; only proceed.

Socrates:: I will do so, as soon as we have come to a settlement together, and you have been reminded of certain statements made in a previous part of our conversation, and renewed before now again and again.

Glaucon:: Pray what statements?

Socrates:: In the course of the discussion we have distinctly maintained the existence of a multiplicity of things that are beautiful, and good, and so on.

Glaucon:: True, we have.

Socrates:: And also the existence of an essential beauty, and an essential good, and so on; reducing all those things which before we regarded as manifold, to a single form and a single entity in each case, and addressing each as an independent being.

Glaucon:: Just so.

Socrates:: And we assert that the former address themselves to the eye, and not to the pure reason; whereas the forms address themselves to the reason, and not to the eye.

Glaucon:: Certainly.

Socrates:: Now with what part of ourselves do we see visible objects?

Glaucon:: With the eye-sight.

Socrates:: In the same way we hear sounds with the hearing, and perceive everything sensible with the other senses, do we not?

Glaucon:: Certainly.

Socrates:: Then have you noticed with what transcendent costliness the architect of the senses has wrought out the faculty of seeing and being seen?

Glaucon:: Not exactly.

Socrates:: Well then, look at it in this light. Is there any other kind of thing, which the ear and the voice require, to enable the one to hear, and the other to be heard, in the absence of which third thing the one will not hear, and the other will not be heard?

Glaucon:: No, there is not.

Socrates:: And I believe that very few, if any, of the other senses require any such third thing. Can you mention one that does?

Glaucon:: No, I cannot.

Socrates:: But do you not perceive that, in the case of vision and visible objects, there is a demand for something additional?

Glaucon:: How so?

Socrates:: Why, granting that vision is seated in the eye, and that the owner of it is attempting to use it, and that color is resident in the objects, still, unless there be present a third kind of thing, devoted to this especial purpose, you are aware that the eyesight will see nothing, and the colors will be invisible.

Glaucon:: Pray what is the third thing to which you refer?

Socrates:: Of course I refer to what you call light.

Glaucon:: You are right.

Socrates:: Hence it appears, that of all the pairs aforesaid, the sense of sight, and the faculty of being seen, are coupled by the noblest link, whose nature is anything but insignificant, unless light is an ignoble thing.

Glaucon:: No, indeed; it is very far from being ignoble.

Socrates:: To whom, then, of the gods in heaven can you refer as the author and dispenser of this blessing? And whose light is it that enables our sight to see so excellently well, and makes visible objects appear?

Glaucon:: There can be but one opinion on the subject; your question evidently alludes to the sun.

Socrates:: Then the relation subsisting between the eyesight and this deity is of the following nature, is it not?

Glaucon:: Describe it.

Socrates:: Neither the sight itself, nor the eye, which is the seat of sight, can be identified with the sun.

Glaucon:: Certainly not.

Socrates:: And yet, of all the organs of sensation, the eye, methinks, bears the closest resemblance to the sun.

Glaucon:: Yes, quite so.

Socrates:: Further, is not the faculty which the eye possesses dispensed to it from the sun, and held by it as something adventitious?

Glaucon:: Certainly it is.

Socrates:: Then is it not also true, that the sun, though not identical with sight, is nevertheless the cause of sight, and is moreover seen by its aid?

Glaucon:: Yes, quite true.

Socrates:: Well then, believe that I meant the sun, when I spoke of the offspring of the chief good, begotten by it in a certain resemblance to itself, that is to say, bearing the same relation in the visible world to sight and its objects, which the chief good bears in the intellectual world to pure reason and its objects.

Glaucon:: How so? Be so good as to explain it to me more at length.

Socrates:: Are you aware, that whenever a person makes an end of looking at objects, upon which the light of day is shedding color, and looks instead at objects colored by the light of the moon and stars, his eyes grow dim and appear almost blind, as if they were not the seat of distinct vision?

Glaucon:: I am fully aware of it.

Socrates:: But whenever the same person looks at objects on which the sun is shining, these very eyes, I believe, see clearly, and are evidently the seat of distinct vision?

Glaucon:: Unquestionably it is so.

Socrates:: Just in the same way understand the condition of the soul to be as follows. Whenever it has fastened upon an object, over which truth and real existence are shining, it seizes that object by an act of reason, and knows it, and thus proves itself to be possessed of reason; but whenever it has fixed upon objects that are blent with darkness, the world of birth and death, then it rests in opinion, and its sight grows dim, as its opinions shift backwards and forwards, and it has the appearance of being destitute of reason.

Glaucon:: True, it has.

Socrates:: Now, this power, which supplies the objects of real knowledge with the truth that is in them, and which renders to him who knows them the faculty of knowing them, you must consider to be the essential Form of Good, and you must regard it as the origin of science, and of truth, so far as the latter comes within the range of knowledge; and though knowledge and truth are both very beautiful things, you will be right in looking upon good as something distinct from them, and even more beautiful. And just as, in the analogous case, it is right to regard light and vision as resembling the sun, but wrong to identify them with the sun; so, in the case of science and truth, it is right to regard both of them as resembling good, but wrong to identify either of them with good; because, on the contrary, the quality of the good ought to have a still higher value set upon it.

Glaucon:: That implies an inexpressible beauty, if it not only is the source of science and truth, but also surpasses them in beauty; for, I presume, you do not mean by it pleasure.

Socrates:: Hush! not a word of that. But you had better examine the illustration further, as follows.

Glaucon:: Show me how.

Socrates:: I think you will admit that the sun ministers to visible objects, not only the faculty of being seen, but also their vitality, growth, and nutriment, though it is not itself equivalent to vitality.

Glaucon:: Of course it is not.

Socrates:: Then admit that, in like manner, the objects of knowledge not only derive from the good the gift of being known, but are further endowed by it with a real and essential existence; though the good, far from being identical with real existence, actually transcends it in dignity and power.

Hereupon Glaucon exclaimed with a very amusing air;

Glaucon:: Good heavens! what a miraculous superiority!

Socrates:: Well, you are the person to blame, because you compel me to state my opinions on the subject.

Glaucon:: Nay, let me entreat you not to stop, till you have at all events gone over again your similitude of the sun, if you are leaving anything out.

Socrates:: Well, to say the truth, I am leaving out a great deal.

Glaucon:: Then pray do not omit even a trifle.

Socrates:: I fancy I shall leave much unsaid; however, if I can help it under the circumstances, I will not intentionally make any omission.

Glaucon:: Pray do not.

Socrates:: Now understand that, according to us, there are two powers reigning, one over an intellectual, and the other over a visible region and class of objects; if I were to use the term firmament you might think I was playing on the word. Well then, are you in possession of these as two kinds, one visible, the other intellectual?

Glaucon:: Yes, I am.

Socrates:: Suppose you take a line divided into two unequal parts, one to represent the visible class of objects, the other the intellectual, and divide each part again into two segments on the same scale. Then, if you make the lengths of the segments represent degrees of distinctness or indistinctness, one of the two segments of the part which stands for the visible world will represent all images; meaning by images, first of all, shadows; and, in the next place, reflections in water, and in close-grained, smooth, bright substances, and everything of the kind, if you understand me.

Glaucon:: Yes, I do understand.

Socrates:: Let the other segment stand for the real objects corresponding to these images, namely, the animals about us, and the whole world of nature and of art.

Glaucon:: Very good.

Socrates:: Would you also consent to say that, with reference to this class, there is, in point of truth and untruthfulness, the same distinction between the copy and the original, that there is between what is matter of opinion and what is matter of knowledge?

Glaucon:: Certainly I should.

Socrates:: Then let us proceed to consider how we must divide that part of the whole line which represents the intellectual world.

Glaucon:: How must we do it?

Socrates:: Thus; one segment of it will represent what the soul is compelled to investigate by the aid of the segments of the other part, which it employs as images, starting from hypotheses, and travelling not to a first principle, but to a conclusion. The other segment will represent the objects of the soul, as it makes its way from an hypothesis to a first principle which is not hypothetical, unaided by those images which the former division employs, and shaping its journey by the sole help of real essential forms.

Glaucon:: I have not understood your description so well as I could wish.

Socrates:: Then we will try again. You will understand me more easily when I have made some previous observations. I think you know that the students of subjects like geometry and calculation, assume by way of materials, in each investigation, all odd and even numbers, figures, three kinds of angles, and other similar data. These things they are supposed to know, and having adopted them as hypotheses, they decline to give any account of them, either to themselves or to others, on the assumption that they are self-evident; and, making these their starting point, they proceed to travel through the remainder of the subject, and arrive at last, with perfect unanimity, at that which they have proposed as the object of investigation.

Glaucon:: I am perfectly aware of the fact.

Socrates:: Then you also know that they summon to their aid visible forms, and discourse about them, though their thoughts are busy not with these forms, but with their originals, and though they discourse not with a view to the particular square and diameter which they draw, but with a view to the absolute square and the absolute diameter, and so on. For while they employ by way of images those figures and diagrams aforesaid, which again have their shadows and images in water, they are really endeavoring to behold those abstractions which a person can only see with the eye of thought.

Glaucon:: True.

Socrates:: This, then, was the class of things which I called intellectual; but I said that the soul is constrained to employ hypotheses while engaged in the investigation of them, not travelling to a first principle, (because it is unable to step out of, and mount above, its hypotheses,) but using, as images, just the copies that are presented by things below, which copies, as compared with the originals, are vulgarly esteemed distinct and valued accordingly.

Glaucon:: I understand you to be speaking of the subject-matter of the various branches of geometry and the kindred arts.

Socrates:: Again, by the second segment of the intellectual world understand me to mean all that the mere reasoning process apprehends by the force of dialectic, when it avails itself of hypotheses not as first principles, but as genuine hypotheses, that is to say, as stepping-stones and impulses, whereby it may force its way up to something that is not hypothetical, and arrive at the first principle of every thing, and seize it in its grasp; which done, it turns round, and takes hold of that which takes hold of this first principle, till at last it comes down to a conclusion, calling in the aid of no sensible object whatever, but simply employing abstract, self-subsisting forms, and terminating in the same.

Glaucon:: I do not understand you so well as I could wish, for I believe you to be describing an arduous task; but at any rate I understand that you wish to declare distinctly, that the field of real existence and pure intellect, as contemplated by the science of dialectic, is more certain than the field investigated by what are called the arts, in which hypotheses constitute first principles, which the students are compelled, it is true, to contemplate with the mind and not with the senses; but, at the same time, as they do not come back, in the course of inquiry, to a first principle, but push on from hypothetical premises, you think that they do not exercise pure reason on the questions that engage them, although taken in connection with a first principle these questions come within the domain of the pure reason. And I believe you apply the term understanding, not pure reason, to the mental habit of such people as geometricians, regarding understanding as something intermediate between opinion and pure reason.

Socrates:: You have taken in my meaning most satisfactorily; and I beg you will accept these four mental states, as corresponding to the four segments, namely pure reason corresponding to the highest, understanding to the second, belief to the third, and conjecture to the last; and pray arrange them in gradation, and believe them to partake of distinctness in a degree corresponding to the truth of their respective objects.

Glaucon:: I understand you. I quite agree with you, and will arrange them as you desire.

**Book 7.**

Socrates:: Now then, go on to compare our natural condition, so far as education and ignorance are concerned, to a state of things like the following. Imagine a number of men living in an underground cavernous chamber, with an entrance open to the light, extending along the entire length of the cavern, in which they have been confined, from their childhood, with their legs and necks so shackled, that they are obliged to sit still and look straight forwards, because their chains render it impossible for them to turn their heads round; and imagine a bright fire burning some way off, above and behind them, and an elevated roadway passing between the fire and the prisoners, with a low wall built along it, like the screens which conjurors put up in front of their audience, and above which they exhibit their wonders.

Glaucon:: I have it.

Socrates:: Also figure to yourself a number of persons walking behind this wall, and carrying with them statues of men, and images of other animals, wrought in wood and stone and all kinds of materials, together with various other articles, which overtop the wall; and, as you might expect, let some of the passers-by be talking, and others silent.

Glaucon:: You are describing a strange scene, and strange prisoners.

Socrates:: They resemble us. For let me ask you, in the first place, whether persons so confined could have seen anything of themselves or of each other, beyond the shadows thrown by the fire upon the part of the cavern facing them?

Glaucon:: Certainly not, if you suppose them to have been compelled all their lifetime to keep their heads unmoved.

Socrates:: And is not their knowledge of the things carried past them equally limited?

Glaucon:: Unquestionably it is.

Socrates:: And if they were able to converse with one another, do you not think that they would be in the habit of giving names to the objects which they saw before them?

Glaucon:: Doubtless they would.

Socrates:: Again; if their prison-house returned an echo from the part facing them, whenever one of the passers-by opened his lips, to what, let me ask you, could they refer the voice, if not to the shadow which was passing?

Glaucon:: Unquestionably they would refer it to that.

Socrates:: Then surely such persons would hold the shadows of those manufactured articles to be the only realities.

Glaucon:: Without a doubt they would.

Socrates:: Now consider what would happen if the course of nature brought them a release from their fetters, and a remedy for their foolishness, in the following manner. Let us suppose that one of them has been released, and compelled suddenly to stand up, and turn his neck round and walk with open eyes towards the light; and let us suppose that he goes through all these actions with pain, and that the dazzling splendor renders him incapable of discerning those objects of which he used formerly to see the shadows. What answer should you expect him to make, if some one were to tell him that in those days he was watching foolish phantoms, but that now he is somewhat nearer to reality, and is turned towards things more real, and sees more correctly; above all, if he were to point out to him the several objects that are passing by, and question him, and compel him to answer what they are? Should you not expect him to be puzzled, and to regard his old visions as truer than the objects now forced upon his notice?

Glaucon:: Yes, much truer.

Socrates:: And if he were further compelled to gaze at the light itself, would not his eyes, think you, be distressed, and would he not shrink and turn away to the things which he could see distinctly, and consider them to be really clearer than the things pointed out to him?

Glaucon:: Just so.

Socrates:: And if some one were to drag him violently up the rough and steep ascent from the cavern, and refuse to let him go till he had drawn him out into the light of the sun, would he not, think you, be vexed and indignant at such treatment, and on reaching the light, would he not find his eyes so dazzled by the glare as to be incapable of making out so much as one of the objects that are now called true?

Glaucon:: Yes, he would find it so at first.

Socrates:: Hence, I suppose, habit will be necessary to enable him to perceive objects in that upper world. At first he will be most successful in distinguishing shadows; then he will discern the reflections of men and other things in water, and afterwards the realities; and after this he will raise his eyes to encounter the light of the moon and stars, finding it less difficult to study the heavenly bodies and the heaven itself by night, than the sun and the suns light by day.

Glaucon:: Doubtless.

Socrates:: Last of all, I imagine, he will be able to observe and contemplate the nature of the sun, not as it appears in water or on alien ground, but as it is in itself in its own territory.

Glaucon:: Of course.

Socrates:: His next step will be to draw the conclusion, that the sun is the author of the seasons and the years, and the guardian of all things in the visible world, and in a manner the cause of all those things which he and his companions used to see.

Glaucon:: Obviously, this will be his next step.

Socrates:: What then? When he recalls to mind his first habitation, and the wisdom of the place, and his old fellow prisoners, do you not think he will congratulate himself on the change, and pity them?

Glaucon:: Assuredly he will.

Socrates:: And if it was their practice in those days to receive honour and commendations one from another, and to give prizes to him who had the keenest eye for a passing object, and who remembered best all that used to precede and follow and accompany it, and from these data divined most ably what was going to come next, do you fancy that he will covet these prizes, and envy those who receive honour and exercise authority among them? Do you not rather imagine that he will feel what Homer describes, and wish extremely and be ready to go through anything, rather than entertain those opinions, and live in that fashion?

Glaucon:: For my own part, I am quite of that opinion. I believe he would consent to go through anything rather than live in that way.

Socrates:: And now consider what would happen if such a man were to descend again and seat himself on his old seat? Coming so suddenly out of the sun, would he not find his eyes blinded with the gloom of the place?

Glaucon:: Certainly, he would.

Socrates:: And if he were forced to deliver his opinion again, touching the shadows aforesaid, and to enter the lists against those who had always been prisoners, while his sight continued dim, and his eyes unsteady, and if this process of initiation lasted a considerable time, would he not be made a laughingstock, and would it not be said of him, that he had gone up only to come back again with his eyesight destroyed, and that it was not worth while even to attempt the ascent? And if any one endeavored to set them free and carry them to the light, would they not go so far as to put him to death, if they could only manage to get him into their power?

Glaucon:: Yes, that they would.

Socrates:: Now this imaginary case, my dear Glaucon, you must apply in all its parts to our former statements, by comparing the region which the eye reveals, to the prison house, and the light of the fire therein to the power of the sun; and if, by the upward ascent and the contemplation of the upper world, you understand the mounting of the soul into the intellectual region, you will hit the tendency of my own surmises, since you desire to be told what they are; though, indeed, God only knows whether they are correct. But, be that as it may, the view which I take of the subject is to the following effect. In the world of knowledge, the essential Form of Good is the limit of our inquiries, and can barely be perceived; but, when perceived, we cannot help concluding that it is in every case the source of all that is bright and beautiful, in the visible world giving birth to light and its master, and in the intellectual world dispensing, immediately and with full authority, truth and reason; and that whosoever would act wisely, either in private or in public, must set this Form of Good before his eyes.

Glaucon:: To the best of my power, I quite agree with you.

Socrates:: That being the case, pray agree with me on another point, and do not be surprised, that those who have climbed so high are unwilling to take a part in the affairs of men, because their souls are ever loath to desert that upper region. For how could it be otherwise, if the preceding simile is indeed a correct representation of their case?

Glaucon:: True, it could scarcely be otherwise.

Socrates:: Well; do you think it a marvelous thing, that a person, who has just quitted the contemplation of divine objects for the study of human infirmities, should betray awkwardness, and appear very ridiculous, when with his sight still dazed, and before he has become sufficiently habituated to the darkness that reigns around, he finds himself compelled to contend in courts of law, or elsewhere, about the shadows of justice, or images which throw the shadows, and to enter the lists in questions involving the arbitrary suppositions entertained by those who have never yet had a glimpse of the essential features of justice?

Glaucon:: No, it is anything but marvelous.

Socrates:: Right; for a sensible man will recollect that the eyes may be confused in two distinct ways and from two distinct causes, that is to say, by sudden transitions either from light to darkness, or from darkness to light. And, believing the same idea to be applicable to the soul, whenever such a person sees a case in which the mind is perplexed and unable to distinguish objects, he will not laugh irrationally, but he will examine whether it has just quitted a brighter life, and has been blinded by the novelty of darkness, or whether it has come from the depths of ignorance into a more brilliant life, and has been dazzled by the unusual splendor; and not till then will he congratulate the one upon its life and condition, and compassionate the other; and if he chooses to laugh at it, such laughter will be less ridiculous than that which is raised at the expense of the soul that has descended from the light of a higher region.

Glaucon:: You speak with great judgment.

Socrates:: Hence, if this be true, we cannot avoid adopting the belief, that the real nature of education is at variance with the account given of it by certain of its professors, who pretend, I believe, to infuse into the mind a knowledge of which it was destitute, just as sight might be instilled into blinded eyes.

Glaucon:: True; such are their pretensions.

Socrates:: Whereas, our present argument shows us that there is a faculty residing in the soul of each person, and an instrument enabling each of us to learn; and that, just as we might suppose it to be impossible to turn the eye round from darkness to light without turning the whole body, so must this faculty, or this instrument, be wheeled round, in company with the entire soul, from the perishing world, until it be enabled to endure the contemplation of the real world and the brightest part thereof, which, according to us, is the Form of Good. Am I not right?

Glaucon:: You are.

Socrates:: Hence, this very process of revolution must give rise to an art, teaching in what way the change will most easily and most effectually be brought about. Its object will not be to generate in the person the power of seeing. On the contrary, it assumes that he possesses it, though he is turned in a wrong direction, and does not look towards the right quarter; and its aim is to remedy this defect.

Glaucon:: So it would appear.

Socrates:: Hence, while, on the one hand, the other so-called virtues of the soul seem to resemble those of the body, inasmuch as they really do not pre-exist in the soul, but are formed in it in the course of time by habit and exercise; the virtue of wisdom, on the other hand, does most certainly appertain, as it would appear, to a more divine substance, which never loses its energy, but by change of position becomes useful and serviceable, or else remains useless and injurious. For you must, ere this, have noticed how keen-sighted are the puny souls of those who have the reputation of being clever but vicious, and how sharply they see through the things to which they are directed, thus proving that their powers of vision are by no means feeble, though they have been compelled to become the servants of wickedness, so that the more sharply they see, the more numerous are the evils which they work.

Glaucon:: Yes, indeed it is the case.

Socrates:: But, if from earliest childhood these characters had been shorn and stripped of those leaden, earthborn weights, which grow and cling to the pleasures of eating and gluttonous enjoyments of a similar nature, and keep the eye of the soul turned upon the things below; if, I repeat, they had been released from these snares, and turned round to look at objects that are true, then these very same souls of these very same men would have had as keen an eye for such pursuits as they actually have for those in which they are now engaged.

Glaucon:: Yes, probably it would be so.

Socrates:: Once more; is it not also probable, or rather is it not a necessary corollary to our previous remarks, that neither those who are uneducated and ignorant of truth, nor those who are suffered to linger over their education all their life, can ever be competent overseers of a state, the former, because they have no single mark in life, which they are to constitute the end and aim of all their conduct both in private and in public; the latter, because they will not act without compulsion, fancying that, while yet alive, they have been translated to the islands of the blest.

Glaucon:: That is true.

Socrates:: It is, therefore, our task, to constrain the noblest characters in our colony to arrive at that science which we formerly pronounced the highest, and to set eyes upon the good, and to mount that ascent we spoke of; and, when they have mounted and looked long enough, we must take care to refuse them that liberty which is at present permitted them.

Glaucon:: Pray what is that?

Socrates:: The liberty of staying where they are, and refusing to descend again to those prisoners, or partake of their toils and honors, be they mean or be they exalted.

Glaucon:: Then are we to do them a wrong, and make them live a life that is worse than the one within their reach?

Socrates:: You have again forgotten, my friend, that law does not ask itself how some one class in a state is to live extraordinarily well. On the contrary, it tries to bring about this result in the entire state; for which purpose it links the citizens together by persuasion and by constraint, makes them share with one another the benefit which each individual can contribute to the common weal, and does actually create men of this exalted character in the state, not with the intention of letting them go each on his own way, but with the intention of turning them to account in its plans for the consolidation of the state.

Glaucon:: True; I had forgotten.

Socrates:: Therefore reflect, Glaucon, that far from wronging the future philosophers of our state, we shall only be treating them with strict justice, if we put them under the additional obligation of watching over their fellow-citizens, and taking care of them. We shall say; It is with good reason that your compeers elsewhere refuse to share in the labors of their respective states. For they take root in a city spontaneously, in defiance of the prevailing constitution; and it is but fair that a self-sown plant, which is indebted to no one for support, should have no inclination to pay to anybody wages for attendance. But in your case, it is we that have begotten you for the state as well as for yourselves, to be like leaders and kings of a hive. better and more perfectly trained than the rest, and more capable of playing a part in both modes of life. You must therefore descend by turns, and associate with the rest of the community, and you must habituate yourselves to the contemplation of these obscure objects. For, when habituated, you will see a thousand times better than the residents, and you will recognize what each image is, and what is its original, because you have seen the realities of which beautiful and just and good things are copies. And in this way you and we shall find that the life of the state is a substance, and not a phantom like the life of our present states, which are mostly composed of men who fight among themselves for shadows, and are at feud for the administration of affairs, which they regard as a great boon. Whereas I conceive the truth stands thus; That city in which the destined rulers are least eager to rule, will inevitably be governed in the best and least factious manner, and a contrary result will ensue if the rulers are of a contrary disposition.

Glaucon:: You are perfectly right.

Socrates:: And do you imagine that our pupils, when addressed in this way, will disobey our commands, and refuse to toil with us in the state by turns, while they spend most of their time together in that bright region?

Glaucon:: Impossible; for certainly it is a just command, and those who are to obey it are just men. No; doubtless each of them will enter upon his administration as an unavoidable duty, conduct the reverse of that pursued by the present rulers in each state.

Socrates:: True, my friend; the case stands thus. If you can invent for the destined rulers a life better than ruling, you may possibly realize a well-governed city; for only in such a city will the rulers be those who are really rich, not in gold, but in a wise and virtuous life, which is the wealth essential to a happy man. But if beggars, and persons who hunger after private advantages, take the reins of the state, with the idea that they are privileged to snatch advantage from their power, all goes wrong. For the post of magistrate is thus made an object of strife; and civil and intestine conflicts of this nature, ruin not only the contending parties, but also the rest of the state.

Glaucon:: That is most true.

Socrates:: And can you mention any life which contemns state offices, except the life of true philosophy?

Glaucon:: No indeed, I cannot.

Socrates:: Well, but the task of government must be undertaken by persons not enamored of it; otherwise, their rivals will dispute their claim.

Glaucon:: Unquestionably it must.

Socrates:: Then what other persons will you compel to enter upon the duties of guardians of the state, if you discard those who understand most profoundly the means of attaining the highest excellence in the administration of a country, and who also possess honors of a different stamp, and a nobler life than that of a statesman?

Glaucon:: I shall not discard them; I shall address myself only to them.

Socrates:: And now would you have us proceed to consider in what way such persons are to arise in the state, and how they are to be carried up to the light, like those heroes who are said to have ascended up to heaven from the nether world?

Glaucon:: Certainly I would have you do so.

Socrates:: Apparently this is a question involving not the mere turning of a shell, but the revolution of a soul, which is traversing a road leading from a kind of night-like day up to a true day of real existence; and this road we shall doubtless declare to be true philosophy.

Glaucon:: Exactly so.

Socrates:: Then must we not consider what branch of study possesses the power required?

Glaucon:: Certainly we must.

Socrates:: Then, Glaucon, can you tell me of a science which ends to draw the soul from the fleeting to the real? Whilst I speak, I bethink myself that we certainly said, did we not, that our pupils must be trained in their youth to war?

Glaucon:: Yes, we did say so.

Socrates:: Then the science, which we are in quest of, must possess this feature as well as the former.

Glaucon:: What feature?

Socrates:: That it can be turned to use by warlike men.

Glaucon:: That is certainly advisable, if it be practicable.

Socrates:: Now in the foregoing discussion we were for training our pupils through the agency of music and gymnastic.

Glaucon:: True.

Socrates:: Gymnastic, I believe, is engaged upon the changeable and perishing; for it presides over the growth and waste of the body.

Glaucon:: That is evident.

Socrates:: Hence gymnastic cannot be the study for which we are looking.

Glaucon:: No, it cannot.

Socrates:: But what do you say to music, considered in the extent in which we previously discussed it?

Glaucon:: Nay, music was only the counterpart of gymnastic, if you remember; for it trained our guardians by the influence of habit, and imparted to them, not science, but a kind of harmoniousness by means of harmony, and a kind of measuredness by means of measure; and in the subjects which it treated, whether fabulous or true, it presented another series of kindred characteristics; but it contained no branch of study tending to any advantage resembling the one of which you are now in quest.

Socrates:: Your memory is very exact; for music really did possess nothing of the kind. But, my excellent Glaucon, where are we to find the thing we want? All the useful arts, I believe, we thought degrading.

Glaucon:: Unquestionably we did; yet what other study is there still remaining, apart from music and gymnastic and the useful arts?

Socrates:: Come then, if we can find nothing beyond and independent of these, let us take one of those studies which are of universal application.

Glaucon:: Pray which?

Socrates:: That general one, for example, of which all arts, trains of thought, and sciences, avail themselves; and which is also one of the first things that every one must learn.

Glaucon:: Tell me the nature of it.

Socrates:: I allude to that common process of distinguishing the numbers, one, two, and three. And I call it briefly, Number and Calculation. For may it not be said of these, that every art and science is compelled to crave a share in them?

Glaucon:: Certainly it may.

Socrates:: And is not the science of war one of the number?

Glaucon:: Beyond a doubt it is.

Socrates:: To take an example from tragedy, I proceeded; Palamedes on all occasions makes out that Agamemnon was a very ridiculous general. For you have remarked, have you not, that he claims, by the invention of numbers, to have marshaled the ranks of the army at Troy, and to have counted over the ships and every thing else, as if such things had been uncounted before his time, and as if Agamemnon had been even ignorant how many feet he had, which would naturally be the case, if he did not know how to count? Yet what do you think of Agamemnon as a general?

Glaucon:: He was a strange one in my opinion, if this story be true.

Socrates:: Then can we help concluding, that to be able to calculate and count is a piece of knowledge indispensable to a warrior?

Glaucon:: Yes, most indispensable, if he is to understand how to handle troops at all, or rather, if he is to be anything of a man.

Socrates:: And does your notion of this science coincide with mine?

Glaucon:: Pray what is your notion?

Socrates:: It seems to be by nature one of those studies leading to reflection, of which we are in quest; but no one appears to make the right use of it, as a thing which tends wholly to draw us towards real existence.

Glaucon:: Explain your meaning.

Socrates:: I will endeavor to make my own opinion clear to you. And you, on your side, must join me in studying those things, which I distinguish in my own mind as conducive, or not, to the end in view, and express your assent or dissent; in order that we may see more clearly, in the next place, whether I am right in my surmises as to the nature of this science.

Glaucon:: Pray go on with your distinctions.

Socrates:: I will. If you observe, some of the objects of our perceptions do not stimulate the reflection into exercise, because they appear thoroughly appreciated by the perception; whereas others urge the reflection strenuously to examine them, because the perception appears to produce an unsound result.

Glaucon:: It is plain you are talking of objects seen at a distance, and painting in perspective.

Socrates:: You have not quite hit my meaning.

Glaucon:: Then pray what sort of objects do you mean?

Socrates:: I regard as non-stimulants all the objects which do not end by giving us at the same moment two contradictory perceptions. On the other hand, all the objects which do end in that way I consider stimulants, meaning those cases in which the perception, whether incident from a near or a distant object, communicates two equally vivid, but contradictory impressions. You will understand my meaning more clearly thus; Here you have three fingers, you say, the little finger, the middle, and the third.

Glaucon:: Very good.

Socrates:: Well, suppose me to be speaking of them as they appear on a close inspection. Now here is the point which I wish you to examine with reference to them.

Glaucon:: Pray what is it?

Socrates:: It is evident that they are all equally fingers; and, so far, it makes no difference whether the one we are looking at be in the middle or outside, whether it be white or black, thick or thin, and so on. For, so long as we confine ourselves to these points, the mind seldom feels compelled to ask the reflection, what is a finger? Because in no instance has the sight informed the mind at the same moment, that the finger is the opposite of a finger.

Glaucon:: No, certainly not.

Socrates:: Then, naturally, such impressions cannot be stimulating or awakening to the reflection.

Glaucon:: True.

Socrates:: But how is it, pray, with the relative sizes of the fingers? Does the sight distinguish them satisfactorily, and does it make no difference to it, whether the position of one of them be in the middle, or at the outside? And in like manner, does the touch estimate thickness and thinness, softness and hardness, satisfactorily? And is there no defect in the similar communications of the other senses? Or, rather do they not all proceed thus? To begin with the perception which takes cognizance of hard things; is it not constrained to take cognizance also of soft things, and does it not intimate to the mind, that it feels the same thing to be both hard and soft?

Glaucon:: It does.

Socrates:: In such cases, then, must not the mind be at a loss to know what this perception means by hard, since it declares the same thing to be also soft; and what the perception of weight means by light and heavy, when it informs the mind that the heavy is light, and the light heavy?

Glaucon:: Why yes; such interpretations will be strange to the mind, and will require examination.

Socrates:: Hence it is natural for the mind in such circumstances to call in the aid of reasoning and reflection, and to endeavor to make out whether each announcement is single or double.

Glaucon:: Undoubtedly.

Socrates:: Should it incline to the latter view, is it not evident that each part of every announcement has a unity and character of its own?

Glaucon:: It is evident.

Socrates:: If then each is one, and both together make two, the mind will conclude that the two are separable. For if they were inseparable, it could only conclude that they are one, not two.

Glaucon:: True.

Socrates:: Well; the sense of sight, we say, gave us an impression, in which the sensations of great and small were confounded, instead of being separated. Am I not right?

Glaucon:: You are.

Socrates:: But, on the other hand, reflection, reversing the process of the sight, was compelled, in order to make the sensible impression clear, to look at great and small as things distinct, not confounded.

Glaucon:: True.

Socrates:: Then is it not some contradiction of this kind that first prompts us to ask, What then, after all, is greatness. and what smallness?

Glaucon:: No doubt it is.

Socrates:: And thus we are led to distinguish between objects of reflection and objects of sight.

Glaucon:: Most rightly so.

Socrates:: This, then, was the meaning which I was just now attempting to convey, when I said that some objects tend to stimulate thought, while others have no bias towards awakening reflection, placing in the former category everything that strikes upon the senses in conjunction with its immediate opposite; and in the latter, everything of which this cannot be said.

Glaucon:: Now I understand you; and I agree with you.

Socrates:: Well; to which of the two classes do you think that number and unity belong?

Glaucon:: I cannot make up my mind.

Socrates:: Indeed! Let our previous remarks help you to a conclusion. If unity, in and by itself, is thoroughly grasped by the sight or any other sense, like the finger we spoke of, it cannot possess the quality of drawing the mind towards real existence. But if some contradiction is always combined with it in all its manifestations, making it appear the opposite of unity quite as much as unity itself, in that case a critic will be immediately required, and the mind will be compelled to puzzle over the difficulty, and stir up the inward faculty of thought to the investigation, and put the question, What, after all, is unity in itself? And thus the study of the unit will be one of the things which turn and lead us to the contemplation of real existence.

Glaucon:: You are right; the observation of the unit does certainly possess this property in no common degree; for the same thing presents at the same moment the appearance of one thing, and an infinity of things.

Socrates:: Then, if this is the case with the unit, is it not also the case with all numbers without exception?

Glaucon:: Doubtless it is.

Socrates:: Well, but calculation and arithmetic treat of number exclusively.

Glaucon:: Certainly they do.

Socrates:: And, apparently, they conduct us to truth.

Glaucon:: Yes, in a manner quite extraordinary.

Socrates:: Hence it would appear that the science of numbers must be one of the studies of which we are in quest. For the military man finds a knowledge of it indispensable in drawing up his troops, and the philosopher must study it because he is bound to rise above the changing and cling to the real, on pain of never becoming a skilful reasoner.

Glaucon:: True.

Socrates:: But our guardian, as it happens, is both soldier and philosopher.

Glaucon:: Undoubtedly he is.

Socrates:: Therefore, Glaucon, it will be proper to enforce the study by legislative enactment, and to persuade those who are destined to take part in the weightiest affairs of state, to study calculation and devote themselves to it, not like amateurs, but perseveringly, until, by the aid of pure reason, they have attained to the contemplation of the nature of numbers, not cultivating it with a view to buying and selling, as merchants or shopkeepers, but for purposes of war, and to facilitate the conversion of the soul itself from the changeable to the true and the real.

Glaucon:: What you say is admirable.

Socrates:: Indeed, talking of this science which treats of calculation, it has only just occurred to me how elegant it is, and how valuable it may be to us in many ways in carrying out our wishes, provided it be pursued for the sake of knowledge, and not for purposes of trade.

Glaucon:: How so?

Socrates:: Because, as we were saying just now, it mightily draws the soul upwards, and compels it to reason about abstract numbers, steadily declining the discussion when any numbers are proposed which have bodies that can be seen and touched. For I presume you are aware that good mathematicians ridicule and disallow any attempt to part the unit in the course of argument; and if you divide it into pieces, like small change, they multiply it back again, and take every precaution to prevent the unit from ever losing its unity, and presenting an appearance of multiplicity.

Glaucon:: That is quite true.

Socrates:: Now suppose, Glaucon, that some one were to ask them the following question; My excellent friends, what kind of numbers are you discussing? Where are the numbers in which the unit realizes your description of it, which is, that every unit is equal, each to each, without the smallest difference, and contains within itself no parts? What answer should you expect them to make?

Glaucon:: If you ask me, I should expect them to say, that the numbers about which they talk, are only capable of being conceived in thought, and cannot be dealt with in any other way.

Socrates:: Then, my friend, do you see that this science is, in all likelihood, absolutely necessary to us, since it evidently obliges the mind to employ the pure intelligence in the pursuit of pure truth?

Glaucon:: It certainly possesses this quality in an eminent degree.

Socrates:: Again; have you ever noticed that those who have a turn for arithmetic are, with scarcely an exception, naturally quick at all sciences; and that men of slow intellect, if they be trained and exercised in this study, even supposing they derive no other benefit from it, at any rate progress so far as to become invariably quicker than they were before?

Glaucon:: That is true.

Socrates:: And I am pretty sure, also, that you will not easily find many sciences that give the learner and student so much trouble and toil as arithmetic.

Glaucon:: No, certainly you will not.

Socrates:: Then on all these accounts, so far from rejecting this science, we must employ it in the education of the finest characters.

Glaucon:: I agree with you.

Socrates:: Then let us consider this as one point settled. In the Second place, let us inquire whether we ought to concern ourselves about the science which borders on arithmetic.

Glaucon:: What is that? Do you mean geometry?

Socrates:: Even so.

Glaucon:: It is obvious, that all that part of it which bears upon strategy does concern us. For in encamping, in occupying positions, in closing up and deploying troops, and in executing all the other maneuvers of an army in the field of battle or on the march, it will make every difference to a military man, whether he is a good geometrician, or not.

Socrates:: Nevertheless, a trifling knowledge of geometry and calculation will suffice for these purposes. The question is, whether the larger and more advanced part of the study tends at all to facilitate our contemplation of the essential Form of Good. Now, according to us, this is the tendency of everything that compels the soul to transfer itself to that region in which is contained the most blissful part of that real existence, which it is of the highest importance for it to behold.

Glaucon:: You are right.

Socrates:: Consequently if geometry compels the soul to contemplate real existence, it does concern us; but if it only forces the changeful and perishing upon our notice, it does not concern us.

Glaucon:: Yes, so we affirm.

Socrates:: Well then, on one point at any rate we shall encounter no opposition from those who are even slightly acquainted with geometry, when we assert that this science holds a position which flatly contradicts the language employed by those who handle it.

Glaucon:: How so?

Socrates:: They talk, I believe, in a very ridiculous and poverty stricken style. For they speak invariably of squaring, and producing, and adding, and so on, as if they were engaged in some business, and as if all their propositions had a practical end in view; whereas in reality I conceive that the science is pursued wholly for the sake of knowledge.

Glaucon:: Assuredly it is.

Socrates:: There is still a point about which we must be agreed, is there not?

Glaucon:: What is it?

Socrates:: That the science is pursued for the sake of the knowledge of what eternally exists, and not of what comes for a moment into existence, and then perishes.

Glaucon:: We shall soon be agreed about that. Geometry, no doubt, is a knowledge of what eternally exists.

Socrates:: If that be so, my excellent friend, geometry must tend to draw the soul towards truth, and to give the finishing stroke to the philosophic spirit, thus contributing to raise up what, at present, we so wrongly keep down.

Glaucon:: Yes, it will do so most forcibly.

Socrates:: Then you must, in the most forcible manner, direct the citizens of your beautiful city on no account to fail to apply themselves to geometry. For even its secondary advantages are not trifling.

Glaucon:: Pray what are they?

Socrates:: Not to mention those which you specified as bearing upon the conduct of war, I would insist particularly upon the fact, of which we are assured, that, where a ready reception of any kind of learning is an object, it will make all and every difference whether the pupil has applied himself to geometry or not.

Glaucon:: Yes, undoubtedly it will.

Socrates:: Shall we, then, impose this, as a secondary study, upon our young men?

Glaucon:: Yes, let us do so.

Socrates:: Again; shall we make astronomy a third study? or do you disapprove?

Glaucon:: I quite approve of it. For to have an intimate acquaintance with seasons, and months, and years, is an advantage not only to the agriculturist and the navigator, but also, in an equal degree, to the general.

Socrates:: You amuse me by your evident alarm lest the multitude should think that you insist upon useless studies. Yet indeed it is no easy matter, but on the contrary a very difficult one, to believe that in the midst of these studies an organ of our souls is being purged from the blindness, and quickened from the deadness, occasioned by other pursuits, an organ whose preservation is of more importance than a thousand eyes; because only by it can truth be seen. Consequently, those who think with us will bestow unqualified approbation on the studies you prescribe; while those who have no inkling at all of this doctrine, will think them valueless, because they see no considerable advantage to be gained from them beyond their practical applications. Therefore consider at once with which of the two parties you are conversing; or else, if you are carrying on the discussion chiefly on your own account, without any reference to either party, you surely will not grudge another man any advantage which he may derive from the conversation.

Glaucon:: I prefer the latter course; I mean to speak, put my questions, and give my answers, chiefly on my own account.

Socrates:: Then take a step backwards. We were wrong a moment ago in what we took as the science next in order to geometry.

Glaucon:: What did we take?

Socrates:: Why, after considering plane surfaces, we proceeded to take solids in a state of revolution, before considering solids in themselves. Whereas the correct way is, proceed from two dimensions to three; which brings us, I believe, to cubical dimensions, and figures into which thickness enters.

Glaucon:: True, Socrates; but these subjects, I think, have not yet been explored.

Socrates:: They have not; and for two reasons. In the first place, they are difficult problems, and but feebly investigated, because no state holds them in estimation; and, in the second place, those who do investigate them stand in need of a superintendent, without whom they will make no discoveries. Now, to find such a person is a hard task to begin with; and then, supposing one were found, as matters stand now, the pride of those who are inquisitive about the subject would prevent their listening to his suggestions. But if a state, in its corporate capacity, were to pay honour to the study, and constitute itself superintendent thereof, these students would yield obedience, and the real nature of the subject, thus continuously and vigorously investigated, would be brought to light. For even now, slighted and curtailed as it is not only by the many, but also by professed inquirers, who can give no account of the extent of its usefulness, it nevertheless makes progress, in spite of all these obstacles, by its inherent elegance; and I should not be at all surprised if its difficulties were cleared up. There certainly is a peculiar fascination about it.

Glaucon:: But pray explain more clearly what you were saying just now. I think you defined geometry as the investigation of plane surfaces.

Socrates:: I did.

Glaucon:: You then proceeded to place astronomy next to geometry; though afterwards you drew back.

Socrates:: Yes, the more I haste to travel over the ground, the worse I speed. The investigation of space of three dimensions succeeds to plane geometry; but because it is studied absurdly, I passed it over, and spoke of astronomy, which implies motion of solid bodies, as the next step after geometry.

Glaucon:: You are right.

Socrates:: Then let us assign the fourth place in our studies to astronomy, regarding the existence of the science now omitted as only waiting for the time when a state shall take it up.

Glaucon:: It is a reasonable idea, Socrates. And to return to the rebuke which you gave me a little while ago for my vulgar commendation of astronomy, I can now praise the plan on which you pursue it. For I suppose it is clear to every one, that astronomy at all events compels the soul to look upwards, and draws it from the things of this world to the other.

Socrates:: It is not clear to me, though perhaps it may be to every one else; for that is not my opinion.

Glaucon:: Then what is your opinion?

Socrates:: It seems to me that astronomy, as now handled by those who embark on philosophy, positively makes the soul look downwards.

Glaucon:: How so?

Socrates:: I think you have betrayed no want of intrepidity in the conception you have formed of the true nature of that learning which deals with the things above. For probably, if a person were to throw his head back, and learn something from the contemplation of a carved ceiling, you would suppose him to be contemplating it, not with his eyes, but with his reason. Now, perhaps your notion is right, and mine foolish. For my own part, I cannot conceive that any science makes the soul look upwards, unless it has to do with the real and invisible. It makes no difference whether a person stares stupidly at the sky, or looks with half-shut eyes upon the ground; so long as he is trying to study any sensible object, I deny that he can ever be said to have learned anything, because no objects of sense admit of scientific treatment; and I maintain that his soul is looking downwards, not upwards, though he may be lying on his back, like a swimmer, to study, either in the sea, or on dry land.

Glaucon:: I am rightly punished; for I deserved your rebuke. But pray what did you mean by saying that astronomy ought to be studied on a system very different from the present one, if it is to be studied profitably for the purposes that we have in view?

Socrates:: I will tell you. Since this fretted sky is still a part of the visible world, we are bound to regard it, though the most beautiful and perfect of visible things, as far inferior nevertheless to those true revolutions, which real velocity, and real slowness, existing in true number, and in all true forms, accomplish relatively to each other, carrying with them all that they contain; which are verily apprehensible by reason and thought, but not by sight. Or do you think differently?

Glaucon:: No, indeed.

Socrates:: Therefore we must employ that fretted sky as a pattern or plan to forward the study which aims at those higher objects, just as we might employ diagrams, which fell in our way, curiously drawn and elaborated by Daedalus or some other artist or draughtsman. For, I imagine, a person acquainted with geometry, on seeing such diagrams, would think them most beautifully finished, but would hold it ridiculous to study them seriously in the hope of detecting thereby the truths of equality, or duplicity, or any other ratio.

Glaucon:: No doubt it would be ridiculous.

Socrates:: And do you not think that the genuine astronomer will view with the same feelings the motions of the stars? That is to say, will he not regard the heaven itself, and the bodies which it contains, as framed by the heavenly architect with the utmost beauty of which such works are susceptible? But as to the proportion which the day bears to the night, both to the month, the month to the year, and the other stars to the sun and moon, and to one another, will he not, think you, look down upon the man who believes such corporeal and visible objects to be changeless and exempt from all perturbations; and will he not hold it absurd to bestow extra ordinary pains on the endeavor to apprehend their true condition?

Glaucon:: Yes, I quite think so, now that I hear you suggest it.

Socrates:: Hence, we shall pursue astronomy with the help of problems, just as we pursue geometry; but we shall let the heavenly bodies alone, if it is our design to become really acquainted with astronomy, and by that means to convert the natural intelligence of the soul from a useless into a useful possession.

Glaucon:: The plan which you prescribe is, I am confident, many times more laborious than the present mode of studying astronomy.

Socrates:: Yes; and I imagine we shall prescribe every thing else on the same scale, if we are to be of any use as legislators. But to proceed; what other science in point can you suggest?

Glaucon:: I cannot suggest any, on such short notice.

Socrates:: Well, motion, if I am not mistaken, admits of certainly more than one variety; a perfect enumeration of these varieties may perhaps be supplied by some learned philosopher. Those which are manifest to people like us are two in number.

Glaucon:: Pray what are they?

Socrates:: We have already described one; the other is its counterpart.

Glaucon:: What is that?

Socrates:: It would seem, that our ears were intended to detect harmonious movements, just as our eyes were intended to detect the motions of the heavenly bodies; and that these constitute in a manner two sister sciences, as the Pythagoreans assert, and as we, Glaucon, are ready to grant. If not, what other course do we take?

Glaucon:: We take the course you mentioned first; we grant the fact.

Socrates:: Then, as the business promises to be a long one, we will consult the Pythagoreans upon this question, and perhaps upon some other questions too, maintaining, meanwhile, our own principle intact.

Glaucon:: What principle do you mean?

Socrates:: Never to let our pupils attempt to study any imperfect branch of these sciences, or anything that ever fails to arrive ultimately at that point which all things ought to reach, as we said just now in treating of astronomy. For you can scarcely be ignorant that harmony also is treated just like astronomy in this, that its professors, like the astronomers, are content to measure the notes and concords distinguished by the ear, one against another, and therefore toil without result.

Glaucon:: Yes, indeed, and they make themselves quite ridiculous. They talk about repetitions, and apply their ears closely, as if they were bent on extracting a note from their neighbors; and then one party asserts that an intermediate sound can still be detected, which is the smallest interval, and ought to be the unit of measure; while the other party contends that now the sounds are identical, both alike postponing their reason to their ears.

Socrates:: I see you are alluding to those good men who tease and torture the chords, and rack them upon the pegs. But not to make the metaphor too long by enlarging upon the blows given by the plectrum, and the peevishness, reserve and frowardness of the strings, I here abandon this style, and tell you that I do not mean these persons, but those whom we resolved but now to consult on the subject of harmony. For they act just like the astronomers; that is, they investigate the numerical relations subsisting between these audible concords, but they refuse to apply themselves to problems, with the object of examining what numbers are, and what numbers are not, consonant, and what is the reason of the difference.

Glaucon:: Why the work you describe would require faculties more than human.

Socrates:: Call it, rather, a work useful in the search after the beautiful and the good, though useless if pursued with other ends.

Glaucon:: Yes, that is not unlikely.

Socrates:: In addition to this, if the study of all these sciences which we have enumerated, should ever bring us to their mutual association and relationship, and teach us the nature of the ties which bind them together, I believe that the diligent treatment of them will forward the objects which we have in view, and that the labor, which otherwise would be fruitless, will be well bestowed.

Glaucon:: I have the same presentiment, Socrates. But the work you speak of is a very great one.

Socrates:: Do you allude to the prelude? or to what? Surely we do not require to be reminded that all this is but the prelude to the actual hymn, which we have to learn? For I presume you do not look upon the proficients in these studies as dialecticians.

Glaucon:: No, indeed I do not; bating a very few exceptions that have fallen in my way.

Socrates:: But of course you do not suppose that persons unable to take a part in the discussion of first principles, can be said to know a particle of the things which we affirm they ought to know.

Glaucon:: No, that again is not my opinion.

Socrates:: Then, Glaucon, have we not here the actual hymn, of which dialectical reasoning is the consummation? This hymn, falling as it does within the domain of the intellect, can only be imitated by the faculty of sight; which, as we said, strives to look steadily, first at material animals, then at the stars themselves, and last of all at the very sun itself. In the same way, whenever a person strives, by the help of dialectic, to start in pursuit of every reality by a simple process of reason, independent of all sensuous information, never flinching, until by an act of the pure intelligence he has grasped the real nature of good, he arrives at the very end of the intellectual world, just as the last-mentioned person arrived at the end of the visible world.

Glaucon:: Unquestionably.

Socrates:: And this course you name dialectic, do you not?

Glaucon:: Certainly I do.

Socrates:: On the other hand, the release of the prisoners from their chains, and their transition from the shadows of the images to the images themselves and to the light, and their ascent from the cavern into the sunshine; and, when there, the fact of their being able to look, not at the animals and vegetables and the suns light, but still only at their reflections in water, which are indeed divine and shadows of things real, instead of being shadows of images thrown by a light which may itself be called an image, when compared with the sun; these points, I say, find their counterpart in all this pursuit of the abovementioned arts, which possesses this power of elevating the noblest part of the soul, and advancing it towards the contemplation of that which is most excellent in the things that really exist, just as in the other case the clearest organ of the body was furthered to the contemplation of that which is brightest in the corporeal and visible region.

Glaucon:: For myself, I accept this statement. And yet I must confess that I find it hard to accept; though at the same time, looking at it in another way, I find it hard to deny. However, as the discussion of it need not be confined to the present occasion, but may be repeated on many future occasions, let us assume the truth of your present theory, and so proceed to the hymn itself, and discuss it, as we have discussed the prelude. Tell us, therefore, what is the general character of the faculty of dialectic, and into what specific parts it is divided, and lastly what are its methods. For these methods will, in all likelihood, be the roads that lead to the very spot where we are to close our march, and rest from our journey.

Socrates:: My dear Glaucon, you would not be able to follow me further, though on my part there should be no lack of willingness. You would no longer be looking at the similitude of that whereof we speak, but at the truth itself, in the shape in which it appears to me. Whether I am right or not, I dare not go so far as to decide positively; but I suppose I am warranted in affirming that we are not far wrong.

Glaucon:: Undoubtedly you are.

Socrates:: And may I not also affirm, that the faculty of dialectic can alone reveal the truth to one who is master of the sciences which we have just enumerated; and that in no other way is such knowledge possible?

Glaucon:: Yes, on that point also you are warranted in speaking positively.

Socrates:: At any rate, no one will contradict us when we assert that there is no other method which attempts systematically to form a conception of the real nature of each individual thing. On the contrary, all the arts, with a few exceptions, are wholly addressed to the opinions and wants of men, or else concern themselves about the production and composition of bodies, or the treatment of things which grow and are compounded. And as for these few exceptions, such as geometry and its accompanying sciences, which, according to us, in some small degree apprehend what is real, we find that, though they may dream about real existence, they cannot behold it in a waking state, so long as they use hypotheses which they leave unexamined, and of which they can give no account. For when a person assumes a first principle which he does not know, on which unknown first principle depends the web of intermediate propositions, and the final conclusion, by what possibility can such mere admissions ever constitute science?

Glaucon:: It is indeed impossible.

Socrates:: Hence the dialectic method, and that alone, adopts the following course. It carries back its hypotheses to the very first principle of all, in order to establish them firmly; and finding the eye of the soul absolutely buried in a swamp of barbarous ignorance, it gently draws and raises it upwards, employing as handmaids in this work of revolution the arts which we have discussed. These we have often called sciences, because it is customary to do so, but they require another name, betokening greater clearness than opinion, but less distinctness than science. On some former occasion we fixed upon the term understanding to express this mental process. But it appears to me to be no part of our business to dispute about a name, when we have proposed to ourselves the consideration of such important subjects.

Glaucon:: You are quite right; we only want a name which when applied to a mental state shall indicate clearly what phenomena it describes.

Socrates:: Indeed I am content, to call as before the first division science, the second understanding, the third belief, and the fourth conjecture, the two latter jointly constituting opinion, and the two former intelligence. Opinion deals with the changing, intelligence with the real; and as the real is to the changing, so is intelligence to opinion; and as intelligence is to opinion, so is science to belief, and understanding to conjecture. But the analogy between the objects of these mental acts, and the twofold division of the provinces of opinion and of intelligence, we had better omit, Glaucon, to prevent burdening ourselves with discussions far outnumbering all the former.

Glaucon:: Well, I certainly agree with you upon those other points, so far as I can follow you.

Socrates:: Do you also give the title of Dialectician to the person who takes thoughtful account of the essence of each thing? And will you admit that, so far as a person has no such account to give to himself and to others, so far he fails to exercise pure reason upon the subject?

Glaucon:: Yes, I cannot doubt it.

Socrates:: Then shall you not also hold the same language concerning the good? Unless a person can strictly define by a process of thought the essential Form of the Good, abstracted from everything else; and unless he can fight his way as it were through all objections, studying to disprove them not by the rules of opinion, but by those of real existence; and unless in all these conflicts he travels to his conclusion without making one false step in his train of thought, unless he does all this, shall you not assert that he knows neither the essence of good, nor any other good thing; and that any phantom of it, which he may chance to apprehend, is the fruit of opinion and not of science; and that he dreams and sleeps away his present life, and never wakes on this side of that future world, in which he is doomed to sleep for ever?

Glaucon:: Yes; I shall most decidedly assert all this.

Socrates:: Then certainly, if you ever had the actual training of those children of yours, whose nature and education you are theoretically superintending, I cannot suppose that you would allow them to be magistrates in the state with authority to decide the weightiest matters, while they are as irrational as the strokes of a pen.

Glaucon:: No, indeed I should not.

Socrates:: You will pass a law, no doubt, ordering them to apply themselves especially to that education which will enable them to use the weapons of the dialectician most scientifically?

Glaucon:: I shall, with your help.

Socrates:: Then does it not seem to you that dialectic lies, like a coping-stone, upon the top of the sciences, and that it would be wrong to place any other science above it, because the series is now complete?

Glaucon:: Yes, I believe you are right.

Socrates:: Hence, it only remains for you to fix upon the persons to whom we are to assign these studies, and the principle of their distribution.

Glaucon:: That is evidently the case.

Socrates:: Do you remember what kind of persons we selected, when we were choosing the magistrates some time ago?

Glaucon:: Of course I do.

Socrates:: Well, I would have you regard the qualities we mentioned, as so far entitling their owners to be selected; that is to say, we are bound to prefer the most steady, the most manful, and, as far as we can, the most comely. But in addition to this, besides requiring in them a noble and resolute moral nature, they must also possess such qualifications as are favorable to this system of education.

Glaucon:: Pray which do you determine these to be?

Socrates:: They must bring with them a piercing eye for their studies, my excellent friend, and they must learn with ease. For assuredly severe studies try the mettle of the mind much more than bodily exercises; because the labor comes more home to it in the former case, as it is limited to the mind, instead of being shared by the body.

Glaucon:: True.

Socrates:: Then we must include in the objects of our search a good memory, a dauntless demeanor, and a thorough love of work. Else, how can you expect to induce a man to go through with his bodily labors, and to learn and practice so much besides?

Glaucon:: No; we can hold out no inducement to a man who does not possess talents of the highest order.

Socrates:: At any rate, it is certain that the false view of philosophy which at present prevails, and the disrepute into which she has fallen, may be traced, as I said before, to the fact, that people apply themselves to philosophy without any regard to their own demerits; whereas the study of he is the privilege of her genuine sons, to the exclusion of the baseborn.

Glaucon:: What do you mean by genuine?

Socrates:: In the first place, he that would study her must not halt in his love of work. He must not be half-laborious, and half-indolent, which is the case when a man loves exercise, and the chase, and all bodily toil, but dislikes study, and feels an aversion for listening and inquiring, and in fact hates all intellectual labor. On the other hand, those people are equally halt whose love of work has taken the opposite form.

Glaucon:: What you say is perfectly true.

Socrates:: In the same way, may we not affirm that a soul is crippled with reference to truth, if, while it hates voluntary falsehood, and cannot endure it in itself, and is exceedingly indignant when other people are guilty of an untruth, it nevertheless calmly accepts involuntary falsehood, and instead of being distressed when its lack of knowledge is detected, is fain to wallow in ignorance with the complacency of a brutal hog?

Glaucon:: No doubt you are right.

Socrates:: Above all, we must watch the genuine and the baseborn on the side of temperance, fortitude, loftiness of mind, and all the separate virtues. For whenever states or private persons have no eye for qualities like these, they unwittingly employ, as magistrates or as friends, men who are halt and illegitimate in one or other of these respects.

Glaucon:: Unquestionably it is so.

Socrates:: Hence we, on our side, must take every precaution in all matters of this description. For, if we can procure persons sound in limb, and sound in mind, and train them up under the influence of these lofty studies and severe discipline, justice herself will find no fault with us, and we shall preserve our state and constitution; whereas, if we select pupils of a different stamp, our success will be turned into failure, and we shall draw down upon philosophy a still heavier storm of ridicule.

Glaucon:: That would be indeed a disgrace.

Socrates:: It certainly would. But very likely I made myself ridiculous just this minute.

Glaucon:: How so?

Socrates:: I forgot, that we were not serious, and spoke too earnestly. For, as I spoke, I looked towards Philosophy, and seeing her assailed with unmerited contumely, I was so indignant, and so angry with those who are responsible for it, that I believe I expressed myself too seriously.

Glaucon:: No, indeed you did not; at least, in listening, I did not think so.

Socrates:: Well, in speaking, it struck me that I did. But, to proceed, let us not forget, that it will be impossible in this instance to select persons advanced in years, as we did in the former. For we must not be persuaded by Solon into thinking that a man, as he grows old, can learn many things. On the contrary, an old man can sooner run than learn; and the wide range of severe labors must fall wholly on the young.

Glaucon:: Unquestionably so.

Socrates:: Arithmetic, therefore, and geometry, and all the branches of that preliminary education which is to pave the way for dialectic, must be taught our pupils in their childhood; care being taken to convey instruction in such a shape as not to make it compulsory upon them to learn.

Glaucon:: Why so?

Socrates:: Because, no trace of slavery ought to mix with the studies of the freeborn man. For the constrained performance of bodily labors does, it is true, exert no evil influence upon the body; but in the case of the mind, no study, pursued under compulsion, remains rooted in the memory.

Glaucon:: That is true.

Socrates:: Hence, my excellent friend, you must train the children to their studies in a playful manner, and without any air of constraint, with the further object of discerning more readily the natural bent of their respective characters.

Glaucon:: Your advice is reasonable.

Socrates:: Do you remember our saying that the children must also be taken on horseback within sight of actual war; and that, on any safe occasion, they must be brought into the field, and made to taste blood, like young hounds?

Glaucon:: I do remember it.

Socrates:: Accordingly we must make a select list, including every one who has displayed remarkable self-possession in the midst of all these labors, studies, and dangers.

Glaucon:: At what age must that be done?

Socrates:: As soon us they are released from the necessary bodily exercises, during which, whether they last two or three years, nothing else can be done. For weariness and sleep are enemies to study. And, besides, the behavior of each in his exercises is one of the tests of character, and a very important one too.

Glaucon:: Doubtless it is.

Socrates:: After this period, these choice characters, selected from the ranks of the young men of twenty, must receive higher honors than the rest; and the detached sciences in which they were educated as children must be brought within the compass of a single survey, to show the co-relation which exists between them, and the nature of real existence.

Glaucon:: Certainly this is the only kind of instruction which will be found abiding, when it has once effected an entrance.

Socrates:: Yes, and it is also a most powerful criterion of the dialectic character. For according as a man can survey a subject as a whole or not, he is, or is not, a dialectician.

Glaucon:: I agree with you.

Socrates:: Hence it will be your duty to have an eye to those who show the greatest ability in these questions, and the greatest firmness, not only in study, but also in war and the other branches of discipline; and when they are thirty years old and upwards, you must select them out of the ranks of your picked men, and raise them to greater honors, and try them by the test of- dialectic ability, in order to see who is able to divest himself of his eyes and his other senses, and advance in company with truth towards real existence. And here it is, my friend, that great caution is required.

Glaucon:: For what special reason?

Socrates:: Do you not perceive, what an immense evil at present accompanies dialectic?

Glaucon:: Pray what is it?

Socrates:: Insubordination, with which I believe dialecticians to be tainted.

Glaucon:: Indeed you are right.

Socrates:: Are you at all surprised at the fact, and do you make no allowance for the persons in question?

Glaucon:: Pray explain yourself.

Socrates:: By way of parallel case, figure to yourself a supposititious child, brought up in the midst of great wealth, and extensive connections of high family, and surrounded by flatterers; and suppose him, on arriving at manhood, to learn that his alleged parents are not his real parents, though he cannot discover the latter. Can you guess what would be his behavior towards his flatterers and towards his spurious parents, first while he was ignorant of the fact of his substitution, and secondly when he became aware of it? or would you like to listen to my own conjectures?

Glaucon:: I should.

Socrates:: Well, I suspect that, so long as he is ignorant of the truth, he will honour his father and his mother and his other apparent relations, more than his flatterers; and that he will not allow the former to want anything so quickly as the latter; and that he will be more likely to be guilty of insubordination in word or deed and of disobedience in important things towards his flatterers, than towards his supposed parents.

Glaucon:: Probably he will.

Socrates:: On the other hand, I suspect that, after he has learned the truth, his esteem and regard for his parents will be diminished, while his respect for his flatterers will be heightened, to whom he will now listen very much more than before, and proceed to live as they would have him live, associating with them undisguisedly, and wholly abandoning all concern for that fictitious father, and those pretended relations, unless his disposition is remarkably good.

Glaucon:: Your description is perfectly true to nature. But how does this comparison bear upon those who apply themselves to dialectic?

Socrates:: I will tell you. We have, I believe, from childhood decided opinions about things just and beautiful; and we have been bred up to obey and honour these opinions, just as we have grown up in submission to our parents.

Glaucon:: True.

Socrates:: Now these opinions are combated by certain pleasurable pursuits, which flatter our soul and try to draw it over to their side; though they fail to persuade us, if we are at all virtuous; in which case, we honour those ancestral opinions, and continue loyal to them.

Glaucon:: True.

Socrates:: Well, but when such a person is met by the question, what is beauty? and having given the answer, which he used to hear from the legislator, is confuted by the dialectic process; and when frequent and various defeats have forced him to believe that there is as much deformity as beauty in what he calls beauty, and that justice, goodness, and all the things, which he used to honour most, are in the like predicament, how do you think he will behave thenceforth towards his old opinions, so far as respect and obedience are concerned?

Glaucon:: Of course he will not pay them the same respect or the same obedience as before.

Socrates:: And so long as he neither honors nor acknowledges his former belief, as he used to do, while at the same time he fails to discover the true principles, is not that flattering life the only one to which he will be likely to attach himself?

Glaucon:: It is.

Socrates:: In other words, he will appear, I suppose, to have abandoned his loyalty, and to have become lawless.

Glaucon:: There cannot be a doubt of it.

Socrates:: Well now, is not this a condition of the students of dialectic a natural one, and, as I said just now, does it not deserve to be treated with great forbearance?

Glaucon:: Yes, and with pity too.

Socrates:: Then in order that you may not have to feel this pity for those men of thirty, must you not use every precaution in introducing them to dialectic?

Glaucon:: Certainly.

Socrates:: And will it not be one great precaution to forbid their meddling with it while young? For I suppose you have noticed, that whenever boys taste dialectic for the first time, they pervert it into an amusement, and always employ it for purposes of contradiction, and imitate in their own persons the artifices of those who study refutation, delighting, like puppies, in pulling and tearing to pieces with logic any one who comes near them.

Glaucon:: They do, to an extravagant extent.

Socrates:: Hence, when they have experienced many triumphs and many defeats, they fall, quickly and vehemently, into an utter disbelief of their former sentiments; and thereby both they and the whole cause of philosophy have been prejudiced in the eyes of the world.

Glaucon:: That is perfectly true.

Socrates:: The man of more advanced years, on the contrary, will not suffer himself to be led away by such madness; but will imitate those who are resolved to discuss and examine truth, rather than those who play at contradiction for amusement; and, as a consequence of his superior discretion, will increase, instead of diminishing, the general respect for the pursuit.

Glaucon:: You are right.

Socrates:: Again; were we not studying precaution throughout, when we said some time back, that the characters, which are to be initiated into dialectic, must be stable and orderly, in opposition to the present system, which allows anybody, however unfit, to enter the field?

Glaucon:: Certainly we were.

Socrates:: Would it suffice, then, for the acquisition of dialectic, that a man should continue constantly and strenuously devoted to the study, resigning every other pursuit for it, just as, in its turn, he resigned everything for gymnastic, during a period twice as long as that which he bestowed on his bodily exercises?

Glaucon:: Do you mean six years, or four?

Socrates:: It does not matter much; say five. After this you will have to send them down again into the cavern we described, and compel them to take commands in war, and to hold such offices as befit young men, that they may also keep up with their neighbors in practical address. And here again you must put them to the test, to see whether they will continue steadfast notwithstanding every seduction, or whether possibly they may be a little shaken.

Glaucon:: And how long a time do you assign for this?

Socrates:: Fifteen years. Then, as soon as they are fifty years old, those who have passed safely through all temptations, and who have won every distinction in every branch whether of action or of science, must be forthwith introduced to their final task, and must be constrained to lift up the eye of the soul, and fix it upon that which gives light to all things; and having surveyed the essence of good, they must take it as a pattern, to be copied in that work of regulating their country and their fellow-citizens and themselves, which is to occupy each in turn during the rest of life; and though they are to pass most of their time in philosophical pursuits, yet each, when his turn comes, is to devote himself to the hard duties of public life, and hold office for their countries sake, not as a desirable, but as an unavoidable occupation; and thus having trained up a constant supply of others like themselves to fill their place as guardians of the state, they will depart and take up their abode in the islands of the blessed. And the state will put up monuments to their memory at the public expense, and offer sacrifices to them, as demigods, if the Pythian oracle will authorize it, or at least as highly-favored and godlike men.

Glaucon:: Like a sculptor, Socrates, you have finished off the leading men in a style of faultless beauty.

Socrates:: Say leading women too, Glaucon. For do not suppose that my remarks were intended to apply at all more to men than to women, so long as we can find women whose talents are equal to the situation.

Glaucon:: You are right, if they are to share with the men in everything on a footing of equality, according to our account.

Socrates:: Well then, do you agree that our theory of the state and constitution is not a mere aspiration, but, though full of difficulties, capable of realization in one way, and only one, which, as we have said, requires that one, if not more, of the true philosophers shall be invested with full authority in a state, and contemn the honors of the present day, in the belief that they are mean and worthless; and that, deeply impressed with the supreme importance of right and of the honors to be derived from it, and regarding justice as the highest and most binding of all obligations, he shall, as the special servant and admirer of justice, carry out a thorough reform in his own state.

Glaucon:: How is that to be done?

Socrates:: All who are above ten years old in the city must be dispatched into the country, and their children must be taken and bred up beyond the influence of that common character, which their parents among others possess, in the manners and laws of the true philosophers, the nature of which we have described above; and, tell me, will not this be the quickest and easiest way to enable a state and a constitution, such as we have represented, to establish itself and prosper, and at the same time be a blessing to the nation in which it has taken root?

Glaucon:: Yes, quite so; and I believe, Socrates, you have stated correctly the means that would be employed, if such a constitution were ever realized.

Socrates:: And have we not by this time discussed to satiety this state, and the individual that resembles it? For I presume it is also clear what sort of person we shall expect him to be.

Glaucon:: It is clear; and the present inquiry is, I believe, concluded.

## Book 8.

Socrates:: Very well; then we agree, Glaucon, upon these points, namely that, if the constitution of a state is to be carried to perfection, it must recognize a community of women, a community of children, and of education in all its branches; and, in like manner, a community of pursuits in war and in peace; and that its kings must be those who have shown the greatest ability in philosophy and the greatest aptitude for war.

Glaucon:: Yes, we agree so far.

Socrates:: In addition to this, we also admitted, that as soon as the rulers have established their position, they are to take the soldiers, and settle them in dwelling-places of a certain description; in which, by our direction, no private rights are admitted, but which are the common property of all. And, besides determining the nature of their dwellings, we also determined, if you recollect, how far they were to be permitted to have anything, which they could call their own.

Glaucon:: Yes, I recollect that we pronounced against their holding any such property as is commonly held at the present day, and decided that, in their capacity of trained soldiers and guardians, they ought to receive in return for their guardianship year by year from the other citizens the maintenance required by their position, and devote their attention to the whole state including themselves.

Socrates:: You are right. But, now that we have concluded this subject, let us recall to mind the point from which we diverged, in order that we may resume our old route.

Glaucon:: That will not be difficult. You were talking pretty much as you are now doing, giving us to understand that you had finished the discussion of the commonwealth, and saying that you applied the term good to such a state as you had then described, and to the man who resembled it; though, as it would seem, you had it in your power to tell us of a still more excellent state, and of a still more excellent man. At the same time, you declared that, if your state were right, all others must be wrong. Of the remaining constitutions I remember you mentioned four principal varieties, which you said it might be worth while to consider, noticing their faults, and observing in their turn the men who resemble them; in order that, after viewing them all and agreeing as to the best and the worst man, we might examine whether, or not, the best is happiest, and the worst most wretched. And on my asking you to specify the four constitutions, to which you alluded, we were interrupted by Polemarchus and Adeimantus; and thereupon you took up the discussion which has brought you to this point.

Socrates:: Your memory is perfectly correct.

Glaucon:: Then allow me to grapple with you, like a wrestler, in my old attitude; and, when I repeat my former question, exert yourself to give me the answer which was then upon your lips.

Socrates:: I will do my best.

Glaucon:: Well, it is my particular desire to be told what are the four constitutions to which you referred.

Socrates:: I shall find no difficulty in answering your question. The constitutions to which I allude, and to which in fact special names have been given, are the following. First, we have the constitution of Crete and Sparta, which has the general voice in its favor. Second in order, as in estimation, stands oligarchy, as it is called, a commonwealth fraught with many evils. Then comes democracy, which is the adversary and successor of oligarchy; and, finally, that glorious thing, despotism, which differs from all the preceding, and constitutes the fourth and worst disease of a state. I suppose you cannot tell me of any other form of polity, which stands conspicuously by itself in kind? For I believe we may regard as minor links in the series just given all principalities and purchased sovereignties and similar constitutions, which are to be found fully as often among the barbarians as among the Greeks.

Glaucon:: Yes, we certainly hear of many strange instances of them.

Socrates:: Now are you aware that the varieties of human character and the varieties of existing constitutions must be exactly equal in point of number? Or do you imagine that constitutions grow upon a tree or rock, instead of springing out of the moral dispositions of the members of each state, according as this or that disposition turns the scale as it were, and drags everything else in its wake?

Glaucon:: I believe the latter to be their sole origin.

Socrates:: Consequently if there are five varieties of commonwealth, there must be also five varieties of mental constitution among individuals.

Glaucon:: Certainly.

Socrates:: We have already discussed the man who resembles aristocracy, whom we rightly affirm to be both good and just.

Glaucon:: We have.

Socrates:: Then must we proceed to describe those inferior men, to wit, the contentious and ambitious man, answering to the Spartan constitution; and likewise the oligarchical, and the democratical, and the despotic man; in order that we may get a view of the most unjust man, and contrast him with the most just; and so may complete our inquiry into the respective merits of pure justice and pure injustice, so far as the happiness or misery of their possessors is concerned; in order that we may either listen to Thrasymachus and pursue injustice, or yield to the argument which is coming into view, and follow after justice?

Glaucon:: We ought by all means so to do.

Socrates:: Well then, as our practice from the first has been to examine moral characteristics in the state prior to doing so in the individual, because such a method conduces to greater clearness; so, if you please, we will begin on the present occasion by examining the ambitious constitution (I do not know of any other name in use; we must call it Timocracy, or Timarchy) and, with this in sight, we will proceed to examine the ambitious man, and then go on to oligarchy and the oligarchical man; and next, after looking at democracy, we will contemplate the democratical man; and lastly, we will enter into a city which is governed by a despot and observe it, and then look into the soul which is its counterpart, and so endeavor to become competent judges of the question proposed.

Glaucon:: There would at least be sound reason in such a method of observing and deciding.

Socrates:: Come then, let us endeavor to describe how timocracy will grow out of aristocracy. May we not lay down the rule, that changes in any constitution originate, without exception, in the governing body, and only when that body becomes the seat of dissensions? For, so long as it continues unanimous, it cannot be shaken, though it be very insignificant in point of numbers.

Glaucon:: Yes, that is true.

Socrates:: Then pray, Glaucon, how will our state be shaken, and in what way will divisions arise either between the auxiliaries and the magistrates, or in these bodies themselves? Would you have us pray to the Muses, like Homer, to tell us, How first division entered; and would you have us describe them as talking in tragic, high-flown style, playing with us as children, and jesting, while they pretend to speak seriously?

Glaucon:: What will their answer be?

Socrates:: Something to this effect; It is indeed difficult for a state, thus constituted, to be shaken. But since everything that has come into being must one day perish, even a system like ours will not endure for all time, but must suffer dissolution. The dissolution will be as follows; Not only the vegetable, but also the animal kingdom, is liable to alternations of fertility and barrenness, mental and bodily; and these alternations are coincident with certain cyclical revolutions, which vary in each case in length according to the length of life of the particular thing. Now, as touching the fruitfulness and barrenness of your own race, though the persons, whom you have trained to be governors of the state, are men of wisdom; yet, in despite of all observation and calculation, they will miss the propitious time. It will give them the slip, and they will beget children on wrong occasions. Now the cycle of a divine race is contained in a perfect number; but the cycle of a human race is expressed by a geometrical number, on which depends the good or bad quality of the births. And when your guardians, from ignorance of this, arrange unseasonable marriages, the children of such marriages will not be well-endowed or fortunate. The best of them will be established in power by their predecessors; but nevertheless they will be unworthy of it; and having entered upon the functions of their fathers, they will first of all begin to slight us, in defiance of their duties as guardians, and underrate music first, and then gymnastic. Thus your young men will grow up worse educated; and, in consequence of this. magistrates will take office who will fail in their duty of discriminating Hesiods races and yours, that is to say the golden and silver and brazen and iron. And this mixture of iron with silver and of brass with gold will breed inequality and incongruous irregularity; and, wherever these take root, their growth always produces enmity and war. So that we may positively assert that the rise of such a generation will invariably be marked by divisions.

Glaucon:: Yes, and we shall allow that the answer of the Muses is the right one.

Socrates:: How could it be otherwise, when the Muses speak?

Glaucon:: And what do the Muses say next?

Socrates:: As soon as a division had arisen, the two parties would be likely to diverge rapidly, the races of iron and brass inclining to money-making and the acquisition of land and houses, of silver and gold; while the other two richly endowed races would, in the absence of all poverty, turn their minds to virtue and the ancient constitution of things. But the violence of their mutual contentions would induce the two parties to come to an agreement, on the understanding that they should divide and appropriate the land and houses, and enslave their formerly free wards, friends, and maintainers, from thenceforth to be held as an inferior tribe and as servants, and apply themselves to war and their own protection.

Glaucon:: I believe you have described correctly the passage to timocracy.

Socrates:: Then will not this constitution be a kind of mean between aristocracy and oligarchy?

Glaucon:: Assuredly it will.

Socrates:: Such being the passage, how will the state in question conduct itself after the change? Is it not obvious that, being a mean between its former constitution and oligarchy, it will imitate partly the one, and partly the other, besides having some peculiarities of its own?

Glaucon:: Precisely so.

Socrates:: Then, in the respect which the warrior class will pay to the magistrates, and in the abstinence of that class from agriculture, handicrafts, and all other pursuits of gain, and in the establishment of public messes, and devotion to gymnastic and the training which war requires, in all such points it will imitate the former constitution, will it not?

Glaucon:: It will.

Socrates:: But in its fear of installing the wise in office, because the wise men in its possession are no longer men of sufficiently simple and sterling stuff, but of compound nature, and in its degenerate inclination towards men of spirit and of a narrower character, with a greater turn for war than for peace, and in the value which it set upon the arts and stratagems which war calls out, and in the incessant hostilities which it carries on, in most of these points it will have a character of its own, will it not?

Glaucon:: It will.

Socrates:: Again, such persons will, like the members of oligarchies, be covetous of wealth, and will have a passionate but concealed regard for gold and silver, from the fact of their owning storehouses and private treasuries, in which they can deposit and secrete their riches, and also walled houses, which are verily private nests, wherein they may spend with a lavish hand on wives or any other object that may please them.

Glaucon:: Most true.

Socrates:: Hence, while their covetous nature makes them prodigal of other peoples money, they will at the same time be parsimonious of their own, because they value it and have to conceal the possession of it; and they will enjoy their pleasures in secret, shunning the law as boys shun their father, because they have been trained not by persuasion but by force, inasmuch as they have slighted the true muse, that goes hand in hand with profound philosophical inquiry, and have honored gymnastic above music.

Glaucon:: You are certainly describing a constitution which is a compound of good and evil.

Socrates:: Yes, it is a compound; but, owing to the preponderance of the spirited element, there is one thing in particular which it exhibits in the clearest colors, and that is party-spirit and the love of distinction.

Glaucon:: Yes, decidedly it does.

Socrates:: Such, then, will be the origin, and such, or nearly such, the character of this constitution, if we are satisfied to sketch a theoretical outline of its form, without perfectly elaborating it, which we need not do, because we can distinguish sufficiently even from such a sketch the most just and the most unjust man, and because it is a work of hopeless length to discuss without any omission every constitution and every character.

Glaucon:: You are right.

Socrates:: Who then is the man that answers to this constitution; what is his origin, and what his character?

Adeimantus:: I imagine, that, as a man of party-spirit, he must rather closely resemble our friend Glaucon.

Socrates:: Perhaps so, as a party-man; but in the following points I do not think that his nature and Glaucon's correspond.

Adeimantus:: What are these points?

Socrates:: He must be more self-willed than Glaucon, and rather less fond of literature; still he must be studious, and fond of listening, but no speaker. A person of this character will not despise slaves, like the perfectly educated man. though he will behave harshly to them and at the same time gently to the free-born. He will also be exceedingly obedient to the magistrates, with a passion for distinction and command, to which he lays claim not on the ground of oratory or any thing of the kind, but on the ground of deeds of arms and exploits congenial to war, devoted as he is to bodily exercise and field-sports.

Adeimantus:: True, this is the character of the corresponding commonwealth.

Socrates:: In addition to this, will not such a person in his younger days despise wealth? but, as he grows older, will he not be always paying it more respect, because he has a touch of the nature of the money-lover, and because his virtue is not free from blemish, owing to his having parted from the best guardian?

Adeimantus:: Who is that guardian?

Socrates:: Rational inquiry, blended with music; for this alone by its presence and indwelling can preserve its owner in the possession of life-long virtue.

Adeimantus:: It is well said.

Socrates:: Such we find to be the character of the timocratic young man, who resembles the timocratic state.

Adeimantus:: Very true.

Socrates:: Again, his origin, may be traced as follows. He is the youthful son of an excellent father, who living, as is not uncommon, in a city where the constitution is defective, avoids honors and offices and litigation and all similar marks of a restless spirit, and is willing to suffer loss rather than get into trouble.

Adeimantus:: Pray describe the formation of such a character.

Socrates:: It dates. from the time when the son listens to his mothers complaint, who is looked down upon by the other women, because her husband is not a member of the government, and who also sees that he does not concern himself much about money, and will not fight and rail as a litigant in the law-courts or in the public assemblies, to all which things he exhibits great indifference; and who further perceives that he is always inwardly reflecting, and that he pays no great respect to herself, though he offers her no disrespect; for all which reasons she is vexed, and tells her son that his father is nothing of a man and culpably inactive, not to mention all the other choice expressions which women are in the habit of lavishing on such men.

Adeimantus:: Ay, they have indeed plenty to say that is quite in keeping with their own character.

Socrates:: And no doubt you are aware, that the servants also of such persons servants who seem to have their masters interests at heart do sometimes privately make similar observations to the sons; and that, if they see a man in debt to the father, or wronging him in any other way, and no proceedings taken against him, they exhort the son, when he is grown up, to take revenge on all such people, and be more of a man than his father. Likewise, when the son goes abroad, he hears and sees other instances of the same thing. He hears the quiet and unmeddlesome called simpletons in the city, and sees that they are held in small esteem; while the busybodies are honored and commended. Thereupon the young man, hearing and seeing all this, and on the other hand listening to his fathers conversation and narrowly examining his pursuits side by side with those of other men, is pulled two ways by two influences. On the one hand his father is watering and nursing the rational element in his soul, and on the other hand every one else is watering and nursing the appetitive and the spirited element of his nature; and because, though his disposition is not that of a bad man, he nevertheless has mixed in the bad society of others, he is drawn by these combined influences into a middle ground, where he delivers up the government of himself to that middle element which is hot-tempered and contentious, and turns out a high-spirited, ambitious man.

Adeimantus:: It appears to me, that you have exactly described the production of such a character.

Socrates:: Then we are in possession of the second constitution, and the second man.

Adeimantus:: We are.

Socrates:: Must we not then, to use the words of Aeschylus, proceed to describe

> Another man matched with another state?

Or rather, according to our plan, must we not begin with the state?

Adeimantus:: By all means.

Socrates:: Well; I think that the constitution which comes next in order will be oligarchy.

Adeimantus:: Pray what kind of constitution do you mean by an oligarchy?

Socrates:: A constitution grounded upon a property qualification, in which the wealthy rule, while the poor have no part in the government.

Adeimantus:: I understand.

Socrates:: Ought we not to describe the first steps in the transition from timarchy to oligarchy?

Adeimantus:: We ought.

Socrates:: Well, no doubt even a blind man could find out how the transition is brought about.

Adeimantus:: How?

Socrates:: It is the influx of gold into those private treasuries that ruins the constitution just described. For the first result of this is that the owners invent ways of spending their money, and pervert the laws with that intent, and disobey them in their own persons, and in the persons of their wives.

Adeimantus:: It would be strange if they did not.

Socrates:: They then proceed, if I am not mistaken, to eye one another with jealous looks, and to enter upon a course of rivalry, which stamps the same character on the general body of which they are members.

Adeimantus:: It is what we might expect.

Socrates:: And thenceforth they press forward on the path of money-getting, losing their esteem for virtue in proportion as the esteem for wealth grows upon them. For can you deny that there is such a gulf between wealth and virtue, that, when weighed as it were in the two scales of a balance, one of the two always falls, as the other rises?

Adeimantus:: That is quite true.

Socrates:: Consequently when wealth and the wealthy are honored in a state, virtue and the virtuous sink in estimation.

Adeimantus:: Obviously.

Socrates:: And what is honored at any time is practiced, and what is dishonored is neglected.

Adeimantus:: True.

Socrates:: Hence, instead of being contentious and ambitious, such persons end by becoming lovers of gain and covetous; and while they commend and admire and confer office upon the wealthy, they despise the poor.

Adeimantus:: Assuredly they do.

Socrates:: So that at length they pass a law, which is the essence of an oligarchical constitution, by which they agree upon a certain sum, which is larger or smaller according to the strength of the oligarchical principle, and forbid any share in the government to those who have not property up to the stipulated amount. And they bring about these measures by violence with arms in their hands, if they have not previously succeeded in establishing the proposed constitution by the alarm which they have inspired? Or am I wrong?

Adeimantus:: No, you are right.

Socrates:: And this, in a word, is the establishment of oligarchy.

Adeimantus:: True; but pray what is the character of the constitution. and what are the faults which we attributed to it?

Socrates:: Its first fault, lies in the very nature of its essential law. For consider what would be the result, if we elected our pilots on this principle of a property qualification, refusing the post to the poor man, though he were a better pilot.

Adeimantus:: We should make sad work with the voyage.

Socrates:: Does not this apply to any management of anything else whatever?

Adeimantus:: Yes, I think so.

Socrates:: Do you except a state? or do you include it?

Adeimantus:: I include it most especially, in consideration of the superior difficulty and importance of its management.

Socrates:: Then here is one of the faults of oligarchy, and that a grievous one.

Adeimantus:: Evidently.

Socrates:: Again; is the following fault at all less grievous than the first?

Adeimantus:: What is it?

Socrates:: Why, that such a city must necessarily lose its unity and become two cities, one comprising the rich, and the other the poor; who reside together on the same ground, and are always plotting against one another.

Adeimantus:: Why this fault, I am sure, is quite as bad as the former.

Socrates:: Once again; it is certainly not a commendable thing that they should be incapable (as they probably will be) of waging any war; the fact being that, if they arm and employ the populace, they cannot help dreading them more than the enemy; whereas, if they hesitate to employ them, they must appear veritable oligarchs in the actual battle; to which we must add that their love of money renders them unwilling to pay war-taxes.

Adeimantus:: You are right.

Socrates:: Again; to return to a point against which we were inveighing some time ago, do you think it right that the same persons should be engaged at the same time in the various occupations of agriculture, trade, and war, which is the case under such a constitution?

Adeimantus:: No; there is nothing to be said for it.

Socrates:: Now, consider whether the following evil, which is greater than all the others, is not admitted by this constitution, and by none of the preceding.

Adeimantus:: What is it?

Socrates:: I allude to the practice of allowing one person to sell all his property, and another to acquire it, the former owner living in the city without being a recognized portion of the state, either as trader, artisan, trooper, or foot-soldier; but described as a destitute man, and a pauper.

Adeimantus:: None of the preceding constitutions admitted such a practice.

Socrates:: To say the least, such a casualty is not prohibited in cities whose constitution is oligarchical. Otherwise it would be impossible for some persons to be extravagantly rich, while others are utter paupers.

Adeimantus:: True.

Socrates:: Let me ask you to examine another point. At the time when such a man was spending money in his wealthy days, was he one whit more useful to the state for the purposes which we were just now specifying? Or was it the case, that though he seemed to be one of the government, he was really neither governor nor servant of the state, but only a consumer of its resources?

Adeimantus:: The latter is the true account. He seemed what you say; but he was really only a consumer.

Socrates:: Then would you have us assert that, as the drone grows up in the hive to be the plague of the bees, so also does such a man grow up as a drone in his house, to be the plague of the state?

Adeimantus:: Undoubtedly, Socrates, he does.

Socrates:: And is it not true, Adeimantus, that, though God has provided none of the flying drones with stings, he has made only some of these walking drones stingless, while to some he has given formidable stings? and that while the stingless ones end in an old age of beggary, the stinging drones, on the contrary, furnish out of their ranks all who bear the name of criminals?

Adeimantus:: It is most true.

Socrates:: It is quite clear then, that, whenever you see beggars in a city, you may be certain that in the same place lurk thieves, cutpurses, temple-robbers, and the instruments of all similar crimes.

Adeimantus:: True.

Socrates:: Well, and in oligarchical states do you not see beggars?

Adeimantus:: Ye; almost all are beggars except the governors.

Socrates:: Then is it, or is it not, our opinion, that there are also many evil doers in such states, armed with stings, whom the magistrates are careful to keep down by main force?

Adeimantus:: Certainly it is our opinion.

Socrates:: Then shall we not assert that the cause which produces such persons therein is want of education, and bad training, and a bad condition of the commonwealth?

Adeimantus:: Yes, we shall.

Socrates:: Well then, this, or something like it, will be the character of a state governed by an oligarchy; and it will contain quite as many evils, if not more.

Adeimantus:: You are near the mark.

Socrates:: Then let us close our account here of this commonwealth which is called oligarchy, and which takes its governors by a property qualification; and let us proceed to examine how the man who resembles it grows up, and what he is when he has grown up.

Adeimantus:: By all means let us do so.

Socrates:: Tell me then, is the transition from the timocratic man, whom we have described, to the oligarchical, effected thus, or nearly thus?

Adeimantus:: How?

Socrates:: The timocratic man has a son, who at first emulates his father and follows his steps; and then suddenly sees him founder on the state as on a sunken rock, and his property and his person thrown overboard, sees him, after commanding his countries armies or holding some other high office, brought to trial, damaged by lying informers, and either put to death, or banished, or disfranchised, and all his substance taken from him.

Adeimantus:: All this might very well happen.

Socrates:: Well, my friend, the instant the son has seen and felt this, and lost his property, he becomes alarmed, I suppose, and thrusts ambition and that high-spirited element headforemost from the throne of his heart; and being humbled by poverty he turns to money-getting, makes mean and petty savings, and by working hard accumulates wealth. Do you not think that such a person does then install on that throne the appetitive and covetous element, and make of it an eastern monarch within himself, adorning it with diadem and collar, and girding the scimitar by its side?

Adeimantus:: I do.

Socrates:: But the rational and the high-spirited elements, I think, he sets down on the ground below it, on this side and on that, as subjects and slaves, forbidding the former to investigate or reason about anything, save how to multiply riches, and forbidding the latter to admire or esteem anything save wealth and the wealthy, or to be ambitious after a single object save the acquisition of riches, and whatever else may conduce to this.

Adeimantus:: There can be no other transformation of an ambitious into a covetous young man so speedy and so thorough.

Socrates:: Then tell me, is such a person oligarchical?

Adeimantus:: Well, at any rate the man from whom he is by transformation derived, resembled the constitution which was the antecedent of oligarchy.

Socrates:: Let us examine whether he will resemble oligarchy.

Adeimantus:: Yes, let us.

Socrates:: Well then, first of all, will he not resemble oligarchy in setting the highest value on riches?

Adeimantus:: Assuredly he will.

Socrates:: And also in the fact that he is parsimonious and hardworking, satisfying only his necessary appetites, and refusing himself all other expenses, and subjugating his other desires as idle.

Adeimantus:: Exactly so.

Socrates:: In other words, he is a sordid man, making a profit out of every thing, and given to hoarding; one of those persons who are positively commended by the great body of men. Or am I wrong in supposing that such will be the man who resembles the constitution we have just described?

Adeimantus:: If you ask me, I think you are right. At any rate, the oligarchical state, as well as the person under discussion, values money above every thing.

Socrates:: The reason being, I believe, that such a man has taken no pains with his education.

Adeimantus:: I fancy he has not; else he would not have appointed, nor would he so highly honor, a blind leader of the chorus.

Socrates:: Very true. And now let me ask you to consider whether we must not assert that drone-like appetites, which are either beggarly or criminal, grow up in him owing to his want of education, and that these appetites are forcibly held down by other prudential considerations.

Adeimantus:: Certainly we must assert it.

Socrates:: And do you know where you must look in order to see their evil deeds?

Adeimantus:: Where?

Socrates:: You must look to occasions where they are guardians of orphans, and to any similar accidents which put it completely in their power to act unjustly.

Adeimantus:: True.

Socrates:: Then is it not clear from this, that in his other contracts, in which his apparent justice secures him a good name, such a person is holding down by a kind of constrained moderation a class of evil appetites that are within him, which he does not tame by reason, or convince that it would be wrong to gratify them, but which circumstances and his own apprehensions teach him to suppress, because he trembles for the rest of his substance?

Adeimantus:: Yes, it is quite clear.

Socrates:: Indeed, my friend, I am quite sure that, when these people have to spend what is not their own, you will find that most of them possess the appetites akin to the drone.

Adeimantus:: Most decidedly they do.

Socrates:: Hence such a person, far from being at peace within himself, will be a double-minded, not a single-minded, man; though he will generally find his lower appetites vanquished by his higher.

Adeimantus:: True.

Socrates:: And for these reasons, I think, such a person will present a better outside than many; but the genuine virtue of a soul attuned to concord and harmony will fly somewhere far away from him.

Adeimantus:: So I think.

Socrates:: And no doubt the parsimonious man makes a miserable rival as a private citizen, when a prize or any other honorable distinction is contested; for he will not spend money to win himself renown in such matches, from fear of exciting his expensive appetites by inviting them to share in the struggle and the rivalry; so that in fact he follows the practice of an oligarchy in employing only some few parts of himself in his wars, and in most cases spares hi and submits to defeat.

Adeimantus:: Exactly so.

Socrates:: Then are we still incredulous, as to the similarity and correspondence subsisting between the oligarchical state and the parsimonious money-hunter?

Adeimantus:: Not at all.

Socrates:: And now we must proceed, I should suppose, to examine in what way democracy arises, and what is its character when it has arisen; in order that once again we may discover the character of the corresponding man, and place him by our side for judgment.

Adeimantus:: Yes, if we would act consistently, we must take that course.

Socrates:: Is not the transition from oligarchy to democracy brought about by an intemperate craving for extravagant wealth, which is publicly acknowledged to be the greatest of blessings, and the attainment of which is considered a duty, the transition itself taking the following form?

Adeimantus:: Pray describe it.

Socrates:: Since the power of the rulers in an oligarchical state is, I believe, wholly due to their great wealth, they are unwilling to put the licentious young men of their time under restraint, to the extent of rendering it illegal for them to run through their property; because they hope, by purchasing the possessions of such persons, and by lending money to them, to make themselves still richer and more honored.

Adeimantus:: Most unquestionably.

Socrates:: And is it not manifest by this time, that it is impossible for the citizens of a state to honor wealth, and at the same time acquire a proper amount of temperance; because they cannot avoid neglecting either the one or the other?

Adeimantus:: It is pretty well manifest.

Socrates:: Hence the rulers in such states, by their reckless admission of unrestrained license, not unfrequently compel men of noble birth to become poor.

Adeimantus:: Yes, that they do.

Socrates:: And the persons thus impoverished lurk, I should suppose, in the city, harnessed and armed with stings, some owing debts, and others disfranchised, and others laboring under both misfortunes, hating and plotting against the new owners of their property, and against all who are better off than themselves, and enamored of revolution.

Adeimantus:: True.

Socrates:: These capitalists, on the other hand, keep prying after their own interests, and apparently do not see their enemies; and, whenever one of the remainder yields them opportunity, they wound him by infusing their poisonous money, and then recover interest many times as great as the parent sum, and thus make the drone and the beggar multiply in the state.

Adeimantus:: Yes, that they do.

Socrates:: And they cannot make up their minds to extinguish this great evil, either by that cauterizing operation of prohibiting people from disposing of their property at their own pleasure, or by employing another method, which provides by a different law for the removal of such dangers.

Adeimantus:: Pray what law do you mean?

Socrates:: I mean one which is next best to the former, and which constrains the citizens to apply themselves to virtue. For if it be enacted that voluntary contracts be as a general rule entered into at the proper risk of the contractor, people will be less shameless in their money-dealings in the city, and such evils as we have just now described will be of less common growth therein.

Adeimantus:: Yes, much less common.

Socrates:: But as it is, the various inducements I have mentioned encourage the governing body in the state to handle their subjects in this ungentle way. On the other hand, if we look at the rulers themselves and their children, do we not see that the young men are made luxurious and indolent both in body and mind, and so idle and effeminate that they cannot resist pleasure and encounter pain?

Adeimantus:: Unquestionably they are.

Socrates:: And that their seniors are indifferent to everything except making money, and as careless about virtue as the poor themselves?

Adeimantus:: Certainly they are.

Socrates:: In this state of things, when the rulers and their subjects encounter one another either in travelling or in some other common occupation, whether it be a pilgrimage or a military expedition, in which they are fellow-sailors or fellow-soldiers; or when they are witnesses of one another's behavior in moments of danger, in which the poor can by no possibility be despised by the rich, because it often happens that a rich man, nursed in luxury and surfeited with abundance, finds himself posted in battle by the side of some lean and sun-burnt poor man, to whom by his labored breathing he betrays his sore distress; when, I repeat, all this takes place, do you imagine that these poor men can avoid thinking, that it is through their own cowardice that such incapable people are wealthy, or that they can refrain from repeating to one another, when they meet in private, Our governors are naught?

Adeimantus:: Nay, I am quite sure that they do so.

Socrates:: Now just as a sickly body requires but a small additional impulse from without to bring on an attack of illness, and sometimes even without any external provocation is divided against itself; so, in the same way, does not this city, whose condition is identical with that of a diseased body, require only the slight excuse of an external alliance introduced by the one party from an oligarchical city, or by the other from a democratical, to bring on an acute disease and an inward battle? and is it not sometimes, even without such external influences, distracted by factions?

Adeimantus:: Most decidedly it is.

Socrates:: Democracy, then, I think, arises, whenever the poor win the day, killing some of the opposite party, expelling others, and admitting the remainder to an equal participation in civic rights and offices; and most commonly the offices in such a state are given by lot.

Adeimantus:: Yes, you have described correctly the establishment of democracy, whether it be effected by an actual appeal to arms, or by the terrified withdrawal of the other party.

Socrates:: And now tell me, in what style these persons administer the state, and what is the character of this third constitution. For obviously we shall find the corresponding man marked, to a certain extent, with the same features.

Adeimantus:: True.

Socrates:: First of all, are they not free, and does not liberty of act and speech abound in the city, and has not a man license therein to do what he will?

Adeimantus:: Yes, so we are told.

Socrates:: And clearly, where such license is permitted, every citizen will arrange his own manner of life as suits his pleasure.

Adeimantus:: Clearly he will.

Socrates:: Hence I should suppose, that in this commonwealth there will be the greatest diversity of character. Unquestionably there will.

Socrates:: Possibly, this constitution may be the most beautiful of all. Embroidered as it is with every kind of character, it may be thought as beautiful as a colored dress embroidered with every kind of flower. And perhaps, I added, as children and women admire dresses of many colors, so many persons will decide in favor of this commonwealth, as the most beautiful.

Adeimantus:: No doubt many will.

Socrates:: Yes, my excellent friend; and it would be a good plan to explore it, if we were in search of a commonwealth.

Adeimantus:: Why, pray?

Socrates:: Because it contains every kind of commonwealth in consequence of that license of which I spoke; and perhaps a person wishing to found a state, as we were just now doing, ought to go into a democratical city, as a bazaar of commonwealths, and choose out the character that takes his fancy, and then found his state according to the choice he has made.

Adeimantus:: We may safely say that he is not likely to be at a loss for patterns.

Socrates:: Again, consider that, in this state, you are not obliged to hold office though your talents may be equal to the task; and that you need not submit to government, if you dislike it, or go to war when your fellow-citizens are at war, or keep peace when they are doing so, if you do not want peace; and again, consider that, though a law forbids your holding office or sitting on a jury, you may nevertheless do both the one and the other, should it occur to you to do so; and now tell me, is not such a course of life divinely pleasant for the moment?

Adeimantus:: Yes perhaps it is, for the moment.

Socrates:: Once more. Is not the meekness of some of those who have been tried in a court of law exquisite? Or have you failed to notice in such a commonwealth how men, who have been condemned to death or exile, stay all the same, and walk about the streets, and parade like heroes, as if no one saw or cared?

Adeimantus:: I have seen many instances of it.

Socrates:: And is there not something splendid in the forbearance of such a commonwealth, and in its entire superiority to petty considerations? Nay, it positively scorns the doctrine, which, when we were founding our state, we laid down with an air of importance, to the effect that no one, who is not endowed with an extraordinary nature, can ever become a good man, unless from his earliest childhood he plays among beautiful objects and studies all beautiful things. How magnificently it tramples all this underfoot, without troubling itself in the least about the previous pursuits of those who enter on a political course, whom it raises to honor, if they only assert that they wish well to the commons.

Adeimantus:: Yes, it behaves very grandly.

Socrates:: These, then, will be some of the features of democracy, to which we might add others of the same family; and it will be, in all likelihood, an agreeable, lawless, parti-colored commonwealth, dealing with all alike on a footing of equality, whether they be really equal or not.

Adeimantus:: The facts you mention are notorious.

Socrates:: And now let me ask you to examine the character of the corresponding individual. Or must we begin, as in the case of the commonwealth, by investigating his origin?

Adeimantus:: Yes.

Socrates:: Then am I not right in supposing that he will be the son of the parsimonious and oligarchical man, bred up under his fathers eye, and in his fathers character?

Adeimantus:: Doubtless he will.

Socrates:: And this son, like the father, will put a violent constraint upon those pleasures within him that tend to extravagance and not to money-getting; which, you know, are called unnecessary pleasures.

Adeimantus:: Clearly he will.

Socrates:: Now, that we may not talk in the dark, would you like us first to define the necessary and unnecessary appetites?

Adeimantus:: I should.

Socrates:: May we not justly apply the term necessary to those appetites which we cannot get rid of, and to those whose satisfaction does us good? For our nature cannot help feeling both these classes of desires, can it?

Adeimantus:: Certainly it cannot.

Socrates:: Then we shall be justified in predicating necessity of them.

Adeimantus:: We shall.

Socrates:: Again; shall we not be right, if we assert all those appetites to be unnecessary, which we can put away from us by early training; and the presence of which, besides, never does us any good, and in some cases does positive harm?

Adeimantus:: Yes, we shall be right.

Socrates:: Would it not be as well to select an example of the existing appetites of each kind, in order that we may gain a general idea of them?

Adeimantus:: Decidedly it would.

Socrates:: Will not the appetite for food, (that is to say, simple bread and meat), within the bounds of health and a good habit of body, be a necessary appetite?

Adeimantus:: I think so.

Socrates:: The appetite for bread at least is surely necessary by a double claim, as being not only beneficial, but also indispensable to the support of life.

Adeimantus:: Yes.

Socrates:: On the other hand, the appetite for meat is necessary, so far as it may contribute advantageously to a good habit of body.

Adeimantus:: Certainly.

Socrates:: Again; the appetite for other viands of a less simple kind, of which by early correction and training most people can rid themselves, and which is hurtful to the body, and hurtful to the soul, in its endeavors after wisdom and temperance, may be rightly styled an unnecessary appetite, may it not?

Adeimantus:: Yes, most rightly.

Socrates:: And must we not assert that the appetites of this second class are also expensive, whereas the others contribute to money-making, because they are a help towards production?

Adeimantus:: Undoubtedly.

Socrates:: Can we say the same of the passion of love and the other appetites?

Adeimantus:: Yes.

Socrates:: Now did we not describe the man, to whom we lately gave the name of drone, as one burdened with those expensive pleasures and desires, and governed by the unnecessary appetites; while we described the man, who is governed by the necessary, as parsimonious and oligarchical?

Adeimantus:: Undoubtedly we did.

Socrates:: Let us now return, and explain how the oligarchical man is transformed into the democratical.

Adeimantus:: How is it?

Socrates:: I would have you suppose that the commencement of a young mans transition from inward oligarchy to democracy dates from the moment when, after being brought up. as we were saying just now, in ignorance and parsimony, he has tasted the honey of the drones, and made acquaintance with fiery and terrible wild beasts, who are able to procure him all kinds of pleasures, of a varied and manifold nature.

Adeimantus:: It cannot be otherwise.

Socrates:: And may we say that, just as the state was transformed by the assistance afforded by a foreign alliance to one of the two parties, in virtue of a common character; so, in the same way, the young man is transformed by the analogous assistance from without, afforded by a certain species of appetites to one of the two parties present with him, in virtue of a real affinity and similarity?

Adeimantus:: Assuredly we may.

Socrates:: And should the oligarchical element within him be supported by some counter-alliance, derived perhaps from his father, or perhaps from his other relations, who rebuke and reproach him, then, I imagine, there ensues a genuine struggle of parties and an inward battling with himself.

Adeimantus:: Undoubtedly.

Socrates:: And occasionally, I fancy, the democratical interest yields to the oligarchical, and certain of the appetites are either cut to pieces or expelled, owing to the presence of a sense of shame in the young mans mind; and order is once more restored.

Adeimantus:: Yes, this does take place sometimes.

Socrates:: But some new appetites, I conclude, akin to those expelled, are privily nursed up, and, owing to the lack of science in his fathers training, become numerous and strong.

Adeimantus:: Yes, this is generally the case.

Socrates:: And these appetites, of course, draw him to his old associates, and by their secret communications engender in him a multitude of others.

Adeimantus:: Undoubtedly.

Socrates:: And finally, I imagine, they seize upon the citadel of the young mans heart, because they perceive it to be destitute of sound knowledge and beautiful studies and true theories, which verily keep the best watch and ward in the minds of men who are the favorites of heaven.

Adeimantus:: Yes, quite the best.

Socrates:: And to supply their place, I fancy, false and presumptuous theories and opinions start up in the man, and secure this post aforesaid.

Adeimantus:: That they do.

Socrates:: Does he not, in consequence, return to those Lotos eaters, and dwell with them without disguise; and if his relatives send any assistance to the parsimonious element of his soul, do not those presumptuous theories close the gates of the royal fortress within him, and not only refuse an entrance to the actual auxiliary force, but even decline to admit an embassy of individuals in the shape of admonitions from elder persons; and do they not fight in person and gain the day; and stigmatizing the sense of shame as folly, do they not thrust it out to an ignominious exile, and expel temperance with insults under the name of cowardice; and do they not prove, by the aid of many useless appetites, that moderation and orderly expenditure are boorish and illiberal, and banish them as such beyond the border?

Adeimantus:: Most certainly they do.

Socrates:: And no doubt, when by the discharge of these virtues they have purified the soul of him who is now in their power, and is being initiated by them into the great mysteries, they proceed at once to restore Insolence, and Disorder, and Licentiousness, and Shamelessness, in great splendor, accompanied by a numerous retinue, and with crowns on their heads, extolling them, and calling them by soft names, describing Insolence as Good breeding, and Disorder as Freedom, and Licentiousness as Magnificence, and Shamelessness as Bravery. Is not this I asked, pretty much the way in which the man who is brought up in the gratification only of necessary appetites alters so far in his youth as to liberate from servitude and control the unnecessary and injurious pleasures?

Adeimantus:: Yes, very evidently it is.

Socrates:: From that day forward a man of this description spends, I should suppose, just as much money and labor and time on unnecessary as upon necessary pleasures. But, should he be so fortunate as to set a limit to his wildness, and, as he grows older, when the tumult of passion has mostly gone by, should he go so far as to readmit to a certain extent portions of the banished, and not surrender himself wholly to the invaders, in that case, it is the habit of his life to make no distinction between his pleasures, but to suffer himself to be led by the passing pleasure which chance as it were throws in his way, and to turn to another, when the first is satisfied. scorning none, but fostering all alike.

Adeimantus:: Exactly so.

Socrates:: Yes; and whenever he is told that though some pleasures belong to the appetites which are good and honorable, others belong to the evil appetites; and that the former ought to be practiced and respected, but the latter chastised and enslaved, he does not receive this true doctrine, or admit it into his castle. On the contrary, at all these assertions he shakes his head, and maintains that all appetites are alike, and ought to be equally respected.

Adeimantus:: Yes, this is precisely his condition, and his behavior.

Socrates:: Hence, he lives from day to day to the end, in the gratification of the casual appetite, now drinking himself drunk to the sound of music, and presently putting himself under training; sometimes idling and neglecting everything, and then living like a student of philosophy. And often he takes a part in public affairs, and starting up, speaks and acts according to the impulse of the moment. Now he follows eagerly in the steps of certain great generals, because he covets their distinctions; and anon he takes to trade, because he envies the successful trader. And there is no order or constraining rule in his life; but he calls this life of his pleasant, and liberal, and happy, and follows it out to the end.

Adeimantus:: Well, you have certainly described a life that might be led by a man whose motto is Liberty and Equality.

Socrates:: Yes; and I conceive it to be also a multitudinous life, replete with very many characters; and I imagine that this is the man who, by the beautiful variety of his nature, answers to the city which we described; a man whose life many men and many women would envy, and who contains within him very many exemplars of commonwealths and characters.

Adeimantus:: True.

Socrates:: What then? May we place this man opposite democracy, in the belief that he may be rightly addressed as democratical?

Adeimantus:: Be it so.

Socrates:: It only remains for us, to describe the most beautiful of all commonwealths, and the most beautiful of all men, that is to say, despotism and the despot.

Adeimantus:: You are quite right.

Socrates:: Come then, my dear friend, tell me in what way despotism arises. That it is a transformation of democracy, is all but obvious.

Adeimantus:: It is.

Socrates:: Then does democracy give birth to despotism, precisely in the way in which oligarchy gave birth to democracy?

Adeimantus:: Explain this.

Socrates:: The thing which oligarchy professed to regard as supremely good, and which was instrumental in establishing it, was excessive wealth; was it not?

Adeimantus:: It was.

Socrates:: Well, it was the insatiable craving for wealth, and the disregard of everything else for the sake of money-making, that destroyed oligarchy.

Adeimantus:: True, it was.

Socrates:: Then may we say that democracy, like oligarchy, is destroyed by its insatiable craving for the object which it defines to be supremely good?

Adeimantus:: And what according to you, is that object?

Socrates:: Freedom. For I imagine that in a democratical city you will be told that it has, in freedom, the most beautiful of possessions, and that therefore such a city is the only fit abode for the man who is a freeman by nature.

Adeimantus:: Why certainly such language is very much in fashion.

Socrates:: To return, then, to the remark which I was trying to make a moment ago; am I right in saying that the insatiable craving for a single object and the disregard of all else transform democracy as well as oligarchy, and pave the way, as a matter of course, for despotism?

Adeimantus:: How so?

Socrates:: Whenever a democratical city which is thirsting for freedom has fallen under the presidency of a set of wicked toastmasters, and has quaffed the wine of liberty untempered far beyond the due measure, it proceeds, I should imagine, to arraign its rulers as accursed oligarchs, and chastises them on that plea, unless they become very submissive, and supply it with freedom in copious draughts.

Adeimantus:: Yes, that is what is done.

Socrates:: And likewise it insults those who are obedient to the rulers with the titles of willing slaves and worthless fellows; while the rulers who carry themselves like subjects, and the subjects who carry themselves like rulers, it does r both privately and publicly, commend and honor. Must it not follow that in such a city freedom goes all lengths?

Adeimantus:: Of course it must.

Socrates:: Yes, my friend; and does not the prevailing anarchy steal into private houses, and spread on every side, till at last it takes root even among the brute creation?

Adeimantus:: What are we to understand by this?

Socrates:: I mean, for example, that a father accustoms himself to behave like a child, and stands in awe of his sons, and that a son behaves himself like a father, and ceases to respect or fear his parents, with the professed object of proving his freedom. And I mean that citizens, and resident aliens, and foreigners, are all perfectly equal.

Adeimantus:: You are right as to the results of such a state of things.

Socrates:: I have told you some of the results; let me tell you a few more trifles of the kind. The schoolmaster, in these circumstances, fears and flatters his scholars, and the scholars despise their masters and also their tutors. And, speaking generally, the young copy their elders, and enter the lists with them both in talking and in acting; and the old men condescend so far as to abound in wit and pleasantry, in imitation of the young, in order, by their own account, to avoid the imputation of being morose or domineering.

Adeimantus:: Exactly so.

Socrates:: But the extreme limit, my friend, to which the freedom of the populace grows in such a commonwealth is only attained when the purchased slaves of both sexes are just as free as the purchasers. Also I had almost forgotten to mention to what extent this liberty and equality is carried in the mutual relations subsisting between men and women.

Adeimantus:: Then, in the words of Aeschylus, shall we not give utterance to that which is already on our lips?

Socrates:: By all means. I, for one, am doing so, when I tell you that no one could believe, without positive experience, how much more free the domestic animals are under this government than any other. For verily the hound, according to the proverb, is like the mistress of the house; and truly even horses and asses adopt a gait expressive of remarkable freedom and dignity, and run at any body who meets them in the streets, if he does not get out of their way; and all the other animals become in the same way gorged with freedom.

Adeimantus:: It is my own dream that you are repeating to me. This often happens to me when I walk into the country.

Socrates:: Now putting all these things together, do you perceive that they amount to this, that the soul of the citizens is rendered so sensitive as to be indignant and impatient at the smallest symptom of slavery? For surely you are aware that they end by making light of the laws themselves, whether statute or customary, in order that, as they say, they may not have the shadow of a master.

Adeimantus:: I am very well aware of it.

Socrates:: This then, my friend, if I am not mistaken, is the beginning, so fair and gay, out of which despotism grows.

Adeimantus:: Gay, indeed! But what is the next step?

Socrates:: That very disease, which broke out in oligarchy and ruined it, appears in democracy also with increased strength and virulence, aggravated by the license of the place, and occasions its enslavement. Indeed, to do anything in excess seldom fails to provoke a violent reaction to the opposite extreme, not only in the seasons of the year and in the animal and vegetable kingdoms, but also especially in commonwealths.

Adeimantus:: This is only natural.

Socrates:: Thus, excessive freedom is unlikely to pass into anything but excessive slavery, in the case of states as well as of individuals.

Adeimantus:: It is.

Socrates:: Hence, in all likelihood, democracy, and only democracy, lays the foundation of despotism; that is to say, the most intense freedom lays the foundation for the heaviest and the fiercest slavery.

Adeimantus:: Yes, it is a reasonable statement.

Socrates:: However, this, I think, was not your question; you were asking, what is this disease, which fastens upon democracy as well as upon oligarchy, and reduces the former to bondage.

Adeimantus:: That was my question.

Socrates:: Well then, I alluded to that class of idle and extravagant men, in which the bravest lead and the more cowardly follow. We compared them, if you recollect, to stinging and stingless drones, respectively.

Adeimantus:: Yes, and rightly so.

Socrates:: Now the presence of these two classes, like phlegm and bile in the body, breeds in every commonwealth disturbance. Therefore a skilful physician and legislator, just like a cunning bee-keeper, must take measures in advance, if possible, to prevent their presence; but, should they make their appearance, he must have them cut out, as quickly as possible, along with the combs themselves.

Adeimantus:: That must he, without a doubt.

Socrates:: Then let us handle the matter thus, in order that we may see more distinctly what we wish to see.

Adeimantus:: How?

Socrates:: Let us suppose a democratic state to be divided, as is really the case, into three parts. The class of people we have described constitutes, I believe, one of these divisions, and is generated by license in a democratical as abundantly as in an oligarchical state.

Adeimantus:: True.

Socrates:: But it is much more keen in the former than in the latter.

Adeimantus:: How so?

Socrates:: In the latter it is despised, and excluded from office, and therefore proves untrained and feeble. But in democracy it is, I conceive, with a few exceptions, the sole presiding body; and its keenest members speak and act, while the residue sit on the benches round, and hum applause, and will not brook any opposite statement; so that all the concerns of such a commonwealth are, with some trifling exceptions, in the hands of this body.

Adeimantus:: Certainly.

Socrates:: In addition to this, a second body is being constantly severed from the mass.

Adeimantus:: What is it like?

Socrates:: If all are occupied in amassing riches, I presume that those who are most orderly by nature generally become wealthiest.

Adeimantus:: It is likely to be so.

Socrates:: Hence I conclude, that out of these persons, the readiest and most copious supply of honey is squeezed for the drones.

Adeimantus:: To be sure; how could honey be squeezed out of the poor?

Socrates:: And they are called wealthy, which means, I suppose, that they are the provender of the drones.

Adeimantus:: Pretty nearly so.

Socrates:: The third class will consist of those members of the commonalty who work with their own hands, and do not meddle with politics, and are not very well off. And this class is, in a democracy, the most numerous and the most important of all, when collected.

Adeimantus:: True; but it will seldom collect, unless it receives a share of the honey.

Socrates:: And therefore it always does receive a share; with this proviso, that its leaders, while depriving the moneyed class of their substance, and making division of it among the commons, manage, if possible, to keep the largest share for themselves.

Adeimantus:: Undoubtedly, with that proviso, it does get a share.

Socrates:: Now these despoiled persons are compelled, I imagine, to defend themselves, by speaking before the commonalty, and acting to the best of their ability.

Adeimantus:: Of course they are.

Socrates:: And, for this behavior, even if they do not desire a revolution, they are accused by the opposite party of plotting against the commons, and of being oligarchs.

Adeimantus:: Undoubtedly.

Socrates:: Therefore in the end, when they see that from want of information and in consequence of the artful misrepresentations of their calumniators the commons are unwittingly bent on wronging them, from that moment forward, whether they wish it or not, they become, as a matter of course, veritable oligarchs. For this evil, amongst others, is engendered in them by the sting of that drone of which we spoke.

Adeimantus:: Yes, precisely so.

Socrates:: Hence arise impeachments, prosecutions, and trials, directed by each party against the other.

Adeimantus:: Certainly.

Socrates:: And is it not always the practice of the commons to select a special champion of their cause, whom they maintain and exalt to greatness?

Adeimantus:: Yes, it is their practice.

Socrates:: Then, obviously, whenever a despot grows up, his origin may be traced wholly to this championship, which is the stem from which he shoots.

Adeimantus:: That is quite obvious.

Socrates:: And what are the first steps in the transformation of the champion into a tyrant? Can we doubt that the change dates from the time when the champion has begun to act like the man in that legend which is current in reference to the temple of Lycasan Zeus in Arcadia?

Adeimantus:: What legend?

Socrates:: According to it, the worshipper who tasted the one human entrails, which was minced up with the other entrails of other victims, was inevitably metamorphosed into a wolf. Have you never heard the story?

Adeimantus:: Yes, I have.

Socrates:: In like manner, should the commons champion find the populace so very compliant that he need make no scruple of shedding kindred blood, should he, with unrighteous charges, as is the wont of such persons, prosecute his victims and render himself blood-guilty, making away with human life, and tasting the blood of his fellows with unholy tongue and lips, should he banish, and kill, and give the signal for cancelling debts and redistributing the land; is it not from thenceforth the inevitable destiny of such a man either to be destroyed by his enemies, or to become a tyrant, and be metamorphosed from a man into a wolf?

Adeimantus:: There is no escape from the alternative.

Socrates:: Such is the fate of the man who is at feud with the moneyed class.

Adeimantus:: It is.

Socrates:: And if he is banished, and afterwards restored in despite of his enemies, does he not return a finished tyrant?

Adeimantus:: Obviously he does.

Socrates:: And if his enemies find themselves unable to expel him, or to put him to death, by accusing him to the state, in that case they take measures to remove him secretly by a violent end.

Adeimantus:: Yes, that is the usual expedient.

Socrates:: In order to prevent this, those who have gone so far always adopt that notorious device of the tyrant, which consists in asking the commons for a body-guard, in order that the peoples friend may not be lost to them.

Adeimantus:: Just so.

Socrates:: And the commons, I imagine, grant the request; for they are alarmed on his account, while they are confident on their own.

Adeimantus:: Just so.

Socrates:: Consequently, when this is observed by a man who has wealth, and with his wealth the character of being a hater of democracy, forthwith, in accordance with the oracle given to Croesus;

> By the pebbly bed of the Hermus,
> Flies he, and halts no more, nor shuns the reproach of a coward.

Adeimantus:: Why, he would not have the chance of shunning it a second time.

Socrates:: And those that are arrested are given up to death, I imagine.

Adeimantus:: Of course they are.

Socrates:: But as for that champion himself, it is quite clear that far from being laid with his huge form hugely prostrate, he has overthrown many another man, and stands in the chariot of the state, metamorphosed from a champion into a consummate tyrant.

Adeimantus:: Yes, there is no help for it.

Socrates:: Pray, are we to discuss the happiness both of the man himself, and of the city in which such a mortal resides?

Adeimantus:: By all means let us do so.

Socrates:: Well, in his early days, and at the beginning of his despotism, has he not a smile and a greeting for everybody that he meets, and does he not repudiate the idea of his being a tyrant, and promise largely both in public and in private; and is it not his practice to remit debts, and make grants of land to the commons and to his own partisans, while he pretends to be mild and gracious to all?

Adeimantus:: It cannot be otherwise.

Socrates:: But as soon as he has relieved himself of his exiled enemies, by becoming reconciled to some, and by destroying others, his first measure is, I imagine, to be constantly exciting wars, in order that the commons may stand in need of a leader.

Adeimantus:: It is his natural course.

Socrates:: Is it not further his intention so to impoverish his subjects by war-taxes, as to constrain them to devote themselves to the requirements of the day, and thus render them less likely to plot against himself?

Adeimantus:: Manifestly it is.

Socrates:: And am I not right in supposing that, should he suspect any persons of harboring a spirit of freedom that will not suffer him to reign in peace, it is his intention to throw them in the way of the enemy, and so get rid of them without suspicion? For all these reasons must not a tyrant be always stirring up war?

Adeimantus:: He must.

Socrates:: Then is it not the obvious result of such a course, that he gets more and more detested by the citizens?

Adeimantus:: Of course it is.

Socrates:: And does it not follow that a few of the boldest of his influential partisans speak their mind fearlessly to him and to one another, and find fault with his policy?

Adeimantus:: So one would expect.

Socrates:: Now, if the tyrant is to keep up his authority, he must put all these people quietly out of the way, until he has left himself not a friend nor an enemy who is worth anything.

Adeimantus:: Certainly he must.

Socrates:: Then he must keenly notice who is manly, who high minded, who prudent, who wealthy. And in such a happy condition is he, that, whether he wishes it or not, he is compelled to be the enemy of all these, and to plot against them, till he has purged them out of the city.

Adeimantus:: What a glorious purification!

Socrates:: Yes, it runs directly counter to the process by which the physician purges the body. For the physician removes what is bad, and leaves what is good; but the tyrant removes the good, and leaves the bad.

Adeimantus:: Why, apparently, it is his only course, if he wishes to reign.

Socrates:: In fact he is bound in the chains of a delightful necessity, which orders him either to live amongst persons the majority of whom are good for nothing, and to live hated by them, or else to cease to exist.

Adeimantus:: That is the alternative.

Socrates:: Hence, in proportion as he grows more and more detested by the citizens for such conduct, he will require a more numerous and a more trusty body-guard, will he not?

Adeimantus:: Of course he will.

Socrates:: And pray, whom can he trust? and from whence will he procure faithful retainers?

Adeimantus:: Oh, they will come in flocks spontaneously, if he pays them their wages.

Socrates:: By my word, I believe you are thinking of another miscellaneous swarm of foreign drones.

Adeimantus:: You are not mistaken.

Socrates:: But would he hesitate to enlist recruits on the spot?

Adeimantus:: By what process?

Socrates:: By taking their slaves from the citizens, emancipating them, and enrolling them in his own body-guard.

Adeimantus:: Most decidedly he would not hesitate; for indeed such persons are really his most trusty adherents.

Socrates:: A tyrant is, indeed, a divinely happy creature, according to your account, if he adopts such men as friends and faithful adherents, after he has destroyed those former ones.

Adeimantus:: Well, he certainly does take this course.

Socrates:: And do not these comrades of his admire him highly, and do not the young citizens associate with him, while the good hate and shun him?

Adeimantus:: How can it be otherwise?

Socrates:: It is not without reason, that people regard tragedy on the whole as wise, and Euripides as a master therein.

Adeimantus:: Pray why?

Socrates:: Because, among other remarks, he has made the following, which shows a thoughtful mind, tyrants are wise by converse with the wise. And he clearly meant by the wise, those with whom the tyrant associates.

Adeimantus:: Yes, and, as one of its numerous merits, tyranny is extolled as something godlike, by the other poets as well as by Euripides.

Socrates:: This being the case, the writers of tragedy, like wise men as they are, will excuse us, and those who copy our commonwealth, for refusing them admittance into the state, because they are panegyrists of tyranny.

Adeimantus:: I imagine that, at any rate, all polite tragedians will excuse us.

Socrates:: At the same time, I believe, they will make the round of the other states, gather together the populace, hire fine, loud, persuasive voices; and so draw over the commonwealths to tyranny and democracy.

Adeimantus:: To be sure they will.

Socrates:: And for these services they are, moreover, paid and honored, by tyrants chiefly, as we should expect, and to a smaller extent by democracy. But in proportion as they advance higher up the hill of commonwealths, their honour flags more and more, as if it were prevented from mounting by loss of breath.

Adeimantus:: Exactly so.

Socrates:: However, this is a digression. Let us return to the inquiry, how that army of the tyrant, that goodly, large, diversified, and ever-changing army, is to be supported.

Adeimantus:: It is clear, that, if there be sacred property in the city, the tyrant will expend it; and that, to whatever extent the produce of such sales from time to time can be made available, the war-taxes, which the commons are compelled to pay, will be proportionally diminished.

Socrates:: But what is he to do when this resource fails?

Adeimantus:: Evidently he will draw on his parents estate for the maintenance of himself and his boon-companions, his messmates and his mistresses.

Socrates:: I understand you. You mean that the commonalty, that begat the tyrant, will maintain him and his companions.

Adeimantus:: It cannot avoid doing so.

Socrates:: But pray explain yourself. Suppose the commons resent this notion, and assert, that it is unjust for a father to have to maintain a grown-up son, since, on the contrary, the son ought to maintain the father; and that they had begotten and installed him not with the intent, that, when he was grown big, they should be made the slaves of their own slaves, and maintain him and them with a mob of others, but with the intent that, under his championship, they should be emancipated from the rich men of the state, and the gentlemen, as they are called; and suppose they now bid him depart out of the city, together with his friends, like a father expelling a son from home along with some riotous boon-companions? What then?

Adeimantus:: Why the commons will then, at length, most certainly discover how feeble they are in comparison with the nursling which they have begotten and cherished and exalted, and that, in ejecting him, they are the weaker expelling the stronger.

Socrates:: What! Will the tyrant venture to lay violent hands on his father, and beat him if he refuses to comply with his wishes?

Adeimantus:: Yes, that he will, when he has taken away his fathers weapons.

Socrates:: You make out that a tyrant is a parricide, and a hardhearted nurse of old age; and, apparently, the government will henceforth be an open and avowed tyranny; and, according to the proverb, the commons, flying from the frying-pan of the service of free men, will have fallen into the fire of a despotism exercised by slaves; in other words, they will have exchanged that vast and unseasonable liberty for the new dress of the harshest and bitterest of all slaveries.

Adeimantus:: No doubt that is the course of events.

Socrates:: Well then, will any one be disposed to disagree with us, if we assert that we have discussed satisfactorily the transition from democracy to tyranny, and the character of the latter when established?

Adeimantus:: We have done so quite satisfactorily.

## Book 9.

Socrates:: It only remains for us, to inquire how the democratical man is transformed into the tyrannical; and what is the character of the latter after the change; and whether his manner of living is happy, or the reverse.

Adeimantus:: True, this case is still remaining.

Socrates:: Then do you know, what I am still desiderating?

Adeimantus:: What is it?

Socrates:: I think that the number and nature of the appetites has not been satisfactorily defined; and while this deficiency continues, the inquiry upon which we are entering will be wrapped in obscurity.

Adeimantus:: It is not too late to supply the deficiency, is it?

Socrates:: Certainly it is not. Observe the peculiarity which I wish to notice in. the case before us. It is this. Some of the unnecessary pleasures and appetites are, if I mistake not, unlawful; and these would appear to form an original part of every man; though, in the case of some persons, under the correction of the laws and the higher appetites aided by reason, they either wholly disappear, or only a few weak ones remain; while, in the case of others, they continue strong and numerous.

Adeimantus:: And pray what are the appetites to which you refer?

Socrates:: I refer to those appetites which bestir themselves in sleep; when, during the slumbers of that other part of the soul, which is rational and tamed and master of the former, the wild animal part, sated with meat or drink, becomes rampant, and pushing sleep away, endeavors to set out after the gratification of its own proper character. You know that in such moments there is nothing that it dares not do, released and delivered as it is from any sense of shame and reflection. It does not shrink from attempting in fancy unholy intercourse with a mother, or with any man or deity or animal whatever; and it does not hesitate to commit the foulest murder, or to indulge itself in the most defiling meats. In one word, there is no limit either to its folly or its audacity.

Adeimantus:: Your description is perfectly true.

Socrates:: But, I imagine, whenever a mans personal habit is healthful and temperate, and when before betaking himself to rest, he has stimulated the rational part of him, and feasted it on beautiful discussions and high inquiries, by means of close and inward reflection; while, on the other hand, he has neither stinted nor gorged the appetitive part in order that it may sleep instead of troubling with its joys or its griefs that highest part, which may thus be permitted to pursue its studies in purity and independence, and to strain forward till it perceives something till then unknown, either past, present, or future; and when, in like manner, he has calmed the spirited element by avoiding every burst of passion, which would send him to sleep with his spirit stirred, when, I say, he proceeds to rest, with two elements out of the three quieted, and the third, wherein wisdom resides, aroused, you are aware that, at such moments, he is best able to apprehend truth, and that the visions, which present themselves in his dreams, are then anything but unlawful.

Adeimantus:: I perfectly coincide in your opinion.

Socrates:: Well, we have been carried too far out of our way, in order to make these remarks. What we wish to recognize is, that apparently a terrible species of wild and lawless appetites resides in every one of us, even when in some cases we have the appearance of being perfectly self restrained. And this fact, it seems, becomes evident in sleep. Pray consider whether you think me right, and agree with me.

Adeimantus:: Yes, I do agree.

Socrates:: Remember then the character which we ascribed to the man of the people. The history of his origin was, I believe, that he had been trained up from early years under the eye of a parsimonious father, who respected only the money-making appetites, and despised those unnecessary appetites which have for their object amusement and display. Am I not right?

Adeimantus:: You are.

Socrates:: By intercourse with more fashionable men, replete with those appetites which we just now discussed, he had run, like them, into utter riot, in detestation of his fathers parsimony; but, as he possessed a better disposition than his corrupters, he? was drawn in two directions, and ended I by adopting an intermediate character; and while enjoying every pleasure in perfect moderation, as he imagined, he lived a life which was neither illiberal nor unlawful, and was thus transformed from an oligarchical into a democratical man.

Adeimantus:: Yes, this was and is our opinion touching such a person.

Socrates:: Well then, figure to yourself that this man has grown old in his turn, and that a young son is being bred up again in his habits.

Adeimantus:: Very good.

Socrates:: Imagine further, that he takes to the same courses that his father did that he is seduced into an utter violation of law, or, to use the language of his seducers, into perfect freedom, and that his father and his other relations bring support to these intermediate appetites, which is met by counter support on the other side; and when these terrible sorcerers and tyrant-makers have despaired of securing the young man by other spells, imagine that they contrive to engender in him some passion, to champion those idle appetites which divide among themselves all that offers for distribution; and this passion you may describe as a kind of huge, winged drone; for how else can you describe the passion entertained by such men?

Adeimantus:: I cannot describe it otherwise.

Socrates:: This done, the other appetites, fraught with incense and perfumes and garlands and wines and the loose pleasures which form part of such convivialities, begin to buzz around this drone, and exalt and nurse him to the uttermost, till they have engendered in him the sting of desire; and from that moment forward this champion of the soul, with frenzy for his body-guard, is goaded on to madness; and if he detects within himself any opinions or appetites which are regarded as good, and which still feel a sense of shame, he destroys them or thrusts them from his presence, until he has purged out temperance, and filled himself with alien frenzy.

Adeimantus:: You exactly describe the generation of a tyrannical man.

Socrates:: Is not this the reason why love has of old been called a tyrant?

Adeimantus:: Probably it is.

Socrates:: Also, my friend, does not a drunken man possess what may be called a tyrannical spirit?

Adeimantus:: He does.

Socrates:: And we know that an insane, or deranged person, expects to be able to lord it not only over men, but even over gods, and attempts to do so.

Adeimantus:: Certainly he does.

Socrates:: So, my excellent friend, a man becomes strictly tyrannical, whenever, by nature, or by habit, or by both together, he has fallen under the dominion of wine, or love, or insanity.

Adeimantus:: Yes, precisely so.

Socrates:: Such is his origin, apparently, and such his nature; but pray how does he live?

Adeimantus:: As they say in the game, you must tell me that.

Socrates:: Be it so. Well, if I am not mistaken, from henceforth feasts and revels and banquets and mistresses, and every thing of the kind, become the order of the day with persons whose minds are wholly under the pilotage of an indwelling tyrant passion.

Adeimantus:: It must be so.

Socrates:: And do not many frightful appetites, that abound in wants, shoot up by their side every day and every night?

Adeimantus:: Yes, many indeed.

Socrates:: So that all existing revenues are soon spent.

Adeimantus:: Of course they are.

Socrates:: Then follow schemes for raising money, and consequent loss of property.

Adeimantus:: Undoubtedly.

Socrates:: And when every resource has failed, must not those violent appetites, which have nestled thickly within, lift up their voices? And goaded on, as these people are, by their appetites, and specially by that ruling passion under which all the rest serve as body-guard, must they not, in a frenzy of rage, look out for some man of substance whom they may rob by fraud or violence?

Adeimantus:: Yes, indeed, they must.

Socrates:: So that if they cannot pillage in every quarter, they are constrained to suffer grievous throes and pangs.

Adeimantus:: They are.

Socrates:: Now, just as the inward pleasures of later growth overreached the original pleasures and took away what belonged to them, in the same way will not the man himself determine to overreach his father and mother, though he is younger than they, and to help himself at their expense out of his fathers property, if he has expended his own share?

Adeimantus:: Undoubtedly he will.

Socrates:: And if his parents oppose his designs, will he not attempt in the first instance to cheat and outwit them?

Adeimantus:: Assuredly he will.

Socrates:: And whenever that is impossible, will he proceed to robbery and violence?

Adeimantus:: I think so.

Socrates:: Then if his aged father and mother hold out against him and offer resistance, will he be so scrupulous as to shrink from playing the tyrant?

Adeimantus:: I am not altogether without my fears for the parents of such a man.

Socrates:: Nay but, Adeimantus, I beseech you to consider that his attachment to his unnecessary and unconnected mistress is new, while his love for his very own indispensable mother is old, and that his affection for his unnecessary and unconnected friend who is in the bloom of youth, is of recent date compared with that for his very own father, his oldest friend, faded and aged as he is; and, this being the case, can you believe that he would beat his mother and father for the sake of his mistress and his friend, and that he would make the former the slaves of the latter, if he brought them into the same house?

Adeimantus:: Upon my word I believe he would.

Socrates:: Then to all appearance it is a most delightful thing to be the parents of a tyrannical son.

Adeimantus:: Yes, that it is.

Socrates:: Well; but, when the property of his father and mother begins to fall the son, while at the same time the swarm of pleasures has mustered thick within him, will not his first exploit be to break into a house or strip some benighted traveler of his clothes, and will he not afterwards proceed to sweep off the contents of some temple? And in the meantime those old and, in common estimation, just opinions, which he held from childhood on the subject of base and noble actions, will be defeated by those opinions which have been just emancipated from slavery, aided by that ruling passion whose body-guard they form, opinions which, so long as he was subject to the laws and to his father, and while his inward constitution was democratical, used to be emancipated only in the dreams of sleep. But, now that this passion has become his absolute lord and master, that character, which used to be his only in dreams, and at rare intervals, has become his constant waking state. There is not a dire murder, a forbidden meat, or an unholy act, from which he will restrain himself; but this passion that lives and reigns within him, in the midst of utter disrule and lawlessness, will, by virtue of its sole supremacy, seduce its possessor, as in the case of a state, into unbounded recklessness, to procure means for the maintenance of itself and its attendant rout, which has partly made entrance from without as a result of wicked companionship, and partly been liberated and released from restraint within by the adoption of similar habits, and by the agency of the passion itself. Or am I wrong in my description of the life of such a man?

Adeimantus:: No, you are right.

Socrates:: And if, a city contains only a few such characters, the rest of the population being sober-minded, these people quit the place and enlist in the body-guard of some other tyrant, or else serve as mercenaries in any war that may be going on. But if they live in a time of peace and quiet, they commit many small mischiefs on the spot in the city.

Adeimantus:: Such as what, pray?

Socrates:: Such as theft, burglary, cutting purses, stealing clothes, sacrilege, kidnapping; and sometimes they turn informers, if they have a talent for speaking, and perjure themselves, and take bribes.

Adeimantus:: True, these are small mischiefs, if the perpetrators are few in number.

Socrates:: Things that are small, are small comparatively; and assuredly all these mischiefs, in their bearings on the corruption and misery of a state; do not, as the proverb says, nearly come up to the mark of a tyrant. For whenever such persons, and others, their close retainers, become numerous in a state, and perceive their own numbers, then, assisted by the folly of the commonalty, these men prove the parents of the tyrant, who is simply that one of their number whose own soul contains the mightiest and hugest tyrant.

Adeimantus:: So one might expect, because such a person must have most of the tyrant about him.

Socrates:: Consequently if the citizens yield willing obedience, all goes smoothly. But should the state prove refractory, the tyrant will chastise, if he can, his fatherland, just as in the former case he chastised his mother and father; and to do this, he will summon to his assistance youthful comrades, under whose imperious authority he will hold and keep his once-loved mother-country, as the Cretans call it, or father-land. And this will be the consummation of the appetite of such a person.

Adeimantus:: Assuredly it will.

Socrates:: And do not these persons display the same character in private, even before they attain to power? In the first place, in their intercourse with others, is it not the case either that all their associates are their flatterers and creatures, or that, if they want anything from anybody, they go down on their knees for it, and do not blush to assume all the appearances of intimate friendship, whereas when they have gained their point they become distant and estranged?

Adeimantus:: Precisely so.

Socrates:: Thus all their life long they live friendless, and always either masters or slaves; for a tyrant nature can never taste real freedom and friendship.

Adeimantus:: Certainly it cannot.

Socrates:: Then shall we not be right if we call such persons faithless?

Adeimantus:: Undoubtedly we shall.

Socrates:: And not only faithless, but also supremely unjust, if we were right in our former conclusions as to the nature of justice.

Adeimantus:: And certainly we were right.

Socrates:: Then let us describe summarily the most wicked man. He is one whose real and waking state is the very counterpart of the ideal and dreamlike description which we have given.

Adeimantus:: Exactly so.

Socrates:: Such is the end of the man, who, with a nature profoundly tyrannical, gains absolute power; and the longer his life of tyranny lasts, the more exactly does he answer to our description.

Glaucon:: That is unquestionably true.

Socrates:: That being the case, will not the man, who shall be proved to be most vicious, be thereby proved to be also most miserable? And will it not be apparent that the man, whose tyranny has lasted longest in the intensest form, has really been for the longest time most intensely vicious and miserable, notwithstanding the variety of opinions entertained by the mass of people?

Glaucon:: Yes, that much is certain.

Socrates:: And can we help regarding the tyrannical man as the counterpart and representative of the state which is under the sway of a tyrant, the democratical man of the democratical state, and so on?

Glaucon:: Unquestionably we cannot.

Socrates:: Hence, as city is to city in point of virtue and happiness, so also is man to man; is it not so?

Glaucon:: Undoubtedly it is.

Socrates:: Then, in point of virtue, how does a city under a tyrant stand as compared with a city under such a kingly government, as we at first described?

Glaucon:: They are the very opposite of one another; one is supremely virtuous, and the other supremely wicked.

Socrates:: I shall not ask you which is which, because that is obvious. But do you decide the question of happiness and misery in the same way, or not? And here let us not be dazzled by looking only at the tyrant, who is merely a unit in the mass, or at a few of his immediate retainers; but, as it is our duty to enter and survey the state as a whole, let us, before giving our opinion, creep into every part of it and look about.

Glaucon:: Well, your proposal is a just one; indeed it is clear to everybody, that a city governed by a tyrant is the most miserable of cities; whereas a city under kingly rule is the happiest of cities.

Socrates:: Then shall I not do right, if, in discussing the corresponding men, I make the same proposal, and recognize only his verdict, who can in thought penetrate into a mans character, and look through it, and who does not, like a child, scrutinize the exterior, till he is dazzled by the artificial glitter which the tyrannical man carries on the outside, but on the contrary sees through it all thoroughly? Suppose I give it as my opinion, that we are all bound to listen to the judge, who is not only capable of passing sentence, but has also lived in the same place with the person in question, and has been an eye-witness of his goings on at home, and of his bearing towards the several members of his family, wherein he will be most thoroughly stripped of the theatrical garb, and also of his behavior in public perils; and suppose we bid him take all these particulars into consideration, and then pronounce, how, on the score of happiness and misery, the tyrant stands as compared with the other men?

Glaucon:: This proposal, would be also a most just one.

Socrates:: Then, in order that we may have some person who will reply to our questions, should you wish us to claim a place among those who, besides being competent to deliver judgment, have before new encountered people of this description?

Glaucon:: Yes, I should.

Socrates:: Come then, let me beg you to consider the question in the following light. Bearing in mind the similarity that subsists between the state and the man, examine them singly in turn, and tell me the circumstances in which each is placed.

Glaucon:: To what circumstances do you refer?

Socrates:: To begin with the state, do you predicate freedom or slavery of one which is under the dominion of a tyrant?

Glaucon:: Consummate slavery.

Socrates:: And yet you see it contains masters and freemen.

Glaucon:: True, it does contain a few such persons; but the mass of the inhabitants, I might say, and the best of them are reduced to an ignominious and miserable servitude.

Socrates:: Now, since the man resembles the state, must not the same order of things exist in him also, and must not his soul be freighted with abundance of slavery and servility, those parts of it, which were the best, being enslaved, while a small part, and that the most corrupt and insane, is dominant?

Glaucon:: It must be so.

Socrates:: If so, will such a soul, by your account, be bond or free?

Glaucon:: I should certainly say the former.

Socrates:: To return, is not the city, which is enslaved to a tyrant, utterly precluded from acting as it likes?

Glaucon:: Yes, quite so.

Socrates:: Then the soul also, which is the seat of a tyranny, considered as a whole will be very far from doing whatever it wishes. On the contrary it will be always dragged by the brute force of passionate desire, and will be filled with confusion and remorse.

Glaucon:: Beyond a doubt.

Socrates:: And must the city which is the seat of a tyranny be rich or poor?

Glaucon:: It must be poor.

Socrates:: Then the tyrannical soul also must be always poverty stricken and craving.

Glaucon:: Just so.

Socrates:: Again; must not such a city and such a man be, as a matter of course, a prey to fear?

Glaucon:: Yes, indeed.

Socrates:: Do you expect to find in any other city more weeping and wailing and lamentation and grief?

Glaucon:: Certainly not.

Socrates:: And to return to the individual, do you imagine such things to exist in any one so abundantly as in this tyrannical man, who is maddened by appetites and longings?

Glaucon:: Why, how could they?

Socrates:: Looking then, I suppose, at all these facts, and others like them, you have decided that the city is the most miserable of cities.

Glaucon:: And am I not right?

Socrates:: You are very right. But once more, looking at the same facts, what account do you give of the tyrannical man?

Glaucon:: I should say that he is quite the most miserable of all men.

Socrates:: There you are no longer right.

Glaucon:: How so?

Socrates:: I believe, that this person is still not the most miserable of all.

Glaucon:: Then who is?

Socrates:: You will perhaps think the following person even more miserable.

Glaucon:: Describe him.

Socrates:: I refer to the man who, being tyrannical, is prevented from living a private life, because he is so unfortunate as to have the post of tyrant, by some mischance, procured for him.

Glaucon:: I infer from the previous remarks that you are right.

Socrates:: Yes; but you must not be content with surmises here; on the contrary, you must examine the subject thoroughly by such a process of reasoning as we are pursuing. For surely the point under investigation is of the highest moment, being as it is the choice between a good and an evil life.

Glaucon:: That is perfectly true.

Socrates:: Observe, then, whether I am right. It appears to me that, in examining the question, we ought to begin our inquiry with the following considerations.

Glaucon:: What are they?

Socrates:: We must begin by considering the individual case of those private members of cities who are wealthy and possess many slaves. For they have this point in common with the tyrant, that they rule over many persons. The difference lies in the greater number of his subjects.

Glaucon:: Yes, it does.

Socrates:: And now, are you aware that such persons are confident and do not fear their servants?

Glaucon:: Yes; what should make them fear them?

Socrates:: Nothing; but do you understand the reason of it?

Glaucon:: Yes; it is because all the city supports each individual.

Socrates:: You are right. Well, but if some deity were to lift out of the city a single individual, possessed of fifty slaves or more, and were to plant him with his wife and children in some desert along with the rest of his substance and his servants, where none of the freemen would be likely to help him, would he not be seized, think you, with an indescribable terror lest he and his wife and children should be murdered by his servants?

Glaucon:: Yes, with utter terror, I think.

Socrates:: And would he not be compelled from that time forward to coax some of his very slaves, and to promise largely, and emancipate them without any excuse for it? In fact, would he not appear in the light of an abject flatterer of his attendants?

Glaucon:: He is doomed to death if he fails to do so.

Socrates:: But what if heaven had surrounded him with a multitude of other neighbors, who would not endure that one person should claim the rights of a master over another, but punished with the utmost severity any such person whom they caught?

Glaucon:: In that case he would be, I imagine, involved still further in an utterly evil plight, because he is hemmed in by a ring of warders, all of whom are his enemies.

Socrates:: And is not the tyrant a prisoner in a similar prison? For if his nature is such as we have described, he is replete with multitudinous terrors and longings of every kind; and, though he has a greedy and inquisitive soul, is he not the only citizen that is precluded from travelling or setting eyes upon all those objects which every freeman desires to see? Does he not bury himself in his house, and live for the most part the life of a woman, while he positively envies all other citizens who travel abroad and see grand sights?

Glaucon:: Yes, assuredly he does.

Socrates:: Such being his evil condition, a larger harvest of misery is reaped by that person, who, with an evil inward constitution like that of the tyrannical man, to whom you just now ascribed consummate wretchedness, is forced out of private life, and constrained by some accident to assume despotic power, thus undertaking to rule others when he cannot govern himself, just like a person who with a diseased and incontinent body is compelled to pass his life, not in retirement, but in wrestling and contending with other persons.

Glaucon:: Undoubtedly, Socrates, the cases are very similar, and your account is very true.

Socrates:: Then, my dear Glaucon, is not the condition of the tyrant utterly wretched, and does he not live a life which is even more intolerable than that of the man who, by your verdict, lives most intolerably?

Glaucon:: Unquestionably.

Socrates:: So, whatever may be thought, a very tyrant is in real truth a very slave in the most abject and intense shape, and a flatterer of the most vicious; and, so far from satisfying his cravings in the smallest degree, he stands in utmost need of numberless things, and is in good truth a pauper, in the eyes of one who knows how to contemplate the soul as a whole; and all his life long he is loaded with terrors, and full of convulsions and pangs, if he resembles the disposition of the state over which he rules; and he does resemble it, does he not?

Glaucon:: Certainly he does.

Socrates:: Then we shall also, in addition to this, ascribe to the man what we stated before, namely, that he cannot help being, and, in virtue of his power, becoming more and more envious, faithless, unjust, friendless, impure, and the host and nurse of every vice; and, in consequence of all this, he must in the first place be unhappy in himself, and in the next place he must make those who are near him as unhappy as himself.

Glaucon:: No sensible man will contradict you.

Socrates:: Then pray go on and, like the judge who passes sentence after going through the whole case, declare forthwith who is first, in your opinion, in point of happiness, and who second, and so on, arranging all the five men in order, the kingly, the timocratical, the oligarchical, the democratical, the tyrannical.

Glaucon:: Well, the decision is an easy one. I arrange them, like choruses, in the order of their entrance, in point of virtue and vice, happiness and misery.

Socrates:: Shall we, then, hire a herald, or shall I make proclamation in person, that the son of Ariston has given his sentence to the effect that he is the happiest man who is best and justest, that is, who is most kingly, and who rules over himself royally; whereas he is the most wretched man who is worst and most unjust, that is, who is most tyrannical, and who plays the tyrant to the greatest perfection both over himself and over a city?

Glaucon:: Let such be your proclamation.

Socrates:: And am I to add to my proclamation, that it makes no difference whether all men and gods find out their characters, or not?

Glaucon:: Do so.

Socrates:: Very well; this will make one demonstration for us. The following must make a second, if it shall be approved.

Glaucon:: What is it?

Socrates:: Since the soul of each individual has been divided into three parts corresponding to the three classes in the state, our position will admit, I think, of a second demonstration.

Glaucon:: What is it?

Socrates:: It is the following. As there are three parts, so there appear to me to be three pleasures, one appropriate to each part; and similarly three appetites, and governing principles.

Glaucon:: Explain yourself.

Socrates:: According to us, one part was the organ whereby a man learns, and another that whereby he shows spirit. The third was so multiform that we were unable to address it by a single appropriate name; so we named it after that which is its most important and strongest characteristic. We called it appetitive, on account of the violence of the appetites of hunger, thirst, and sex, and all their accompaniments; and we called it peculiarly money-loving, because money is the chief agent in the gratification of such appetites.

Glaucon:: Yes, we were right.

Socrates:: Then if we were to assert that the pleasure and the affection of this third part have gain for their object, would not this be the best summary of the facts upon which we should be likely to settle by force of argument, as a means of conveying a clear idea to our minds, whenever we spoke of this part of the soul? and shall we not be right in calling it money-loving and gain-loving?

Glaucon:: I confess I think so.

Socrates:: Again, do we not maintain that the spirited part is wholly bent on winning power and victory and celebrity?

Glaucon:: Certainly we do.

Socrates:: Then would the title of strife-loving and honour-loving be appropriate to it?

Glaucon:: Yes, most appropriate.

Socrates:: Well, but with regard to the part by which we learn, it is obvious to every one that its entire and constant aim is to know how the truth stands, and that this of all the elements of our nature feels the least concern about wealth and reputation.

Glaucon:: Yes, quite the least.

Socrates:: Then shall we not do well to call it knowledge-loving and wisdom-loving?

Glaucon:: Of course we shall.

Socrates:: Does not this last reign in the souls of some persons, while in the souls of other people one or other of the two former, according to circumstances, is dominant?

Glaucon:: You are right.

Socrates:: And for these reasons may we assert that men may be primarily classed under the three heads of lovers of wisdom, of strife, and of gain?

Glaucon:: Yes, certainly.

Socrates:: And that there are three kinds of pleasures, respectively underlying the three classes?

Glaucon:: Exactly so.

Socrates:: Now are you aware, that if you choose to ask three such men each in his turn, which of these lives is pleasantest, each will extol his own beyond the others? Thus the money-making man will tell you, that compared with the pleasures of gain, the pleasures of being honored or of acquiring knowledge are worthless, except in so far as they can produce money.

Glaucon:: True.

Socrates:: But what of the honour-loving man? Does he not look upon the pleasure derived from money as a vulgar one, while, on the other hand, he regards the pleasure derived from learning as a mere vapor and absurdity, unless honour be the fruit of it?

Glaucon:: That is precisely the case.

Socrates:: And must we not suppose that the lover of wisdom regards all the other pleasures as, by comparison, very far inferior to the pleasure of knowing how the truth stands, and of being constantly occupied with this pursuit of knowledge; and that he calls those other pleasures strictly necessary, because, if they were not necessary, he would feel no desire for them?

Glaucon:: We may be certain that it is so.

Socrates:: Then whenever a dispute is raised as to the pleasures of each kind and the life itself of each class, not in reference to degrees of beauty and deformity, of morality and immorality, but in reference merely to their position in the scale of pleasure, and freedom from pain, how can we know which of the three men speaks most truly?

Glaucon:: I am not quite prepared to answer.

Socrates:: Well; look at the question in this light. What must be the instrument employed in passing a judgment, in order that such a judgment maybe correct? Must it not be experience, wisdom, and reasoning? or can one find a better organ of judging than these?

Glaucon:: Of course we cannot.

Socrates:: Then observe. Of the three men, which is the best acquainted by experience with all the pleasures which we have mentioned? Does the lover of gain study the nature of real truth to such an extent as to be, in your opinion, acquainted with the pleasure of knowledge better than the lover of wisdom is acquainted with the pleasure of gain?

Glaucon:: There is a great difference. The lover of wisdom is compelled to taste the pleasures of gain from his childhood; whereas the lover of gain is not compelled to study the nature of the things that really exist, and thus to taste the sweetness of this pleasure, and become acquainted with it; rather I should say, it is not easy for him to do this, even if he has the inclination.

Socrates:: Hence, the lover of wisdom is far superior to the lover of gain in practical acquaintance with both the pleasures.

Glaucon:: He is indeed.

Socrates:: But what of the lover of honour? Is he acquainted with the pleasure of wisdom as thoroughly as the lover of wisdom is acquainted with the pleasure of honour?

Glaucon:: Nay; honour waits upon them all, if each works out the object of his pursuit. For the rich man is honored by many people, as well as the courageous and the wise; so that all are acquainted with the nature of the pleasure to be derived from the fact of being honored. But the nature of the pleasure to be found in the contemplation of truth, none can have tasted, except the lover of wisdom.

Socrates:: Then, as far as practical acquaintance goes, the lover of wisdom is the best judge of the three.

Glaucon:: Quite so.

Socrates:: Also we know that he alone can lay claim to wisdom as well as experience.

Glaucon:: Undoubtedly.

Socrates:: Once more; the organ by which judgment is passed is an organ belonging, not to the lover of gain or of honour, but to the lover of wisdom.

Glaucon:: What is that organ?

Socrates:: We stated, I believe, that judgment must be passed by means of reasoning. Did we not?

Glaucon:: We did.

Socrates:: And reasoning is in an especial degree, the organ of the lover of wisdom.

Glaucon:: Certainly.

Socrates:: Consequently, if wealth and gain were the best instruments for deciding questions as they arise, the praise and the censure of the lover of gain would necessarily be most true.

Glaucon:: Quite so.

Socrates:: And if honour, victory, and courage, were the best instruments for the purpose, the sentence of the lover of honour and of strife would be most true, would it not?

Glaucon:: Obviously it would.

Socrates:: But since experience, wisdom, and reasoning, are the best instruments, what then?

Glaucon:: Why of course, the praise of the lover of wisdom and of reasoning is the truest.

Socrates:: Then, if the pleasures are three in number, will the pleasure of this part of the soul, by which we learn, be pleasantest? and will the life of that man amongst us, in whom this part is dominant, be also most pleasant?

Glaucon:: Unquestionably it will; at any rate, the man of wisdom is fully authorized to praise his own life.

Socrates:: And what life, does the judge pronounce second, and what pleasure second?

Glaucon:: Obviously, the pleasure of the warlike and honour loving man. For it approaches the first more nearly than the pleasure of the money-making man does.

Socrates:: Then the pleasure of the lover of gain is to be placed last, as it appears.

Glaucon:: Undoubtedly.

Socrates:: Thus will the unjust man be twice in succession foiled, and twice conquered by the just. And now for the third and last time, address yourself, like a combatant in the great games, to Olympian Zeus, the Preserver, and observe that in the pleasure of all but the wise man there is something positively unreal and ungenuine, and slight as the rude outline of a picture, as I think I have been told by some learned man. And let me say, that a fall in this bout will be the heaviest and most decisive of all.

Glaucon:: Quite so; but explain yourself.

Socrates:: I shall find what we want, if you will respond while I prosecute the inquiry.

Glaucon:: Put your questions by all means.

Socrates:: Tell me then, do we not assert that pain is the opposite of pleasure?

Glaucon:: Assuredly we do.

Socrates:: And also that there is such a thing as a simultaneous absence both of pleasure and of pain?

Glaucon:: Certainly there is.

Socrates:: In other words, you admit that there is a point midway between the two at which the mind reposes from both. Is not that your meaning?

Glaucon:: It is.

Socrates:: Have you forgotten the language which people hold when they are ill?

Glaucon:: Give me a specimen of it.

Socrates:: They tell us that nothing is pleasanter than health, but that, before they were ill, they had not found out its supreme pleasantness.

Glaucon:: I remember.

Socrates:: Do you not also hear persons who are in excessive pain say, that nothing is so pleasant as relief from pain?

Glaucon:: I do.

Socrates:: And I think you find that, on many other similar occasions, persons, when they are uneasy, extol as supremely pleasant, not positive joy, but the absence of, and repose from, uneasiness.

Glaucon:: True; and perhaps the reason is, that at such times this relief does become positively pleasant and delightful.

Socrates:: In the same way we might expect, that when a persons joy has ceased, the repose from pleasure will be painful.

Glaucon:: Perhaps so.

Socrates:: Thus the repose, which we described just now as midway between pleasure and pain, must be now one, now the other.

Glaucon:: So it would seem.

Socrates:: Can that, which is neither pleasure nor pain, become both?

Glaucon:: I think not.

Socrates:: Again, pleasure and pain, when present in the mind, are both of them emotions, are they not?

Glaucon:: They are.

Socrates:: But was not the simultaneous absence of pleasure and of pain shown just now to indicate a state of undoubted repose, midway between the two?

Glaucon:: It was.

Socrates:: Then how can it be right to regard the absence of pain as pleasant, or the absence of pleasure as painful?

Glaucon:: It cannot be right.

Socrates:: Hence, the repose felt at the times we speak of is not really, but only appears to be, pleasant by the side of what is painful, and painful by the side of what is pleasant; and these representations will in no instance stand the test of comparison with veritable pleasure, because they are only a species of enchantment.

Glaucon:: I confess that the argument points to that conclusion.

Socrates:: In the next place turn your eyes to pleasures which do not grow out of pains, to prevent your imagining, as perhaps at the present moment you might do, that it is a law of nature that pleasure should be a cessation of pain, and pain a cessation of pleasure.

Glaucon:: Pray where am I to look, and what pleasures do you mean?

Socrates:: Among many others, you may, if you will, take as the best example for your consideration the pleasures of smell; which, without the existence of any previous uneasiness, spring up suddenly in extraordinary intensity, and when they are over, leave no pain behind.

Glaucon:: That is quite true.

Socrates:: Then do not let us be persuaded that genuine pleasure consists in the release from pain, or that genuine pain consists in the release from pleasure.

Glaucon:: No.

Socrates:: But it is certain that, speaking roughly, most of the so-called pleasures which reach the mind through the body, and the keenest of them, belong to this species; that is to say, they are a kind of release from pain.

Glaucon:: They are.

Socrates:: Does not the same remark apply to those pleasures and pains of anticipation which precede them?

Glaucon:: It does.

Socrates:: Now, are you aware what the character of these pleasures is, and what they most resemble?

Glaucon:: What?

Socrates:: Do you believe that there is in the nature of things a real Above, and Below, and an Intermediate?

Glaucon:: Yes, I do.

Socrates:: And do you imagine that a person, carried from below to that intermediate position, could help fancying that he is being carried above? And when he is stationary in that situation, and looks to the place from whence he has been carried, do you imagine that he can help supposing his position to be above, if he has not seen the real Above?

Glaucon:: For my own part, I assure you I cannot imagine how such a person is to think differently.

Socrates:: Well, supposing him to be carried to his old place, would he think that he is being carried below, and would he be right in so thinking?

Glaucon:: Of course he would.

Socrates:: And will not all this happen to him, because he is not acquainted with the real Above, and Between, and Below?

Glaucon:: Obviously it will.

Socrates:: Then can you wonder, that persons unacquainted with truth, besides holding a multitude of other unsound opinions, stand to pleasure and pain and their intermediate, in such a position, that though when they are carried to what is painful, they form a correct opinion of their condition, and are really in pain; yet, when they are carried from pain to the middle point between pain and pleasure, they obstinately imagine that they have arrived at fullness of pleasure, which they have never experienced, and consequently are deceived by contrasting pain with the absence of pain, like persons who, not knowing white, contrast gray with black, and take it for white?

Glaucon:: No, indeed, I cannot wonder at it; nay, I should wonder much more if it were not so.

Socrates:: Well, consider the question in another light. Are not hunger and thirst, and similar sensations, a kind of emptiness of the bodily constitution?

Glaucon:: Undoubtedly.

Socrates:: Similarly, are not ignorance and folly an emptiness of the mental constitution?

Glaucon:: Yes, certainly.

Socrates:: Will not the man who eats, and the man who gets understanding, be filled?

Glaucon:: Of course.

Socrates:: And will fullness, induced by a real substance, be more true or less true than that induced by a less real substance?

Glaucon:: Obviously, the more real the substance, the more true is the fullness.

Socrates:: Then do you think that pure being enters more largely into the constitution of the class of substances like bread and meat and drink, and food generally, than into the constitution of that species of things which includes true opinion and science and understanding, and in a word, all virtue? In forming your judgment look at the matter thus. Do you believe that real existence is essentially the attribute of that which is closely connected with the unchanging and immortal and with truth, and which is itself unchanging and immortal, and appears in substances like itself; or, is it rather the attribute of that which is closely connected with the changeful and mortal, and which is itself changeful and mortal, and appears in things of kindred mould?

Glaucon:: It is the attribute of the former in a very superior degree.

Socrates:: And does science enter at all less largely, than real existence, into the substance of the unchanging?

Glaucon:: Certainly not.

Socrates:: Well, does truth enter less largely?

Glaucon:: No.

Socrates:: That is to say, if truth enters less largely, real existence enters less largely also?

Glaucon:: Necessarily so.

Socrates:: Speaking universally, does not the cultivation of the body in all its branches contain truth and real existence in a less degree than the cultivation of the soul in all its branches?

Glaucon:: Yes, in a much less degree.

Socrates:: And do you not regard the body itself as less true and real than the soul?

Glaucon:: I do.

Socrates:: And is not that, which is filled with substances more real, and which is itself more real, really more filled than that which is filled with things less real, and which is itself less real?

Glaucon:: Undoubtedly it is.

Socrates:: Hence, as it is pleasant to a subject to be filled with the things that are naturally appropriate to it, that subject which is really more filled, and filled with real substances, will in a more real and true sense be productive of true pleasure; whereas that subject which partakes of things less real, will be less really and less securely filled, and will participate in a less true and less trustworthy pleasure.

Glaucon:: The conclusion is absolutely inevitable.

Socrates:: Those, therefore, who are unacquainted with wisdom and virtue, and who spend their time in perpetual banqueting and similar indulgences, arc carried down, as it appears, and back again only as far as the midway point on the upward road; and between these limits they roam their life long, without ever overstepping them so as to look up towards, or be carried to, the true Above; and they have never been really filled with what is real, or tasted sure and unmingled pleasure; but, like cattle, they are always looking downwards, and hanging their heads to the ground, and poking them into their dining-tables. while they graze and get fat and propagate their species; and, to satiate their greedy desire for these enjoyments, they kick and butt with hoofs and horns of iron, till they kill one another under the influence of ravenous appetites; because they fill with things unreal the unreal and incontinent part of their nature.

Glaucon:: Certainly, Socrates, you describe like an oracle the life of the majority of persons.

Socrates:: And does it not follow that they consort with pleasures mingled with pain which are mere phantoms and rude outlines of the true pleasure, and which are so colored by simple juxtaposition to pain, that they appear in each case to be extravagantly great, and beget a frantic passion for themselves in the breasts of the foolish people, and are made subjects of contention, like that phantom of Helen, for which, according to Stesichorus, the combatants at Troy fought, in ignorance of the true Helen?

Glaucon:: Such a state of things, follows as a matter of course.

Socrates:: And now to come to the spirited element. Must not the consequences be exactly similar, whenever a man labors for the gratification of this part of his nature, either in the shape of jealousy from motives of ambition, or in the shape of violence from love of strife, or in the shape of anger out of discontent, while he pursues after honour and victory and anger to his own satisfaction, without reflection and without sound sense?

Glaucon:: The consequences in this case also must necessarily be similar.

Socrates:: And what is the inference? May we assert confidently, that of all the appetites with which the gain-loving and honour-loving elements are conversant, those which follow the leading of science and reason, and along with them pursue the pleasures which wisdom directs, till they find them, will find not only the truest pleasures that they can possibly find, in consequence of their devotion to truth, but also the pleasures appropriate to them, since what is best for each is also most appropriate?

Glaucon:: Yes, no doubt it is most appropriate.

Socrates:: Hence, so long as the whole soul follows the guidance of the wisdom-loving element without any dissension, each part can not only do its own proper work in all respects, or in other words, be just; but, moreover, it can enjoy its own proper pleasures, in the best and truest shape possible.

Glaucon:: Yes, precisely so.

Socrates:: On the other hand, whenever either of the two other elements has gained the mastery, it is fated not only to miss the discovery of its own pleasure, but also to constrain the other principles to pursue an alien and untrue pleasure.

Glaucon:: Just so.

Socrates:: Well, the further a thing is removed from philosophy and reason, the more likely will it be to produce such evil effects, will it not?

Glaucon:: Yes, much more likely.

Socrates:: And that is furthest removed from reason which is furthest removed from law and order, is it not?

Glaucon:: Quite obviously.

Socrates:: And have not the passionate or tyrannical appetites been proved to be furthest removed from law and order?

Glaucon:: Yes, quite the furthest.

Socrates:: Whereas the kingly and regular appetites stand nearest to law and order, do they not?

Glaucon:: They do.

Socrates:: Hence, if I am not mistaken, the tyrant will be furthest from, and the king nearest to, true and specially appropriate pleasure.

Glaucon:: It is undeniable.

Socrates:: And therefore the tyrant will live most unpleasantly, and the king most pleasantly.

Glaucon:: It is quite undeniable.

Socrates:: And pray are you aware of the extent to which the discomfort of the tyrants life exceeds that of the kings?

Glaucon:: I wait for you to tell me.

Socrates:: There are three pleasures, it appears, one genuine, and two spurious. Now the tyrant has trespassed beyond these last, has fled from law and reason, and lives with a bodyguard of slavish pleasures; and the extent of his inferiority is hard indeed to state, unless perhaps it may be stated thus.

Glaucon:: How?

Socrates:: Reckoning from the oligarchical man, the tyrant stands third, I believe, in the descending line; for the democratical man stood between.

Glaucon:: Yes.

Socrates:: Then, if our former remarks were true, must not the pleasure with which he consorts, be, so far as truth is concerned, a copy of a copy, the original of which is in the possession of the oligarchical man?

Glaucon:: Just so.

Socrates:: Again, reckoning from the kingly man, the oligarchical in his turn stands third in the descending line, supposing us to identify the aristocratical and the kingly?

Glaucon:: True, he does.

Socrates:: Therefore the tyrant is thrice three times removed from true pleasure.

Glaucon:: Apparently so.

Socrates:: Then it seems that tyrannical pleasure may be represented geometrically by a square number, 9.

Glaucon:: Exactly so.

Socrates:: And by squaring and cubing, it is made quite clear to what a great distance the tyrant is removed.

Glaucon:: Yes, to an arithmetician it is.

Socrates:: Conversely, if you wish to state the distance at which the king stands from the tyrant in point of reality of pleasure, by working out the multiplication you will find that the former lives 729 times more pleasantly than the latter, or that the latter lives more painfully than the former in the same proportion.

Glaucon:: You have brought out an extraordinary result in calculating the difference between the just man and the unjust, on the score of pleasure and pain.

Socrates:: Well, I am sure that the number is correct, and applicable to human life, if days and nights and months and years are applicable thereto.

Glaucon:: And no doubt they are.

Socrates:: Then if the good and just man so far surpasses the wicked and unjust in point of pleasure, will he not surpass him incalculably more in gracefulness of life, in beauty, and in virtue?

Glaucon:: Yes, indeed he will, incalculably.

Socrates:: Well, then, now that we have arrived at this stage of the argument, let us resume that first discussion which brought us hither. It was stated, I believe, that injustice is profitable to the man who is consummately unjust, while he is reputed to be just. Or am I wrong about the statement?

Glaucon:: No, you are right.

Socrates:: This is the moment for arguing with the author of this remark, now that we have come to an agreement as to the respective effects of a course of injustice, and of a course of justice.

Glaucon:: How must we proceed?

Socrates:: We must mould in fancy a representation of the soul, in order that the speaker may perceive what his remark amounts to.

Glaucon:: What kind of representation is it to be?

Socrates:: We must represent to ourselves, a creature like one of those which, according to the legend, existed in old times, such as Chimera, and Scylla, and Cerberus, not to mention a host of other monsters, in the case of which we are told that several generic forms have grown together and coalesced into one.

Glaucon:: True, we do hear such stories.

Socrates:: Well, mould in the first place the form of a motley many-headed monster, furnished with a ring of heads of tame and wild animals, which he can produce by turns in every instance out of himself.

Glaucon:: It requires a cunning modeler to do so; nevertheless, since fancy is more plastic than wax and substances as pliable as wax, suppose it done.

Socrates:: Now proceed, secondly, to mould the form of a lion, and, thirdly, the form of a man. But let the first be much the greatest of the three, and the second next to it.

Glaucon:: That is easier; it is done.

Socrates:: Now combine the three into one, so as to make them grow together to a certain extent.

Glaucon:: I have done so.

Socrates:: Lastly, invest them externally with the form of one of the three, namely, the man, so that the person who cannot see inside, and only notices the outside skin, may fancy that it is one single animal, to wit, a man.

Glaucon:: I have done it.

Socrates:: And now to the person who asserts that it is profitable for this creature min to be unrighteous, and that it is not for his interest to do justice, let us reply that his assertion amounts to this, that it is profitable for him to feast and strengthen the multifarious monster and the lion and its members, and to starve and enfeeble the man to such an extent as to leave him at the mercy of the guidance of either of the other two, without making any attempt to habituate or reconcile them to one another, but leaving them together to bite and struggle and devour each other.

Glaucon:: True, the person who praises injustice will certainly in effect say this.

Socrates:: On the other hand, will not the advocate of the profitableness of justice assert that actions and words ought to be such as will enable the inward man to have the firmest control over the entire man, and, with the lion for his ally, to cultivate, like a husbandman, the many-headed beast, nursing and rearing the tame parts of it, and checking the growth of the wild; and thus to pursue his training on the principle of concerning himself for all jointly. and reconciling them to one another and to himself?

Glaucon:: Yes, these again are precisely the assertions of the person who praises justice.

Socrates:: Then in every way the panegyrist of justice will speak the truth, while the panegyrist of injustice will lie. For whether you look at pleasure, at reputation, or at advantage, the panegyrist of the righteous man speaks truth, whereas all the criticisms of his enemy are unsound and ignorant.

Glaucon:: I am thoroughly of that opinion.

Socrates:: Let us therefore try to win him over mildly (for his error is involuntary), and let us put this question to him; My good friend, may we not assert that the practices which are held to be fair and foul, are fair or foul according as thy either subjugate the brutal parts of our nature to the man, perhaps I should rather say, to the divine part, o. make the tame part the servant and slave of the wild? Will he say, yes? or how will he reply?

Glaucon:: He will say yes, if he will take my advice.

Socrates:: Then according to this argument, can it be profitable for any one to take gold unjustly, since the consequence is, that, in the moment of taking the gold, he is enslaving the best part of him to the most vile? or, it being admitted that, had he taken gold to sell a son or a daughter into slavery, and a slavery among wild and wicked masters, it could have done him no good to receive even an immense sum for such a purpose; will it be argued that, if he ruthlessly enslaves the divinest part of himself to the most ungodly and accursed, he is not a miserable man, and is not being bribed to a far more awful destruction than Eriphyle, when she took the necklace as the price of her husbands life?

Glaucon:: I will reply in his behalf; it is indeed much more awful.

Socrates:: And do you not think that intemperance, again, has been censured time out of mind for the reason that, during its outbreaks, that great and multiform beast, which is so terrible, receives more liberty than it ought to have?

Glaucon:: Obviously, you are right.

Socrates:: And are not the terms, self-will and discontent, used to convey a reproof, whenever the lion-like and serpentine creature is exalted and enhanced out of all harmony?

Glaucon:: Exactly so.

Socrates:: Again, are not luxury and effeminacy censured because they relax and unnerve this same creature, by begetting cowardice in him?

Glaucon:: Undoubtedly they are.

Socrates:: And are not the reproachful names of flattery and servility bestowed, whenever a person subjugates this same spirited animal to the turbulent monster, and, to gratify the latters insatiable craving for money, trains the former from the first, by a long course of insult, to become an ape instead of a lion?

Glaucon:: Certainly you are right.

Socrates:: And why, let me ask you, are coarseness and vulgarity considered- discreditable? May we not assert that these terms imply that the most excellent element in the person, to whom they are attributed, is naturally weak, so that instead of being able to govern the creatures within him, he pays them court, and can only learn how to flatter them?

Glaucon:: Apparently so.

Socrates:: Then, in order that such a person may be governed by an authority similar to that by which the best man is governed, do we not maintain that he ought to be made the servant of that best man, in whom the divine element is supreme? We do not indeed imagine that the servant ought to be governed to his own detriment, which Thrasymachus held to be the lot of the subject; on the contrary, we believe it to be better for every one to be governed by a wise and divine power, which ought, if possible, to be seated in the mans own heart, the only alternative being to impose it from without; in order that we may be all alike, so far as nature permits, and mutual friends, from the fact of being steered by the same pilot.

Glaucon:: Yes, that is quite right.

Socrates:: And this, is plainly the intention of law, that common friend of all the members of a state. and also of the government of children, which consists in withholding their freedom, until the time when we have formed in a constitution in them, as we should in a city, and until, by cultivating the noblest principle of their nature, we have established in their hearts a guardian and a sovereign, the very counterpart of our own; from which time forward we suffer them to go free.

Glaucon:: Yes that is plain.

Socrates:: Then pray, Glaucon, on what principle, and by what line of argument, can we maintain that it is profitable for a man to be unjust, or intemperate, or to commit any disgraceful act, which will sink him deeper in vice, though he may increase his wealth thereby, or acquire additional power?

Glaucon:: We cannot maintain that doctrine on any ground.

Socrates:: And by what argument can we uphold the advantages of disguising the commission of injustice, and escaping the penalties of it? Am I not right in supposing that the man, who thus escapes detection, grows still more vicious than before; whereas if he is found out and punished, the brute part of him is quenched and tamed, and the tame part is liberated, and the whole soul is molded to the loftiest disposition, and thus, through the acquisition of temperance and justice combined with wisdom, attains to a condition which is more precious than that attained by a body endowed with strength and beauty and health, in the exact proportion in which the soul is more precious than the body?

Glaucon:: Yes, indeed, you are right.

Socrates:: Hence I conclude, the man of understanding will direct all his energies through life to this one object; his plan being, in the first place, to honour those studies which will impress this high character upon his soul, while at the same time he slights all others.

Glaucon:: Obviously.

Socrates:: And as for his bodily habit and bodily support, in the second place, far from living devoted to the indulgence of brute irrational pleasure, he will show that even health is not an object with him, and that he does not attach preeminent importance to the acquisition of strength or health or beauty, unless they are likely to make him temperate; because, in keeping the harmony of the body in tune, his constant aim is to preserve the symphony which resides in the soul.

Glaucon:: Yes, no doubt it is, if he intends to be a genuine votary of music.

Socrates:: Will he not also show how strictly he upholds that system and concord which ought to be maintained in the acquisition of wealth? And will he not avoid being dazzled by the congratulations of the crowd into multiplying infinitely the bulk of his wealth, which would bring him endless trouble?

Glaucon:: I think he will.

Socrates:: On the contrary, an anxious reference to his inward constitution, and a watchful care that none of its parts be pushed from their propriety owing to a superabundance or scantiness of substance, will be the principles by which, co the best of his ability, he will steer his course in adding to, or spending out of, his property.

Glaucon:: Precisely so.

Socrates:: And, once more, in reference to honors, with the same standard constantly before his eyes, he will be glad to taste and partake of those which he thinks will make him a better man; whereas he will shun, in private and in public, those which he thinks likely to break up his existing condition.

Glaucon:: If that is his chief concern, I suppose he will not consent to interfere with politics.

Socrates:: By my faith, you are wrong; for he certainly will, at least, in his own city, though perhaps not in his native land, unless some providential accident should occur.

Glaucon:: I understand. He will do so, you mean, in the city whose organization we have now completed, and which is confined to the region of speculation; for I do not believe it is to be found anywhere on earth.

Socrates:: Well, perhaps in heaven there is laid up a pattern of it for him who wishes to behold it, and, beholding, to organize himself accordingly. And the question of its present or future existence on earth is quite unimportant. For in any case he will adopt the practices of such a city, to the exclusion of those of every other.

Glaucon:: Probably he will.

## Book 10.

Socrates:: I must say that, while I am led by a variety of considerations to believe that we were unquestionably right in our plans for organizing the state, I feel this conviction most strongly when I think of our regulations about poetry.

Glaucon:: What was the nature of them?

Socrates:: They were to the effect that we ought on no account to admit that branch of poetry which is imitative; and now that the specific parts of the soul have been each separately defined, the conviction that such poetry must be unhesitatingly refused admittance, is to my mind even clearer than it was before.

Glaucon:: Explain what you mean.

Socrates:: I am quite sure that you will not denounce me to the tragedians, and the whole company of imitative poets, and therefore I do not mind saying to you, that all imitative poetry would seem to be detrimental to the understanding of those hearers who do not possess the antidote in a knowledge of its real nature.

Glaucon:: Pray what is the purport of your remarks?

Socrates:: I must speak my mind, although I confess I am checked by a kind of affectionate respect for Homer, of which I have been conscious since I was a child. For of all those beautiful tragic poets he seems to have been the original master and guide. But it would be wrong to honour a man at the expense of truth, and therefore I must, as I said, speak out.

Glaucon:: By all means do so.

Socrates:: Listen then, or rather reply.

Glaucon:: Put your questions.

Socrates:: Can you give me any account of the nature of imitation generally? For I assure you I am at a loss myself to understand its real meaning.

Glaucon:: And so you expect me to understand it.

Socrates:: It would not be extraordinary if you did; for it often happens that shortsighted people make out objects sooner than quick-sighted.

Glaucon:: True; but in your presence, if I did make a discovery, I should not have the courage to mention it; therefore look yourself.

Socrates:: Well, is it your wish that we should pursue our usual course in the outset of our investigation? We have, I believe, been in the habit of assuming the existence, in each instance, of some one Form, which includes the numerous particular things to which we apply the same name. Do you understand, or not?

Glaucon:: I do understand.

Socrates:: Then let us, on the present occasion, take any one of those numerous things that suits your pleasure. For example, if this instance suits you, there are, of course, many beds and many tables.

Glaucon:: Certainly.

Socrates:: But of Forms in connection with these articles, there are, I believe, only two, one the Form of a bed, and one that of a table.

Glaucon:: Yes.

Socrates:: Have we not also been accustomed to say that the manufacturer of each of these articles is looking at the Form while he is constructing the beds or the tables which we employ, or whatever it may be? For, of course, no manufacturer constructs the Form itself; because that is impossible.

Glaucon:: Certainly it is.

Socrates:: But pray consider how you will describe the following workman.

Glaucon:: To whom do you allude?

Socrates:: I allude to the workman who constructs all the articles which come within the province of the whole class of artisans.

Glaucon:: You are talking of a marvelously clever man.

Socrates:: Wait a little, and you will have better reasons for saying so. Besides being able to construct all manufactured articles, the same artisan produces everything that grows out of the ground, and creates all living things, himself among others; and, in addition to this, heaven and earth and the gods and all the heavenly bodies and all the beings of the nether world are his workmanship.

Glaucon:: What an extraordinarily ingenious person you are describing!

Socrates:: You are incredulous, are you? Then tell me; Do you think that the existence of such an architect is a complete impossibility? or do you believe that in one way there could, and in another way there could not, be a manufacturer of such a variety of things? Do you not perceive that, in a kind of way, even you yourself could construe! this multiplicity of objects?

Glaucon:: Pray what is this way?

Socrates:: Far from being difficult; it is a rapid method, and admits of many variations. Perhaps the most rapid way of all would be to take a mirror, and turn it round in every direction. You will not be long in making the sun and the heavenly bodies, nor in making the earth, nor in making yourself, and every other living thing, and all inanimate objects, and plants, and everything that we mentioned just now.

Glaucon:: Yes, we can produce so many appearances, but assuredly not truly existing things.

Socrates:: Right; and your observation is just to the point. Now, in my opinion, the painter also belongs to this class of architects. Does he not?

Glaucon:: Certainly he does.

Socrates:: But I suppose you will say that all his creations are unreal. And yet the painter too, in a kind of way, constructs a bed. Or am I wrong?

Glaucon:: Yes, the painter too constructs a bed in appearance.

Socrates:: But what of the manufacturer of beds? Did you not certainly say a minute ago, that he did not construct the Form, which, according to our doctrine, constitutes the reality of a bed, but only a particular bed?

Glaucon:: Yes, I did say so.

Socrates:: Consequently, if he does not construct what really exists, must we not say that he does not construct a real thing, but only something like the reality, but still unreal? And if any one were to describe the work of the bed-wright, or of any other artisan, as perfectly real, his account of the matter would be, in all probability, untrue, would it not?

Glaucon:: Yes, in the opinion of those who are versed in such discussions as these.

Socrates:: Then let us not be at all surprised at finding that things as substantial as a bed are shadowy objects when contrasted with reality.

Glaucon:: True.

Socrates:: Should you like us to employ these illustrations in our inquiry into the real nature of an imitator?

Glaucon:: If you please.

Socrates:: Well, here we have three sorts of beds; of which one exists in the nature of things; and this we shall attribute, if I am not mistaken, to the workmanship of God. If not, to whom can we attribute it?

Glaucon:: We can only attribute it to Him, I think.

Socrates:: The second is made by the upholsterer.

Glaucon:: Yes.

Socrates:: And the third is the production of the painter. Is it not?

Glaucon:: Be it so.

Socrates:: Thus we have three kinds of beds, and three superintendents of their manufacture, the painter, the upholsterer, God.

Glaucon:: Yes, three.

Socrates:: Now whether it was that God did not choose to make more than one bed, or that by a species of necessity he was precluded from making more than one in the universe, he has at any rate made only one, which is the absolute essential Bed. But two, or more than two, such beds have not been created by God, and never will be.

Glaucon:: How so?

Socrates:: Because, if God had made only two, a single bed would again have made its appearance, whose Form would enter into the other two in their turn; and this would be the absolute essential Bed, and not the two.

Glaucon:: You are right.

Socrates:: Knowing this, I should suppose, and wishing to be the real maker of the really existing bed, and not a certain indefinite manufacturer of a certain indefinite bed, God created a single such Bed.

Glaucon:: It seems so.

Socrates:: Then are you in favor of our addressing Him as the Creator, for example, of this object?

Glaucon:: Yes, it is but just to do so, seeing that by creation He has made both this, and everything else.

Socrates:: And what of the upholsterer? Must we not style him the artificer of a bed?

Glaucon:: Yes.

Socrates:: May we go on to call the painter, the artificer and maker of this same article?

Glaucon:: Certainly not.

Socrates:: Then, by your account, what is he with reference to a bed?

Glaucon:: In my opinion he might most justly be styled the imitator of that of which the other two are artificers.

Socrates:: Well, then, do you call the author of that which is twice removed from the thing as it was created, an imitator?.

Glaucon:: Yes, exactly so.

Socrates:: Hence, since the tragedian is an imitator, we may predicate of him likewise, that he, along with all the other imitators, is the third in descent from the sovereign and from truth.

Glaucon:: So it would appear.

Socrates:: Then we are unanimous as to the nature of the imitator. But answer me one question about the painter. Do you suppose that a painter attempts to imitate the originally created object, or the productions of the artificer?

Glaucon:: The latter.

Socrates:: As they really exist, or as they appear? Define this further.

Glaucon:: What do you mean?

Socrates:: I mean this; when you look at a bed sideways, or in front, or from any other position whatever, does it alter its identity at all, or does it continue really the same, though it appears changed? And so of everything else?

Glaucon:: The latter is the true account; it appears different, but it is not really changed.

Socrates:: Now this is the point which I wish you to consider. To which of the two is painting, in every instance, directed! Does it study to imitate the real nature of real objects, or the apparent nature of appearances? In other words, is it an imitation of a phantasm, or of truth?

Glaucon:: Of the former.

Socrates:: The imitative art, then, is, I conceive, completely divorced from truth; and, apparently, it is enabled to effect so much, because it only seizes upon an object in a small part of its extent, and that small part is unsubstantial. For example, we say the painter will paint us a shoemaker, a carpenter, or any other craftsman, without knowing anything about their trades; and, notwithstanding this ignorance on his part, let him be but a good painter, and if he paints a carpenter and displays his picture at a distance, he will deceive children and silly people by making them think that it really is a carpenter.

Glaucon:: No doubt he will.

Socrates:: Be that as it may, I will tell you, my friend, how I think we ought to feel in all such cases. Whenever a person tells us that he has fallen in with a man who is acquainted with all the crafts, and who sums up in his own person all the knowledge possessed by other people singly, to a degree of accuracy which no one can surpass, we must reply to our informant, that he is a silly fellow, and has, apparently, fallen in with a juggler and mimic, whom he has been deceived into thinking omniscient, because he was himself incapable of discriminating between science, and ignorance, and imitation.

Glaucon:: That is most true.

Socrates:: And now, we must proceed to consider the case of tragedy and its leader, Homer; because we are told by some persons, that dramatic poets are acquainted not only with all arts, but with all things human which bear upon virtue and vice, and also with things divine. For, to write well, a good poet must, they say, possess a knowledge of his subject, or else he could not write at all. Hence we must inquire, whether the poets, whom these people have encountered, are mere imitators, who have so far imposed upon the spectators, that, when they behold their performances, they fail to perceive that these productions are twice removed from reality, and easily worked out by a person unacquainted with the truth, because they are phantoms, and not realities; or whether our informants are so far right, that good poets do really know the subjects about which they seem to the multitude to speak well.

Glaucon:: Yes, we must by all means investigate the matter.

Socrates:: Well then, do you think, that, if a man could produce both the original and the representation, he would give himself up seriously to the manufacture of the representations, and make this the object of his life, under the idea that lie professes a most noble purpose?

Glaucon:: I do not think so.

Socrates:: On the contrary, if he were truly instructed as to the nature of the things which he imitates, he would, I imagine, bestow far more industry upon real actions than upon the imitations, and he would endeavor to leave behind him a number of excellent works, as memorials of himself, and would be more anxious to be the panegyrized than the panegyrist.

Glaucon:: I agree with you; for the honour and the profit are much greater in the one case than in the other.

Socrates:: Now, on ordinary subjects, let us not demand an explanation from Homer or any other poet, by asking why, if any of the ancient or modern poets were adepts in the healing art and not mere imitators of the physicians language, they have not the credit of having effected any cures like Asclepius, or of having left behind them a body of scholars in physic, as Asclepius left his descendants; neither let us question them concerning the other arts, which may be dismissed from the discussion. But concerning those grandest and most beautiful subjects which Homer undertakes to treat, such as war, and the conduct of campaigns, and the administration of cities, and the education of man, it is surely just to institute an inquiry, and ask the question, thus; My dear Homer, if you are really only once removed from the truth, with reference to virtue, instead of being twice removed, and the manufacturer of a phantom, according to our definition of an imitator; and if you used to be able to distinguish between the pursuits which make men better or worse, in private and in public; tell us, what city owes a better constitution to you, as Lacedaemon owes hers to Lycurgus, and as many cities, great and small, owe theirs to many other legislators? What state attributes to you the benefits derived from a good code of laws? Italy and Sicily recognize Charondas in this capacity, and we Solon. But what state recognizes you? Will he be able to mention any?

Glaucon:: I think not; at least we are not told any tale of the kind even by the very poets who claim him as their ancestor.

Socrates:: Well then, does the story go that any war in Homers time was brought to a happy termination under his command, or by his advice?

Glaucon:: No, not one.

Socrates:: Well, is he said to have been, like Thales the Milesian and Anacharsis the Scythian, the author of a number of ingenious inventions, bearing upon the useful arts or other practical matters, which would convey the impression of his having been a man of wisdom in the active duties of life?

Glaucon:: No, certainly nothing of the sort is said of him.

Socrates:: Well then, is it reported of Homer that, though not a public man, he nevertheless in his lifetime personally conducted, in private, the education of certain disciples, who used to delight in his society, and handed down to posterity an Homeric way of living; just as Pythagoras was in an extraordinary degree beloved personally as a companion, not to mention that his successors, who to this day call their mode of living by his name, are considered to a certain extent conspicuous in the world?

Glaucon:: No, Socrates; nothing of this kind either is reported of him. Indeed, if the stories about Homer are true, the education of his friend Creophylus might possibly be thought even more ridiculous than his name. For we are told that even Creophylus neglected Homer singularly in his lifetime.

Socrates:: No doubt that is the story. But do you suppose, Glaucon, that, if Homer had been really able to educate men and make them better, from the fact of being capable not merely of imitating but of knowing the subjects in question, he could have failed to attract to his side a multitude of companions, who would have loved and honored him? For so long as Protagoras of Abdera, and Prodicus of Ceos, and a host of other persons, can, as we see, persuade the men of their day by private intercourse, that they will be incapable of managing their own house and city, unless they superintend their education; and so long as the wisdom, implied in this, insures to these teachers an affection so unbounded, that they are almost carried about on the shoulders of their companions; is it conceivable that, if Homer and Hesiod were really capable of improving men in virtue, they should have been suffered by their contemporaries to travel about reciting? Is it not more likely that they would have been hugged more closely than gold, and constrained to stay at home with their countrymen? or else, if this favor were refused, that they would have been escorted in their wanderings, till their disciples had received a satisfactory education?

Glaucon:: I believe you are unquestionably right, Socrates.

Socrates:: Then must we not conclude that all writers of poetry, beginning with Homer, copy unsubstantial images of every subject about which they write, including virtue, and do not grasp the truth? In fact, as we were saying just now, will not the painter, without understanding anything about shoemaking, paint what will be taken for a shoemaker by those who are as ignorant on the subject as himself, and who judge by the colors and forms?

Glaucon:: Yes, certainly he will.

Socrates:: And just in the same way, I fancy, we shall assert that the poet, as well as the painter, lays on a species of colors, in the shape of verbs and nouns, to represent the several professions, of which he only understands enough to be able to imitate them; so that if he writes in meter, rhythm, and harmony, about shoemaking, or about generalship, or about any subject whatever, people who are as ignorant as himself, and who judge merely by the form of expression, look upon his poetry as very excellent. So powerful is the charm which these musical appliances naturally possess. For I suppose you know what a poor appearance the works of poets present, when they have been stripped of their musical coloring, and are rehearsed in their proper nakedness. Doubtless you have observed the fact.

Glaucon:: Yes, I have.

Socrates:: Does it not remind one of the withered appearance presented by the countenances of those who have once been blooming without being beautiful, whenever their bloom has deserted them?

Glaucon:: Precisely so.

Socrates:: Now let me ask you to examine the following point. According to us, the maker of the image, that is, the imitator, understands only the appearance, and not the reality. Is it not so?

Glaucon:: Yes.

Socrates:: Do not let us leave the matter half explained, but let us examine it satisfactorily.

Glaucon:: Proceed.

Socrates:: A painter, by our account, will paint a bit and bridle, will he not?

Glaucon:: Yes.

Socrates:: But the bridle and bit will be made by the saddler and the smith, will they not?

Glaucon:: Certainly.

Socrates:: Then does the painter understand how the bit and bridle ought to be shaped? Or is it the case, that even the makers, the smith and the saddler, are ignorant on this subject, which is only understood by the rider, who knows how to use the things in question?

Glaucon:: That is the true state of the case.

Socrates:: Then may we not assert that all things are in the same predicament?

Glaucon:: What do you mean?

Socrates:: May we not assert that each single thing involves three particular arts, the province of the first being to use the thing, of the second to produce it, of the third to imitate it?

Glaucon:: Yes, we may.

Socrates:: Are not the excellence, beauty, and correctness of every manufactured article, or living creature, or action, to be tried only by a reference to the purpose intended in their construction, or in their natural constitution?

Glaucon:: True, they are.

Socrates:: Hence the man who makes use of a thing must necessarily be best acquainted with it, and must in the course of using it keep the maker informed as to the success or failure of its performances. For example, a flute-player, no doubt, informs a flute-maker about the flutes which he employs in the exercise of his art, and will direct him how they ought to be made; and the flute-maker will submit to his directions.

Glaucon:: Of course.

Socrates:: The one has a thorough acquaintance with good and bad flutes, and conveys information, upon which the other relies, and will make accordingly; is not that the case?

Glaucon:: Yes, it is.

Socrates:: Hence, the maker of the instrument will entertain a correct belief with regard to its beauty or badness, by holding communication with the person who has a thorough acquaintance with the subject, and by being compelled to listen to his instructions; whereas the user of the same instrument will possess science on these points.

Glaucon:: Exactly so.

Socrates:: But which of the two will the imitator possess? Will he, by actually using the things he describes, know scientifically, whether his productions are beautiful and right, or not; or will he entertain correct opinion, from being compelled to put himself in communication with the man of real knowledge, and to submit to his directions as to the style in which he ought to work?

Glaucon:: Neither.

Socrates:: That is to say, the imitator will neither know scientifically, nor entertain correct opinions with reference to the beauty or badness of the things which he imitates.

Glaucon:: It seems not.

Socrates:: The poetical imitator will be charmingly wise upon the subjects which he treats.

Glaucon:: Not exactly.

Socrates:: However, he will go on imitating, notwithstanding his being thoroughly ignorant as to what constitutes a thing good or bad. Nay, apparently he will copy the vague notions of beauty which prevail among the uninformed multitude.

Glaucon:: Yes, what else can he copy?

Socrates:: Then, to all appearance, we are pretty well agreed so far as this, that the imitative person knows nothing of importance about the things which he imitates, and that therefore imitation is an amusement and not a serious business; and that those who cultivate tragic poetry in iambic or in epic verse are without exception in the highest possible degree imitators.

Glaucon:: Exactly so.

Socrates:: Then, in the name of heaven, does not this process of imitation deal with something twice removed from the truth? Answer me.

Glaucon:: It does.

Socrates:: But pray how do you describe that part of human nature on which it exercises the power which it possesses?

Glaucon:: Explain what part you mean.

Socrates:: I will. Objects of the same size, I believe, appear to us to vary in magnitude according to their distance from our eyes.

Glaucon:: They do.

Socrates:: And things which look bent under water appear straight when taken out of the water; and the same objects look either concave or convex, owing to mistakes of another kind about colors to which the eye is liable; and clearly there exists in the soul a kind of utter confusion of this sort. And it is just this natural infirmity of ours which is assailed with every species of witchcraft by the art of drawing, as well as by jugglery, and the numerous other inventions of the same sort.

Glaucon:: True.

Socrates:: And have not the processes of measuring and counting and weighing made their appearance most agreeably to aid us in dispelling these tricks of fancy, and to overthrow within us the power of vague notions of degrees of magnitude, quantity, and weight, and establish the control of the principle, which has calculated, or measured, or weighed?

Glaucon:: Undoubtedly.

Socrates:: And surely this must be the work of the rational element in the soul.

Glaucon:: Yes, certainly it must.

Socrates:: But when this element, after frequent measuring, informs us that one thing is greater or less than, or equal to, another thing, it is contradicted at the same moment by the appearance which the same things present.

Glaucon:: Yes.

Socrates:: Did we not assert the impossibility of entertaining, at the same time and with the same part of us, contradictory opinions with reference to the same things?

Glaucon:: Yes, and we were right in asserting it.

Socrates:: Then that part of the soul, whose opinion runs counter to the measurements, cannot be identical with that part which agrees with them.

Glaucon:: Certainly not.

Socrates:: But surely that part, which relies on measurement and calculation, must be the best part of the soul.

Glaucon:: Doubtless it must.

Socrates:: Hence, that which contradicts this part must be one of the inferior elements of our nature.

Glaucon:: Necessarily so.

Socrates:: This was the point which I wished to settle between us, when I said that painting, or to speak generally, the whole art of imitation, is busy about a work which is far removed from truth; and that it associates moreover with that part of us, which is far removed from wisdom, and is its mistress and friend for no wholesome or true purpose.

Glaucon:: Unquestionably.

Socrates:: Thus the art of imitation is the worthless mistress of a worthless friend, and the parent of a worthless progeny.

Glaucon:: So it seems.

Socrates:: Does this apply only to the imitation which addresses itself to the eye? or may we extend it to that which addresses itself to the ear, which I believe we name poetry?

Glaucon:: Probably we may.

Socrates:: Well, do not let us rely only on the probable evidence derived from painting, but let us prosecute further inquiries into that very part of the intellect, with which the imitative art of poetry associates, and let us examine whether it is worthless or good.

Glaucon:: Yes, we ought to do so.

Socrates:: Let us state the case thus. The imitative art, if we are right, imitates men who are engaged in voluntary or involuntary actions, and who, according to the result of their actions, think themselves well off or the reverse; and who, in the midst of all these circumstances, are conscious either of joy or of grief. Is there anything to be added to this?

Glaucon:: No, nothing.

Socrates:: Now, in this variety of circumstances, is a mans state one of unanimity? Or is he at feud and war with himself in his actions, just as he was at feud and entertained contradictory opinions at the same moment about the same subjects, where his sight was concerned? But I remember, that on this subject we need not come to an agreement now; for we settled all this satisfactorily in the past conversations, in which we admitted that our soul is fraught with an infinite number of these simultaneous contradictions.

Glaucon:: We were right.

Socrates:: Yes, we were. But there was something then omitted, which I think it is now necessary to discuss.

Glaucon:: What was that?

Socrates:: We said, I believe, at the time, that a good man, if he meet with a misfortune, like that of losing a son or anything else that he values most highly, will bear it more easily than any one else.

Glaucon:: Certainly he will.

Socrates:: But now, let us further examine, whether he will feel no sorrow at all, or whether, this being impossible, he will observe some kind of moderation in grief.

Glaucon:: The latter is the truer account.

Socrates:: Now let me ask you a question about him. Do you think he will fight against his grief and resist it most, when the eyes of his equals are upon him, or when he is alone by himself in solitude?

Glaucon:: He will do so much more, I imagine, when he is observed.

Socrates:: But when he is alone, I fancy, he will venture to say much, which he would be ashamed to say in the hearing of another person, and he will do much, which he would not like any one to see him doing.

Glaucon:: Just so.

Socrates:: Now that which urges him to resist his grief is reason and law, is it not? while that which prompts him to indulge it is the affliction itself?

Glaucon:: True.

Socrates:: But when there are two opposite attractions in a man at the same time in reference to the same thing, he must, according to our doctrine, be a double man.

Glaucon:: Of course he must.

Socrates:: Is not one part of him prepared to obey the directions of law?

Glaucon:: What are they?

Socrates:: Law, I believe, tells him that it is best to keep as quiet as possible in misfortunes, and check all feelings of discontent; because we cannot estimate the amount of good and evil contained in these visitations, and at the same time impatience does not help us forwards; and because none of the affairs of this life deserve very serious anxiety, while grief stands in the way of that behavior which we ought to adopt in our troubles without a moments delay.

Glaucon:: To what do you allude?

Socrates:: It is our duty to think over the event that has taken place, and to arrange our affairs to meet the emergency in the way which reason pronounces best, like the player who moves his pieces according to the dice which he has thrown; and, instead of hugging the wounded part, like children after a fall, and continuing to roar, we ought ever to habituate the soul to turn with all speed to the task of healing and righting the fallen and diseased part, thus putting a stop to lamentation by the aid of medicine.

Glaucon:: Certainly that would be the best behavior under misfortune.

Socrates:: Then the better part of us, we say, consents to be led by such reasoning.

Glaucon:: Obviously it does.

Socrates:: On the other hand, shall we not maintain, that the element which prompts us to think of, and grieve over, our misfortune, and which has an insatiable appetite for lamentations, is irrational and idle, and the friend of cowardice?

Glaucon:: Certainly we shall.

Socrates:: This being the case, the peevish temper furnishes an infinite variety of materials for imitation; whereas the temper, which is wise and calm, is so constantly uniform and unchanging, that it is not easily imitated; and, when imitated, it is not easily understood, especially by a general gathering of all sorts of persons, collected in a theatre. For these people witness the imitation of a state which, if I am not mistaken, is far from being their own.

Glaucon:: It is, unquestionably.

Socrates:: Hence it is clear, that the imitative poet has, in the nature of things, nothing to do with this calm temper of soul, and that his wisdom is not set on pleasing it, if he is intended to gain a reputation in the world; but his business is with the peevish and changeful temper, because it is easily imitated.

Glaucon:: That is clear.

Socrates:: Then we shall be justified now in laying hands on him, and placing him on a level with the painter. For he resembles the painter in producing things that are worthless when tried by the standard of truth; and he resembles him also-in this, that he holds intercourse with a part of the soul which is like himself, and not with the best part. And, this being the case, we shall henceforth be justified in refusing to admit him into a state that would fain enjoy a good constitution, because he excites and feeds and strengthens this worthless part of the soul, and thus destroys the rational part; like a person who should strengthen the hands of the dissolute members of a state and raise them to supreme power, and at the same time bring the educated class to destruction. Precisely in the same way we shall assert that the imitative poet likewise implants an evil constitution in the soul of each individual, by gratifying that senseless part which, instead of distinguishing the greater from the less, regards the same things now as great, and now as small, and manufactures fantastic phantoms that are very widely removed from truth.

Glaucon:: Exactly so.

Socrates:: But still, we have not yet brought forward the heaviest count in our indictment. For that poetry should be able to damage the great majority even of good men, is, I conceive, a crime of the deepest dye.

Glaucon:: Undoubtedly it is, if the indictment can be sustained.

Socrates:: Attend, and then judge. The best of us, I believe, while listening to the passages in which Homer or one of the tragedians represents some suffering hero, who spins out a long speech in his lamentations, or perhaps some persons engaged in beating their breasts and bemoaning themselves in song, are delighted, as you know, and give ourselves up to be led along, and sympathize with the sufferer, and earnestly praise as a good poet the writer who can bring us as much as possible into this frame of mind.

Glaucon:: I know it, of course.

Socrates:: But, on the other hand, whenever sorrow comes home to one of us, you are aware that we pride ourselves upon the opposite conduct; that is, we glory in being able to endure with calmness, because, in our estimation, this behavior is manly, while the other which we praised before is womanish.

Glaucon:: I am aware of it.

Socrates:: Then is this praise rightly bestowed? I mean, is it right to feel pleasure and bestow praise, instead of being disgusted, when one sees a man behaving as one would scorn and blush to behave oneself?

Glaucon:: No, indeed, this does not seem reasonable.

Socrates:: It does not, if you look at it in another light.

Glaucon:: In what light?

Socrates:: If you consider that the part which is forcibly held down when those calamities of our own occur, and which has hungered for the privilege of weeping and bewailing itself fully and without stint, because it is its nature to covet this satisfaction, is the very part that is fed to satiety by the poets, and delights in those descriptions; and that, meanwhile, that part of us which is naturally the noblest, from not having been sufficiently trained by reason and by habit, relaxes in its watch over this querulous part, because it is surveying the afflictions of others, and because it is not discreditable to itself to praise and compassionate another man, who professes to be good, though his grief is ill-timed. In fact, it looks upon the pleasure as so much clear gain, and will not allow itself to be deprived of it by a contempt for the whole poem. For it is given, I think, only to a few to reflect that the conduct of other people must necessarily influence our own, and that it is no easy matter, after feeding the strength of the principle of pity upon the sufferings of others, to keep it under restraint when we suffer ourselves.

Glaucon:: That is most true.

Socrates:: Does not the same reasoning apply also to jokes which you would yourself be ashamed to make, but which in comic representations, or even in private life, you will be very well pleased to hear, and will not hate as immoral, acting in this just as you acted in your pity? For on such occasions you give the rein to that element, which, in your own case, you check by reason, when it would fain create laughter, because you dread the reputation of a buffoon; and, having thus given it strength and spirit, you have often, in your own conduct, been unconsciously seduced into adopting the character of a comic poet.

Glaucon:: Very true.

Socrates:: And in the case of love, and anger, and all the mental sensations of desire, grief, and pleasure, which, as we hold, accompany all our actions, is it not true that poetic imitation works upon us similar effects? For it waters and cherishes these emotions, which ought to wither with drought, and constitutes them our rulers, when they ought to be our subjects, if we wish to become better and happier instead of worse and more miserable.

Glaucon:: I cannot deny it.

Socrates:: Then, Glaucon, whenever you meet with eulogists of Homer, who tell you that he has educated Greece, and that he deserves to be taken up and studied with an eye to the administration and guidance of human affairs, and that a man ought to regulate the tenor of his whole life by this poets directions, it will be your duty to greet them affectionately as excellent men to the best of their ability, and to admit that Homer is first and greatest among tragic poets; but you must not forget, that, with the single exception of hymns to the gods and panegyrics on the good, no poetry ought to be admitted into a state. For if you determine to admit the highly-seasoned muse of lyric or epic poetry, pleasure and pain will have sovereign power in your state, instead of law and those principles which, by the general consent of all time, are most conformable to reason.

Glaucon:: That is perfectly true.

Socrates:: Having recurred to the subject of poetry, let this defense serve to show the reasonableness of our former judgment in banishing from our state a pursuit which has the tendencies we have described; for, in doing so, we were yielding to reason. But that poetry may not charge us with being, to a certain extent, harsh and rough. let us address her and say, that there is a quarrel of long standing between philosophy and poetry. For those lines;

> That yelping cur, which at its master barks, and,
> Mighty he is in the vain talk of fools, and,
> The lordly mob of god-wise folks, and,
> Poor are those subtle thinkers;

and a thousand others, are marks of an old antagonism between the two. But nevertheless let us admit, that, if the poetry whose end is to please, and imitation, can give any reasons to show that they ought to exist in a well-constituted state, we for our part will gladly welcome them home again. For we are conscious of being enchanted by such poetry ourselves; though it would be a sin to betray what seems to us the cause of truth. Am I not right in supposing that you, my friend, are enchanted by poetry, especially when you contemplate it under Homers guidance?

Glaucon:: Yes, I am, powerfully.

Socrates:: Then is it not just that the sentence of exile should remain in force against poetry, until she has made her defense either in lyrical or in some other measure?

Glaucon:: Certainly it is.

Socrates:: And I suppose we shall also allow those of her patrons who are lovers of poetry without being poets, to advocate her cause in prose by maintaining that poetry is not only pleasurable, but also profitable in its bearings upon governments, and upon human life; and we shall listen favorably. For we shall be gainers, I presume, if poetry can be proved to be profitable as well as pleasurable.

Glaucon:: Undoubtedly we shall be gainers.

Socrates:: But if not, why in that case, my dear friend, we must take a lesson from those persons who, after becoming enamored of an object, deny their passion at any cost, if they think it injurious; for though the love of such poetry which has grown up in us under the training of our admirable constitutions, will make us cordially desirous that it should appear perfectly excellent and true, still, so long as it is unable to make good its defense we shall protect ourselves, as we listen, by inwardly repeating, like a charm, the argument which we have just brought to a close, and we shall be on our guard against falling anew into that childish passion, which most people acknowledge. At any rate, we have learned that we must not make a serious pursuit of such poetry, in the belief that it grasps truth and is good; on the contrary, the listener, apprehending danger to the constitution within him, is bound to be on his guard against it, and to adopt the opinion which we have expressed on the subject.

Glaucon:: I thoroughly agree with you.

Socrates:: Indeed, my dear Glaucon, the choice between becoming a good or a bad man involves a great stake, yes, a greater stake than people suppose. Therefore it is wrong to be heedless of justice and the rest of virtue, under the excitement of honour, or wealth, or power, or even of poetry.

Glaucon:: I agree with you, at the conclusion of our inquiry; and I fancy every one else will do the same.

Socrates:: And yet, we have not discussed the principal wages of virtue, and the greatest of the prizes that are held out to it.

Glaucon:: If there are others greater than those already mentioned, they must be of extraordinary magnitude.

Socrates:: But how, can anything great be compressed into a brief space of time? And the whole interval between Childhood and old age is brief, I conceive, compared to eternity.

Glaucon:: Rather describe it as nothing.

Socrates:: What then? Do you think that it is the duty of an immortal thing to trouble itself about this insignificant interval, and not about eternity?

Glaucon:: I think it ought to concern itself about eternity; but what do you mean by this?

Socrates:: Have you not learned, that our soul is immortal, and never dies?

Glaucon looked at me, and said in amazement;

Glaucon:: No, really, have not; but can you maintain this doctrine?

Socrates:: Yes, as I am an honest man; and I think you could also. It is quite easy to do it.

Glaucon:: Not to me; at the same time I should be glad to hear from you what by your account is so easy.

Socrates:: Be so good as to listen.

Glaucon:: Proceed, by all means.

Socrates:: Do you call one thing good, and another evil?

Glaucon:: I do.

Socrates:: And do we hold the same opinion as to the meaning of the two terms?

Glaucon:: What opinion do you hold?

Socrates:: I hold that the term evil comprises everything that destroys and corrupts, and the term good, everything that preserves and benefits.

Glaucon:: So do I.

Socrates:: Again; do you maintain that everything has its evil, and its good? Do you say, for example, that the eyes are liable to the evil of ophthalmia, the entire body to disease, corn to mildew, timber to rot, copper and iron to rust, or, in other words, that almost everything is liable to some connatural evil and malady?

Glaucon:: I do.

Socrates:: And is it not the case that, whenever an object is attacked by one of these maladies, it is impaired, and, in the end, completely broken up and destroyed by it?

Glaucon:: Doubtless it is so.

Socrates:: Hence everything is destroyed by its own connatural evil and vice; otherwise, if it be not destroyed by this, there is nothing else that can corrupt it. For that which is good will never destroy anything, nor yet that which is neither good nor evil.

Glaucon:: Of course not.

Socrates:: If then we can find among existing things one which is liable to a particular evil, which can indeed mar it, but cannot break it up or destroy it, shall we not be at once certain that a thing so constituted can never perish?

Glaucon:: That would be a reasonable conclusion.

Socrates:: Well, then, is not the soul liable to a malady which renders it evil?

Glaucon:: Certainly it is; all those things which we were lately discussing, injustice, intemperance, cowardice, and ignorance, produce that result.

Socrates:: That being the case, does any one of these things bring about the dissolution and destruction of the soul? Turn it over well in your mind, that we may not be misled by supposing that, when the crimes of the unjust and foolish man are found out, he is destroyed by his injustice, which is a depraved state of the soul. No, consider the case thus. The depravity of the body, that is to say, disease, wastes and destroys the body, and reduces it to a state in which it ceases to be a body; and all the things, which we named just now, are brought by their own proper vice, which corrupts them by its adhesion or indwelling, to a state in which they cease to exist. I am right, am I not?

Glaucon:: Yes.

Socrates:: Then proceed to examine the soul on the same method. Is it true that, when injustice and other vices reside in the soul, they corrupt and wither it by contact or indwelling, until they have brought it to death, and severed it from the body?

Glaucon:: Certainly, they do not produce that effect.

Socrates:: Well but, on the other hand, it is irrational to suppose that a thing can be destroyed by the depravity of another thing, though it cannot be destroyed by its own.

Glaucon:: True, it is irrational.

Socrates:: Yes it is, Glaucon; for you must remember that we do not imagine that a body is to be destroyed by the proper depravity of its food, whatever that may be, whether moldiness or rottenness or anything else. But if the depravity of the food itself produces in the body a disorder proper to the body, we shall assert that the body has been destroyed by its food remotely, but by its own proper vice, or disease, immediately; and we shall always disclaim the notion that the body can be corrupted by the depravity of its food, which is a different thing from the body, that is to say, the notion that the body can be corrupted by an alien evil, without the introduction of its own native evil.

Glaucon:: You are perfectly correct;.

Socrates:: Then according to the same reasoning, unless depravity of body introduces into the soul depravity of soul, let us never suppose that the soul can be destroyed by an alien evil without the presence of its own peculiar disease; for that would be to suppose that one thing can be destroyed by the evil of another thing.

Glaucon:: That is a reasonable statement.

Socrates:: Well then, let us either refute this doctrine and point out our mistake, or else, so long as it remains unrefuted, let us never assert that a fever, or any other disease, or fatal violence, or even the act of cutting up the entire body into the smallest possible pieces, can have any tendency to destroy the soul, until it has been demonstrated, that, in consequence of this treatment of the body, the soul itself becomes more unjust and more unholy. For, so long as a thing is exempt from its own proper evil, while an evil foreign to it appears in another subject, let us not allow it to be said that this thing, whether it be a soul or anything else, is in danger of being destroyed.

Glaucon:: Well, certainly no one will ever prove that the souls of the dying become more unjust in consequence of death.

Socrates:: But in case any one should venture to encounter the argument, and to assert that the dying man becomes more depraved and unjust, in order to save himself from being compelled to admit that the soul is immortal, I suppose we shall infer that, if the objector is right, injustice is as fatal as a disease to its possessor; and we shall expect those who catch this essentially deadly disorder to die by its agency, quickly or slowly, according to the violence of the attack; instead of finding, as we do at present, that the unjust are put to death in consequence of their injustice, by the agency of other people who punish them for their crimes.

Glaucon:: Then really, injustice cannot be thought such a very dreadful thing, if it is to be fatal to its owner; because in that case it will be a release from evils. But I am inclined to think that, on the contrary, we shall find that it kills other people if it can, while it endows its possessor with peculiar vitality, and with sleeplessness as well as vitality. So widely and permanently is it removed, to all appearance, from any tendency to destroy its owner.

Socrates:: You say well. For surely when the soul cannot be killed and destroyed by its own depravity and its own evil, hardly will the evil, which is charged with the destruction of another thing, destroy a soul or anything else, beyond its own appropriate object.

Glaucon:: Yes, hardly; at least that is the natural inference.

Socrates:: Hence, as it is destroyed by no evil at all, whether foreign to it or its own, it is clear that the soul must be always existing, and therefore immortal.

Glaucon:: It must.

Socrates:: Well then, let us consider this proved. And, if so, you understand that the souls that exist must be always the same. For, if none be destroyed, they cannot become fewer. Nor yet can they become more numerous; because if any class of things immortal became more numerous you know that something mortal must have contributed to swell its numbers; in which case, everything would finally be immortal.

Glaucon:: True.

Socrates:: But reason will forbid our entertaining this opinion, which we must therefore disavow. On the other hand, do not let us imagine that the soul in its essential nature, and viewed by itself, can possibly be fraught with abundance of variety, unlikeness, and disagreement.

Glaucon:: What do you mean?

Socrates:: A thing cannot easily be eternal, as we have just proved the soul to be, if it is compounded of many parts, and if the mode of composition employed is not the very best.

Glaucon:: Probably it cannot.

Socrates:: Now the immortality of the soul has been established beyond the reach of doubt by our recent argument, to which other demonstrations might be added; but to understand its real nature, we must look at it, not, as we are now doing, after it has been marred by its association with the body, and by other evils; but we must carefully contemplate it by the aid of reasoning, when it appears in unsullied purity; and then its surpassing beauty will be discovered, and the nature of justice and injustice, along with all the questions which we have now discussed, will be far more clearly discerned. As it is, we have given a true account of the soul in its present appearance. But we have looked at it in a state like that of the sea god Glaucus; whose original nature can no longer be readily discerned by the eye, because the old members of his body have been either broken off, or crushed and in every way marred by the action of the waves, and because extraneous substances, like shellfish and seaweed and stones, have grown to him. so that he bears a closer resemblance to any wild beast whatever than to his natural self. The soul, as we are contemplating it, has been reduced to a similar state by a thousand evils. But we ought to fix our attention on one part of it exclusively, Glaucon.

Glaucon:: On what part?

Socrates:: On its love of wisdom, that we may learn to what it clings, and with what it desires to have intercourse, in virtue of its close connection with the divine, the immortal, and the eternal; and what it would become if it invariably pursued the divine, and were, by the impulse thence derived, lifted out of the sea in which it now is, and disencumbered of the stones and shellfish and that uncouth multitude of earthy and rocky substances, with which, because earth has been its food, it is now overgrown in consequence of those banquetings which are called felicitous. And then we should see whether it is essentially multiform or uniform, or otherwise constituted, and how. But at present we have, if I am not mistaken, discussed pretty thoroughly its affections and manifestations in human life.

Glaucon:: Yes, undoubtedly we have.

Socrates:: And have we not, divested ourselves of all secondary considerations in the course of the argument;

and, without introducing the rewards and the reputation which justice confers, as you said that Homer and Hesiod do, have we not found that justice, taken by itself, is best for the soul, also taken by itself, and that the soul is bound to practice just actions, whether it possess the ring of Gyges, and, in addition to this ring, the helmet of Hades, or not?

Glaucon:: It is most true that we have done so.

Socrates:: Then may we now, Glaucon, proceed without offence to take into account those great and abundant rewards, which justice, along with the rest of virtue, wins to the soul from gods and men, not only during a mans lifetime, but also after his death?

Glaucon:: Yes, undoubtedly we may.

Socrates:: Will you repay me what you borrowed in the course of the argument?

Glaucon:: Pray what did I borrow?

Socrates:: I granted to you that the just man should have the reputation of being unjust, and the unjust man the reputation of being just. For you were of opinion, that, even if it were impossible that the true state of the case should be concealed both from men and gods, still this ought to be granted for the sake of the argument, in order that pure justice might be weighed against pure injustice. You remember, do you not?

Glaucon:: Indeed, I should be in fault if I did not.

Socrates:: But, now that judgment has been passed upon them, I, in my turn, demand in behalf of justice, that we should admit the estimation, in which she is held, to be what it really is, both among gods and among men; in order that she may receive the prizes of victory, which she earns by her outward appearance and bestows upon those who possess her, now that it has been proved that the blessings derived from really being just are given by her, without any deception, to those who truly receive her.

Glaucon:: Your demand is a just one.

Socrates:: Then will you not first restore to me this admission, that the gods at least are not mistaken as to the real character of the just and the unjust man?

Glaucon:: We will.

Socrates:: That being the case, the one will be dear to me gods, and the other hateful in their sight, as we also agreed originally.

Glaucon:: True.

Socrates:: And shall we not agree that all things which come from the gods, come in the best possible shape to the man whom they love, unless some past sin has already doomed him to a certain amount of suffering?

Glaucon:: Certainly they do.

Socrates:: Hence, in the case of the just man, we must assume that, whether poverty be his lot, or sickness, or any other reputed evil, all will work for his final advantage, either in this life, or in the next. For, unquestionably, the gods can never neglect a man who determines to strive earnestly to become just, and by the practice of virtue to grow as much like God as man is permitted to do.

Glaucon:: No, such a man is not likely to be neglected by one whom he resembles.

Socrates:: But, in the case of the unjust man, must we not entertain the opposite opinion?

Glaucon:: Certainly we must.

Socrates:: Then these will be the prizes bestowed by the gods upon the just man.

Glaucon:: So it seems to me, at all events.

Socrates:: But what, do men bestow on him? Does not the case stand thus, if we are to set down the truth? Do not those clever unjust men behave like runners who run well from the starting-place to the turning post, but flag from thence to the goal? They start off briskly, but end by making themselves ridiculous, and slink away crestfallen and uncrowned. But the really good runners receive the prize at the end of the course, and are crowned. Is not this also generally the case with the just? Towards the close of every action, every social relation, and life itself, do they not gain a good name, and win the prizes from the hands of their fellow-men?

Glaucon:: Certainly they do.

Socrates:: Then will you suffer me to say of them what you said of the unjust? For I shall not hesitate to declare that the just, when they are advanced in years, hold office, if they like, in their own city, and marry into what families they please, and wed their daughters to whomsoever they choose. In a word, I now say of the just all that you said of the unjust. On the other hand, I likewise affirm of the unjust, that the greater part of them, even if they escape detection in their youth, are found out and turned into ridicule at the end of their course; and that, as they grow old, they are insulted in their misery by strangers as well as by their fellow-citizens, and forced to submit to the scourge, and finally to the rack and the heated iron, which you rightly described as barbarous treatment. Imagine yourself to have been told by me that they undergo all those inflictions. And now. as I said, consider whether you will suffer me to speak in this way.

Glaucon:: Undoubtedly I shall; for your statement is just.

Socrates:: Such then, will be the prizes, the rewards, and the gifts, which are bestowed on the just man, in his lifetime, by gods and by men, in addition to those good things which justice of itself placed in his possession.

Glaucon:: Yes, and they are very magnificent, as well as very certain.

Socrates:: These, however, are nothing, in number or in magnitude, compared with the lot that awaits the just and the unjust after death. And this must be described, in order that we may award to each the complement of recompense, which the argument is bound to set forth.

Glaucon:: Speak on; there are few things that I would more gladly hear.

Socrates:: Well, I will tell you a tale, not like that of Odysseus to Alcinous, but of what once happened to a brave man, Er the son of Armenius, a native of Pamphylia, who, according to story, was killed in battle. When the bodies of the slain were taken up ten days afterwards for burial in a state of decomposition, Ers body was found to be still fresh. He was carried home, and was on the point of being interred, when, on the twelfth day after his death, as he lay on the funeral-pyre, he came to life again, and then proceeded to describe what he had seen in the other world. His story was, that when the soul had gone out of him, it travelled in company with many others, till they came to a mysterious place, in which were two gaps, adjoining one another, in the earth, and exactly opposite them two gaps above in the heaven. Between these gaps sate judges, who, after passing sentence, commanded the just to take the road to the right upwards through the heaven, and fastened in front of them some symbol of the judgment that had been given; while the unjust were ordered to take the road downwards to the left, and also carried behind them evidence of all their evil deeds. When he came to the place himself, he was told that he would have to carry to men a report of the proceedings of that other world; and he was admonished to listen, and watch everything that went on there. So he looked, and beheld the souls on one side taking their departure at one of the gaps in the heaven and the corresponding gap in the earth, after judgment had been passed upon them; while at the two other gaps he saw them arriving, squalid and dusty, or pure and bright, according as they ascended from earth, or descended from heaven. Each soul, as it arrived, wore a travel-stained appearance, and gladly went away into the meadow and there took up quarters, as people do when some great festival is pending. Greetings passed between all that were known to one another; and those who had descended from heaven were questioned about heaven by those who had risen out of the earth; while the latter were questioned by the former about earth. Those who were come from earth told their tale with lamentations and tears, as they bethought them of all the dreadful things that they had seen and suffered in their subterranean journey, which they said had lasted a thousand years; while those who were come from heaven described enjoyments and sights of marvelous beauty. It would take a long time, Glaucon, to repeat at length the many particulars of their stories; but, according to Er, the main points were the following. For every one of all the crimes, and all the personal injuries, committed by them, they suffered tenfold retribution when the turn for it came. The cycle of punishment recommenced every century, because the length of human life was estimated at a hundred years, the object being to make them pay the penalty for each offence ten times over. Thus, all who had been guilty of a number of murders, or had betrayed and enslaved cities and armies, or had been accomplices in any other villainy, were intended to undergo tenfold sufferings for all and each of their offences; while, on the other hand, those who had done any charitable acts, and had shown themselves just and holy, were meant to receive on the same principle their due reward. With regard to those whose death followed close upon their birth, he gave some particulars which need not be recorded. But, according to his narrative, the punishment for impiety, disobedience to parents, and the murder of near relations, was unusually severe; and the reward for piety and obedience unusually great. For he was within hearing, he said, when one of the spirits asked another where Ardiaeus the Great was. Now this Ardiaeus had been sovereign in a city of Pamphylia, a thousand years before that time, and was said to have put his aged father and elder brother to death, besides committing a number of other wicked actions. The spirit to whom the question was addressed, replied, he is not come, and is not likely to come hither. For this, you must know, was one of the terrible sights that we beheld. When we were close to the aperture, and were on the point of ascending, after having undergone all our other sufferings, we suddenly came in sight of Ardiaeus and others, of whom the greater part, I think I may say, had been despots; though it is true there were also a few private persons, who had once been reckoned among enormous criminals. These people, when they thought themselves sure of ascending immediately, were repulsed by the aperture, which bellowed whenever one of these incurable sinners, or anybody who had not fully expiated his offences, attempted to ascend. Thereupon certain fierce and fiery-looking men, who were in attendance and understood the meaning of the sound, seized some of them by the waist and carried them off; but Ardiaeus and others were bound, hand and foot and head, and thrown down, and flayed with scourges, and dragged out by the wayside, and carded, like wool, upon thorn-bushes; and those who were passing by at the time were informed why they were put to this torture, and that they were being carried away in order to be flung into Tartarus. We had already gone through a great variety of alarms, but none of them were equal to the terror that then seized us, lest that sound should be uttered when any of us tried to go up; and most glad we all were to ascend, when it was not heard. This will convey an idea of the penalties and the tortures; while the rewards were precisely the opposite. When seven days had elapsed since the arrival of the spirits in the meadow, they were compelled to leave the place, when their time came, and set out on the eighth day, and travel three days, till they arrived on the fourth at a place, from whence they looked down upon a straight pillar of light, stretching across the whole heaven and earth, more like the rainbow than anything else, only brighter and clearer. This they reached, when they had gone forward a days journey; and, arriving at the centre of the light, they saw that its extremities were fastened by chains to the sky. For this light binds the sky together, like the hawser that strengthens a trireme, and thus holds together the whole revolving universe. To the extremities is fastened the distaff of Necessity, by means of which all the revolutions of the universe are kept up. The shaft and hook of this distaff are made of steel; the whorl is a compound of steel and other materials. The nature of the whorl may be thus described. In shape it is like an ordinary whorl; but from Ers account we must picture it to ourselves under the form of a large hollow whorl, scooped out right through, into which a similar, but smaller, whorl is nicely inserted, like those boxes which fit into one another. In the same way a third whorl is inserted within the second, a fourth within the third, and so on to four more. For in all, there are eight whorls, inserted into one another, each concentric circle showing its rim above the next outer, and all together forming one solid whorl embracing the shaft, which is passed right through the centre of the eighth. The first and outermost whorl has the broadest rim; the sixth has the next broadest; then comes the fourth; then the eighth; then the seventh; then the fifth; then the third; and the second has the narrowest rim. The rim of the greatest whorl exhibits a variety of colors; that of the seventh is most brilliant; that of the eighth derives its color from the reflected light of the seventh; that of the second and that of the fifth are similar, but of a deeper color than the others; the third has the palest color; the fourth is rather red; and the sixth is almost as pale as the third. Now the distaff as a whole spins round with uniform velocity; but while the whole revolves, the seven inner circles travel slowly round in the opposite direction; and of them the eighth moves quickest, and after it the seventh, sixth and fifth, which revolve together; the fourth, as it appeared to them, completes its revolution with a velocity inferior to the last mentioned; the third ranks fourth in speed; and the second, fifth. The distaff spins round upon the knees of Necessity. Upon each of its circles stands a siren, who travels round with the circle, uttering one note in one tone; and from all the eight notes there results a single harmony. At equal distances around sit three other personages, each on a throne. These are the daughters of Necessity, the Fates, Lachesis, Clotho, and Atropos; who, clothed in white robes, with garlands on their heads, chant to the music of the sirens, Lachesis the events of the past, Clotho those of the present, Atropos those of the future. Clotho with her right hand takes hold of the outermost rim of the distaff, and twirls it altogether, at intervals; and Atropos with her left hand twirls the inner circles in like manner; while Lachesis takes hold of each in turn with either hand. Now the souls, immediately on their arrival, were required to go to Lachesis. An interpreter first of all marshaled them in order, and then having taken from the lap of Lachesis a number of lots and plans of life, mounted; high pulpit, and spoke as follows; Thus saith the maiden Lachesis, the daughter of Necessity. Ye short-lived souls, a new generation of men shall here begin the cycle of its mortal existence. Your destiny shall not be allotted to you, but you shall choose it for yourselves. Let him who draws the first lot be the first to choose a life, which shall be his irrevocably. Virtue owns no master; he who honors her shall have more of her, and he who slights her, less. The responsibility lies with the chooser. Heaven is guiltless. Having said this, he threw the lots down upon the crowd; and each spirit took up the one which fell by his side, except Er himself, who was forbidden to do so. Each, as he took up his lot, saw what number he had drawn. This done, the plans of life, which far outnumbered the souls that were present, were laid before them on the ground. They were of every kind. There were lives of all living things, and among them every sort of human life. They included sovereignties, of which some were permanent, and others were abruptly terminated and ended in poverty and exile and beggary. There were also lives of famous men, renowned either for beauty of person and feature, for bodily strength and skill in games, or else for high birth and the merits of ancestors; and in the same way there were lives of undistinguished men, and likewise lives of celebrated and uncelebrated women. But no settled character of soul was included in them, because with the change of life, the soul inevitably becomes changed itself. But in every other respect the materials were very variously combined, wealth appearing here, and poverty there; disease here, and health there; and here again a mean between these extremes. This, my dear Glaucon, is apparently the moment when everything is at stake with a man; and for this reason, above all others, it is the duty of each of us diligently to investigate and study, to the neglect of every other subject, that science which may haply enable a man to learn and discover, who will render him so instructed as to be able to discriminate between a good and an evil life, and according to his means to choose, always and everywhere, that better life, by carefully calculating the influence which the things just mentioned, in combination or in separation, have upon real excellence of life; and who will teach him to understand what evil or good is wrought by beauty tempered with poverty or wealth, and how the result is affected by the state of soul which enters into the combination; and what is the consequence of blending together such ingredients as high or humble birth, private or public life, bodily strength or weakness, readiness or slowness of apprehension, and everything else of the kind, whether naturally belonging to the soul or accidentally acquired by it; so as to be able to form a judgment from all these data combined, and, with an eye steadily fixed on the nature of the soul, to choose between the good and the evil life, giving the name of evil to the life which will draw the soul into becoming more unjust, and the name of good to the life which will lead it to become more just, and bidding farewell to every other consideration. For we have seen that in life and in death it is best to choose thus. With iron resolution must he hold fast this opinion when he enters the future world, in order that, there as well as here, he may escape being dazzled by wealth and similar evils; and may not plunge into usurpations or other corresponding courses of action, to the inevitable detriment of others, and to his own still heavier affliction; but may know how to select that life which always steers a middle course between such extremes, and to shun excess on either side to the best of his power, not only in this life, but also in that which is to come. For, by acting thus, he is sure to become a most happy man.

To return; the messenger from the other world reported that on the same occasion the Interpreter spoke to this effect; Even the last comer, if he chooses with discretion and lives strenuously, will find in store for him a life that is anything but bad, with which he may well be content. Let not the first choose carelessly, or the last despond. As soon as he had said these words, the one who had drawn the first lot advanced, and chose the most absolute despotism he could find; but so thoughtless was he, and greedy, that he had not carefully examined every point before making his choice; so that he failed to remark that he was fated therein, amongst other calamities, to devour his own children. Therefore, when he had studied it at his leisure, he began to beat his breast and bewail his choice; and, disregarding the previous admonitions of the Interpreter, he laid the blame of his misfortune not upon himself, but upon Fortune and Destiny, and upon any body sooner than himself. He was one of those who had come from heaven, and had lived during his former life under a well-ordered constitution, and hence a measure of virtue had fallen to his share through the influence of habit, unaided by philosophy. Indeed, according to Ers account, more than half the persons similarly deluded, had come from heaven; which is to be explained by the fact of their never having felt the discipline of trouble. For the majority of those who came from the earth did not make their choice in this careless manner, because they had known affliction themselves, and had seen it in others. On this account, and also through the chances of the lot, most of the souls exchanged an evil destiny for a good, or a good destiny for an evil. But if a man were always to study wisdom soundly, whenever he entered upon his career on earth, and if it fell to his lot to choose anywhere but among the very last, there is every probability, to judge by the account brought from the other world, that he would not only be happy while on earth, but also that he would travel from this world to the other and back again, not along a rough and subterranean, but along a smooth and heavenly road. It was a truly wonderful sight, he said, to watch how each soul selected its. life, a sight, at once melancholy, and ludicrous, and strange. The experience of their former life generally guided the choice. Thus he saw the soul, which had once been that of Orpheus, choosing the life of a swan, because from having been put to death by women, he detested the whole race so much, that he would not consent to be conceived and born of a woman. And he saw the soul of Thamyras choosing the life of a nightingale. He saw also a swan changing its nature, and selecting the life of a man; and its example was followed by other musical animals. The soul that drew the twentieth lot chose a lions life. It was the soul of Ajax the son of Telamon, who shrunk from becoming a man, because he recollected the decision respecting the arms of Achilles. He was followed by the soul of Agamemnon, who had been also taught by his sufferings to hate mankind so bitterly, that he adopted in exchange an eagles life. The soul of Atalanta, which had drawn one of the middle lots, beholding the great honors attached to the life of an athlete, could not resist the temptation to take it up. Then he saw the soul of Epeus the son of Panopeus, assuming the nature of a skilful work-woman. And in the distance, among the last, he saw the soul of the buffoon Thersites putting on the exterior of an ape. It so happened that the soul of Odysseus had drawn the last lot of all. When he came up to choose, the memory of his former sufferings had so abated his ambition, that he went about a long time looking for a quiet retired life, which with great trouble he discovered lying about, and thrown contemptuously aside by the others. As soon as he saw it, he chose it gladly, and said that he would have done the same, if he had even drawn the first lot. In like manner some of the other animals passed into men, and into one another, the unjust passing into the wild, and the just into the tame; and every kind of mixture ensued.

Now, when all the souls had chosen their lives in the order of the lots, they advanced in their turn to Lachesis, who dispatched with each of them the Destiny he had selected, to guard his life and satisfy his choice. This Destiny first led the soul to Clotho in such a way as to pass beneath her hand and the whirling motion of the distaff, and thus ratified the fate which each had chosen in the order of precedence. After touching her, the same Destiny led the soul next to the spinning of Atropos, and thus rendered the doom of Clotho irreversible. From thence the souls passed straightforward under the throne of Necessity. When the rest had passed through it, Er himself also passed through; and they all travelled into the plain of Forgetfulness, through dreadful suffocating heat, the ground being destitute of trees and of all vegetation. As the evening came on, they took up their quarters by the bank of the river of Indifference, whose water cannot be held in any vessel. All persons are compelled to drink a certain quantity of the water; but those who are not preserved by prudence drink more than the quantity; and each, as he drinks, forgets everything. When they had gone to rest, and it was now midnight, there was a clap of thunder and an earthquake; and in a moment the souls were carried up to their birth, this way and that, like shooting stars. Er himself was prevented from drinking any of the water; but how, and by what road, he reached his body, he knew not; only he knew that he suddenly opened his eyes at dawn, and found himself laid out upon the funeral-pyre.

And thus, Glaucon, the tale was preserved, and did not perish; and it may also preserve us, if we will listen to its warnings; in which case we shall pass prosperously across the river of Lethe, and not defile our souls. Indeed, if we follow my advice, believing the soul to be immortal, and to possess the power of entertaining all evil, as well as all good, we shall ever hold fast the upward road, and devotedly cultivate justice combined with wisdom; in order that we may be loved by one another and by the gods, not only during our stay on earth, but also when, like conquerors in the games collecting the presents of their admirers, we receive the prizes of virtue; and, in order that both in this life and during the journey of a thousand years which we have described, we may never cease to prosper.

THE END.

# Republic Of Plato.

Translated by Davis, Henry

## BOOK I.

Socrates;
Cephalus;
Glaucon;
Adimantus;
Polemarchus;
Thrasymachus.

Socrates:: I went down yesterday to the Piræus, with Glaucon, son of Ariston, to pay my devotion to the goddess,—and wishing, at the same time, to observe in what manner they would celebrate the festival, as they were now to do so for the first time. The procession of the natives themselves, indeed, seemed beautiful; yet that which the Thracians conducted appeared not less elegant. After we had paid our devotions, and seen the solemnity, we were going back to the city, when Polemarchus, son of Cephalus, observing us from a distance, hurrying home, bid his boy run and tell us to wait for him; and the boy, taking hold of my robe behind, said:—

Boy:: Polemarchus desires you to wait.

Socrates:: I turned then and asked, where he was.

Boy:: He is coming after you, but pray wait for him.

Glaucon:: Yes, we will wait:

Socrates:: and just afterwards came Polemarchus and Adimantus, the brother of Glaucon, and Niceratus, son of Nicias, and some others, as from the procession.

Polemarchus:: Socrates, you seem to me to be hurrying to the city, as on your return.

Socrates:: Aye, you do not make a bad guess.

Polemarchus:: See you, then, how many we are?

Socrates:: Yes, of course.

Polemarchus:: Well, then, you must either prove yourselves stronger than these, or else remain here.

Socrates:: One expedient, is still left; namely, to persuade you that you should let us go.

Polemarchus:: How can you possibly persuade such as will not hear?

Glaucon:: By no means.

Polemarchus:: Make up your mind then, that we will not hear.

Adeimantus:: But know you not, that in the evening there is to be a torch-race on horseback to the goddess?

Socrates:: On horseback; surely, this is a novelty. Are they to have torches, and to hand them to one another, contending together on horseback;—or how do you mean?

Polemarchus:: Just so. And besides, they will perform a nocturnal solemnity well worth seeing;—for we shall rise after supper and see it the night festival, and shall be there with many of our young friends, and have a chat. Do you also stay and do the same.

Glaucon:: It is right, I think, that we should stay.

Socrates:: Well,—if you please, we will so.

We went home therefore to Polemarchus' house, and there we found, both Lysias and Euthydemus, brothers of Polemarchus,—likewise Thrasymachus the Chalcedonian, Charmantides the Pæoneian, and Clitophon the son of Aristonymus.

Cephalus, the father of Polemarchus, was likewise in the house; and he seemed to me to have become a good deal aged, for I had not seen him for a long time.

He was sitting crowned on a cushioned seat; for he had been offering sacrifice in the inner court. So we sat down by him; for some seats stood there in a circle. Immediately, therefore, on seeing me, Cephalus saluted me, and said:

Cephalus:: Socrates, you do not often come down to us to the Piraeus, though you ought; for, could I still easily go up to the city, there would have been no need for you to come hither, but we should have gone up to you. As it is, however, you should come hither more frequently; for be assured that with me, the more bodily pleasures decay, the more also do the desires and pleasures of conversation increase. Do not then fail us, but accompany these youths, and resort hither, as to friends, and very dear friends too.

Socrates:: As for me, Cephalus, I am delighted to converse with persons well advanced in years; for it appears to me a duty to learn from them, as from persons who have gone before us, on a road which we too must necessarily travel, what kind of road it is,—whether rough and difficult, or level and easy. Moreover, I would gladly learn from you as you are now at that time of life which the poets call the threshold of old age, what your opinion of it is, whether it be a burdensome part of life, or how you describe it.

Cephalus:: By Zeus! I will tell you, Socrates, what I, for my part, think of it; for several of us, who are of the same age, frequently meet together in the same place, observing the old proverb. Most of us, therefore, when we are together, complain of missing the pleasures of youth, calling to remembrance the pleasures of love, those of drinking and feasting, and such like: and they are mightily in dudgeon, as being bereaved of some great things,—having once lived happily, but now scarce living at all. Some of them, too, bemoan the contempt which old age meets with from intimate friends: and, on this account, they whine about old age, as being the cause of so many of their ills. To me, however, Socrates, these men seem not to blame the real cause; for, if this were the cause, I myself likewise should have suffered these very same things through old age,—and all others, likewise, who have come to these years. Now I have met with several not thus affected; and particularly I was once in company with Sophocles the poet, when he was asked by some one: How, do you feel, Sophocles, as to the pleasures of love; are you still able to enjoy them? Softly, friend;—most gladly, indeed, have I escaped from these pleasures, as from some furious and savage master. To me, then, he, at that time, seemed to speak well, and now not less so: for, on the whole, as respects such things there is in old age great peace and freedom; because, when the appetites cease to be vehement and have let go their hold, what Sophocles said, most certainly happens; we are delivered from very many, and those too, furious masters. With relation to these things, however, and what concerns our intimates, there is one and the same cause; which is, not old age, Socrates, but the disposition or different men: for, if they be discreet and moderate, even old age is but moderately burdensome: but if not, Socrates,—to such an one, both old age and youth are grievous.

Socrates:: Delighted to hear him say these things, and wishing him to discourse further, I urged him, and said: I fancy, Cephalus, the generality will not agree with you in these opinions; but will imagine that you bear old age easily, not owing to your natural bias, but from possessing much wealth; for the rich, say they, have many consolations.

Cephalus:: True; they do not agree with me; and there is something in what they say, yet not so much as they imagine. The saying of Themistocles, however, is just; who, when the Seriphian reviled him, and said, that he was honored, not on his own account, but on account of his country, replied, that neither would himself have been renowned, had he been a Seriphian, nor would he, the Seriphian, had he been an Athenian. To those likewise, who are not rich and bear old age with impatience, the same saying fairly applies;—that neither would the worthy man bear old age with poverty quite easily, nor would he who is unworthy, though enriched, ever be agreeable to himself.

Socrates:: But, tell me, Cephalus; was the greater part of what you possess, left you, or did you acquire it yourself?

Cephalus:: Somewhat, Socrates, I have acquired: as to money-getting I am in a medium between my grandfather and my father: for my grandfather of the same name with myself, who was left almost as much property as I possess at present, increased it manifold; while my father Lysanias made it yet less than it is now: I, on the other hand, am content, if I can leave my sons here not less, but some little more than I received.

Socrates:: I asked you, for this reason,—because you seem to me to have no excessive love for riches; and this is generally the case with those who have not acquired them; while those who have acquired them themselves, are doubly fond of them: for, as poets love their own poems, and as parents love their own children,—in the same manner, too, those who have enriched themselves, value their wealth, as their own production, as well as for its utility,—on which ground it is valued by others.

Cephalus:: True.

Socrates:: Aye, entirely so. But further, tell me this;—what do you conceive to be the greatest good realized through the possession of extensive property?

Cephalus:: That, probably, of which I shall not persuade the generality, were I even to mention it. For, be assured, Socrates, that, after a man begins to think he is soon to die, he becomes inspired with a fear and concern about things, that had not entered his head before: for those stories concerning a future state, which tell us, that the man who has been unjust here must be punished hereafter, have a tendency, much as he formerly ridiculed them, to trouble his soul at such a time with apprehensions, that they may be true; and the man, either through the infirmity of old age, or being now, as it were, in closer proximity to them, views them more attentively, and consequently becomes full of suspicion and dread, and reflects and considers whether he has in any thing done any one a wrong. That man, then, who discovers in his own life much of iniquity, and, like children, constantly starting in his sleep, is full of terrors, and lives on with scarce a hope of the future. But with the man who is not conscious of any such iniquity;

Hope, the solace of old age,
Is ever present.

As Pindar says: for this, Socrates, he has beautifully expressed, that whoever lives a life of justice and holiness;

With him to cheer his heart, the nurse of age,
Sweet hope abides, companion blest, that sways
With power supreme the changeful mind of man.

In this he speaks well, and with great elegance. In conformity with this thought, therefore, I deem the possession of riches to be chiefly valuable, not to every man indeed, but to the man of worth: for as respects liberating us from the temptation of cheating or deceiving against our will,—or again from departing thither in fear, because we owe either sacrifices to God, or money to man,—for this, indeed, the possession of money has great advantages. It has many other also;—but for my part, Socrates, that seems not the least, among all others, which proves its high advantage to a man of understanding.

Socrates:: You speak admirably, Cephalus:—but this very thing, *Justice*,—shall we call it Truth, simply, and the restoring what one has received from another,—or shall we say, that it is possible to do the very same things at one time justly and at another unjustly? My meaning is somewhat as follows: Every one would probably be of opinion, that if a man received arms from a friend in sound mind, and that person should demand them back when mad, it would not be proper to restore such articles, nor would the restorer be just; nor again, would he who, to a man so situated, should willingly tell the whole truth.

Cephalus:: Right.

Socrates:: This, then, is not the definition of justice, namely, to speak the truth, and restore what one has received.

Polemarchus:: Of course it is, Socrates, if at least we are to believe Simonides.

Cephalus:: However that be, I leave this conversation to you; for I must now go to attend to the sacred rites.

Socrates:: Well then, is not Polemarchus, the heir of your argument?

Cephalus:: Certainly!

Socrates:: Smiling, Cephalus went off to the sacred rites.—

Tell me, then, you who are heir in the conversation, what is it, that you affirm Simonides to have correctly alleged about justice?

Polemarchus:: That to restore to each his due, is just: in saying this, he seems, to me at least, to speak correctly.

Socrates:: Aye, indeed, we cannot easily discredit Simonides; for he is a wise and divine man:—but as to his meaning in this passage, you, Polemarchus, are probably acquainted with it, but I am not; for it is plain he does not mean what we were saying just now,—that, when one has deposited any thing with us, we should return it to him, even if he demand it in his insanity: and yet the thing deposited is in some sense due, is it not?

Polemarchus:: It is.

Socrates:: At least, then, you will grant it must on no account whatever be restored, when a man asks for it in his insanity?

Polemarchus:: True.

Socrates:: Simonides then, it would seem, has some other meaning than this, in saying that to deliver up what is due, is just?

Polemarchus:: Yes,—one quite different: for he is of opinion, that friends ought to do their friends good—not ill.

Socrates:: I understand;—that man does not give back what is due, who restores money deposited with him, if the repayment and receipt be really hurtful, and the receiver and restorer be friends:—is not this what you allege Simonides to say?

Polemarchus:: Surely.

Socrates:: What then?—-are we to give our enemies, also, what may chance to be their due?

Polemarchus:: By all means, what is really due to them; and from an enemy to an enemy, there is due, I imagine, what is fitting too,—namely some evil.

Socrates:: Simonides, then, it would seem, defined the nature of justice somewhat enigmatically, and after the manner of the poets; for it seems he had a notion, that justice consists in giving every one what was expedient for him; and this he called his due.

Polemarchus:: But what is your opinion?

Socrates:: By Zeus, if any one then should ask him thus,—Simonides, what is the art, which, dispensing to certain persons something fitting and due, is called medicine, what, think you, would he answer us?

Polemarchus:: That art, surely, which dispenses drugs to the body, and also meats and drinks.

Socrates:: And what is the art, which, dispensing to certain things something fitting and due, is called cookery?

Polemarchus:: The art which gives seasonings to victuals.

Socrates:: Granted. What then, is that art, which may be called justice, as dispensing to certain persons something fitting and due?

Polemarchus:: If we ought to be at all directed, Socrates, by what has been said above, it is the art which dispenses good offices to friends, and injuries to enemies.

Socrates:: To do good, then, to friends, and ill to enemies, he calls justice?

Polemarchus:: It seems so.

Socrates:: Who then can best serve his friends, when they are sick, and most ill to his enemies, as either in sickness or health?

Polemarchus:: A physician.

Socrates:: And who to those at sea, as respects danger on the sea?

Polemarchus:: A pilot.

Socrates:: But what as to the just man? In what business, and with respect to what action, can he most serve his friends and harm his foes?

Polemarchus:: In fighting in alliance with the one, and against the other,—so far as I think.

Socrates:: Just so; but at any rate, to those who are not sick, Polemarchus, the physician is useless?

Polemarchus:: Aye.

Socrates:: And the pilot, to those who do not sail?

Polemarchus:: He is.

Socrates:: And is the just man, in like manner, useless to those not engaged in war?

Polemarchus:: This, at any rate, is not at all my opinion.

Socrates:: Is justice, then, useful also in time of peace?

Polemarchus:: Yes, useful, too.

Socrates:: And so is agriculture, is it not?

Polemarchus:: Yes.

Socrates:: Towards the getting in of crops?

Polemarchus:: Yes.

Socrates:: And is not shoemaking useful too?

Polemarchus:: Yes.

Socrates:: Towards the possession of shoes, methinks you will say?

Polemarchus:: Certainly.

Socrates:: But what then? For the use or possession of what is it, that would you say justice were useful in time of peace?

Polemarchus:: For contracts, Socrates!

Socrates:: By these contracts do you mean copartnerships, or what else?

Polemarchus:: Copartnerships, certainly.

Socrates:: Well then; is the just man or the dice-player, a good and useful copartner for playing at dice?

Polemarchus:: The dice-player.

Socrates:: But, in the laying of tiles or stones, is the just man a more useful and a better partner than the builder?

Polemarchus:: By no means.

Socrates:: In what copartnership then, is the just man a better copartner than the harper, as the harper is better than the just man for touching the strings of a harp?

Polemarchus:: In one about money, as I imagine.

Socrates:: And yet perhaps, with regard to the use of money, Polemarchus, when it is necessary jointly to buy or sell a horse, then, I should think, the jockey is the better copartner, is he not?

Polemarchus:: He would appear so.

Socrates:: And with respect to a ship, the shipwright or pilot?

Polemarchus:: It seems so.

Socrates:: When is it, then, with respect to the joint application of money, that the just man is more useful than others?

Polemarchus:: When it is to be deposited and be safe, Socrates!

Socrates:: Do you not mean when there is no need to use it, but to leave it in deposit?

Polemarchus:: Certainly.

Socrates:: When money then, is useless, justice is still useful with regard to it?

Polemarchus:: It seems likely.

Socrates:: When, therefore, one wants to put by a pruning-hook, justice is useful, both for a community and for a particular person: but when one wants to use it, then the art of vine-dressing is useful.

Polemarchus:: It seems so.

Socrates:: You will say, likewise, that when a shield or a lyre is to be kept and not used, then justice is useful; but when they are to be used, then the arts of warfare and music?

Polemarchus:: Of course.

Socrates:: And with reference to all other things, when they are to be used, justice is useless; but when they are not to be used, it is useful?

Polemarchus:: It seems so.

Socrates:: Justice, then, my friend, can be no very important matter, if it is useful only in respect of things not to be used. But let us consider this matter:—is not he who is the cleverest at striking in a fight, whether with the fists or some other way, the cleverest likewise, in self-defense?

Polemarchus:: Certainly.

Socrates:: And as to the person who is clever in warding off and escaping from a distemper, is he not very clever also in bringing it on?

Polemarchus:: So I suppose.

Socrates:: And he too the best guardian of a camp, who can steal the counsels, and the other operations of the enemy?

Polemarchus:: Certainly.

Socrates:: Of whatever, then, any one is a good guardian, of that likewise he is a clever thief.

Polemarchus:: It seems so.

Socrates:: If, therefore, the just man be clever in guarding money, he is clever likewise in stealing.

Polemarchus:: So it would seem, from this reasoning.

Socrates:: The just man, then, has been shown to be a sort of thief; and it is likely you have learned this from

Homer; for he not only admires Autolycus, the maternal-grandfather of Ulysses, but says, that he was distinguished beyond all men for thievishness and swearing. Justice, then, seems in your opinion as well as in that of Homer and Simonides, to be a sort of thieving carried on for the benefit of our friends on the one hand, and for the injury of our enemies on the other:—did not you say so?

Polemarchus:: No, by Zeus, I did not; nor, indeed, do I any longer know what I was saying:—yet it is still my opinion, that justice benefits friends, but injures foes.

Socrates:: But tell me, whether you pronounce such to be friends, as seem to be honest; or such merely as are so, though not seeming so;—and in the same way as to enemies?

Polemarchus:: It is reasonable, to love those whom one deems honest, and to hate those one deems wicked.

Socrates:: But do not men fall into error on this point, so that many appear to them honest who are not so, and many the contrary?

Polemarchus:: Yes, they do.

Socrates:: To such as these, then, the good are enemies, and the bad friends?

Polemarchus:: Certainly.

Socrates:: But still is it, in that case, just for them to benefit the wicked, and hurt the good?

Polemarchus:: So it seems.

Socrates:: The good, moreover, are just, and incapable of doing any ill.

Polemarchus:: True.

Socrates:: According to your argument, then, is it just to do those harm, who do no harm themselves?

Polemarchus:: By no means think that, Socrates; for that opinion seems to be vicious.

Socrates:: With respect to the unjust, then, is it right to injure these, but to do good to the just?

Polemarchus:: This opinion seems fairer than the other.

Socrates:: To many, then, it will occur to think, Polemarchus,—that is, to as many as have formed wrong opinions of men,—that they may justly hurt their friends for they are wicked to them, and, on the other hand, benefit their enemies, inasmuch as they are good:—and thus we shall state the very reverse of what we alleged Simonides to say.

Polemarchus:: That is precisely the case:—but, let us change our definition; for we seem not to have rightly defined a friend and a foe.

Socrates:: How were they defined, Polemarchus?

Polemarchus:: That he who seems honest, is a friend.

Socrates:: How then are we now to alter our definition?

Polemarchus:: That the person, who seems, and also is honest, is a friend; but that he who is apparently honest, but not really so, seems to be, yet is not really a friend: the definition, too, respecting an enemy, exactly corresponds.

Socrates:: The good man, according to this reasoning, will, it seems, be a friend; and the wicked man a foe?

Polemarchus:: Yes.

Socrates:: Do you bid us then make an addition to our former definition of justice, by saying that it is just to serve a friend and harm a foe:—and are we now to say, in addition to this, that it is just to serve a friend who is good, but to hurt an enemy who is bad?

Polemarchus:: This last, seems to me perfectly well expressed.

Socrates:: Is it the just man's part, then, to hurt any one mortal whatever?

Polemarchus:: By all means; the wicked at least, and his enemies, he ought certainly to injure.

Socrates:: And horses, when hurt, do they become better or worse?

Polemarchus:: Worse.

Socrates:: Do they so, as regards the virtue of dogs or horses?

Polemarchus:: That of horses.

Socrates:: And, do not dogs, when hurt, become worse as regards the virtue of dogs, but not of horses?

Polemarchus:: Necessarily so.

Socrates:: As to men, then, friend, may we not likewise say, that when hurt, they become worse with reference to man's virtue?

Polemarchus:: Certainly.

Socrates:: But is not justice a human virtue?

Polemarchus:: This too we must allow.

Socrates:: It follows, then, friend, that those men who are hurt become more unjust?

Polemarchus:: It seems so.

Socrates:: Can musicians, then, by music, make men unmusical?

Polemarchus:: Impossible.

Socrates:: Or horsemen, by horsemanship, make men unskilled in horsemanship?

Polemarchus:: They cannot.

Socrates:: Is it possible, either, that by justice the just can make men unjust; or in general that by virtue, the good can make men wicked?

Polemarchus:: It is impossible.

Socrates:: Yes, for it is not, methinks, the effect of heat to make cold, but the effect of its contrary?

Polemarchus:: Yes.

Socrates:: Nor of drought to make moist, but that of its contrary?

Polemarchus:: Certainly.

Socrates:: Neither is it the part of a good man to hurt, but that of his contrary?

Polemarchus:: It appears so.

Socrates:: But, at any rate, the just is good?

Polemarchus:: Certainly.

Socrates:: Neither, then, is it the part of a just man, Polemarchus, to hurt either friend or any other, but that of his contrary, the unjust man.

Polemarchus:: In all respects, Socrates, you seem to reason truly.

Socrates:: If, then, any one affirms it just to give every one his due, and consequently thinks this within himself, that injury is due from a just man to enemies, but service to friends,—be was not wise who said so, for he spoke not the truth:—for in no case has the justice been proved of injuring any one at all.

Polemarchus:: I agree.

Socrates:: You and I then will jointly dispute the point, if any one allege, that Simonides, or Bias, or Pittacus, or any other of those wise and happy men said so.

Polemarchus:: I am ready, for my part, to take part in this discussion.

Socrates:: But know you, whose saying I conceive it to be,—that it is just to serve friends, and hurt enemies?

Polemarchus:: Whose?

Socrates:: I conceive it to be Periander’s, or Perdiccas’s, or Xerxes’s, or Ismenius’s, the Theban, or of some other rich man, who thought himself mightily important.

Polemarchus:: You say most truly.

Socrates:: Be it so:—but as this has not been shown to be justice nor the just, what else may one say it is? Now Thrasymachus had frequently during our discourse been on the point of breaking in upon the discussion with some objection, but was hindered by the sitters-by, who wanted to hear out the conversation. When, however, we came to a pause, and after my making these last remarks, he could no longer keep quiet; but, taking his spring like a wild beast, attacked us, as if he would tear us in pieces. Both myself and Polemarchus were frightened and terror-struck.

But he, raising his voice in the midst, cried out:—

Thrasymachus:: What is this, Socrates, which has so long possessed you; and why do you thus play the fool together, conceding mutually to one another? But if in particular you really want to know the nature of justice, do not only ask questions, and value yourself in refuting the answers you may get, well knowing that it is easier to ask than to answer; but answer yourself, and state your own view of the nature of justice. And take care that you do not tell me that it is what is fit, or what is due, or what is profitable, or what is gainful, or what is expedient; but, whatever you mean, express it plainly and accurately; for I will not allow you to utter such trifles as these.

Socrates:: I was astounded on hearing this; and when I looked at him, I was frightened; and, methinks, had I not perceived him before he perceived me, I should have become speechless. But just when he began to grow fierce under our discussion, I observed him first, so that I was now able to answer him, and said, somewhat in a flutter:—Be not hard on us, Thrasymachus; if I and he Polemarchus err in the working out of our arguments, be well assured we err unwittingly: for, think not, that if we were searching for gold, we would ever wittingly yield to one another in the search, thus frustrating all chance of discovering it, and yet searching for justice,—a matter far more valuable than gold, foolishly make concessions to each other, and not labor with the utmost ardor for its discovery:—think you so, friend?

Thrasymachus:: Nay, methinks, we could not.

Socrates:: That we should be sympathized with by your clever persons is far more to be expected then, than that we should be treated with contempt.

On hearing this he, Thrasymachus, gave a disdainful sort of laugh, and said:—

Thrasymachus:: By Heracles, this is Socrates' wonted irony; and this I both knew, and foretold to these here,—that you never incline to answer, but use your irony, and do any thing rather than answer, if any one asks you any thing.

Socrates:: Aye; you are a wise man, Thrasymachus; for you knew well, that if you asked any one, how many make twelve; and, if asking, you should tell him, you must not tell me, man, that twelve are twice six,—or three times four,—or four times three; because I will not admit it, if you are such a trifler; it was plain to you, methinks, that no man would answer one so inquiring. But if he should say to you, What mean you, Thrasymachus, may I not answer in any of these ways you have told me,—not even though the real answer happen to be one of them; but am I rather to say something else than the truth? Or, how is it you mean? What would you say to him in reply to these things?

Thrasymachus:: If they were alike, I should give an answer; for the one, forsooth, is like the other.

Socrates:: That is no real objection; but even if it be not like, but only appears so to him who has been asked, do you think he would the less readily express his opinion, whether we should forbid him or not?

Thrasymachus:: And, will you do so now? Will you state, in reply, some of those things which I forbade you to say?

Socrates:: I should not wonder, if I did, if it appeared so to me on inquiry.

Thrasymachus:: What, then, if I should show you another answer, besides all these about justice, and better, too, than these,—what will you deserve to suffer?

Socrates:: What else, but what the ignorant ought to suffer?—and it is proper, perhaps, to learn from a wise man, I consequently deserve to suffer this.

Thrasymachus:: You are merry now; but besides learning, you must pay money too.

Socrates:: Aye, when I have it.

Glaucon:: We have got some: but, as for the money, Thrasymachus, say on, for all of us will club for Socrates.

Thrasymachus:: By all means, I think, in order that Socrates may go on in his usual manner,—not answer himself, but when another answers, take up the discourse and confute.

Socrates:: How, then, in the first place, my good fellow, can a man answer, when he neither knows, nor pretends to know; and when, supposing him to have any opinion at all about these matters, he is forbidden to say what he thinks by no ordinary person? But it is more reasonable, then, that you speak, as you say you know, and can tell us. Do not refuse, then, but oblige me by answering, and do not begrudge instructing Glaucon here, and the rest of the company.

On my saying this, both Glaucon and the rest of the company entreated him not to decline it:—and Thrasymachus in particular, was evidently most anxious to speak, in order to gain applause, reckoning he had a mighty clever answer to make, and pretending to be earnest that I should be the answerer; but at last he agreed.

Thrasymachus:: Now, this, forsooth, is the wisdom of Socrates, that he himself is unwilling to teach, but goes about learning from others, and gives no thanks for it.

Socrates:: That I learn from others, Thrasymachus, is quite true; but in saying, that I do not thank persons for it, you are wrong. I pay as much as I am able, and I can only give them praise, for money I have none; but how readily I do this, when any one appears to me to speak well, you shall perfectly know directly, whenever you make your answer; for methinks you will speak well.

Thrasymachus:: Hear, then, for I say that the just is nothing else but what is expedient for the strongest. But why do not you commend?—Ah! you do not like that.

Socrates:: Let me learn first, what it is you are talking about; for as yet I know not. That which is expedient for the strongest you say, is the just. And what, at all, is it that you are talking of now, Thrasymachus? for you certainly do not mean any thing like this. If Polydamas, the wrestler, be stronger than we, and if beef be better for his body, this food is likewise both just and beneficial to us, who are weaker than himself.

Thrasymachus:: You are a saucy fellow, Socrates, and lay hold of my argument just on that side where you may damage it most.

Socrates:: By no means, my good fellow; but say more plainly what is your meaning.

Thrasymachus:: Know you not, then, that with reference to States, some are tyrannical, others democratical, and others aristocratical?

Socrates:: Of course.

Thrasymachus:: And is not the governing part of each State the more powerful?

Socrates:: Certainly: and every government makes laws precisely to suit itself,—a democracy, democratic laws; a tyranny, tyrannic; and the rest in like manner:—and when they have made them, they declare that to be just for the governed, which is advantageous for themselves, and any one who transgresses it, they punish as one acting contrary both to law and justice.

Thrasymachus:: This, then, most excellent Socrates, is what I say, that in all States the same thing constitutes justice, viz., what is expedient for the established government. This, then, is the fact with him who reasons rightly, that in all cases whatever that same is just which is expedient for the more powerful.

Socrates:: Now, I understand what you mean. But as to its truth or otherwise, I will try to find out. As for the expedient, then, even you yourself, Thrasymachus, have affirmed it to be the just; and yet, though you forbade me to give the answer, still you are adding the expression of the more powerful.

Thrasymachus:: Quite a trifling addition, perhaps.

Socrates:: It is not clear yet, whether it is small or great; but it is clear that we must inquire whether you speak the truth, since I, too, acknowledge that the just is something that is expedient; but you say, in addition, that it is that also which belongs to the most powerful. This I am not sure of; but that is what we have to inquire.

Thrasymachus:: Inquire then.

Socrates:: We will do so:—and, tell me,—do you not say, that it is just to obey governors?

Thrasymachus:: Yes, I do.

Socrates:: Are the governors in the several states infallible, or are they capable of erring?

Thrasymachus:: Certainly, they are liable to err.

Socrates:: When they set about making laws, then, do they not make some of them right, and some of them wrong?

Thrasymachus:: I think so.

Socrates:: To make them right, then, is to make them expedient for themselves, and to make them not right, is that inexpedient;—or how mean you?

Thrasymachus:: Just so.

Socrates:: And what they enact is to be observed by the governed; and this is what is just?

Thrasymachus:: Of course.

Socrates:: According to your reasoning, then, it is just, to do what is expedient to the stronger, while the contrary is what is not expedient:—what say you?

Thrasymachus:: I am of the same opinion as yourself.

Socrates:: But let us inquire better. Is it not granted, that governors in bidding the governed do certain things, may sometimes be in error as to what is best for themselves; and that what the governors enjoin, is just for the governed to do? Have not these truths been granted?

Thrasymachus:: I think so.

Socrates:: Consider also, therefore, that you have allowed it to be just to do what is inexpedient for governors and the more powerful, whenever governors unwillingly enjoin what is ill for themselves; and yet you say, that it is just for the others to do what these enjoin. Must it not necessarily happen, then, most sage Thrasymachus, that, in this case, it may be just to do the contrary of what you say: for that which is the disadvantage of the more powerful, is sometimes enjoined on the inferiors?

Polemarchus:: Yes, by Zeus, these things are quite clear, Socrates.

Clitophon:: Yes, if you bear him witness.

Socrates:: What need, of a witness?—for Thrasymachus himself acknowledges that governors sometimes order what is ill for themselves, and that it is just for the governed to do these things. Aye, Polemarchus; for he laid it down, that it is just to do what is bidden by the governors, and he has also defined that as just, Clitophon, which is expedient for the more powerful; and, having laid down both these propositions, he has granted that the more powerful sometimes bid the inferiors and governed to do what is inexpedient for themselves; and, from these concessions, what is expedient for the more powerful can no more be just than what is not expedient.

Clitophon:: But he alleged, that what was expedient for the strongest was what the strongest judged expedient for himself; this, too, was to be done by the inferior, and this he defined as the just.

Polemarchus:: Aye,—but that was not stated.

Socrates:: There is no difference, Polemarchus; but, if Thrasymachus says so now, so let us understand him. Now tell me, Thrasymachus; was this what you meant by justice,—namely, the advantage of the more powerful, such as appeared so to the more powerful, whether it really were so, or not:—shall we say that you mean this?

Thrasymachus:: Not at all:—for, think you, I call him who errs, the more powerful, at the time he errs?

Socrates:: For my part, I thought you meant this, when you acknowledged that governors were not infallible, but that in some things even they erred.

Thrasymachus:: You are a sycophant, in reasoning, Socrates! For, for instance do you call him a physician, who errs about the treatment of the sick, in respect of that very thing in which he errs; or him a reasoner, who errs in reasoning, at the very time he errs, and with reference to that very error? But, we say, in common language, I fancy, that the physician erred, the reasoner erred, and the grammarian likewise; but in fact I think, each of these, so far as he is what we designate him, never errs; so that, strictly speaking especially as you are a strict reasoner, no artist errs;—for he who errs, errs through defect of science, in what he is not an artist; and hence no artist, or wise man, or governor, errs, in so far as he is a governor. Yet every one would say 'the physician erred,' and 'the governor erred,' You must understand, then, that it was in this way I just now answered you. But the most accurate answer is this:—that the governor, in as far as he is governor, errs not; and as he does not err, he enacts that which is best for himself, and this must be observed by the governed. So that as I said at the beginning, I call justice the doing that which is for the advantage of the strongest *i.e.* the best.

Socrates:: Be it so, Thrasymachus;—but do I seem to you to act the sycophant?

Thrasymachus:: Aye, surely.

Socrates:: Do you think that I insidiously mislead you in the argument, to put the question to you as I did?

Thrasymachus:: I know it well, and you shall gain nothing by it; for neither shall you mislead me unawares, nor can you unawares get the better of me in argument.

Socrates:: I shall not attempt it, my excellent friend, but, that nothing of this kind may happen to us again,— define in which way you speak of a ruler, and superior, according only to common talk, or in the strict sense of the word, as you just now said, he, whose advantage, in that he is the more powerful, it is just for the inferior to observe.

Thrasymachus:: I speak of him, who is a ruler in the strictest sense of the word. For this now abuse and calumniate me, as you like. I do not deprecate your doing so; but you are quite unable.

Socrates:: Do you think me so mad, as to attempt to shave a lion, and traduce Thrasymachus?

Thrasymachus:: You have just attempted it, but with no effect.

Socrates:: Enough of such matters; but tell me he who is, strictly speaking, a physician, whom you just now mentioned, is he a gainer of money, or a tender of the sick?—and mind—tell us of him who is really a physician.

Thrasymachus:: A tender of the sick.

Socrates:: But what of the pilot? is he who is really a pilot, a master of sailors, or a sailor?

Thrasymachus:: A master of sailors.

Socrates:: It matters not, I fancy, that he sails in a ship, and is not to be called a sailor; for he it is not called a pilot from his sailing, but from his art, and his mastery of the sailors.

Thrasymachus:: True.

Socrates:: Has not each of these, then, something that is advantageous for him?

Thrasymachus:: Certainly.

Socrates:: Was not the art then acquired for this very purpose, to seek out and supply to each what is advantageous for him?

Thrasymachus:: For that purpose.

Socrates:: To each of the arts, then, is any other advantage wanting, than to be as perfect as possible?

Thrasymachus:: —How mean you by this question?

Socrates:: If you were to ask me, whether it is sufficient for the body to be a body, or whether it needs something else, I should say, that it certainly does stand in need of something else. For this reason, indeed, has the medicinal art been already invented, because the body is infirm, and it is not sufficient for it to be such as it is:—in order then to supply what is advantageous for it, art has been provided. Do you think then, that I am right, or not, in thus speaking?

Thrasymachus:: Right.

Socrates:: But what then? Is this very art of medicine, or any other whatever, imperfect, as being deficient in a certain virtue; just as the eyes, when deficient as to sight, and the ears as to hearing; and for these reasons need they a certain additional art to seek out and furnish what is expedient for these very organs? Is there then in art itself some imperfection, and does every art need another art, to consider what is expedient for it, and does that which considers again need another, and so on to infinity; or will each art consider what is expedient for itself; or will each need neither itself, nor any other, to consider what is expedient for it with reference to its own imperfection?—For there is no imperfection nor error in any art whatever; nor is it the business of art to seek what is expedient for anything else, but that of which it is the art;—but as for itself, it is infallible and pure, because it is right, so long as each, whatever it is, be an accurate whole:—and consider now, in that same strict sense of the words, whether it be thus or otherwise.

Thrasymachus:: It seems so.

Socrates:: The art of medicine, then, does not consider what is expedient for the art of medicine, but for the body?

Thrasymachus:: Yes.

Socrates:: Nor the art of managing horses, what is expedient for that art, but for horses. Nor any other art for itself for that is needless, but only for that of which it is the art?

Thrasymachus:: So it appears.

Socrates:: However, Thrasymachus, the arts rule and govern that of which they are arts?

He assented to this, though with great difficulty.

No science whatever, then, either considers or dictates what is expedient for the superior, but only what is so for the inferior,—that, namely, which is governed by it?

To this also he at length assented, though he attempted to contend about it. But when he had assented, What else is this, but saying that no physician, so far as he is a physician, either considers or dictates what is expedient for the physician, but only what is expedient for the sick?—For the physician, strictly so called, has been acknowledged to be one who has charge of the body, and is not an amasser of wealth.—Has it not been acknowledged?

He assented.

And likewise that the pilot, so called, is the master of the sailors, and not a sailor?

Thrasymachus:: It has been acknowledged.

Socrates:: Such a pilot and master then, will not consider and dictate what is expedient for the pilot, but what is so to the sailor and the governed?

He acquiesced, but unwillingly.

Nor yet, Thrasymachus, does any other in any government whatever, so far as he is a governor, consider or dictate what is expedient for himself, but only for the governed and those to whom he acts as steward; and, with an eye to this, and to what is expedient and suitable for this, he both says what he says, and does what he does.

When we were at this part of the discussion, and it was evident to all, that the definition of justice stood now quite contrary to that of Thrasymachus, Thrasymachus, instead of replying, said:

Thrasymachus:: Tell me, Socrates, have you a nurse?

Socrates:: What now;—ought you not rather to answer, than put such questions?

Thrasymachus:: Because, forsooth, she neglects you when your nose is stuffed, and does not wipe it when it needs it, you, who as well as she, understand neither about sheep nor shepherd.

Socrates:: What is the meaning of all this?

Thrasymachus:: Because you think that shepherds and herdsmen consider the good of the sheep or oxen, to fatten and tend them, having their eye on something else than their masters good and their own; moreover, that those who rule in cities, those, who rule truly, are somehow differently disposed towards the governed, than a shepherd would be towards sheep, and that they attend day and night to somewhat else than the question, how they shall be gainers themselves; and so far are you from the notion of the just and justice, and the unjust and injustice, that you seem ignorant that both justice and the just are, in reality, a foreign good, expedient for the stronger and ruling party, but positively injurious to the subject and servant,—while injustice, on the contrary, takes the rule of such as are truly simple and just, and the governed do what is expedient for him, since he possesses the most power, and promote his happiness, by serving him, but themselves not at all.—In this case, most simple Socrates, we should consider, that a just man gets less on all occasions than an unjust.—First, in mutual contracts with one another, where a certain party joins with another, you will never find on the dissolution of the partnership, that the just man gets more than the unjust, but less:—then, again, in civil affairs, when public imposts are to be paid, the just man, from equal means, pays more, the other less; and when anything is to be gained, the one gains nothing, the other much; and when each of these holds any public office, if no other loss befalls the just man, at any rate his domestic affairs become deteriorated through neglect, and from the public he derives no benefit, because he is just;—besides which, he becomes hated by his domestics and acquaintance, since he will never serve them, beyond what is just.—But with the unjust man, all the contrary of this occurs; for I maintain, what I lately said, that such an one has a great power of becoming unfairly rich.—Consider the case of this man, therefore, if you would discern how much more it conduces to his private interest to be unjust, rather than just.

This you will most easily of all understand if you come to the most finished injustice, such as renders the unjust man most happy, but the injured and those who are unwilling to do injustice, most wretched.—This, now, is tyranny, which takes away the goods of others, as well by secret fraud as open violence, both things sacred and holy, private and public, and these in no small portions, but all at once.—In all particular cases of such crimes, when a man undisguisedly commits injustice, he is both punished and treated with the greatest ignominy: and as a proof of this, they are called sacrilegious, kidnappers, housebreakers, pilferers, and thieves, according to the several kinds of the wickedness committed.

But when a man, in addition to the property of the citizens, takes prisoners and enslaves the citizens themselves, instead of these ugly names, he is called happy and blest, not only by the citizens, but likewise by all the rest, whoever may get informed that he has committed such enormous injustice;—for those who revile wickedness, revile it—not because they are afraid of doing, but because they are afraid of suffering what is unjust.—Thus, Socrates, is it, that injustice, when it attains a certain point, is both more powerful, more free, and more absolutely despotic than justice: and as I said at the beginning the advantage of the stronger happens to be just, while that is unjust which profits and benefits one's self.

Socrates:: Saying this, Thrasymachus purposed going off, after pouring on our ears, as a bath-keeper, this impetuous and lengthened discourse.

Those present, however, would not suffer him, but forced him to stay and give account of what he had advanced; and I myself, also, strongly urged him, and said: Oh! wonderful Thrasymachus; do you purpose, after throwing on us such strange talk, to go away without rightly instructing us, or informing yourself whether the case be as you say, or otherwise?

Do you think that you are trying to determine some small matter, and not the guide of life, by which each of us being conducted may pass his life most profitably?

Thrasymachus:: Can I think that the case is otherwise?

Socrates:: You seem, at any rate, to care nothing at all about us, nor to be any way concerned whether we shall live well or ill, through our ignorance of what you say you know:—but, my good friend, be so obliging as to show it to us also; nor will the favor be ill-placed, whatever you may bestow on so many of us as are here present. And I, for my part, can say that I am not persuaded, nor do I think, that injustice is more gainful than justice,—not even should we allow it play, and not prevent it doing what it likes. But, my good friend, even supposing him to be unjust and able to do unjustly, either secretly or by open force, yet I at least am not persuaded that injustice is more gainful than justice; and on this point probably some of us here are of the same mind, and not I alone. Persuade us, therefore, sufficiently, my admirable friend, that we are wrong in deeming justice of more value than injustice.

Thrasymachus:: But how, am I to persuade you? for if you are not persuaded by what I have said already, what further can I do for you? Shall I take and implant my arguments in your very soul?

Socrates:: By Zeus, no;—but, first of all, whatever you have said, abide by it: or, if you do change, change openly, and do not deceive us. Now, you see, Thrasymachus—for we will reconsider what has been above said,—that in first defining the true physician, you did not think it needful afterwards, that the true shepherd should strictly keep his flock, but fancy, that so far as he is a shepherd, he may feed his flock without regarding the best interests of the sheep, but rather as some glutton going to feast on them at some entertainment, or to dispose of them as a merchant, and not care for them as a shepherd. The shepherd art, however, has certainly no other care but that for which it is appointed, namely, to afford it what is best, since its own affairs are already so sufficiently provided for, as to be in the very best state without needing any of the shepherd art. So likewise, I, for my part, conceived that there you must necessarily agree with us in this, that every government, in as far as it is government, considers what is best for nothing else but for that which is governed and tended, whether in political or private government. But with respect to rulers in cities, think you that such as are really rulers govern willingly?

Thrasymachus:: No, by Zeus, I do not think so; but I am quite certain.

Socrates:: Why now, Thrasymachus, do you not perceive, as regards all other governments, that no one undertakes them willingly, but men ask for recompense, since the benefits likely to accrue from governing are not to come to themselves, but to the governed? Tell me this, then;—do we not always say that each several art is distinct in this, in having a distinct function? And my admirable friend, do not answer contrary to your opinion, that we may make some real progress.

Thrasymachus:: In this respect, at any rate, it is distinct.

Socrates:: And does not each of them afford us some certain peculiar advantage, and not a common one;—as, for instance, the medicinal, health; the pilot art, safety in sailing,—and the rest in like manner?

Thrasymachus:: Certainly.

Socrates:: And has not the mercenary art mercenary reward? for this is its function. Do you call both the medicinal art and the pilot art one and the same? Or, if you mean to define them strictly, as you proposed, though one in piloting recover his health, on account of the expedience of his going to sea, you will not at all the more on this account call it the medicinal art?

Thrasymachus:: Not at all.

Socrates:: Nor will you call the mercenary art the medicinal, I fancy, though in earning a reward one may recover his health?

Thrasymachus:: No, indeed.

Socrates:: What then? Will you call the medicinal the mercenary art, if, in performing a cure, one earn a reward?

Thrasymachus:: No.

Socrates:: Have we not acknowledged, then, that each art has its peculiar advantage?

Thrasymachus:: Granted.

Socrates:: Whatever, then, be that advantage, with which all artists in common are advantaged, it must plainly be by using some same thing in common to all, that they are advantaged by it.

Thrasymachus:: It seems so.

Socrates:: Still, we say that the advantage accruing to artists from receiving a reward comes to them from the adoption of a mercenary art.

He acquiesced unwillingly.

Socrates:: This, then, is not the advantage which each receives from his own art, namely, the receiving a reward?—But if we strictly consider it, the art of medicine produces health, that of money-getting a reward, masonry a house, and the mercenary art accompanying it, a reward; and all the others in like manner,—every one performs its own work, and confers advantage on that for which it was designed; but if it meet not with a reward, is the artist benefited at all by his art?

Thrasymachus:: It appears not.

Socrates:: But confers he no service when he works gratuitously?

Thrasymachus:: I think he does.

Socrates:: This, then, is now evident, Thrasymachus, that no art or government provides what is advantageous for itself; but, as we said long ago, it both provides and prescribes for the governed what is advantageous to him, having in view the interest of the inferior and not that of the more powerful. For these reasons, then, friend Thrasymachus, I even just now said, that no one is willing to govern and undertake the setting right of others' troubles without asking a reward; because, whoever intends to practice his art well, never himself does nor enjoins on others what is best for himself, if he enjoins according to his art, but rather what is best for the governed; for which reason, therefore, as it seems, a recompense must be given to those who are likely to be willing governors,—either money, or honor,—or punishment, on the other hand, if a man will not govern.

Glaucon:: How say you this, Socrates?—the two rewards, indeed, I understand; but the punishment, that you mention, and how you can speak of it under the head of reward, I know not.

Socrates:: As for the reward, then, of the best of men, do you not understand why the most worthy govern, when they are willing to govern:—or, do you not know, that to be ambitious and covetous, is both deemed a reproach, and is so?

Glaucon:: I do.

Socrates:: For these reasons, then, good men are not willing to govern, either for money or for honor; inasmuch as they neither wish to be called mercenary, for openly making gain by governing,—nor thieves, for taking clandestinely from what belongs to their office:—nor again are they willing to govern for honor, since they are not ambitious. Hence if they are to be induced to govern willingly, there must be laid on them both compulsion and punishment; and hence it seems likely, that a willing undertaking of government, without waiting for compulsion, has been reckoned dishonorable. The greatest part of the punishment, however, in case he is not willing to govern himself, is the being governed by one who is inferior. It is chiefly through fear of this, methinks, that the good govern, when they do govern: and in that case they enter on the government, not as on anything good, or as about to derive any advantage therefrom, but as on a necessary task, and finding none better than, or even like, themselves, to entrust with the government. It seems likely, indeed, that if there were a state of good men, the contest would be, not to govern, as now it is to govern; and, hence, it would be manifest, that the really true governor does not naturally aim at his own advantage, but at that of the governed; so that any one who has sense would rather choose to be benefited by another, than have trouble in benefiting another.

This, therefore, I, for my part, by no means grant to Thrasymachus; that justice is what is expedient for the stronger:—but this, indeed, we shall consider again hereafter.—What Thrasymachus says now, however, seems to me of much more importance,—when he says, that the life of the unjust man is better than that of the just.

You, then, Glaucon, which opinion do you choose; and which of the two seems to you most consistent with truth?

Glaucon:: The life of the just, is in my opinion the more profitable.

Socrates:: Have you heard, how many good things Thrasymachus just now enumerated in the life of the unjust?

Glaucon:: I heard; but I am not persuaded.

Socrates:: Do you wish, then, that we should persuade him if we can find any means of doing so, that there is no truth in what he says?

Glaucon:: How should I not wish it?

Socrates:: If then, by way of opposition, we advance, as argument against argument, how many good things are involved in being just,—and again, he on the other side, and we again rejoin, it will be requisite to compute and estimate what either of us says on either side; and we shall want also some judges to decide thereon. But if, as just now, we investigate these matters, by agreeing with each other, we shall ourselves be both judges and counsel?

Glaucon:: Certainly.

Socrates:: Which of these plans, then, do you choose?

Glaucon:: The latter.

Socrates:: Come then, Thrasymachus;—answer us from the beginning. Say you, that complete injustice is more profitable than complete justice?

Thrasymachus:: Assuredly, I do say so;—and why, too, I have already told you.

Socrates:: Come, now, how can you affirm anything like the following concerning them?—Do you call one of them virtue; and the other vice?

Thrasymachus:: How not?

Socrates:: Is not justice, then, a virtue,—and injustice a vice?

Thrasymachus:: Likely, indeed, that I should say so, facetious man; since I say that injustice is profitable, but justice not so!

Socrates:: What then?

Thrasymachus:: Quite the contrary.

Socrates:: Do you call justice a vice?

Thrasymachus:: No; but a very generous folly.

Socrates:: Do you, then, call injustice a want of principle?

Thrasymachus:: No, but sagacity.

Socrates:: Do the unjust, Thrasymachus, seem to you both wise and good?

Thrasymachus:: Such, at least, as are able to do injustice in perfection, and can subject states and nations to themselves; but you think, perhaps, that I speak of cut-purses. Even such employment as this, is profitable, if concealed; but yet is of no value in comparison with what I just mentioned.

Socrates:: I am not ignorant, of what you mean to say: but at this I am surprised,—that you should reckon injustice as a part of virtue and wisdom, and justice among their contraries.

Thrasymachus:: But, I certainly do reckon it so.

Socrates:: This, my good friend, is somewhat too hard, and it is no longer easy to know what one can say: for if you had alleged that injustice is profitable, and had still allowed it to be a vice, or base, as some others do,—we should have had something to say, speaking according to received opinions. But now it is evident that you will say it is beautiful and strong, and will attribute to it all other properties which we ascribe to the just man, because, forsooth, you have ventured to class it with virtue and wisdom.

Thrasymachus:: You augur very truly.

Socrates:: I must not grudge, however, to pursue our inquiry, so long as I conceive you speak what you really think; for you appear to me, Thrasymachus, without doubt, not to be jesting, but only to speak what you conceive to be the truth.

Thrasymachus:: What difference is it to you, whether I think so, or not;—and why do you not refute my reasoning?

Socrates:: No difference at all:—but try further to reply to this likewise: does one just man appear to you to wish to have more than another just man?

Thrasymachus:: By no means; for otherwise he would not have been accommodating and silly, as we just conceived him.

Socrates:: What; not even in a just action?

Thrasymachus:: No,—not even in one that is just.

Socrates:: But, would he deem it right to overreach the unjust man, and reckon it just; or would he not think it just?

Thrasymachus:: He would both count it just, and deem it right; but yet he would not be able to do it.

Socrates:: That, I do not ask,—but, whether the just man would neither deem it right, nor feel a wish to overreach a just man, but yet would do so to the unjust?

Thrasymachus:: Such is the case.

Socrates:: What, then, would the unjust man do?—Would he deem it right to overreach the just man, even in a just action?

Thrasymachus:: How not, since he deems it right to overreach all men?

Socrates:: With respect, then, to the unjust man and unjust action, will not the unjust man desire to overreach both; and eagerly strive himself to receive most of all?

Thrasymachus:: Such is the fact.

Socrates:: This, then, is what we mean:—the just man does not try to overreach one like himself, but one that is unlike, while the unjust man does so both to one like, and one unlike himself.

Thrasymachus:: You have expressed yourself admirably.

Socrates:: Well, then, the unjust man is both wise and good; but the just man is neither.

Thrasymachus:: Well, again.

Socrates:: In that case, is not the unjust man like the wise and the good, and the just man unlike.

Thrasymachus:: Of course, a person of a certain character is likely to resemble one of like character: and he who is otherwise, not.

Socrates:: Well said:—such an one then, of course, is either of those whom he resembles?

Thrasymachus:: Why doubt it?

Socrates:: Granted, Thrasymachus;—now do you call one man musical, and another unmusical?

Thrasymachus:: I do.

Socrates:: Which of the two do you call wise, and which unwise?

Thrasymachus:: The musical, surely, wise, and the unmusical unwise.

Socrates:: As being wise, then, is he not good; but as unwise, bad?

Thrasymachus:: Yes.

Socrates:: And what as to the physician, is it not the same?

Thrasymachus:: The same.

Socrates:: Do you think, then, my excellent friend, that any musician, when he is tuning a harp, wants to overreach, or deems it right to have more skill than a man who is a musician, in straining and slackening the strings?

Thrasymachus:: Not I.

Socrates:: But what with respect to one unmusical?

Thrasymachus:: He could not help it.

Socrates:: And what as to the physician? In prescribing meats or drinks, would he try to overreach either another physician, or the art he professes?

Thrasymachus:: No, indeed.

Socrates:: But one who is no physician would?

Thrasymachus:: Yes.

Socrates:: Just consider then, as respects all science and ignorance, whether any skilful man, be he who he may, appears to you to have a desire to grasp at, or do, or say more than another skilful man,—and not rather to do the same things, in the same business as one equally skilful with himself?

Thrasymachus:: Aye, it seems, it must be so.

Socrates:: But what, as to him who is unskilled, will not he like to overreach both alike the skilful and the unskilled?

Thrasymachus:: Probably.

Socrates:: But the skilful man is wise?

Thrasymachus:: I admit it.

Socrates:: And the wise, good?

Thrasymachus:: I admit it.

Socrates:: Both the good and the wise, then, will not want to overreach his like, but rather one unlike, and contrary to himself?

Thrasymachus:: It seems so.

Socrates:: But the bad and the ignorant man will want to overreach both his like and his contrary?

Thrasymachus:: It appears so.

Socrates:: In that case, Thrasymachus;—the unjust man desires to overreach both one unlike and one like himself:—did not you say so?

Thrasymachus:: I did.

Socrates:: The just man, however, on his side, will not overreach his like, but one unlike?

Thrasymachus:: Yes.

Socrates:: The just man then, resembles the wise and the good, but the unjust, the evil and the ignorant?

Thrasymachus:: It seems so.

Socrates:: But we agreed, that each of them was such as what he resembled?

Thrasymachus:: We did agree so.

Socrates:: The just man, then, has been clearly shown to be good and wise, but the unjust, ignorant and evil.

Thrasymachus at last agreed to all these things,—not easily, as I now narrate them, but dragged to it, and with difficulty, and with a wondrous deal of sweating, just as if it was summer.

Then, indeed, did I behold—I never did before—Thrasymachus blushing.

And after we had agreed that justice was virtue and wisdom, and injustice, vice and ignorance,—well, let this be so settled;—but we said also, that injustice is powerful:—do not you remember, Thrasymachus?

Thrasymachus:: I do remember;—but, to me at least, what you now say is not pleasing, and I have somewhat to say about it; but should I mention it, I well know you would say I am declaiming. Either, then, let me say what I please, or, if you wish to question me, do so, and I will say to you, as to gossiping old women, “Be it so,” and will assent and dissent.

Socrates:: Not by any means, if against your own opinion.

Thrasymachus:: Just to please you, since you will not let me speak: though what else do you wish?

Socrates:: Nothing, by Zeus: but if you will do this, do it, and I will ask questions.

Thrasymachus:: Ask, then.

Socrates:: This, then, I ask, as just now that we may regularly examine our argument, of what quality is justice, compared with injustice? for I think it has been said that injustice was more powerful and stronger than justice.—But now, at any rate, if justice be both virtue and wisdom, it will easily, methinks, be seen to be more powerful also than injustice, since injustice is ignorance; no one can any longer be ignorant of this.—For my part, however, Thrasymachus, I am not desirous of getting rid of the question at once, but to consider it somehow thus.—Would you say that a state may be unjust, and attempt to enslave other states unjustly, and have enslaved them, and besides that actually hold many in slavery under herself?

Thrasymachus:: How not and this for the most part the best state will do, and one that is most completely unjust.

Socrates:: I am aware, that this was your assertion:—but this is what I wish to inquire; whether the state, which becomes more powerful than another state, is to hold this power without justice, or must necessarily do so with justice?

Thrasymachus:: If indeed, as you now alleged, justice is wisdom—with justice; but if, as I said,—with injustice.

Socrates:: I am quite delighted, Thrasymachus, that you not merely assent and dissent; but also that you answer quite capitally.

Thrasymachus:: For I oblige you.

Socrates:: Therein doing well: oblige me, then, in this too, and tell me,—think you that a city, or camp, or robbers, or thieves, or any other company of men, such as jointly undertake anything unjustly, can meet with any success, if they injure one another?

Thrasymachus:: No, indeed.

Socrates:: But what, if they do no wrong?—will they not get on better?

Thrasymachus:: Certainly.

Socrates:: For, somehow or other, Thrasymachus, injustice induces seditions, and hatreds, and contentions among men,—while justice brings harmony and friendship. Does it not?

Thrasymachus:: Granted, that I may not differ from you.

Socrates:: You are very kind, my excellent friend, then tell me this too;—if this be the work of injustice to engender hatred wherever it exists, will it not, when exercised both among freemen and slaves, make them hate one another, and become seditious, and incapable of doing anything in concert for the common advantage?

Thrasymachus:: Certainly.

Socrates:: But what if it happen in the case of two only; will they not differ, and hate, and become enemies both to one another and to the just also?

Thrasymachus:: They will.

Socrates:: If then, my admirable friend, injustice reside in a person,—will it lose its power, or still retain it?

Thrasymachus:: It will still retain it.

Socrates:: Seems it not, then, to have some such power as this;—that, in whatever it exists, whether in a city, or race, or camp, or anywhere else, it first of all renders it unable to act of itself, owing to seditions and differences;

besides which, it becomes an enemy not only to itself, but to every opponent, especially to the just—is it not so?

Thrasymachus:: Certainly.

Socrates:: And, methinks, when injustice residing in one man will have all these effects, which it is natural for it to produce, it will, in the first place, render him unable to act, while at variance and discord with himself;—and, secondly, as being an enemy both to himself and the just:—is it not so?

Thrasymachus:: Yes.

Socrates:: But, at any rate, friend, the gods are just?

Thrasymachus:: Granted.

Socrates:: As respects the gods, then, Thrasymachus, the unjust man will be a foe, but the just man a friend?

Thrasymachus:: Feast yourself boldly on this reasoning; for I will not oppose you, that I may not render myself odious to those who think so.

Socrates:: Come then, and satiate me with the rest of the feast, by answering as you were doing just now: for as respects the just appearing wiser and better and more able to act, but the unjust being capable of doing nothing in concert; and besides that, as to what we said with reference to the unjust, that they are ever at any time able strenuously to act in mutual concert,—this we advanced not quite correctly, for being thoroughly unjust, they would not spare one another: but yet it was evident that there was a justice in them, which made them refrain at any rate from injuring one another and those of their party,—owing to which they performed what they did; and they rushed into unjust actions, through injustice, in a kind of half-wicked feeling; for the completely wicked are both perfectly unjust, and also quite incapable of action:—that this is really so, I understand, but not in the way that you first defined it.

Besides, whether the just live better than the unjust, and are more happy which we proposed to consider afterwards, is now to be considered:—and, methinks, they appear to do so even at present, from what we have said:—but let us consider the matter still better; for the discussion is not about a casual matter, but about the manner in which we ought to live.

Thrasymachus:: Consider, then.

Socrates:: I am considering;—and tell me, does there seem to you to be any work peculiar to a horse?

Thrasymachus:: Yes.

Socrates:: Would you not call that the peculiar work both of a horse, and indeed of any being whatever, which he can do, or best do, with him alone?

Thrasymachus:: I do not understand.

Socrates:: But thus;—see you with anything else than the eyes?

Thrasymachus:: Surely not.

Socrates:: What then? Could you hear with anything else than the ears?

Thrasymachus:: By no means.

Socrates:: Should we not, then, justly call these the works peculiar to them?

Thrasymachus:: Certainly.

Socrates:: And what—could you not with a sword, a knife, and many other things, lop off a vine-branch?

Thrasymachus:: How not?

Socrates:: But with nothing, at any rate, methinks, so well as with a pruning-knife made for that purpose.

Thrasymachus:: True.

Socrates:: Shall we not then define this to be its peculiar work?

Thrasymachus:: We will so define it then.

Socrates:: Now, methinks, you may understand better what I was asking, when I inquired whether the work of each be not that which, of all others, one performs either alone or in the best manner.

Thrasymachus:: I understand you; and this seems to me to be each one’s peculiar work.

Socrates:: Granted:—and does there not likewise appear to you to be a virtue belonging to everything, to which a certain work is assigned? But let us run over the same ground once more:—We say that the eyes have a certain work?

Thrasymachus:: Yes.

Socrates:: Is there not then a virtue belonging to the eyes?

Thrasymachus:: A virtue also.

Socrates:: Well, then, have the ears a certain work?

Thrasymachus:: Yes.

Socrates:: And of course a virtue also?

Thrasymachus:: A virtue also.

Socrates:: And, about all the rest;—is it not thus?

Thrasymachus:: It is.

Socrates:: But, hold:—could the eyes ever cleverly perform their work, when not possessed of their own proper virtue, but vice instead of virtue?

Thrasymachus:: How could they? for perhaps you mean blindness instead of sight.

Socrates:: Whatever, be their virtue, that I mean,—for I do not yet enter on this question; but, whether by their own proper virtue they will perform their own proper work well, whatever they undertake; and by vice, badly?

Thrasymachus:: In this, at least, you speak the truth.

Socrates:: And will not the ears also, when deprived of their virtue, perform their work ill?

Thrasymachus:: Certainly.

Socrates:: And, are we to settle all other things by the same reasoning?

Thrasymachus:: So I suppose.

Socrates:: Come then, after this, consider what follows: has the soul a certain work, which you can perform by no other living thing,—such as this, to take care, to govern, to consult, and all such acts? Is there any other than the soul, to which we can justly ascribe them, and say they are its proper functions?

Thrasymachus:: No other.

Socrates:: But what of this?—To live; shall we say it is the work of the soul?

Thrasymachus:: Most assuredly.

Socrates:: Do not we say, then, that there is some virtue, also, peculiar to the soul?

Thrasymachus:: We do.

Socrates:: And can the soul, then, Thrasymachus, ever perform its own works cleverly, whilst deprived of its proper virtue;—or, is this impossible?

Thrasymachus:: Impossible.

Socrates:: Of necessity, then, a bad soul must govern and take care of things badly, and a good soul perform all these things well?

Thrasymachus:: Necessarily so.

Socrates:: Did we not then agree, that justice was the virtue of the soul, and injustice its vice?

Thrasymachus:: We did so agree.

Socrates:: The just soul, then, and the just man, will live well, and the unjust ill?

Thrasymachus:: It appears so, according to your reasoning.

Socrates:: Surely, then, he who lives well is both blessed and happy; and he who does not, the opposite?

Thrasymachus:: How not?

Socrates:: The just, then, is happy, and the unjust miserable?

Thrasymachus:: Granted.

Socrates:: But at any rate, it is not advantageous to be miserable, but happy?

Thrasymachus:: How not?

Socrates:: In that case, excellent Thrasymachus, injustice is never more profitable than justice.

Thrasymachus:: Well, now, Socrates, you have been capitally well feasted at these Bendideia.

Socrates:: Aye, by you, Thrasymachus, I certainly have; for you are grown quite mild, and have ceased to be troublesome:—and if I have not feasted handsomely, it is owing to myself, not you.—But just as greedy guests, ever gloating on what is fresh brought before them, taste thereof, without having properly enjoyed what went before,—so I, methinks, without having first ascertained what we were before investigating,—namely the nature of justice, have omitted this, and rushed eagerly forward to inquire concerning it, whether it be vice and ignorance, or wisdom and virtue;—and when an assertion was afterwards introduced, that injustice is more profitable than justice, I could not refrain from coming to this, from the other; so that now, from this conversation, I have learnt nothing at all;—for since I do not know what justice is, I can scarcely know whether it be a virtue or not,—and whether he who possesses it be unhappy or happy.

THE END OF THE FIRST BOOK.

## BOOK II.

Socrates:: Having said these things, I thought to have been relieved from the debate; but this it seems was only the introduction; for Glaucon is on all occasions most courageous, and then especially did not approve of Thrasymachus' withdrawal from the debate, but said;—

Glaucon:: Socrates, have you any desire of seeming to have persuaded us, or to succeed in really persuading us that it is in every respect better to be just than unjust?

Socrates:: I, for my part, would prefer to do so in reality, if it depended on me.

Glaucon:: You are not doing then, what you desire: for, tell me, does there appear to you any good of this kind, such as we would accept as a possession, without regard to its results, but embracing it simply for its own sake; such as joy and all kinds of harmless pleasures, though for the future no other advantage springs from them than the delight arising from their possession.

Socrates:: To me, indeed, there does seem to be something of this kind.

Glaucon:: But what;—is there not some species of good which we both love for its own sake, and also for what springs from it,—as wisdom, sight, and health?—for such goods we surely embrace on both accounts.

Socrates:: Yes.

Glaucon:: But do you see, a third species of good,—among which are bodily exercise, being healed when sick, the practice of medicine, or any other lucrative employment?—for these things, we should say, are laborious, yet beneficial to us, and we should not choose them for their own sake, but on account of the rewards and other advantages that spring from them.

Socrates:: There is, indeed, this third species also: but what then?

Glaucon:: In which of these species, do you place justice?

Socrates:: I think, indeed, in the most beautiful,—as being a good, which, both on its own account and for what springs from it, is desired by a man bent on being happy.

Glaucon:: It does not seem so, however, to the multitude, but rather to be of that laborious kind which is pursued on account of rewards and honors gained through high repute, but on its own account to be shunned, as fraught with trouble.

Socrates:: I am aware, that it seems so; and it was in this view, that it was some time since condemned by Thrasymachus, but injustice praised:—it seems, however, that I am one of those who are dull in learning.

Glaucon:: Come now, listen to me too, if you please; for Thrasymachus seems to me to have been charmed by you just like a snake, more quickly than he ought; while, with respect to myself, the proof has not yet been made to my satisfaction in either case, for I desire to hear what each is, and what intrinsic power it has by itself, when residing in the soul,—letting alone the rewards and what springs from them.

I will proceed, in this manner, therefore, if it be your pleasure.

I will take up Thrasymachus' argument in another shape; and, first of all, I will tell you what they say justice is, and whence it arises,—and, secondly, that all who cultivate it, cultivate it unwillingly, as necessary, but not as good,—and thirdly, that they do this with reason, inasmuch as, according to their notion, the life of an unjust man is much better than that of one that is just.

Though, for my own part, Socrates, it by no means appears so to me, still I am thrown into a state of doubt, from having my ears stunned by hearing Thrasymachus and innumerable others.—But as for the statement respecting justice, that it is better than injustice, I have never yet heard it explained as I wish.

I wish, therefore, to hear it eulogized on its own account, and am quite of opinion that I shall hear it from you: wherefore, by way of opposition, I shall speak in praise of an unjust life, and in so speaking will show you in what manner I want to hear you in turn condemn injustice and commend justice.

But see if my proposal be agreeable to you.

Socrates:: Quite so; for about what would any man of intellect delight more frequently to speak and hear?

Glaucon:: You speak excellently well:—and now, as to what I said I would first speak about, listen, both what justice is and whence it springs.

They say, forsooth, that to do injustice is naturally good, and to suffer injustice bad,—but that suffering injustice is attended with greater evil than doing injustice with good; so that, when men do each other injustice, and likewise suffer it, and have a taste of both, it seems advantageous for those, who are not able to avoid the one and choose the other, to agree among themselves neither to act unjustly nor yet to be treated so; and also, that hence they began to form for themselves laws and compacts, and to call what is enjoined by law lawful and just.—This, then, is the origin and essence of justice,—a medium between what is best, namely, when a man acts unjustly with impunity, and what is worst, that is, when one injured is unable to obtain redress;—and this justice being half-way between both these, is desired, not as good, but as being held in honor, owing to an incapacity for doing injustice; because the man who had ability to do so would never, if really a man, agree with any one neither to injure nor be injured; for he would be mad to do so.

This, then, Socrates, and such like, is the nature of justice; and such, as they say, is the source whence it arises.

Again,—that those who cultivate it through an incapability of doing injustice, cultivate it unwillingly, we shall best be made aware, if we should mentally conceive such a case as follows:—Let us give full liberty to each of them, both the just and the unjust, to do whatever they please,—and then follow them, observing whither inclination will lead each.—We should then detect the just man going the same way with the unjust, through a desire of having more than others,—which every nature naturally pursues as good, but by law and compulsion is led to respect equality.

And the liberty of which I speak may be chiefly of such a kind, as if they possessed such a power, as they say once belonged to Gyges the progenitor of the Lydian king; and of him, forsooth, they say, that he was a hired shepherd with the then governor of Lydia, but when a portion of ground was torn up by a prodigious rain and earthquake, and an opening made in the place where he was grazing his flocks,—that, in astonishment at the sight, he descended and saw other wonders besides, which men hand down in fables, especially a brazen horse, hollow, provided with doors, leaning against which, he beheld inside a dead body, apparently larger than that of a man, and that it had nothing else except that it wore a gold ring on its hand, which he took off and came out.

And when there was a meeting of the shepherds, as usual, for making their monthly report to the king about their flocks, he also came with the ring; and while sitting with the rest, he happened to turn the stone of the ring towards himself into the inner part of his hand; and when this was done, he became invisible to those who sat beside him, and they talked of him as absent: and astonished at this, he again handled his ring, turned the stone outward, and on turning it became visible.

On observing this, then, he made trial of the ring, whether it had this power; and it always happened so, that, when he turned the stone inward, he became invisible,—when outward, visible.

Perceiving this, he instantly contrived to be made one of the embassy to the king; and on his arrival he debauched his wife, and, with her, assaulted and killed the king, and took possession of the kingdom.

If now, there were two such rings, and the just man had one, and the unjust the other, no one, we should think, would be so case-hardened as to persevere in justice, and dare to refrain from others' property and not touch it, when it was in his power both to take fearlessly, even from the market-place, whatever he pleased, and to enter houses, and embrace any one he pleased,—both to kill and loose from chains whomever he pleased,—and to do anything else likewise, as a god among men:—acting in this manner, he would in no respect differ from the other, but both would go the same road.

This, in truth, one may say, is a strong proof, that no one is willingly just, but only by constraint, as if it were not an intrinsic good, because every one, where he thinks he can, does injustice.

Every man, then, thinks that injustice is intrinsically much more profitable than justice, thinking truly, as he says, who argues on such a subject as this: inasmuch as, if any one possessed of such a liberty were never to act unjustly, nor touch others' property, he would be deemed by men of sense to be most wretched, and most void of understanding; yet would they praise him in each others' presence, mutually deceiving one another through fear of being injured.

Thus much, then, concerning these things.

With respect, again, to the decision on the life of those of whom we are speaking,—if we distinguish the supremely just and the supremely unjust, we shall be able to come to a right judgment,—but not otherwise; and what, then, is this distinction?

It is this;—let us, from the unjust man, take nothing of injustice, nor from the just man, of justice; but let us make each of them perfect in his own pursuit.

First, then, let the unjust man act as clever artists do.

For instance, a skilful pilot or physician comprehends both the possible and impossible in his art, the former of which he attempts, but relinquishes the latter;—and again, if he meet with any failure, he is able to rectify it:—so, in like manner, let the unjust man when he attempts clever acts of injustice, remain concealed, if he intends to be exceedingly unjust; but, as for him that is caught, he must be deemed worthless: for the most complete injustice is—to seem just, when not so.

To the completely unjust, then, we must ascribe the most complete injustice, and not take it from him, but allow him, while doing the greatest injustice, to win the highest reputation for justice; and, if he should fail at all, he should be able to rectify it, and be capable of speaking persuasively, if any report of his unjust deeds get abroad, and be able also to effect by force what requires force, owing to his courage and strength, and through the instrumentality of his friends and his wealth; supposing him, then, to be such as this, let us for argument place in contrast with him a just, simple-minded, and generous-hearted man, who, according to Æschylus, desires less the seeming than the reality of goodness: let us take from him, then, the mere seeming of goodness; for, should he seem just, honors and rewards will be his lot, because he merely seems so:—and thus it may be uncertain whether he be such for the sake of justice, or rewards and honors.

Let him be stripped, then, of everything but justice, and be placed in direct contrast to the other;—without doing injustice too, let him have the reputation of doing the greatest,—in order that he may be put to the test for justice, and not be moved to reproach and its consequences, but rather be unchangeable till death, seeming, indeed, to be unjust through life, though really just; and that thus both arriving at the extreme,—one of justice, the other of injustice, we may judge which of the two is the happier.

Socrates:: Bah, bah, dear Glaucon, how exceedingly anxious you are to cleanse each of these men for trial, just as you would a statue!

Glaucon:: As much, as I can: but, as they are such, there will be no difficulty, I suppose, in ascertaining what life will be the lot of either.

It shall be told, then:—and, even if it should be told with more than usual bluntness, think not, that it is I who tell it, Socrates, but those who praise injustice before justice.—This then will they say, that the just man, thus situated, will be scourged, tortured, fettered, have his eyes burnt out, and lastly, suffer all manner of evils, and be crucified; and he will know too, that a man should desire not to be, but to appear just.

As for that saying of Æschylus, too, it applied far better against the unjust man: for in reality men will say, that the unjust man, as being in pursuit of an object connected with truth, and not living according to opinion, has no desire to appear, but to be unjust,—

> Reaping the hollow furrow of his mind,
> Whence all his cherished councils blossom forth.

In the first place, he holds the magistracy in the state, because he is thought just,—next, he marries out of whatever family he pleases, and gives his children in marriage to whom he pleases, forms agreements and joins in partnership with whom he likes,—and, besides all this, succeeds in all his projects for gain, because he scruples not to commit injustice.

When he engages, therefore, in competitions, he both in private and public surpasses and overreaches his adversaries; and by this overreaching gets rich, serves his friends, hurts his foes; and to the gods, as respects sacrifices and offerings, he not only sufficiently but even magnificently both sacrifices and makes offerings, serving far better than the just man, not only the gods, but of men also whomsoever he pleases; so that it is very likely that he should be a greater favorite of the gods than the just man.

Thus, they say, Socrates, that with gods and men a better life awaits the unjust than the just.

Socrates:: Glaucon having said this, I was thinking of saying something in reply; but his brother Adimantus said—

Adeimantus:: Do you not think, Socrates, that enough has been already said on the matter?

Socrates:: What then?

Adeimantus:: The very point has not been mooted, which ought most especially to have been discussed.

Socrates:: Why then, as the saying is, let a brother help a brother,—so that, if he fails at all, do you help him out:—yet, as far as I am concerned, what he has alleged is quite sufficient to defeat me, and disable me from defending justice.

Adeimantus:: Oh, it is a mere nothing you allege;—but still hear this in addition;—for we must go through all the arguments in opposition to what he has said, those, namely, which praise justice and condemn injustice,—in order that it may be more clearly seen, what, I think, Glaucon means: and perhaps parents tell and exhort their sons, as all those do who care for them, that they ought to be just,—not commending justice for itself, but for the reputation arising therefrom;—and hence to a man reputed to be just, there may accrue from that very repute both state-offices and marriage-connections, and whatever Glaucon just now enumerated as the consequences of being reputed just: these, however, carry this notion of repute too far;—for, throwing in the approbation of the gods, they can speak of abundant blessings, which, they say, the gods bestow on the holy.

Just as noble Hesiod and Homer say;—the former, that the gods make oaks produce for just men

> Acorns at top, and in the middle bees;
>
> Their woolly sheep are laden thick with fleece;

and a great many other good things of the same nature:—similarly, also, the latter:—

> Unrivalled, like the praise of some great king,
> Who o'er a numerous people and renown'd
> Presiding like a deity, maintains

Justice and truth.
The earth under his sway
Her produce yields abundantly; the trees
Fruit-laden bend; the lusty flocks bring forth;
The ocean teems with finny swarms beneath
His joint control, and all the land is blest.

Musæus, too, and his son Eumolpus tell us, that the gods give just men far more splendid blessings than these; for carrying them in his poem into Hades, and placing them at table in company with holy men, at a feast prepared for them, they crown them, and make them pass the whole of their time drunken,—deeming eternal inebriation to be the best reward of virtue.—Some, however, extend down still further than these the rewards from the gods; for they say, that children's children, and a future generation of the holy and faithful, are left on earth. These, then, and such as these, are their eulogies of justice. As for the unholy and unjust, however, they bury them in Hades, in mud, and compel them to carry water in a sieve;—and as for those that are yet living, if they lead them into wrong notions, as Glaucon did in enumerating the punishments of just persons, but reputed unjust,—this they can allege about the unjust, but nothing else. The praise then or blame belongs to either party as they please.

In addition to this, however, consider, Socrates, another species of argument about justice and injustice, referred to both privately and by poets; for all with one mouth celebrate temperance and justice as beautiful, but still difficult and laborious, but intemperance and injustice as sweet and easy of attainment, though by repute only and law disgraceful: and they mostly say, that unjust are more profitable than just actions; and wicked rich men, and such as have power of any kind, either public or private, they are quite willing to pronounce happy and to honor both publicly and privately, but to despise and overlook those who may be at all weak and poor, even though they acknowledge them to be better than the others.—But of all these arguments, the most marvelous are those concerning the gods and virtue,—as if it were a matter of course, that the gods allot misfortunes and an evil life to many good men, and to the opposite, an opposite fate.

Peddler-priests also, and prophets, frequenting the gates of the rich, persuade them, that they possess a power granted them by the gods, of expiating by sacrifices and incantations in the midst of pleasures and feastings, whatever injustice has been committed by any one, or his forefathers: and if he wishes to blast a foe, he can at small expense injure the just, as well as the unjust, by certain blandishments and magic ties, persuading the gods, as they say, to succor them: and to all these discourses they bring the poets as witnesses; who, mentioning mans predisposition to vice, say,—

How vice at once and easily we choose;
The way so smooth, its dwelling too so nigh;
Toil before virtue, thus forewill'd the gods—

and a certain road, both long and steep;—while others make Homer witness as to the persuasive power of men over the gods, inasmuch as that poet says,—

……the gods
In virtue thy superiors, are themselves
Yet placable; and if a mortal man
Offend by transgression of their laws,
Libation, incense, sacrifice, and prayers
In meekness offer'd turn their wrath away.

They bring forward, too, a crowd of books of Musæus and Orpheus, the offspring of the Moon and the Muses, as they say, in accordance with which they perform their sacred rites, persuading not only private individuals, but states likewise, that both absolutions and purgations from iniquities are effected by sacrifices, and sportive pleasures,—and this, too, for the benefit of the living as well as the dead;—which purgations they call *mysteries*, which absolve us from the evils of another life,—whereas a dreadful fate awaits those who perform no sacrifice.

As respects all such and so much as has been said, dear Socrates, about virtue and vice, and what reward both men and gods attach thereto,—what do we suppose the souls of our youth do when they hear them, such at least as are of good natural parts, and able to rush, as it were, to all that is said, and thence infer in what sort of character, and by what procedure one may best pass through life?

He might probably say to himself, according to Pindar,—

Shall I yon rampart, loftier far
    Than justice, dare ascend,—or crooked fraud
Invite, to cheat the world, and thus
    Myself live cased in guilt’s base panoply.

For what is said happens to me, if I am just, though I am not reputed so, they say it is no profit, but clearly, mere trouble and punishment,—whereas the unjust man, who has procured for himself the reputation of justice, is said to have a divine life. Since then, as the sages tell me, appearance both does violence to reality, and is the arbiter of happiness, I ought surely to turn wholly thereto, drawing round myself, as a covering and picture, an image of virtue, but still dragging after me the cunning and versatile fox of that very clever Archilochus. Perhaps, however, some one will say,—it is not easy for a bad man always to practice his wickedness in secret.—Neither is anything else easy will we say of important matters: but still, would we be happy, thither we must go where the tracks of reasoning lead us: for, with a view to concealment, we shall form conspiracies and associations; and there are masters of persuasion, who teach a popular and forensic wisdom,—by which, partly though persuasion and partly by force, we may escape punishment after all our overreaching. However, it is not possible either to escape the notice of the gods, or to overpower them.

Wherefore, if they have no existence, and have no care about human affairs, neither need we care about concealment; and as respects their existence and care for us, we neither know nor have heard of them otherwise than from traditions, and from the poets who write their genealogies; and these very persons tell us, that they are to be moved and persuaded by sacrifices and propitiatory vows, and offerings,—both of which we are to believe, or neither.

If, however, we are to believe both, we may do injustice, and offer sacrifice from the fruits of unjust deeds.

For if we be just, we shall escape punishment from the gods, and then deprive ourselves of the gains of injustice: but if, on the other hand, we be unjust, we shall make gain, and after transgressing and offending, shall appease them by prayers, and so escape punishment.

Nevertheless, we shall suffer in Hades the punishment of our misdeeds here, either ourselves, or our children's children.

But the reasoner may say, Friend, the mysteries again can do much, and the gods who expiate,—as say the mightiest states, and those children of the gods,—the poets and prophets, who declare that these things are so.

For what reason, then, should we prefer justice before the greatest injustice?—Should we acquire it by any unfair pretences, we shall, both with reference to gods and men, fare according to our wishes both in life and death, as we are told by the sayings both of the multitude and the learned too.—From all that has been said, then, Socrates, how shall a man contrive to acquire a will for honoring justice, who has any power of mind, or wealth, or body, or birth, and not rather laugh at hearing its praises?

Although, therefore, a man be able even to show what we have said to be false, and fully knows that justice is best, he will, perhaps, greatly excuse and not be angry with the unjust, because he knows, that unless a man through a divine instinct abhor injustice, or from knowledge abstain from it,—of all the rest not one is willingly just, but either through cowardice, old age, or some other weakness, condemns injustice, when unable to do it.

That it is so, is plain;—for the first of such persons, who arrives at the power, is the first to commit injustice, as far as he is able.

The reason of all this, again, is no other than that, from whence all this discussion set out between my brother and me and you, Socrates, because, among all of you, my wonderful man, who call yourselves the eulogists of justice, from these ancient heroes downwards, of all whose arguments are left to the men of the present time, no one has ever yet condemned injustice, nor praised justice, otherwise than as respects the repute, honors, and emoluments arising therefrom; while, as respects either of them in itself, and subsisting by its own power in the soul of the possessor, and concealed both from gods and men, no one has yet sufficiently investigated, either in poetry or prose-writing,—how, namely, that the one is the greatest of all the evils that the soul has within it, and justice the greatest good: for had it from the beginning been thus stated by you all, and you had so persuaded us from our youth, we should not need to guard against injustice from our fellows, but every man would be the best guardian over himself, through fear, lest by doing injustice he should dwell with the greatest evil.

These things, Socrates, and, perhaps also, yet more than these, Thrasymachus, and others too, might say respecting justice and injustice, perverting their power, disagreeably as I conceive:—but, I, for I wish to conceal nothing from you, am very anxious to hear your refutation, and so say the most I can by way of opposition.—Do not, therefore, merely show us in your reasoning, that justice is better than injustice, but in what way each by itself affects the mind, the one as in itself evil, and the other as good; and put out of the question mere opinion, as Glaucon recommended; for if you do not set aside the true opinions on both sides, and add those that are false, we will say you do not praise justice, but its appearance, and do not condemn injustice, but its appearance,—advising the unjust man to hide himself, and agreeing with Thrasymachus that justice is a foreign good expedient for the more powerful, while injustice is what is expedient and profitable for one's self, but inexpedient for the inferior.

Since, then, you have granted that justice is one of those greatest goods, which on account of their results are worthy to be possessed, but yet far more in themselves for their own sake,—such as sight, hearing, wisdom, health, and all other genuine goods, such as are so in their own nature, and not merely in opinion; for this very reason we may praise justice, as intrinsically, in itself, profitable to its owner, and injustice harmful; but as for rewards and repute, let others sing their praises.—I could endure, perhaps, that the rest of the world should thus praise justice and condemn injustice, complimenting and reviling the opinions and rewards that concern them; but certainly I could not endure it in you except you absolutely require it, because you have passed the whole of life, engaged in no other inquiry but this.—Show us, then, in course of the discussion, not only that justice is better than injustice, but also what either intrinsically by itself makes its owner, whether concealed or not from gods and men, the one being good, and the other evil.

Socrates:: On hearing this, pleased, as I always am, with the disposition of Glaucon and Adimantus, I was then, in particular, perfectly delighted, and replied: O sons of that worthy sire the Sophist, with good reason does the lover of Glaucon thus begin his elegies which he made on you, when you distinguished yourselves in the battle of Megara.

> Ariston’s sons! of sire renown’d afar,  
> That race divine.......

This, friends, seems well observed; for you must be under some influence quite divine, if you are not persuaded that injustice is better than justice, when you can thus speak in its defense. Still methinks, you are not really persuaded; and I reason from the rest of your behavior; because, according to your mode of talking, I should certainly have disbelieved you:—but the more I trust you, the more I am at a loss, as to the kind of argument I should use. I know not, indeed, how I am to defend it,—as I seem unable:—and the proof of it is, that, as respects what I thought I had clearly shown in arguing with Thrasymachus, that justice is better than injustice, you did not admit my proofs;—nor, on the other hand, have I any excuse for not defending it; because I fear it may be impious to abandon justice, and see it accused when I am present, without defending it, so long as I have breath and am able to speak.

It is best then to assist it in such a manner as I can.

Hereupon Glaucon and the rest entreated me by all means to defend it, and not relinquish the discussion, but rather investigate thoroughly the nature of each, and what the truth is, as to their respective advantages.

I then stated what I thought,—that the inquiry we were attempting was no trifling one, but one, as appears to me, suited for sharp-sighted persons.

Since then, we are not very expert, it seems proper to make such an investigation of it, as if a person should order persons not very sharp-sighted to read small letters at a distance, and then find out that the same letters are rather larger elsewhere, and in a larger field;—it would then appear desirable, methinks, first to read these, and then examine the lesser, whether they happen to be the same.

Adeimantus:: By all means. But what analogy do you perceive, Socrates, in the inquiry about justice?

Socrates:: I will tell you:—do we not say that justice affects an individual man and an entire state also?

Adeimantus:: Certainly.

Socrates:: Is not a state a greater object than an individual?

Adeimantus:: Greater.

Socrates:: Perhaps, then, justice will be more fully developed in what is greater, and also more easily intelligible:—we will first, then, if you please, inquire what it is in states; and then, we will in like manner examine it in the individual, searching for the similitude of the greater in the idea of the less.

Adeimantus:: Yes,—you seem to me, to speak rightly.

Socrates:: If then, we contemplate in argument the rise of a state, shall we not also perceive the rise of justice and injustice?

Adeimantus:: Perhaps so.

Socrates:: Well then, if this be the case, is there no ground for hoping that we shall more easily find the object of our inquiry?

Adeimantus:: Just so.

Socrates:: Does it not seem, then, that we ought to try after success? for I imagine this is a work of no small importance. Consider then.

Adeimantus:: We have considered, and do you the same.

Socrates:: A state then, takes its rise, methinks,—because none of us individually happens to be self-sufficient, but stands in need of many things; do you think that there is any other origin of the settlement of a state?

Adeimantus:: None.

Socrates:: Thus, then, one assisting one person for the want of one thing, and another another for the want of another, as we stand in need of many things, we collect into one dwelling many companions and assistants, and to this joint dwelling we give the name of city; do we not?

Adeimantus:: Certainly.

Socrates:: One then imparts to another, if he does impart anything, or receives in exchange, thinking it will be for his advantage?

Adeimantus:: Certainly.

Socrates:: Come then, let us, for argument's sake, form a city from the beginning;—our necessity, as it seems, will form it?

Adeimantus:: Of course.

Socrates:: But the first and the greatest of wants is the provision of food, in order that we may subsist and live?

Adeimantus:: Assuredly.

Socrates:: The second is of lodging, the third of clothing, and the like?

Adeimantus:: Just so.

Socrates:: But come, how will the city be able to make so great a provision?—Shall not one be a husbandman, another a builder, a third a weaver;—and must we not add to them a shoemaker, or some one else of those that minister to our bodily wants?

Adeimantus:: Certainly.

Socrates:: The state then, that is most in need, will consist of only four or five men?

Adeimantus:: It appears so.

Socrates:: What then? must each of these contribute his work for the whole in common?—as, for instance, must the husbandman, though only one, provide food for four, and spend fourfold time and labor in providing food and sharing it with others; or is he, without any care for them, to prepare for himself alone the fourth part of this food in the fourth part of the time, while of the other three parts of his time, he employs one in the providing a house, another clothing, the other shoes,—and not trouble himself to share with others, but give his whole attention to his own affairs?

Adeimantus:: Aye, but perhaps the former way, Socrates, is easier than the latter.

Socrates:: By Zeus, that is not amiss:—for, while you are speaking, I am thinking that first of all we are born not each perfectly alike to each, but differing in disposition,—one fitted for doing one thing, and another for another;—does it not seem so to you?

Adeimantus:: It does.

Socrates:: What then?—Will a man do better, when, as a single individual, he works in many arts, or only in one?

Adeimantus:: When one works in one.

Socrates:: This, moreover, is also plain, methinks;—that if one miss the seasonable time for any work, it is ruined?

Adeimantus:: Clearly.

Socrates:: Aye,—for the work, methinks, will not wait on the leisure of the workman, but the workman must necessarily attend closely on his work, not in the way of a by-job?

Adeimantus:: He must.

Socrates:: And hence more will be done, and better, and with greater ease, when every one does but one thing, according to his genius, at the proper time, and when at leisure from all other pursuits.

Adeimantus:: Quite so.

Socrates:: Surely, Adimantus, we need more citizens than four for the provisions that we mentioned: for the husbandman, it seems, will not himself make his own plough, if it is to be good, nor yet a spade or any other instruments of agriculture:—neither, again, will the builder,—for he, likewise, needs many things; and in the same way, the weaver also and the shoemaker:—is it not so?

Adeimantus:: True.

Socrates:: Carpenters, then, and smiths, and many other such workmen, by becoming members of our little city, make it throng?

Adeimantus:: Certainly.

Socrates:: Yet it would be no very great matter, either, if we added to them herdsmen also, and shepherds, and all other sorts of graziers,—in order that both the husbandmen may have oxen for ploughing, and the builders by aid of the husbandmen may have cattle for their carriages, and the weavers also, and shoemakers, hides and wool.

Adeimantus:: Yet it would be no very small city, that had all these.

Socrates:: Moreover, it is all but impossible to settle the city itself in such a place that it will not require imported goods.

Adeimantus:: Impossible.

Socrates:: Surely, then, it will require others in addition, to bring to it what it needs from other cities.

Adeimantus:: It will require them.

Socrates:: And, moreover, if the servant were to go empty, taking with him nothing that they need from whom what they themselves require is imported, he will return empty; will he not?

Adeimantus:: I think so.

Socrates:: It is necessary for them, then, not only to produce what is sufficient for themselves, but such and as many things also, as are required by those whose services they require.

Adeimantus:: It ought.

Socrates:: Our city, then, certainly wants many more husbandmen and other kinds of workmen.

Adeimantus:: Aye, many more.

Socrates:: And all other servants besides, to import and export the several articles; and these are merchants, are they not?

Adeimantus:: Yes.

Socrates:: We shall want merchants then, as well?

Adeimantus:: Certainly.

Socrates:: And if the traffic is carried on by sea, it will want many others besides, skilled in navigation.

Adeimantus:: Many others, truly.

Socrates:: What then;—in the city itself, how will they exchange with one another what each has produced, for the sake of which, we have formed a city and established a community?

Adeimantus:: It is plain, that by selling and buying they will do so.

Socrates:: A market-place, therefore, and an established coinage, as a symbol for the purposes of exchange, must spring up from hence.

Adeimantus:: Certainly.

Socrates:: If then the husbandman, or any other workman, bring any of his work to the market, but does not come at the same time as those who want to make exchanges with him, will he not, while sitting in the market, be unoccupied at his trade?

Adeimantus:: By no means; for there are some, who, observing this, devote themselves to this service; and, in well-regulated cities, they are chiefly such, as are weakest in body and unfit for any other work;—these then should attend about the market, to give money in exchange for what people wish to sell, and goods in exchange for money to such as want to buy.

Socrates:: It is this want, that provides our city with a race of shopkeepers; for do we not call those shopkeepers, who sit in the market, and serve both in selling and buying; whereas such as travel to other cities we call merchants?

Adeimantus:: Certainly.

Socrates:: There are certain other servants still, I conceive, who, though as regards intellectual power unworthy to be taken into society, yet possess bodily strength adequate for labor; and these selling the use of their strength, and calling the reward of it hire, are called, I think, hired laborers;—are they not?

Adeimantus:: Just so.

Socrates:: Hired laborers then, as it seems, form the complement of a city.

Adeimantus:: Aye, it seems so.

Socrates:: Has our city then, Adimantus, so increased on us already, as to be complete?

Adeimantus:: Perhaps.

Socrates:: Where, then, will justice and injustice be placed in it; and, in which of the matters that we have considered is it engendered?

Adeimantus:: I do not know, Socrates, unless it be somehow in a certain use of these very things with one another.

Socrates:: Perhaps, you are right:—but yet we must consider the point, and not avoid it. First, then, let us consider how the persons thus procured are to be supported.—In making bread and wine, and clothes, and shoes, and building houses, will they not work in summer, chiefly without clothes and shoes, but in winter, sufficiently clad and shod? and will they be supported partly on barley made into meal, and partly on wheat made into loaves, partly boiled and partly toasted, with fine loaves and cakes placed over a fire of stubble or dried leaves, and will they feast, they and their children, resting on couches strewed with smilax and myrtle-leaves,—drinking wine, crowned, and singing to the gods, pleasantly living together, begetting children not beyond their means, and cautiously guarding against poverty or war?

Glaucon then, in answer, said:

Glaucon:: You make the men feast, it seems, without esculents.

Socrates:: You say true: I forgot that they were to have esculents too;—and they will clearly have salt, and olives, and cheese, and will boil bulbous roots, and potherbs, such as are cooked in the fields: and we will set before them desserts of figs, peas, and beans; and they will toast at the fire myrtle-berries and beech-nuts, drinking in moderation; and thus passing their life in peace healthily, they will die in old age, probably, and leave a similar mode of life to their children.

Glaucon:: Socrates, if you had been making a city of hogs, on what else but these would you have fed them?

Socrates:: But what ought we to do then, Glaucon?

Glaucon:: What is usual: let them lie down on beds, I think, unless they are to live miserably, and take their meals from tables, and have esculents, as the present men have, and desserts.

Socrates:: Be it so:—I understand. We are considering, it seems, not only how a city, but how a luxurious city may exist; and perhaps it is not amiss: for, in considering one of this character, we may probably see how justice and injustice arise in cities. But the true city, which we have lately described, seems to me just like a person that is in health; but if you are desirous that we should inspect, also, a city that is inflated, there can be no objection to it: for these things that concern a merely simple mode of life will not of course suffice for some, nor will this sort of life satisfy them; but there must be beds, tables, and all other articles of furniture,—seasonings, unguents, and perfumes, mistresses, confections, and many miscellaneous articles of this description. And especially as to what we before mentioned, we must no longer consider these as alone necessary,—namely, houses, and clothes, and shoes; but we must set in operation painting too, and all the refined arts, and must possess gold, and ivory, and all things of that kind; must we not?

Glaucon:: Yes.

Socrates:: Must we not, then, increase the size of our city?—For that healthy one is no longer sufficient, but already full of repletion and abundance of such things as are in nowise requisite for cities,—such as all kinds of sportsmen, and imitative artists, many of whom imitate in figures and colors, and many in music: poets too, and their assistants, rhapsodists, actors, dancers, contractors, and manufacturers of all sorts of trinkets, especially of those belonging to female attire; and in that case, too, we shall require many more servants; and think you not they will require teachers, nurses, tutors, hair-dressers, barbers, confectioners, too, and cooks?

Glaucon:: Aye, and further still, we shall want swine-herds.

Socrates:: Of these, indeed, there were none in the other state for there needed none; but in this we shall need these also; and shall require, too, many other sorts of cattle, if any one eats them; shall we not?

Glaucon:: Of course.

Socrates:: Shall we not, then, in this mode of life, require physicians far more than in the former one?

Glaucon:: Much more.

Socrates:: And the land, perhaps, which at first sufficed to support the inhabitants, will, instead of being sufficient, become too little; or how shall we say?

Glaucon:: Just so.

Socrates:: Must we not then cut off a part from the neighboring country, if we would have enough for arable and pasture, and they in turn from ours, if they on their part devote themselves to the accumulation of boundless wealth, going beyond the limits of mere necessity?

Glaucon:: We must, Socrates.

Socrates:: Shall we go to war afterwards, Glaucon, or how shall we do?

Glaucon:: Certainly.

Socrates:: But let us not yet, consider the question, whether war produces harm or good,—but thus much only, that we have found the origin of war, and whence especially arise mischief to cities, both privately and publicly.

Glaucon:: Aye, indeed.

Socrates:: We shall require, then, friend, a still larger city,—not for a small, but for a large army, which may go out and fight with those who assail it, for their whole substance and everything that we have now mentioned.

Glaucon:: What, are not these sufficient to fight?

Socrates:: No;—not if you and all of us were rightly agreed, when we formed our state: and we agreed, if you remember, that it was impossible for a single person to practice many arts well.

Glaucon:: True.

Socrates:: What then, do not struggles in war seem to require art?

Glaucon:: Very much so.

Socrates:: Ought we then to take more care of the shoemaking art than of that of warfare?

Glaucon:: By no means.

Socrates:: But we charged the shoemaker not to attempt to be at the same time a husbandman, or a weaver, or a builder, in order that the work of shoemaking might be well done; and in like manner we allotted to each of the others a single calling, to which each was adapted by nature, and at which, each by abstaining from the rest, and applying to it the whole of his life, and not neglecting the proper opportunities, he would be likely to work well; but is it not of the greatest importance that what concerns war should be well performed? or is it so easy that one who is a husbandman may also be a soldier, and a shoemaker, and one who practices any other art,—while no one could become a skilful chess or dice player, who does not study it from childhood, but makes it a mere by-work? and can a person who takes a spear or other warlike arms and instruments, instantly become an expert combatant in an armed encounter or aught else relating to war; while, as respects the tools of any other art whatever, one cannot become a good artist, or even a wrestler to any useful extent, without having correct knowledge and bestowing sufficient attention?

Glaucon:: In that case, such tools, would truly be very valuable.

Socrates:: Therefore, by how much more important is the work of the state-guardians, by so much will it require the greatest leisure from other pursuits, and likewise the greatest art and study! I really think so. And will it not also require natural talents suited to this particular profession?

Glaucon:: Of course.

Socrates:: I think, then, we should make it our special business, if possible, to choose what men and what talents are suited for the guardianship of a state.

Glaucon:: Aye, our special business.

Socrates:: By Zeus, in that case we have undertaken no trifling business; but, still we must not despair, as long, at least, as we have any ability.

Glaucon:: Of course not.

Socrates:: Think you, then, that the genius of a high-bred whelp at all differs as respects guardianship, from that of a high-bred youth?

Glaucon:: "What do you mean?

Socrates:: For instance, must not each of them be acute in perception, swift in pursuing what he perceives, and strong likewise, if he wants, when he has taken, to overcome it?

Glaucon:: Of all these there is great need.

Socrates:: And surely he must be brave also, if he is to fight well.

Glaucon:: Of course.

Socrates:: But is he likely to be brave, who has not a high spirit; whether horse, or dog, or any other animal? Have you not observed, how irresistible and invincible is anger, and, when it is present, that every soul is fearless of everything and indomitable?

Glaucon:: I have.

Socrates:: It is plain, then, what species of guardian we ought to have, as respects the body?

Glaucon:: Yes.

Socrates:: And with reference to his soul moreover, that he should be spirited.

Glaucon:: That is clear, also.

Socrates:: How then, Glaucon, can they be otherwise than savage towards each other and the other citizens, when of such a temper?

Glaucon:: By Zeus, not easily.

Socrates:: Still it is necessary, that towards their friends they should be mild, but towards their enemies fierce:—for otherwise they would not wait for others to destroy them, but rather be beforehand with them in doing it.

Glaucon:: True.

Socrates:: What shall we do, then;—whence shall we find a disposition at the same time mild and magnanimous?—for the mild nature is surely opposed to the high-spirited?

Glaucon:: It appears so.

Socrates:: Nevertheless, if he be deprived of either of these, he cannot be a good guardian; but this seems to be impossible:—and thus it turns out that it is impossible there should be a good guardian.

Glaucon:: It seems so.

Socrates:: Then I, being at a loss, and considering what had passed, said:—We very justly hesitate, my friend, for we have departed from the image that we first established.

Glaucon:: How say you?

Socrates:: Did we not observe that there are such kinds of tempers as we imagined did not exist, having these opposite qualities?

Glaucon:: Where?

Socrates:: One may see it also in other animals, and not a little in that, to which we compared our guardian; for you know it is the natural temper of generous dogs to be as gentle as possible towards their intimates and their acquaintances, but the reverse to those whom they know not.

Glaucon:: Aye,—I know it.

Socrates:: This then, is quite possible; and we do not unnaturally require our guardian to be so.

Glaucon:: It seems not.

Socrates:: Are you, further, of opinion, that he who is to be our guardian should, besides being spirited, have a philosophic nature also?

Glaucon:: How?—for I do not understand.

Socrates:: This too, you will observe in dogs, what is also well worthy of admiration in the brute.

Glaucon:: What?

Socrates:: He is angry at every unknown person that he sees, though he has never suffered ill from him before; but one that is known he fawns upon, even though he may never have received any good from him. Did you never wonder at this?

Glaucon:: I never, thought of it before; but he does so, it is clear.

Socrates:: Moreover, this affection of his nature appears elegant at least, and truly philosophic.

Glaucon:: In what respect?

Socrates:: Because, it distinguishes a friendly and unfriendly aspect by nothing else but this,—that it knows the one, but not the other:—and how can we refuse to consider that as the love of learning, which defines the friendly and the foreign by intelligence and ignorance?

Glaucon:: By no means:—it cannot be otherwise.

Socrates:: Nevertheless, to be a lover of learning and a philosopher, are the same.

Glaucon:: The same.

Socrates:: May we not then boldly lay down the principle, that in man too, if any one be mild towards his intimates and acquaintances, he must by nature be a philosopher and a lover of learning?

Glaucon:: Let us so lay it down.

Socrates:: He, then, who intends to be a good and worthy state-guardian, should be by nature a philosopher, spirited, swift, and strong.

Glaucon:: By all means.

Socrates:: Let him, then, be just such as this. In what manner, then, shall they be trained and instructed? and will the consideration of this at all aid us in perceiving the object, for the sake of which we are considering all these things; that is to say, how justice and injustice arise in a state? that we may not omit any necessary part of our argument, or wade through what is superfluous?

Then, said Glaucon's brother:

Adeimantus:: I, for my part, quite expect, that this inquiry will conduce to this end.

Socrates:: By Zeus, friend Adimantus, we must not dismiss it; even though it be somewhat too long.

Adeimantus:: No, truly.

Socrates:: Come then, let us, as if we were talking in the way of fable, and at our leisure, give some ideal training to these men.

Adeimantus:: It is right to do so.

Socrates:: What then is the education?—Is it difficult to discover a better than has been discovered for a long time? that is, surely, gymnastics for the body, and music for the mind?

Adeimantus:: It is.

Socrates:: Must we not first, then, begin by teaching music, rather than gymnastics?

Adeimantus:: Of course.

Socrates:: When you say music, you mean arguments, do you not?

Adeimantus:: I do.

Socrates:: But of arguments there are two kinds,—the one true, the other false.

Adeimantus:: Yes.

Socrates:: And they must be instructed in both,—but first in the false.

Adeimantus:: I do not understand, what you mean.

Socrates:: Know you not, that first of all we tell children fables;—and this, surely, to speak generally, is falsehood; though there is some truth in it; but we employ fables with children before gymnastic exercises.

Adeimantus:: We do.

Socrates:: This was what I meant, then, by saying that we must begin music before gymnastics.

Adeimantus:: Right.

Socrates:: And know you not, that the beginning of every work is most important, especially to any one young and tender;—because then that particular impression is most easily instilled and formed, which any one may wish to imprint on each individual.

Adeimantus:: Entirely so.

Socrates:: Shall we then let children hear any kind of fables composed by any kind of persons, and receive into their minds opinions in a great measure contrary to those which we think they should have when they are grown up?

Adeimantus:: We should by no means allow it.

Socrates:: First of all, then, as it seems, we must exercise control over the fable-makers; and whatever beautiful fable they may invent, we should select, and what is not so, we should reject:—and we are to prevail on nurses and mothers to repeat to the children such fables as are selected, and fashion their minds by fables, much more than their bodies by their hands. But very many of those that they now tell them must be cast aside.

Adeimantus:: What, for instance?

Socrates:: In the more important fables, we shall see the lesser likewise:—for the fashion of them must be the same; and both the greater and the less must have the same kind of influence:—do not you think so?

Adeimantus:: I do: but I do not at all understand, which of them you call the greater.

Socrates:: Those, which both Hesiod and Homer told us, and the other poets also:—for they composed and related false fables for mankind, and do still relate them.

Adeimantus:: What class, do you mean;—and what do you blame in them?

Socrates:: That, which ought first and most of all to be blamed,—especially when one does not falsify well.

Adeimantus:: What is that?

Socrates:: When a poet, in his composition, exhibits bad representations of the nature of gods and heroes,—just as a painter draws a picture not at all resembling what he was intending to paint.

Adeimantus:: Yes, it is quite right, that such as these should be blamed:—but how do we say, and in what respect?

Socrates:: First of all, with reference to that greatest falsehood, in matters of grave importance too, in saying which he did not falsify well, that Uranus made what Hesiod says he did; and then again how Kronos punished him, and what Kronos did, and suffered from his son: for though these things were true, yet I think they should not be so readily told to the unwise and the young, but rather concealed from them;—and were there need to tell them, they should be heard in secrecy, by as few as possible, after sacrificing not a Valueless hog, but some great and wonderful sacrifice, in order that it may fall to the lot of the fewest possible to hear them.

Adeimantus:: These fables, are indeed injurious.

Socrates:: Neither are they to be told, Adimantus, in our state:—nor should it be said in the hearing of a youth, that he who commits the most extreme injustice, or that he who punishes in every possible way a father who commits injustice, does nothing strange, but only does the same as the first and the greatest of the gods.

Adeimantus:: No truly, nor do such things as these seem to me proper to be said.

Socrates:: Neither, generally, must it be told, how gods war with gods, and plot and fight against one another for such assertions are not true,—if, at least, it be the duty of those who are to guard the state to esteem it most shameful to hate each other on slight grounds.

As little ought we to describe in fables, and with ornamental aids, the battles of the giants, and other many and various feuds, both of gods and heroes, with their own kindred and relations:—but if we would persuade them that never at all should one citizen hate another, and that it is not holy, such things as these are rather to be told them in early childhood, by the old men and women and those well advanced in life; and the poets should be obliged to compose consistently with these views.

And the fables of Hera fettered by her son, and Hephaestus hurled from heaven by his father for going to assist his mother when beaten, and all those battles of the gods which Homer has composed, we must not admit into our state;—either in allegory or without allegory; for young persons are not able to judge what is allegory and what is not, but whatever opinions they receive at such an age are wont to be obliterated with difficulty, and immovable.

Hence, one would think, we should of all things endeavor, that what they first hear be composed in the best manner for exciting them to virtue.

Adeimantus:: There is reason for it:—but, if any one should ask us about these, what they are, and what kind of fables, which should we name?

Socrates:: Adimantus, you and I are not poets at present, but founders of a city, and it is the founders business to know the models on which the poets are to compose their fables, contrary to which they are not to be tolerated; but it is not our province to make fables for them.

Adeimantus:: Right. But as to this very thing,—namely, the models to be taken in speaking about the gods, what must they be?

Socrates:: Some such as these:—God is always to be represented such as he is, whether we represent him in epic, in song, or in tragedy.

Adeimantus:: Necessarily so.

Socrates:: Is not God essentially good, and is he not to be described as such?

Adeimantus:: Without doubt.

Socrates:: But nothing that is good is hurtful, is it?

Adeimantus:: I do not think so.

Socrates:: Does then what is not hurtful ever hurt?

Adeimantus:: By no means.

Socrates:: Does that, which hurts not, do any evil?

Adeimantus:: Nor this either.

Socrates:: And what does no evil cannot be the cause of any evil?

Adeimantus:: Of course not.

Socrates:: But what?—good is beneficial.

Adeimantus:: Yes.

Socrates:: It is, therefore, the cause of prosperity?

Adeimantus:: Yes.

Socrates:: Good, therefore, is not the cause of all things, but the cause of those things only which are in a right state,—not the cause of those things which are in a wrong state.

Adeimantus:: Entirely so.

Socrates:: Neither, then, can God, since he is good, be the cause of all things, as the many say, but only the cause of a few things to men, but of many things not the cause; for our blessings are much fewer than our troubles: and no other must be assigned as the cause of our blessings; whereas of our troubles we must seek some other causes, and not God.

Adeimantus:: You seem to me, to speak most truly.

Socrates:: We must not admit, then, that error of Homer or any other poet who foolishly errs with respect to the gods, and says how—

> Fast by the threshold of Jove's courts are placed
> Two casks; one stored with evil, one with good,
> From which the God dispenses as he wills.
> For whom the glorious Thund'rer mingles both,
> He leads a life chequer'd with good and ill
> Alternate; but to whom he gives unmix'd
> The bitter cup, he makes that man a curse,
> His name becomes a by-word of reproach,
> His strength is hunger-bitten, and he walks
> The blessed earth unblest, go where he may,—

Nor, that Zeus—

> Grants mortal man both happiness and woe.

As regards the violation of oaths and treaties which Pandarus effected, if any should say it was done by the agency of Athena and Zeus, we cannot approve;—neither if he were to relate the dissension among the gods, and the judgment by Themis and Zeus; nor yet must we suffer the youth to hear what Æschylus says; how;

> Forthwith to mortals God invents a cause,
> Whene'er he wills their dwellings to destroy;—

and, besides, if any one is making poetical compositions, in which are these iambics, the sufferings of Niobe, of the Pelopides, or the Trojans, or others of a like nature, we must either not suffer him to say, that they are the works of God,—or, if of God, we must discover that principle of action which we now require, and say, that God did what was just and good, and that they were benefited by being chastised: and we must not let a poet say, that those are miserable who are punished, and that it is God who does these things. If they say, however, that the wicked, as being miserable, need correction, and that, in being punished, they are benefited by God, we may suffer the assertion.—To say, however, that God, who is good, is the cause of ill to any one, this we must by all means oppose, and suffer no one to say so in our state; if at any rate we wish it well governed;—neither must we allow any one, young or old, to hear such things told in fable, either in verse or prose,—as their relation is neither consistent with holiness, nor profitable to us, nor consistent with themselves.

Adeimantus:: I vote along with you, as respects this law,—for it quite pleases me.

Socrates:: This, then, is probably one of the laws and models as respects the gods, by which it will be necessary for those who speak to speak and for those who compose to compose, that God is not the cause of all things, but of good.

Adeimantus:: Yes, of course.

Socrates:: But what as to this second law?—Think you that God is a sorcerer, and appears designedly, at different times, in different shapes,—sometimes like himself,—and, at other times, changing his form into many shapes,—sometimes deceiving us and making us conceive false opinions of him;—or, that he is simple, and that he by no means quits his proper form?

Adeimantus:: I cannot, now, at least, say so.

Socrates:: But what as to this;—if anything be changed from its proper form, must it not be necessarily changed by itself, or by another?

Adeimantus:: Undoubtedly.

Socrates:: Are not those things which are in the best state, changed and moved least of all other by another;—as the body, by meats and drinks, and labors, and all kinds of plants by droughts and winds, and such like accidents? Is not the most healthy and vigorous least of all changed?

Adeimantus:: Surely.

Socrates:: And as to the soul itself, will not external accidents least of all disorder and change the bravest and wisest?

Adeimantus:: Yes.

Socrates:: And surely all manufactured vessels, and buildings, and vestments, such as are properly made and in a right state, are according to the same reasoning least of all changed by time, or other accidents?

Adeimantus:: Such is the case.

Socrates:: Everything then, which is in a good state, either by nature or art, or both, receives the smallest change from another.

Adeimantus:: It seems so.

Socrates:: But God, and all that belongs to divinity, are in the best state?

Adeimantus:: Of course.

Socrates:: In this way, then, God should least of all have many shapes?

Adeimantus:: Least of all, truly.

Socrates:: Again.—should he change and alter himself?

Adeimantus:: Clearly so, if he be changed at all.

Socrates:: Does he then change himself to what is better, and fairer, or to the worse, and more deformed?

Adeimantus:: To the worse, surely,—if he be changed at all; for we can never say, that God is at all deficient in beauty or excellence.

Socrates:: You speak most correctly. And this being so, think you, Adimantus, that any one, either of gods or men, would willingly make himself any way worse?

Adeimantus:: Impossible.

Socrates:: It is impossible, then, for a god to desire to change himself; but, as it seems, each being most beautiful and excellent, continues always to the utmost of his power invariably in his own form.

Adeimantus:: This seems a necessary conclusion.

Socrates:: Well then, most excellent Adimantus, let not any of the poets tell us, how;

……

> in similitude of strangers oft
> The gods, who can with ease all shapes assume,
> Repair to populous cities.

……

Neither let any one belie Proteus and Thetis, nor introduce Hera in tragedies or other poems, as having transformed herself into a priestess, collecting for;

Those life-sustaining sons
Of Inachus, the Argive streams;—

nor let them tell us many other such falsehoods:—nor again, let mothers, persuaded by them, terrify their children, telling the stories wrong,—as, that certain gods wander by night.

Resembling various guests, in various forms,—

lest they should, at one and the same time, blaspheme against the gods, and make their children cowards.

Adeimantus:: Surely not.

Socrates:: But do the gods, who in themselves never change, still make us imagine that they appear in various forms, deceiving us, and playing the sorcerer?

Adeimantus:: Perhaps they do.

Socrates:: What;—can a god wish to deceive,—holding up a mere phantom, either in word or deed?

Adeimantus:: I know not.

Socrates:: Know you not, that a real falsehood if we be allowed to say so, both all the gods and men abhor?

Adeimantus:: How mean you?

Socrates:: Thus: that to be deceived in the most excellent part of oneself, and that about one’s highest interests, is what no one wishes of his own accord; but, of all things, every one is most afraid of this happening to him.

Adeimantus:: Even yet, I do not understand you.

Socrates:: Because, you think I am saying something awful but I am saying, that for the soul to be deceived with respect to realities, and to be so deceived and ignorant, and in that to have obtained and to maintain a falsehood, is what every one would least of all choose; and would most hate it in the soul.

Adeimantus:: Most especially.

Socrates:: But this, as I was now saying, might very correctly be termed a real falsehood—ignorance in the soul of the deceived person; for imitation in words is a kind of image of the affection the soul feels, and springs up afterwards, and is not altogether a pure falsehood :—is it not so?

Adeimantus:: Assuredly.

Socrates:: But a real falsehood is not only hated by the gods, but also by men.

Adeimantus:: It appears so to me.

Socrates:: But what as to a falsehood in words? when is it of such service, so as not to deserve hatred?—Is it not when employed towards enemies, and some even of those called friends,—when during madness, or other folly, they attempt to do some mischief; —in that case, is it not useful for dissuasion as a drug;—and in the fables we just mentioned, because we know not how the truth stands about ancient things, do we not forge a falsehood resembling the truth as much as possible, and so make it useful?

Adeimantus:: It certainly is so.

Socrates:: In which of these cases, then, is a falsehood useful to God?—Does he invent a falsehood resembling the truth, because he is ignorant of ancient things?

Adeimantus:: That were ridiculous.

Socrates:: In God, then, there is not a lying poet?

Adeimantus:: I think not.

Socrates:: But would he invent a falsehood through fear of his enemies?

Adeimantus:: Far from it.

Socrates:: Or on account of the folly or madness of his friends?

Adeimantus:: No, none of the foolish and mad are beloved of God.

Socrates:: There is no occasion at all, then, for a god to invent a falsehood?

Adeimantus:: None.

Socrates:: The divine and godlike nature, then, is altogether free from falsehood?

Adeimantus:: Entirely so.

Socrates:: God, then, is quite simple and true, both in word and deed; neither is he changed himself, nor does he deceive others,—neither by visions, nor discourse, nor the pomp of signs, neither when we are awake nor when we sleep?

Adeimantus:: So it appears to me, just as you say.

Socrates:: You agree then, that this shall be the second principle which we are to lay down both in speaking and composing concerning the gods,—namely, that they are neither sorcerers and change themselves, nor mislead us by falsehoods, either in word or deed?

Adeimantus:: I agree.

Socrates:: While, then, we commend many other things in Homer, this we shall not commend,—namely, the dream sent by Jupiter to Agamemnon; nor that in Æschylus, when he makes Thetis say that Apollo had sung at her marriage, that;

…… her happy lot should be
To bear an offspring fair, from ailment free,
And blest with lengthen’d days; and then the God,
Unfolding all, with pæans high proclaim’d
Thy heaven-blest fortunes, welcome to my soul
I hoped that all was true that Phoebus sang

So sweetly tuned with high prophetic art;—
But he who at my nuptials joy foretold,
The same is he, who now hath slain my child.

When any one alleges such things as these about the gods, we must show disapproval, and not grant them the privilege of a chorus; neither should we suffer teachers to employ them in the training of youth,—if at least our guardians are to be pious and divine men, as far as man can be.

Adeimantus:: As to all these models, I entirely agree with you, and I should adopt them as laws.

THE END OF THE SECOND BOOK.

## BOOK III.

Socrates:: Concerning the gods, then, such things as these are, it seems, to be both heard, and not heard, from childhood upwards, by those who will honour the gods and parents, and not lightly esteem mutual friendship.

Adeimantus:: Aye,—and methinks, these things are rightly so understood.

Socrates:: But what then?—If men are to be brave, must not these things be told them, and such others likewise, as may make them least of all afraid of death; or, think you, that any one can ever be brave, who has this fear within him?

Adeimantus:: Not I, truly.

Socrates:: But what? think you any one can be free from the fear of death, while he conceives that there is Hades—and a dreadful place, too,—and that in battles he will choose death in preference to defeat and slavery?

Adeimantus:: Surely not.

Socrates:: We ought then, it seems, to take the command, also, of those who undertake to discourse about these fables, and entreat them not so sweepingly to abuse what is in Hades, but rather to praise it;—since they neither speak what is true, nor what is expedient for those who mean to be soldiers.

Adeimantus:: We ought indeed.

Socrates:: Beginning then, at this verse, we will omit all such as these:—

I had rather live
The servile hind for hire, and eat the bread
Of some man scantily, himself sustained,
Than sovereign empire hold o'er all the shades; —

And this—

Lest Neptune o’er his head
Shattering the vaulted earth, should wide disclose
To mortal and immortal eyes his realm
Terrible, squalid, to the gods themselves
A dreaded spectacle;—

And—

Oh, then, ye gods! there doubtless are below,
The soul and semblance both, but empty forms; —

And—

He’s wise alone, the rest are fluttering shades; —

And—

Down into Hades from his limbs dismiss’d
His spirit fled sorrowful, of youth’s prime
And vigorous manhood suddenly bereft; —

And—

…….
His soul, like smoke, down to the shades
Fled howling.
……

And—

As when the bats within some hallow’d cave
Flit screaming all around; for if but one
Fall from the rock, the rest all follow him;
In such connection mutual they adhere;
So.
………………………the ghosts
Troop’d downward, gibbering all the dreary way.

As to these and all such like passages, we must request Homer and the other poets not to be offended at our erasing them,—not as unpoetical and displeasing to the ears of the multitude;—for the more poetical they are, the less should they be listened to by children, or men either, who would be free, and fear slavery more than death.

Adeimantus:: Aye, by all means.

Socrates:: Further, are not all dreadful and frightful titles also, about these things, to be rejected;—Cocytus and Styx, the infernals, the life-lorn, and many other appellations of this character, such as make all hearers shudder?—and perhaps they may well serve some other purpose; but we fear for our guardians, lest by such terror they be made more effeminate and soft than is fitting.

Adeimantus:: We are in the right too, to be afraid of that.

Socrates:: Are these then to be suppressed?

Adeimantus:: Yes.

Socrates:: And must they speak, then, and compose on a contrary model to these?

Adeimantus:: Plainly so.

Socrates:: And are we likewise to suppress the wailings and lamentations of illustrious men?

Adeimantus:: We must, if we do the former.

Socrates:: Consider then, whether we shall suppress them rightly or not,—and do we say, that the virtuous man to another virtuous man—whose friend he is—deems death dreadful?

Adeimantus:: We do.

Socrates:: He would not then, at any rate, lament over him, as if he had suffered something dreadful?

Adeimantus:: No, indeed.

Socrates:: And we say this likewise, that such an one is most of all self-sustained as regards living happily, and distinctively above all others, least in need of foreign aid.

Adeimantus:: True.

Socrates:: To him, then, it is least dreadful to be deprived of a son, a brother, or property, or other like things?

Adeimantus:: Aye, least of all so.

Socrates:: Least of all then will he lament, but rather endure with the utmost meekness whatever trouble may befall him?

Adeimantus:: Certainly.

Socrates:: We should be right then in suppressing the lamentations of famous men, and should assign them to women, and among these even not to the better sort, and to such men as are cowards; in order that, as regards those whom we propose to educate for the guardianship of the country, they may disdain to act thus.

Adeimantus:: Right.

Socrates:: Again, then, we will entreat Homer and the rest of the poets not to say in their compositions about Achilles, the son of a goddess, that

> Now on his side he lay, now lay supine,
> Now prone; then starting from his couch he roam'd
> Forlorn the beach.
>
> ………

Nor how—

> …….
>
> grasping with both hands the ashes.
> Down he pour'd them burning on his head.
>
> …

Nor the rest of his lamentation and wailing,—of whatever kind and quantity he made them;—nor Priam, near as he was to the gods, who—

> ………………………………..
>
> to all—kneel'd
> In turn, then roll'd himself in dust, and each
> By name solicited to give him way.

Still much more must we entreat them not to represent the gods as bewailing, and saying;

Ah me, forlorn! ah me, parent in vain
Of an illustrious birth.

And if they are not thus to introduce the gods, far less should they dare thus unbecomingly to represent the greatest of those gods:

Ah! I behold a warrior dear to me,
Around the walls of Ilium driven, and grieve
For Hector,—

And again,—

Alas, he falls! my most beloved of men,
Sarpedon, vanquished by Patroclus, falls:
So will the Fates!

Supposing then, friend Adimantus, our youths should seriously hear such things as these, and not ridicule them as spoken unworthily,—hardly any one would think it unworthy of himself as a man, or reprove himself for it, if he should chance either to say or do anything of the kind,—but would rather, without shame or endurance, sing many lamentations and moanings over trifling sufferings.

Adeimantus:: You speak most truly.

Socrates:: But they must not,—as our argument has just evinced; which we must believe, till some one persuades us by some better.

Adeimantus:: They must not, of course.

Socrates:: Neither ought we, moreover, to be over fond of laughing:—for commonly where a man gives himself to violent laughter, such a disposition requires a violent change.

Adeimantus:: I think so.

Socrates:: Neither, if any one should represent worthy men as overcome by laughter, should we allow it, much less if he thus represent the gods.

Adeimantus:: Much, indeed.

Socrates:: Neither, then, ought we to receive such statements as these of Homer concerning the gods:—

Heaven rang with laughter inextinguishable—
Peal after peal, such pleasure all conceived
At sight of Vulcan in his new employ.

This cannot be admitted, according to your reasoning.

Adeimantus:: If you please to call it my reasoning,—this, indeed, cannot be admitted.

Socrates:: Besides this, however, the truth must be held of great importance:—for if we just now argued rightly, and falsehood be really of no service to the gods, but useful to men, in the form of a drug, it is plain that such a thing should be trusted only to physicians, but not meddled with by private persons.

Adeimantus:: Quite plain.

Socrates:: To the governors of the state, then, if to any, it especially belongs to speak falsely either about enemies or citizens, for the good of the state; whereas, for all the rest, they must venture on no such a thing. For a private person, moreover, to speak falsely against such governors, we shall deem the same and even a greater offence, than for a patient not to speak the truth to his physician, or for one who is learning his exercises to his gymnastic master about the ailments of his body,—or for one not to tell the pilot the real state of what concerns the ship and sailors, how himself and the other sailors are performing their duty.

Adeimantus:: Most true.

Socrates:: If, however, he should detect any other citizen in a falsehood—

……. of those, who by profession serve
The public, prophet, healer of disease,
Or him who makes the shafts of spears.

he will punish him, as introducing a practice subversive and destructive of the city, as well as of a ship.

Adeimantus:: If, at least, it is on speech that actions are completed.

Socrates:: But what;—will our youths have no need of temperance?

Adeimantus:: Certainly.

Socrates:: And are not such as these in general the principal parts of temperance; namely, obedience to governors,—and also, that the governors themselves be temperate in drinking, feasting, and pleasures of love?

Adeimantus:: I am quite of that opinion.

Socrates:: And we shall say, I believe, that such views are just,—just as in Homer Diomedes says:

> Sit thou in silence, and obey my speech, —
> and what is in connection therewith,—thus:
> So moved the Greeks successive, ev'ry chief
> His loud command proclaiming, while the rest,
> As voice in all those thousands none had been,
> Heard mute.......

and so on.

Adeimantus:: Well spoken.

Socrates:: But what of such as these?—

> Oh! charged with wine, in steadfastness of face
> Dog unabash'd, and yet at heart a deer,—

and as respects what follows, and whatever other childish effusions are uttered in prose or verse by private individuals, are they well pronounced? No, not well:—for, methinks, even as respects temperance, such discourses are not fit for the young to hear; and supposing they do afford some other sort of pleasure, it is no wonder:—but what is your notion of the matter?

Adeimantus:: The same as your own.

Socrates:: What?—To make the wisest man say, that it appears to him supremely beautiful, when

……………… the steaming table's spread
With plenteous viands, while the cups, with wine
From brimming beakers fill'd, pass brisk around,—

does it seem proper to you that a youth should hear, in order to obtain a command over himself;—or yet this:—

……… most miserable it is,
To die of famine and have adverse fate;—

or that Zeus, through desire for the pleasures of love, could easily forget all that in solitary watching he had revolved in his mind, while other gods and men were asleep, and could be so struck on seeing Hera, as not even to care to enter his chamber, but to desire connection with her on the very spot, to embrace her on the ground, and at the same time to declare that he was possessed with a desire, exceeding even what he felt on their first acquaintance;

……… Hidden from their parents dear;—

nor yet how Ares and Aphrodite were bound by Hephaestus, and other such things?

Adeimantus:: No, by Zeus; these seem quite unfit.

Socrates:: But if, any instances of self-denial in all matters are both to be spoken of and practiced by men of eminence, these should be held up for a spectacle and celebrated in verse,—such as this:—

…… Smiting on his breast, thus he reproved

The mutinous inhabitant within.

Adeimantus:: Just so, by all means.

Socrates:: Of course, then, we cannot by any means allow men to receive bribes, or be covetous.

Adeimantus:: By no means.

Socrates:: Neither must we sing to them, that

Gifts gain the gods and venerable kings;—

neither can we commend Phoenix, the tutor of Achilles, as if he spoke correctly, when counseling him to accept of presents and assist the Greeks, but, without presents, not to desist from his wrath:—nor again, should we commend Achilles himself, or approve of his being so covetous as to receive presents from Agamemnon, and, likewise for giving up the dead body of Hector, on receiving a ransom, when otherwise he would not do so.

Adeimantus:: Of course it is not right, to commend such conduct as this.

Socrates:: I am loath, for Homer's sake, to say, that it is not allowable to allege these things against Achilles, or to believe them, when said by others; nor, again, that he spoke thus to Apollo:—

Oh! of all the powers above,
To me most adverse, archer of the skies!
Thou hast beguiled me, leading me away.
And hast defrauded me of great renown.
Ah! had I power, I would requite thee well,—

and how he disobeyed the river Xanthus though a divinity, and was ready to fight; and again, how he says to that other river, Spercheius, with his sacred locks;

Thy lock to great Patroclus I could give,
Who now is dead…

Adeimantus:: Now, that he actually did this, we cannot believe.

Socrates:: And again, the dragging of Hector round the tomb of Patroclus, and the murder of the captives at his funeral pile,—we shall deny that all this is spoken truly; nor shall we suffer our people to believe, that Achilles, the son of a goddess, and of Peleus, the most wise of men, and the third from Jupiter, educated also by that sage Chiron, could be of so disordered a constitution as to have within him two positively opposite moral ailments,—illiberality and covetousness, and moreover a contempt both of gods and men.

Adeimantus:: You say right.

Socrates:: Let us not then believe these things, nor yet suffer any to say, that Theseus, son of Poseidon, and Pirithous, son of Zeus, were impelled to such dire abductions; nor that any other son of a deity, or hero either, would dare to commit horrible and impious deeds, such as now they falsely ascribe to them; but let us compel the poets to say, either that the actions do not belong to these persons, or that these persons are not the children of gods,—but not to say both, nor yet try to persuade our youth that the gods are the origin of evil, and heroes no better than men:—for just as we said before, these statements are neither holy nor true; inasmuch as we have somewhere or other shown, that evils cannot possibly proceed from the gods.

Adeimantus:: Of course not.

Socrates:: But, besides this, they are hurtful to the hearers also; for every one will pardon his own depravity, through the persuasion that even the near relatives of the gods, near to Zeus himself, do, and have done, things of a similar nature, of whom it has been written,—

> They, on the top of Ida, have uprear'd
> To parent Jupiter an altar;—

And;

> Whose blood derived from gods is not extinct.

Wherefore, we should suppress all such fables, lest they create in our youth a great readiness for committing wickedness.

Adeimantus:: We should so, of course.

Socrates:: What other species of argument, then,—since we are speaking about arguments,—have we still remaining, which ought, or ought not, to be maintained?—For in what manner we ought to speak of the gods we have already mentioned, and likewise of demons and heroes, and those too in Hades.

Adeimantus:: Certainly.

Socrates:: Does it not remain, then, to speak concerning men?

Adeimantus:: Clearly so.

Socrates:: Still it is impossible for us, my friend, to regulate this at present.

Adeimantus:: How?

Socrates:: Because we shall say, I think, that the poets and orators speak amiss in most important respects concerning mankind, as for instance, that many are unjust, and yet happy, while the just are miserable; and that injustice is profitable, if it escape observation, while justice is another's gain indeed, but injury to one's self; such things, as these, we must forbid them to say, but yet bid them sing and compose in fable the very contrary. Do you not think so?

Adeimantus:: I know it well.

Socrates:: If then you acknowledge that I am right, shall I conclude that you have admitted what all along we were seeking for?

Adeimantus:: You judge right.

Socrates:: Shall we not allow, then, that such arguments may be stated about men, whenever we shall have discovered the nature of justice,—and how it is naturally profitable for the just man to be such, whether he seem so or not?

Adeimantus:: Most true.

Socrates:: Concerning the arguments, then, let what we have said suffice, and now we should consider, methinks, the manner of stating them; and then we shall have completely considered, both what is to be spoken, and the manner how.

Adeimantus:: What you now say, I do not understand.

Socrates:: Nevertheless, it needs you should.—Perhaps then you will understand it better in this way:—is not everything told by the mythologists or poets, a narrative of the past, present, or future?

Adeimantus:: Of course.

Socrates:: And do not they execute it, either in simple narrative, or through the medium of imitation, or both?

Adeimantus:: This too, I yet require to understand more plainly.

Socrates:: I appear, to be a ridiculous and dull instructor:—like those, then, who are unable to speak, I will endeavor to explain my meaning,—not the whole generally, but by a particular case. And tell me,—are you acquainted with the opening of the Iliad, where the poet says, Chryses entreated Agamemnon to ransom his daughter; but that he was angry, whereupon the former, since he did not obtain his request, besought the god, against the Greeks?

Adeimantus:: I know it.

Socrates:: You know, then, that down to these verses,—

> His supplication was at large to all
> The host of Greece; but most of all to two,
> The sons of Atreus, highest in command,—

the poet himself speaks, and does not attempt to divert our attention elsewhere, as if any other person were speaking except himself; but as to what he says after this, he speaks as though he himself were Chryses, and tries all he can to make us think that the speaker is not Homer, but the priest, an old man:—and thus he has composed nearly all the rest of the narrative of what happened at Troy, and in Ithaca, and the adventures throughout the Odyssey.

Adeimantus:: Yes, certainly.

Socrates:: Is it not narrative, then, when he recites the several speeches, and also when he recites what intervenes between the speeches?

Adeimantus:: Of course.

Socrates:: But when he speaks in the person of another, do we not say, that then he assimilates his speech as much as possible to each person whom he introduces as speaking?

Adeimantus:: We will grant it;—why not?

Socrates:: And is not a poet's assimilation of himself to another, either in voice or figure, an imitation of that person to whom he assimilates himself?

Adeimantus:: Of course.

Socrates:: In such a case as this, then, it seems, both he and the other poets execute their narrative by means of imitation?

Adeimantus:: Certainly.

Socrates:: But if the poet were not to conceal himself at all, his whole action and narrative would be without imitation.—That you may not say, however, that you do not again understand how this can be, I will tell you.—If, for instance, in relating how Chryses came with his daughters ransom, beseeching the Greeks, but chiefly the kings, Homer had subsequently spoken, not in the character of Chryses, but still as Homer, you know it would not be imitation, but only simple narrative:—and it would have been somehow thus I shall speak without meter, for I am no poet:—“The priest came and prayed, that the gods would allow them to take Troy, and return in safety; and begged them also to restore him his daughter, and accept the presents, out of respect to the god. When he had said this, all the rest showed respect, and consented; but Agamemnon became enraged, and charged him to depart instantly, and not return, lest his scepter and the garlands of the god should not avail him, and added also, that, before his daughter should be ransomed she should grow old with him in Argos; and he ordered him to be gone, and not irritate him, if he would get home in safety. The old man on hearing this was terrified and went away in silence. And after his retiring from the camp he offered numerous prayers to Apollo, calling on the god by his various names, and reminding as well as imploring him, that, if ever, either in the building of temples, or the offering of sacrifices, he had made any acceptable presents,—for the sake of these then, he besought him, to avenge with his shafts on the Greeks the tears that had been shed by himself.”—Thus far, friend, the narrative is simple, without imitation.

Adeimantus:: I understand.

Socrates:: Understand, then, that the opposite of this happens, when one takes out the poets words between the speeches, and leaves only the dialogue.

Adeimantus:: This too, I understand, that something like this takes place with tragedies.

Socrates:: You have apprehended my meaning quite correctly. And methinks, I can now make plain to you what before I could not,—that in poetry, and all fabulous writing, one species of it is wholly imitative, as, for instance just as you say, tragedy and comedy; another species employs the narration of the poet himself, you will find this chiefly in dithyrambics; and another again by both, as in epic poetry, and many other kinds besides:—if you understand me.

Adeimantus:: Aye,—I now understand, what you meant before.

Socrates:: Remember, too, that we were before saying, that it had already been settled what were to be the subjects of speech, but it yet remained to be considered how they should be spoken.

Adeimantus:: I do remember.

Socrates:: This then, is the very thing that I was saying,—namely, that we ought to have agreed, whether we will allow the poets to make us narratives wholly through the medium of imitation, or partly through imitation, partly not so,—and, of what kind in each,—or lastly whether they are not to employ imitation at all.

Adeimantus:: I guess, you are inquiring, whether we are to receive tragedy and comedy into our state, or not.

Socrates:: Perhaps so, and something more too,—for I as yet know not; but wherever our reason, wind-like, carries us, there must we go.

Adeimantus:: You say well.

Socrates:: Let us then consider, Adimantus, whether our guardians ought to be practiced imitators or not:—does not this follow, from what has been above stated, that each may exercise one business well, but many, not,—and should he attempt it, that, in grasping at many things, he will fail in all, and excel, perhaps, in none?

Adeimantus:: Of course he will.

Socrates:: Well then, does not the same reasoning apply to imitation, that the same man cannot so well imitate many things as one?

Adeimantus:: Of course he cannot.

Socrates:: In that case he can perform scarcely any of the more eminent employments, and at the same time imitate many things, and be an apt imitator,—since the same persons cannot well execute two different sorts of imitations, apparently similar to each other; as, for instance, comedy and tragedy:—and as for that, did you not, just now, call both of these imitations?

Adeimantus:: I did; and you are right in saying, that the same persons cannot succeed in both.

Socrates:: Nor can they, at the same time, be rhapsodists and actors?

Adeimantus:: True.

Socrates:: Nor can the same persons be actors in comedies and in tragedies:—and all these are imitations, are they not?

Adeimantus:: Aye,—surely.

Socrates:: The genius of man, Adimantus, seems to have been cut up even into a still greater number of minute particles,—so much so, indeed, that it cannot properly imitate many things, or perform in earnest those very things, of which even the imitations are the resemblances.

Adeimantus:: Most true.

Socrates:: If we are to hold to our first reasoning, therefore, that our guardians, though unoccupied in any productive art whatever, ought to be the most skilful laborers for the liberty of the state, and to mind nothing but what refers thereto, it were surely proper that they should neither perform nor imitate anything else,—but, should they imitate at all, to imitate from their childhood upwards just what correspond with these,—brave, temperate, pious, generous-hearted men, and the like;—but neither to perform, nor desire to imitate what is illiberal or base, lest from the very imitation they come to experience the positive reality, Have you not also observed, that imitations, if from earliest youth onwards they be long continued, become established in the manners and natural temper, both as to body and voice, and intellect too?

Adeimantus:: Very much so.

Socrates:: Surely we are not to allow those, for whom we profess to be anxious, and who ought to be good men, to imitate a woman either young or old, whether reviling her husband, or contending against the gods, and speaking boastingly from the idea of her own happiness;—neither should we imitate her in her misfortunes, sorrows, and lamentations, when sick, or in love, or in the throes of child-birth; we shall be far from allowing this.

Adeimantus:: By all means.

Socrates:: Nor to imitate male or female servants in doing servants' duties?

Adeimantus:: Nor this either.

Socrates:: Nor yet, it seems, depraved men, dastards, and those who do the contrary of what has been just mentioned, who revile and rail at one another; and speak abominable things, whether drunk or sober, or do any other misdeeds, such as this class of persons are guilty of, either in words or actions, either as respects themselves or others?—I think too, that they should not even accustom themselves to resemble madmen, in words or actions, for one may know both the mad and wicked, whether men or women;—yet we must not either do or imitate any one of their actions.

Adeimantus:: Most true.

Socrates:: But what;—are braziers or other craftsmen, or such as row vessels, or pilot the sailors, or any others connected therewith to be imitated?

Adeimantus:: How can it be so, by those at least who are not allowed to give their mind up to those pursuits?

Socrates:: But what,—are they to imitate horses neighing, or bulls lowing, or rivers murmuring, or the sea roaring, or thunder, and all such like things?

Adeimantus:: No surely:—we have forbidden them either to get mad, or resemble madmen.

Socrates:: If then I understand what you mean, there is a sort of speech and narrative in which the truly good and worthy man expresses himself, when required to say anything,—and another again quite dissimilar, to which a person quite oppositely born and bred always adheres, and in which he always expresses himself.

Adeimantus:: But what sorts are they?

Socrates:: That man, seems a worthy man, who on coming in his narrative to any speech or action of a good man, will willingly tell it, as if he were himself the man, and not be ashamed of such an imitation,—the more especially, if he be imitating a good man acting cautiously and sensibly, one who is seldom and but little led astray through ailments, or love, or drink, or any other mishap. But when there arises in his narrative anything unworthy of himself, he will not be in any hurry to assimilate himself to one that is worse, except it be for a short time when he is doing some good; and besides, he will be ashamed of it, both as being unpracticed in the imitation of such characters, and also, as unwilling to mould himself, and stand among the models of baser men, whom all the while he despises in his heart, bearing with them only for mere amusement.

Adeimantus:: Probably.

Socrates:: Will he employ a narrative such as that we not long since described in the case of Homer's poems; and will his language partake both of imitation and simple narrative, but have only a small portion of imitation inserted in a great quantity of plain narrative?—Do you think I speak to the purpose or not?

Adeimantus:: Yes, certainly; that must needs be the type of such an orator.

Socrates:: In that case, will not such a man, the more he is depraved, the more readily narrate any matter whatever, thinking nothing unworthy of him,—so much so, indeed, that he will undertake to imitate everything zealously and in public, and such especially as we just mentioned, thunderings and noises of winds and tempests, and of axles and wheels, and of trumpets, pipes, whistles, and sounds of all kinds of instruments, and the cries of dogs likewise, and sheep, and birds?-—and of course the whole expression of this is to be by imitation, both in voice and gestures, partaking but slightly of narrative.

Adeimantus:: This too, is a matter of course.

Socrates:: These, are what I termed the two kinds of diction.

Adeimantus:: Yes, they are.

Socrates:: Has not one of the two, then, very trifling variations; and to give the diction a becoming harmony and rhythm, he who would speak correctly must always speak in the same style, in one harmony,—for the variations are but trifling,—and of course in a rhythm closely corresponding?

Adeimantus:: It is so, clearly.

Socrates:: But as to the other kind, does it not require the contrary,—all kinds of harmonies, and all kinds of rhythms, if, indeed, it is to be naturally expressed, on account of its having all sorts and shades of variation?

Adeimantus:: That is precisely the case.

Socrates:: Do not, then, all the poets, and writers of narrative generally, use one or other of these models of diction, or a blending of the other two?

Adeimantus:: They must.

Socrates:: What are we to do then:—shall we admit into our state all of these models, or only one of the unmixed, or the one compounded?

Adeimantus:: If my opinion, is to prevail, you should employ that uncompounded one, which imitates only what is worthy.

Socrates:: But surely, Adimantus, the mixed is at least pleasant:—the most pleasant of all, both to children and pedagogues, is the opposite of what you choose, and it is so to the crowd likewise.

Adeimantus:: Yes, it is the most pleasant.

Socrates:: But probably, you will not deem it suited to our civil establishment, because with us no man can be engaged in two or more occupations, but each individual is employed in one only?

Adeimantus:: Of course, it is not fit.

Socrates:: Shall we not find then, that in such a state alone, a shoemaker is only a shoemaker, and not a pilot as well as a shoe-maker; and that the husbandman is only a husbandman, and not a judge as well as a husbandman; and that the soldier is a soldier, and not a money-maker as well; and so with the rest?

Adeimantus:: True.

Socrates:: With respect to the man then, who is enabled by his talents to become everything and imitate everything, if that person were to come into our state and wish to show us his poems, we should respect him as a pious, wonderful, and pleasant person, but would say that we have no such person in our state, nor could such be allowed; and then we should send him to some other state, pouring oil on his head, and crowning him with a woolen chaplet, while we ourselves would call in, to our advantage, a more austere and less pleasing poet and mythologist, to imitate for us the diction of what is becoming, and say whatever he says, in accordance with those models which we regularly set forth on first undertaking the education of our soldiers.

Adeimantus:: So we should do, if it depended on us.

Socrates:: Now then, friend, it seems that we have thoroughly discussed that part of music which concerns oratory and fable; for what is to be spoken, and how spoken, we have already considered.

Adeimantus:: I think so too.

Socrates:: Are we not next to speak, about the style of song and melody?

Adeimantus:: Clearly so.

Socrates:: Cannot one already find out, then, what we ought to say about these things, and of what kind they should be, if we would be consistent with what we have above said?

Here Glaucon, smiling, said,—

Glaucon:: I seem, indeed, Socrates, to be a stranger to the whole business, for I cannot at present conceive what we ought to say, though I have some inkling.

Socrates:: You can, surely, at any rate, fully state this much,—that melody has three constituents,—sentiment, harmony, and rhythm?

Glaucon:: Yes, this much, at any rate.

Socrates:: And as concerns the sentiment,—that differs in nothing from the sentiment which is not sung, inasmuch as it ought to be performed on the same models, as we just said, and after the same fashion.

Glaucon:: True.

Socrates:: Surely, then, the harmony and rhythm should correspond with the sentiment?

Glaucon:: Of course.

Socrates:: But yet we said there was no need for wailings and lamentations in written compositions?

Glaucon:: None, certainly.

Socrates:: Which then are the querulous harmonies? Tell me,—for you are a musician.

Glaucon:: The mixed Lydian, and the sharp Lydian, and some others of this kind.

Socrates:: Are not these, then, to be rejected, as being useless even to well-conducted women, not to speak of men?

Glaucon:: Certainly.

Socrates:: Drunkenness, moreover, is highly unbecoming in our guardians, as well as effeminacy and idleness?

Glaucon:: Of course.

Socrates:: Which then are the effeminate and convivial harmonies?

Glaucon:: The Ionic, and the Lydian, which are called relaxing.

Socrates:: Can you use these, my friend, for military men?

Glaucon:: By no means; but it seems you have yet the Doric remaining, and the Phrygian.

Socrates:: I am not learned, in harmonies; but let us put out of the question that harmony, which would fitly imitate the voice and accents of a brave man, engaged in military action, and every sort of rough adventure, and, should he fail of success, rushing on wounds or death, or any other distress, all the while regularly and resolutely battling with fortune:—let us put out of the question, also, that kind of harmony which suits what is peaceable, where there is no violence, but everything is voluntary, where a man either persuades or beseeches any one, about anything,—either God by prayer, or man by instruction and admonition; or, on the other hand, where one submits to another's entreaties, instructions, or persuasion, and in all these points acts in accordance with intellect, and does not behave haughtily, but demeans himself soberly and moderately, gladly embracing whatever may happen:—put out of the question, too, these two harmonies, the vehement and the voluntary, which so capitally imitate the voice both of the unfortunate and fortunate,—the moderate and brave.

Glaucon:: Aye, you are anxious, to leave no others but those I now mentioned.

Socrates:: We shall have no need, then, in our songs and melodies, for many strings or instruments expressive of all the harmonies.

Glaucon:: We shall not, it seems.

Socrates:: We are not to maintain, then, such craftsmen, as make harps and spinets, and instruments of many strings that produce a variety of harmony.

Glaucon:: We are not, it seems.

Socrates:: But what,—will you admit into our city flute-makers or flute-players? for, are not those instruments which consist of the greatest number of strings, and those that produce all kinds of harmony, imitations of the flute?

Glaucon:: Plainly so.

Socrates:: There are still left you, then, the lyre and the harp, as useful for your city; and, as respects the fields again, a reed or so for the shepherds?

Glaucon:: This is quite reasonable.

Socrates:: We are doing nothing new then, in preferring Apollo and Apollo's instruments, to Marsyas and his instruments.

Glaucon:: Truly not, it seems.

Socrates:: By the dog, too, we have been once more unconsciously cleansing our city, which, we just now said, had become luxurious.

Glaucon:: Aye; we were wise to do so.

Socrates:: Come then, and let us cleanse the remainder; for what concerns rhythm will follow after harmonies,—namely, that our citizens pursue not ever-varying rhythms having a variety of cadences, but observe what are the rhythms of an orderly and manly life; and observing these, should compel the time and the melody to subserve the sentiment, and not the sentiment to subserve the time and melody.—Now, what these rhythms are, it is your business to tell, as you did with the harmonies.

Glaucon:: Nay, by Zeus, I cannot tell:—-so far, indeed, as that there are three forms from which all measures are composed, just as there are four primitive sounds, from which all harmony is derived, this I can say from observation; but what kind of imitations they are, and of what kind of life, I am not able to tell.

Socrates:: These things, however, with Damon's aid we will consider,—what measures suit illiberality and insolence, or madness and any other ill disposition,—and what rhythms also must be left for their opposites. And I have a confused recollection of having heard him call a certain measure enoplion, which was compound, another a dactyl, and a third an heroic measure,—embellishing them I know not how,—making them equal above and below, in breadth and length: and methinks he called one an iambus, and another a trochee, and regulated also the long and short measures. In some of these, too, I fancy, he both blamed and praised the measure of the foot, no less than the numbers themselves, or something compounded of both. As for these matters, however, as I said, let them be thrown on Damon: for to define them distinctly, indeed, would require no small discourse: do not you think so?

Glaucon:: No small one, truly.

Socrates:: But as for this point,—whether the propriety or impropriety is dependent on the good or ill rhythm,—can you at all discern that?

Glaucon:: Of course.

Socrates:: Moreover, with respect to good or ill rhythm, the one depends on elegant expression, and conforms to it, while the other is the reverse; and, in the same way, as to the harmonious and discordant, the rhythm and harmony being subservient to the sentiment, as we just said, and not the sentiment to the former.

Glaucon:: These, indeed, should subserve the sentiment.

Socrates:: And what, as to the manner of expression, and as to the sentiment itself, must it not be suited to the temper of the soul?

Glaucon:: Of course.

Socrates:: And all the rest to the expression?

Glaucon:: Yes.

Socrates:: Well then, fine expression, fine harmony, perfect propriety, and perfect rhythm, are dependent on good disposition,—not that dullness which in flattering language we call good temper, but the intellect itself, adorned with excellent and amiable moral feelings?

Glaucon:: Surely, altogether so.

Socrates:: Must not all these then be always pursued by the youth, if they would perform their duties?

Glaucon:: They should, indeed, be so pursued.

Socrates:: Painting, indeed, is, somehow, full of these things, and so is every other such kind of craftsmanship; and weaving, too, is full thereof, and embroidery and architecture, and all craftship of all kinds of implements; and yet further, the nature of animal bodies and of all plants,—for in all these is found either propriety or impropriety: and moreover, impropriety, want of rhythm, and want of harmony, are close akin to bad language and depraved manners,—their opposites being likewise related, and imitations of discretion and good morals.

Glaucon:: Entirely so.

Socrates:: Must we, then, merely superintend the poets, and oblige them to present in their poems the idea of good morals, or else not write at all with us;—or should we superintend all other craftsmen also, and restrain this immoral, undisciplined, illiberal, indecent style, so as not to exhibit it either in the representation of animals, or in buildings, or in any other craftsmanship,—so that he who cannot do this may not be suffered to work with us?— This we must do, for fear that our guardians, being trained by images of evil, as in bad pasture-land, by every day plucking and eating many different things, should establish imperceptibly, by little and little, some mighty evil in their soul;—but rather should we seek for such craftsmen, as, by the help of a good natural genius, can investigate the nature of the beautiful and becoming,—in order that our youths, dwelling, as it were, in a healthful place, may receive advantage on all sides, and so receive some service, either by sight or hearing, from fine productions, just as a breeze brings health from healthy places, and imperceptibly lead them from childhood onwards to resemblance, friendship, and harmony with right reason.

Glaucon:: Thus indeed, they would be brought up in the best possible manner.

Socrates:: In this case, then, Glaucon;—is not musical training of the utmost importance, inasmuch as rhythm and harmony enter largely into the inward part of the soul, and most powerfully affect it, at the same time introducing decorum, and rendering every one becoming, if properly trained, and, if not so, the reverse?—Moreover, the man, who has thus been brought up as he ought, very soon perceives whatever workmanship is defective and badly executed, or what productions are of such description,—and through a right feeling of disgust will praise and rejoice in the beautiful, and receiving it in his soul will be fostered thereby, and thus become a worthy, good man,—while, as to all that is base, he will rightly despise and hate it, even from early youth, and before he can partake of reason; and again, when reason comes, having been thus trained, he will heartily embrace it, because he clearly recognizes it from its intimate familiarity with himself.

Glaucon:: This appears to me, the very reason, why there should be musical training.

Socrates:: Just as in learning our letters, we are only then sufficiently instructed, when we are acquainted, on meeting them, with the few elementary letters through their various combinations, and do not more or less despise them as unnecessary to be learnt, but take all pains to understand them thoroughly,—as we cannot be good grammarians till we do so.

Glaucon:: True.

Socrates:: And supposing the images of letters were seen anywhere, either in water or in mirrors, should we not recognize them before the letters themselves?—or is this a part of the same art and study?

Glaucon:: Surely.

Socrates:: Is it then true, what I say, by the gods, that in this case we shall never become musicians, neither ourselves nor the guardians we talk of training, unless we understand the ideas of temperance, fortitude, liberality, and magnificence, and whatever are akin to these, are acquainted also with their contraries, so familiar to all, and unless, wheresoever they are, we observe both the virtues themselves and the images thereof, and despise them neither in small nor great instances, but conceive them to be rather a part of the same art and study.

Glaucon:: It must be so.

Socrates:: Must not that person, then, whose lot it is to have virtuous habits in his soul, and what is proportioned and corresponding thereto in his appearance, partake of the same impression and be a fine spectacle to anyone who is able to behold him?

Glaucon:: Quite so.

Socrates:: Yet, what is most beautiful is most lovely?

Glaucon:: Of course.

Socrates:: He, then, who is most musical should surely love those men, who are most eminent in this way; but if a man be unmusical, he will not love them?

Glaucon:: He will not, if he be at all defective in his soul: still, if it were in his body, he would bear with it, and be willing to associate with him.

Socrates:: I understand, that your favorites are or have been of this kind: and I too agree to that; but tell me this,—is there any communion between temperance and excessive pleasure?

Glaucon:: How can there? for such pleasure causes a privation of intellect, not less than grief.

Socrates:: But has it communion with any other virtue?

Glaucon:: Not at all.

Socrates:: What then,—has it communion with insolence and intemperance?

Glaucon:: Most certainly.

Socrates:: Can you mention a greater and more acute pleasure than what respects the matters of love?

Glaucon:: I cannot, nor yet one that is more insane.

Socrates:: But right love is of a nature to love the beautiful and the good temperately and harmoniously?

Glaucon:: Certainly.

Socrates:: Nothing, then, which is mad, or allied to intemperance, may approach real and right love.

Glaucon:: It may not approach it.

Socrates:: Nor may pleasure approach it; neither may the lover and the person he loves have communion with it, if they are rightly to love and be beloved?

Glaucon:: No, truly; they may not, Socrates.

Socrates:: Thus, then, it seems, you will lay down a law in the city you are establishing, that the lover shall love, converse, and associate with the objects of his love, as with a son,—from a virtuous motive and with his consent; and as to everything else, every one will so converse with him whose love he solicits, as never to wish to associate for any other purpose but what we have said;—for otherwise he would undergo the reproach of being unmusical and unacquainted with the beautiful.

Glaucon:: It must be so.

Socrates:: Do not you think then, that our discourse concerning music is now concluded?—For it has now terminated where it ought,—as what is concerned with the art of music somehow ought to terminate in the love of the beautiful.

Glaucon:: I agree.

Socrates:: After music, then, our youths must be trained in gymnastics.

Glaucon:: What then?

Socrates:: In this likewise they must needs be accurately trained, from infancy upwards through their whole life:—For the matter, methinks, stands somehow thus;—and do you also consider.—I do not think that any sound body can, by its own virtue, render the soul good; and contrariwise, that a good soul can, by its own virtue, render the body the best possible: what think you?

Glaucon:: I think so too.

Socrates:: If then, after having sufficiently trained the intellect, we commit to it the careful management of what concerns the body, shall we not, as we are only laying down patterns, that we may not be tedious, act in a right manner?

Glaucon:: Entirely so.

Socrates:: We say then, that they must abstain from drunkenness; for any one, rather than a guardian, might be allowed to get drunk, and not know where he is.

Glaucon:: It were ridiculous, for a guardian to need a guardian himself.

Socrates:: But what as respects meats;—for these men are wrestlers in most important combats;—are they not?

Glaucon:: Yes.

Socrates:: Would not then the bodily state of the wrestlers suit such as these?

Glaucon:: Perhaps so.

Socrates:: But, they are a sluggish set, and of dubious health:—do you not observe, that they sleep out their life; and, that if they only ever so little depart from their regular diet, such wrestlers become extensively and deeply diseased?

Glaucon:: I do observe it.

Socrates:: But a more elegant kind of exercise, is required for our military wrestlers,—who, as dogs, ought to be wakeful, and see and hear most acutely, and endure, in their expeditions, many changes of water and food, of heat and cold, that so they may not fail in their health?

Glaucon:: I think so.

Socrates:: Is not then the best kind of gymnastic exercise very like the simple music which we just before described?

Glaucon:: How mean you?

Socrates:: That the gymnastics should be simple and moderate, and of that kind most especially which concern war.

Glaucon:: Of what kind?

Socrates:: Even from Homer, one may learn such things as these: for you know, that in their military expeditions, at their heroes' banquets, he never feasts them with fish, not even while they were by the sea at the Hellespont, nor yet with boiled flesh, but only with roast meat, as what soldiers can most easily procure: for, in short, one can everywhere more easily use fire, than carry vessels about?

Glaucon:: Yes.

Socrates:: Neither does Homer, I think, make any mention of seasonings: and this is what every wrestler knows,—that the body, to be in good condition, must abstain from these.

Glaucon:: They are right, and do abstain.

Socrates:: You do not then approve, friend, it would seem, of the Syracusan table, and the various Sicilian made-dishes, since you think the other right?

Glaucon:: It seems I do not.

Socrates:: You will disapprove also of a Corinthian girl, as a mistress, for such as would be in good bodily condition?

Glaucon:: By all means.

Socrates:: And likewise of those celebrated delicacies of Attic confections?

Glaucon:: Surely.

Socrates:: As respects all such feeding and dieting, if we compare it to the melody and song produced in full harmony and universal rhythm, will not the comparison hold good?

Glaucon:: Of course.

Socrates:: And does not that diversity cause insubordination in this case—disease in the other? But simplicity in music, engenders temperance in the soul,—and in gymnastics, bodily health.

Glaucon:: True.

Socrates:: And when insubordination and diseases multiply in a city, must not many law-courts and medicine-halls be opened; and will not the forensic and medicinal arts be in request, when many, even of the free, will earnestly apply to them?

Glaucon:: Of course.

Socrates:: Can you then adduce any greater proof of bad and shameful training in a city, than the fact of their needing physicians and supreme magistrates, and these too, not only for base and low craftsmen, but for those also, who boast of having been liberally educated;—and again, does it not seem base, and a great proof of defective education, to be obliged to see justice pronounced on us by others, as our masters and judges, and yet to have no sense of it in ourselves?

Glaucon:: This, is of all things the most base.

Socrates:: And deem you not this far more base; when a person not only spends a great part of his life in courts of justice, as defendant or plaintiff,—but, from ignorance of the beautiful, thinks he is renowned for his very dexterity in doing injustice, and his cleverness at turning through all sorts of windings, and using every kind of subterfuge, with the idea of evading justice,—and all this for the sake of small and contemptible things,—ignorant how much better and more noble it were so to regulate life as not to need a sleepy judge?

Glaucon:: This, is still baser than the other.

Socrates:: And to need the medicinal art, not on account of wounds, or some incidental epidemic complaint, but through sloth, and such diet as we mentioned, being filled with rheums and wind, like lakes, and obliging the skilful sons of Æsculapius to invent new names for diseases,—such as dropsies and catarrhs:—do not you think this abominable?

Glaucon:: Truly, those are very new and strange names of diseases.

Socrates:: Such, as I think, existed not in the days of Æsculapius: and I guess so from this, that when Eurypylus was wounded at Troy, and was getting Pramnian wine to drink with much flour sprinkled in it, and cheese grated all which seem to be of inflammatory tendency, the sons of Æsculapius neither blamed the woman who presented it, nor reproved Patroclus, for presenting the cure.

Glaucon:: Surely such a potion, is absurdly improper for one in such a case.

Socrates:: Not so, if you consider, that the descendants of Æsculapius, as they tell us, did not, before the time of Herodicus, practice the method of cure now in use, which puts the patient on a regimen;—whereas Herodicus, being a teacher of youth, and in weak health too, confounded gymnastics and medicine, and made himself first very uncomfortable, and afterwards many others besides.

Glaucon:: How was that?

Socrates:: By procuring himself a lingering death; for while he was constantly attending to his disease, which was mortal, he was not able, as I imagine, to cure himself; though, to the neglect of everything else, he was constantly using medicines, and thus passed his life, always most uneasy, if he departed in the least from his usual diet; and through this wisdom of his, struggling long with death, he arrived at old age.

Glaucon:: A mighty reward, he reaped for his cleverness!

Socrates:: Such as became one, who was unconscious that it was not from ignorance or inexperience of this method of cure, that Æsculapius did not discover it to his descendants, but simply because he was aware, that in all well-regulated states there every one had a certain work enjoined him, necessary to be done, and no one could be permitted to have time or leisure to get sick throughout life, or busy himself with taking medicine;—a fact that we amusingly discover in the case of laboring people, but do not see it in that of the rich, and those reputed happy.

Glaucon:: How?

Socrates:: A builder, when he falls sick, gets from the physician some potion for throwing up his disease, or purging it downwards, or else, by means of caustic or amputation, for getting freed from trouble; but if any one prescribe him a system of regimen, putting caps on his head and so on, he quickly tells him that he has no leisure to lie sick, and it does not suit him to live in that manner, attending to his troubles, and neglecting his duty; and so, bidding the physician farewell, he returns to his ordinary diet, and, should he recover, he goes on managing his affairs, but should his body be unable to bear up against the disease, he dies, and gets rid of his troubles.

Glaucon:: Such an one, ought to use the art of medicine just in this manner.

Socrates:: Is it not, because be has a certain business,—and which, if he does not do it, it is no profit for him to live?

Glaucon:: Plainly.

Socrates:: But the rich man, as we say, has no such work allotted him, from which, when compelled to refrain, life is not worth the having?

Glaucon:: It is said so of him, at least.

Socrates:: You do not mind, what Phocylides says,—that one ought, throughout life, to practice virtue.

Glaucon:: I think, we attended to that formerly.

Socrates:: We shall not differ on this point. But let us learn, whether excessive attention to one’s disease is to be the business of the rich, and life is not worth keeping, if he does not give this attention; inasmuch, as such a life hinders the mind from attending to building and other arts,—but, as respects the exhortation of Phocylides, it is no hindrance.

Glaucon:: Yes, by Zeus, it is, and that in the greatest degree, when this unusual care of the body goes beyond gymnastics.

Socrates:: It agrees neither with attention to private economy, or military expeditions, or sedentary magistracies in the city. But what is of most importance is, that such application to health ill suits any sort of learning and inquiry and solitary study, because one is then perpetually dreading certain pains and swimming of the head, and blaming philosophy as the cause thereof,—so that, where there is this attention to health, it greatly hinders the practice of virtue and improvement therein, as it makes us always imagine that we are ill and ailing.

Glaucon:: Very probably.

Socrates:: And shall we not say, that Æsculapius too understood these things, when to persons in health, and such as used a wholesome diet, but were afflicted by some particular disease, to these and such kind of constitution he prescribed medicine, resisting their ailments by drugs and incisions, but still ordering them their usual diet, that the public might not be injured; but he did not attempt, either by low or nourishing diet, to cure thoroughly diseased systems; and so to afford a long and miserable life to the man himself, and his descendants too, who would probably be of the same kind: for he did not think that a man ought to be cured, who could not live in the ordinary course, as in that case he would be of no service either to himself or the state.

Glaucon:: You make Æsculapius, a politician.

Socrates:: Plainly so; and his sons may evince that he was so. See you not again, that at Troy they proved their bravery in war, and, as I say, practiced medicine likewise? And do not you remember, that when Menelaus was wounded by Pandarus,—

> they sucked the wound, then spread it o'er
> With drugs of balmy power;—

but as for what he wanted to eat or drink afterwards, they prescribed for him no more than for Eurypylus, because they deemed external applications sufficient to heal men, who, before they were wounded, had been healthy and moderate in their diet, whatever potion they might have drunk at the time, but conceived, that a diseased constitution and an intemperate life were beneficial neither to the men themselves nor to others, and that their art ought not to be employed on, nor minister to them, even were they richer than Midas.

Glaucon:: How vastly clever, you are making the sons of Æsculapius!

Socrates:: It is quite right;—though in opposition to us, the tragedy-writers, and Pindar also, say that Æsculapius was the son of Apollo, and was induced by gold to undertake the cure of a rich man, already in a dying state,—for which indeed he was struck with a thunderbolt:—but we, in accordance with what has been before said, will not believe them as to both these statements, but assert, that were he really a god's son, he would not have been given to filthy lucre,—or else, if he were given to filthy lucre, he was not a god's son.

Glaucon:: This at least, is quite correct. But what say you to this, Socrates?—Must we not provide good physicians for the state; and must not these probably be such as have been conversant with great numbers both of healthy and sick people; and judges also, who have had experience of all varieties of dispositions?

Socrates:: I am speaking particularly, of those who are good: but tell me,—are you aware who they are, that I deem such?

Glaucon:: I shall be, if you will tell me.

Socrates:: I will try to do so; but you are inquiring in one and the same question about two different things.

Glaucon:: As how?

Socrates:: Physicians, would become extremely skilled, if, from childhood upwards, they would, in course of learning their art, gain experience from a large number of bodies, and these too of a very sickly character,—especially if they should be themselves afflicted with all kinds of maladies, and not be altogether of a healthy constitution,—for it is not by the body, methinks, that they cure the body else their own bodies would never be allowed to be diseased, or become so, but they cure the body by the soul, which, while in a diseased state, or becoming so, is incapable of properly performing any cure whatever.

Glaucon:: Right.

Socrates:: But as for the judge, friend, he governs the soul by the soul; and if it has been bred up from childhood with depraved souls, has constantly associated with them, and has itself committed all sorts of crime, it cannot so far emancipate itself, as of itself to judge correctly about others' ill deeds, just as happens with respect to bodily ailments:—no, it must even in youth be unacquainted with and unpolluted by bad habits, if it would be fair and honorable itself and judge correctly of what is just. Hence, therefore, the virtuous, even in youth, appear simple, and easily deceived by the unjust, because they have within them, forsooth, no dispositions corresponding in sentiment with those of the wicked.

Glaucon:: Aye, indeed, this very often happens to them.

Socrates:: For this reason, the good judge must not be a youth, but old,—one who has been late in learning the nature of wickedness, which he apprehends not as a peculiar quality resident in his own soul, but from having, as a foreign one, long studied it in the souls of others, and from having ascertained the nature of its evil by positive science, rather than personal experience.

Glaucon:: Such an one as this, is likely to be a very noble judge.

Socrates:: And a good one too; the very thing you required: for the man with a good soul is good;—while on the other hand, the clever, slyly suspicious man,—he, namely, who has himself committed much sin, and is deemed subtle and wise when in the society of his equals, has the repute of being a clever, wary kind of person, because he has constantly in his eye those models that reside within himself:—but whenever he approaches the good, who are his seniors, he appears mightily inferior, unseasonably suspicious, and wholly ignorant of moral integrity, having within him no models of any such quality; but, on the other hand, as he has more frequent intercourse with the wicked than with the wise, he appears, both to himself and others, unusually wise, rather than ignorant.

Glaucon:: Quite true.

Socrates:: We must not then, in such a man as this, look for a wise and good judge, but in the former one. Vice, indeed, can never know both itself and virtue; but virtue, where the moral temper is gradually instructed, will attain to a scientific knowledge both of itself and depravity also:—this man, then, and not the wicked one, is, as I think, wise.

Glaucon:: I, too, am of the same opinion.

Socrates:: You will establish, then, in your state a science of medicine such as we have described, and along with it a corresponding system of judicature, both of which together may carefully provide for such of your citizens as are naturally well disposed both in body and in mind; while, as regards the opposite, such as are diseased in their bodies, they should let die; but as for those who are thoroughly evil and incurable as to the soul, these they are themselves to put to death?

Glaucon:: It seems, at any rate, the best, that can happen, both for those who are thus afflicted and for the state itself.

Socrates:: As respects your youths, however, it is quite plain, that they will be cautious in calling in the aid of judicial science, so long as they are employed on that simple music, which, we said, generates temperance.

Glaucon:: Of course.

Socrates:: Will not then, the musician who pursues gymnastics, on the very same principles as his own art, prefer doing so in such a way as not to want medicine except when absolutely necessary?

Glaucon:: I think so.

Socrates:: His exercises too, and his labors, he will perform with reference more to the spirited portion of his nature thus stirred into action, than to mere physical strength,—differently, indeed, from all other wrestlers, who take food and undergo toil with a view to the promotion of bodily strength?

Glaucon:: Most true.

Socrates:: In that case, Glaucon, they who propose to teach music and gymnastics, propose them, not for what some imagine, namely, to cure the body by the one, and the soul by the other.

Glaucon:: If not, what is their motive?

Socrates:: They seem to propose them both, chiefly on the soul's account.

Glaucon:: As how?

Socrates:: Perceive you not, how those persons have regulated their intellect itself, who have all their life been conversant with gymnastics, yet never studied music,—or how those are affected who have lived in a manner quite the reverse of this?

Glaucon:: What are you speaking about?

Socrates:: Of savageness and fierceness, and again of effeminacy and mildness.

Glaucon:: Yes, I understand;—that is, persons who apply themselves to unmixed gymnastics become more savage than they ought; and those again who attend to music alone, are softer than becomes them.

Socrates:: And moreover, this very savageness imparts probably a certain spirit to the disposition, and, if rightly disciplined, will become fortitude; but when stretched too far, it will probably become indecently fierce and troublesome.

Glaucon:: So I think.

Socrates:: But what;—will not the philosophic nature partake of the mild also; and when this disposition is carried to excess, may it not prove softer than it ought, and if rightly disciplined, both mild and modest?

Glaucon:: Just so.

Socrates:: We say also, that our guardians ought naturally to be possessed of both.

Glaucon:: They ought.

Socrates:: Ought they not, then, to be made to suit one another?

Glaucon:: Of course.

Socrates:: And the soul of the person thus suited is temperate and brave?

Glaucon:: Certainly.

Socrates:: But the soul of a person not so suited is cowardly and savage?

Glaucon:: Especially so.

Socrates:: As a matter of course, then, when one consents to be soothed with the charms of music, and to have poured into his soul through his ears as through a pipe those lately called the sweet, effeminate, and doleful harmonies, and spends the whole of his life humming ditties and charmed with melody,—such an one, first of all,—should he possess any spirit,—softens it like iron, and makes it serviceable, instead of useless and harsh. When, however, he positively declines desisting, and becomes the victim of a kind of fascination,—after this, he is melted and dissolved, till his spirit is quite spent, and the nerves are, as it were, cut out from his soul, making him an effeminate warrior.

Glaucon:: Quite so indeed.

Socrates:: Aye; if he had originally possessed a nature devoid of spirit, he would quickly have done thus; but, if he possesses one of high spirit, it makes the mind weak, and causes it to be quickly overbalanced, speedily either excited and overcome; and hence men become outrageous and ill-tempered, rather than high-spirited.

Glaucon:: Quite so, indeed.

Socrates:: But what;—if a man labor much in gymnastics and live on extremely good diet, but pay no attention to music and philosophy; is he not first of all, from having his body in good condition, abundantly filled with prudence and spirit, and does he not become braver than he was before?

Glaucon:: Surely.

Socrates:: But what;—supposing he does nothing else, and has no commerce with the Muses, not even if he had any love of learning in his soul, as neither having a taste for investigation, nor sharing in any inquiry or reasoning, or other musical pursuit whatever, does it not become feeble, deaf, and blind, as being neither awakened, nor nurtured, nor his perceptions purified?

Glaucon:: Just so.

Socrates:: Such an one then becomes, I suppose, a hater of argument, and indisposed to music,—one who cannot at all be reasoned into anything, but conducts himself in all matters with violence and ferocity, like a wild beast; and thus he lives in ignorance and barbarity, out of measure, and unpolished?

Glaucon:: Quite so.

Socrates:: Corresponding then to these two tempers, it seems, I would say, that some deity has furnished men with two arts,—music and gymnastics,—relating respectively to the high-spirited and the philosophic nature,—not indeed, for the soul and body, otherwise than as a by-work and accessory, but with a view to those two tempers, that they may be mutually suitable to each other by being tightened and loosened at pleasure.

Glaucon:: Aye,—it seems so.

Socrates:: Whoever then can most cleverly mingle gymnastics with music, and introduce them in justest measure into the soul, this person we may most properly call completely musical, and most harmoniously disposed,—far more, indeed, than the man who puts in tune the strings of an instrument.

Glaucon:: Very likely, Socrates.

Socrates:: Shall we not then, always need, Glaucon, such a president in our city, if its government is to be kept entire?

Glaucon:: It will indeed be quite needful, as far at least as we can.

Socrates:: The above then are probably the true models both of education and discipline:—for why should one go through the dances, the hunts of wild beasts with dogs and nets, the wrestlings and the horse-races expedient for such persons?—for it is almost manifest that they follow as a matter of course, nor are they at all hard to discover.

Glaucon:: Well, perhaps they are not difficult.

Socrates:: Granted:—but after this, what had we next to determine?—Is it not, which of these shall govern, and be governed?

Glaucon:: What else?

Socrates:: Is it not plain that the governors should be the elder, and the governed the younger?

Glaucon:: Plain.

Socrates:: And also, that the best of them should govern?

Glaucon:: Aye,—that too.

Socrates:: And the best husbandmen;—are they not the cleverest in tillage?

Glaucon:: Yes.

Socrates:: Now, if it be fit that our guardians be the best, will they not be most strictly watchful over the city?

Glaucon:: Yes.

Socrates:: With this view should we not make them prudent, and able, and careful also of the city?

Glaucon:: It is the fact.

Socrates:: At any rate a man would be most careful of what he happens to love?

Glaucon:: Necessarily so.

Socrates:: And this at least one must especially love,—namely, what he deems to have a community of interest with himself, especially when he conceives, that in another's good fortune he may find good fortune too,—but if otherwise, the reverse?

Glaucon:: Just so.

Socrates:: We must choose then, from the rest of the guardians such men, as on inquiry most of all seem to perform with all cheerfulness through an entire life whatever they deem expedient for the state,—while, as to the inexpedient, they will not do it by any means at all.

Glaucon:: These are just the proper persons.

Socrates:: I really think that they ought to be observed at all stages of life, whether they act consistently with this opinion, without either being reduced or forcibly compelled inconsiderately to throw up the opinion, of its being a duty to do what is best for the state.

Glaucon:: What throwing up do you mean?

Socrates:: I will tell you. Opinion seems to me to come from the intellect either voluntarily or involuntarily,—

voluntarily indeed as regards false opinion, when it comes from him who unlearns it,—but involuntarily, as regards every true one.

Glaucon:: The case of the voluntary one, I understand; but that of the involuntary I want to learn.

Socrates:: What;—are not even you of opinion, that men are deprived of good things involuntarily, but of evil things voluntarily? Is being deceived respecting the truth no evil, and the attainment of truth no good? and think you not, that to form opinions respecting things as they really exist is attaining the truth?

Glaucon:: Aye, you speak correctly:—they do indeed seem to me to be deprived unwillingly of true opinion.

Socrates:: Are they then thus affected by being robbed, or enchanted, or forced?

Glaucon:: Now, at any rate, I do not understand you.

Socrates:: I am probably expressing myself, just like the tragedians: for, I say, that those have their opinions stolen, who change them through persuasion, or else forget them; because, in the one case, they are imperceptibly removed by time, and in the other by reasoning:—now perhaps you understand?

Glaucon:: Yes.

Socrates:: And those, I say, are forced out of their opinions, whom grief or agony obliges to change them?

Glaucon:: This too, I understand, and you are right in saying so.

Socrates:: Those, moreover, methinks, you will say, are enchanted out of their opinions, who change them, either bewitched by pleasure or appalled by fear.

Glaucon:: For whatever deceives, seems to exercise a kind of magical enchantment.

Socrates:: We must now then inquire,—as I was saying before,—who are the best guardians of their own particular maxim, that they should do whatever they deem to be best for the state; and they should observe them too quite from childhood, setting before them such work, as may lead them most readily to forget such a matter and delude themselves; and we should choose one who is mindful and hard to be deluded, while one who is not so we should reject:—is that it?

Glaucon:: Yes.

Socrates:: And we must appoint them labors and pains and contests, in which we must observe these very same things.

Glaucon:: Right.

Socrates:: Should we not, also, appoint a third contest, that of the mountebank kind; and look to see, just as persons lead young colts amidst noises and tumults, to find out whether they are frightened?—and thus, while yet young, they must be led into various fearful situations, and again be thrown back into pleasures, trying them far more than gold in the fire, whether a person appears hard to be beguiled by mountebank tricks, and is of composed demeanor amidst all, because he is a good guardian of himself, and of that music in which he had been instructed, proving himself in all these respects to be in just rhythm and harmony.

Glaucon:: Being of such character, he would truly be most useful both to himself and the state.

Socrates:: And he who in childhood, youth, and manhood, has been thus tried, and come out pure, may be appointed governor and guardian of the state; honors are to be paid him while he lives, and at his death he should receive the highest rewards of public burial and other memorials:—while one that is not such we must reject. Somewhat like this, methinks, Glaucon,—for we have only drawn it in outline, not defined it accurately,—should be the mode of choosing and establishing our governors and guardians.

Glaucon:: I think so too.

Socrates:: Is it not then really most correct to call these the perfect guardians, both as to what relates to enemies abroad and friends at home, for taking from one party the will, and from the other the power of doing mischief, while the youth whom we just now called guardians will be allies and auxiliaries to the decrees of the governors?

Glaucon:: Yes, I think so.

Socrates:: What then, should be our plan, when we are falsifying by one of the well-intentioned and necessary untruths, such as we just mentioned, with a view to persuade chiefly the governors themselves;—but, if not these, the rest of the state?

Glaucon:: What kind of untruth do you mean?

Socrates:: Nothing new, but something like the Phoenician fable, which has often taken place heretofore, as the poets say and have persuaded us, but which has not happened in our times, nor do I know whether it is likely to happen,—to persuade one of which indeed requires great suasive power.

Glaucon:: You seem to me, to hesitate to tell it!

Socrates:: I shall appear to you, to hesitate with very good reason, whenever I shall tell it.

Glaucon:: Speak, and be not afraid.

Socrates:: I will tell you then, though I know not with what courage, or what words I am to use in telling you;—and I will attempt, first of all to persuade the governors themselves, and the soldiers, and then also the rest of the state, that, whatever training or education we gave them, all these particulars seemed to affect and befall them like dreams, while really they were in course of formation and development beneath the earth, where are fabricated not only themselves, but also their amour and other equipments:—but after they were completely fashioned, the earth, who is their mother, brought them forth; and now they ought to consult the interests of the country in which they reside as for a mother and nurse, and to defend her in case of invasion, and to look upon the rest of the citizens as their brethren, and sprung from the same soil.

Glaucon:: It is not without reason, that some time back, you were ashamed to tell this falsehood.

Socrates:: Quite so:—but still hear the remainder of the fable. All of you in the state truly are brethren as we shall tell them by way of fable; but the God, in forming you, mixed gold in the formation of such of you as are able to govern;—on which account they are the most honorable;—in such as are auxiliaries, silver;—and in the husbandmen and other craftsmen, iron and brass. Since then you are all of the same kindred, you would for the most part beget children resembling yourselves; and sometimes perhaps silver will be generated out of gold, and out of silver there might be a golden offspring; and thus in all other ways are they generated out of one another. Governors then, first and chiefly, the God charges, that over nothing are they to be such good guardians, or to keep such vigilant watch, as over their children;— to know with which of these principles their souls are imbued;—and should their descendants be of brass or iron, they will show them no indulgence whatever, but assigning them honour just proportioned to their natural temper, will thrust them down to the rank of craftsmen or husbandmen. And if again any from among these latter shall exhibit a golden or silver sort of nature, they are to pay them honour and elevate them;—some to the guardianship, others to the rank of auxiliaries,—the oracle having declared that the state shall perish whenever iron or brass shall hold its guardianship. With, respect to this fable then, have you any means of persuading them of its truth?

Glaucon:: None, of persuading these men themselves; but I have as respects their sons and posterity, and the rest of mankind afterwards.

Socrates:: Even this, would act well in making them more anxious about the state's welfare, and for one another; for I almost understand what you mean:—and this truly will lead the same way as the oracle. As for ourselves, having armed these earthborn sons, let us lead them forward under the conduct of their leaders; and when they are come into the city, let them consider where they may best pitch their camp, so as best to keep in order those within it, should any one be unwilling to obey the laws; and likewise how they may defend it against those without, should any enemy come, like a wolf, on the fold. And when they have pitched their camp, and sacrificed to the proper divinities, let them erect their tents: is that the way?

Glaucon:: Just so.

Socrates:: They should be such then as may suffice to defend them, both from winter's cold and summer-heat?

Glaucon:: Of course; for I think, you are alluding to houses.

Socrates:: Yes, those of the military class, not those of the money-makers.

Glaucon:: How, do you say that the latter differs from the former?

Socrates:: I will try to tell you; for, of all things, it is the most dreadful, and disgraceful to shepherds, to breed, as guardians of the flocks, such kind of dogs, and in such a manner, as that, either through want of discipline, or hunger, or some other ill habit, the dogs should themselves attempt to hurt the sheep and so resemble wolves rather than dogs.

Glaucon:: It is dreadful, of course.

Socrates:: Must we not then take all care, lest our allies act thus towards our citizens, as being the more powerful, and, instead of generous allies, resemble savage masters?

Glaucon:: We must take care.

Socrates:: Would they not be prepared to exercise the greatest caution, if they were really well educated?

Glaucon:: They are so, moreover.

Socrates:: I then, for my part, observed: that you cannot properly insist on, friend Glaucon; but what we were just now saying is proper; namely, that they should have a good education, whatever its nature, if they are to possess what is most important towards rendering them mild, both among themselves and towards those under their guardianship.

Glaucon:: Right.

Socrates:: In addition then to this training, any intelligent person would say, that their houses and all other effects ought to be so contrived, as neither to impede their guardians in becoming the very best possible, nor to excite them to the injury of the other citizens.

Glaucon:: Aye, and he will say true.

Socrates:: If then they intend to be such, consider, whether they ought to live and arrange their household in some such manner, as follows: First, let none possess any private property unless it be absolutely necessary: next, let none have any dwelling, or store-house, into which any one that pleases may not enter: then, as for necessaries, let them be such as both temperate and brave champions in war may require; making for themselves this law, not to receive such a reward of their guardianship from the other citizens, as to have either surplus or deficiency at the years end. Let them also frequent public meals, as in camps, and live in common; and we must tell them, that they have ever in their souls from the gods a divine gold and silver, and therefore have no need of that which is human; and that it were profane to pollute the possession of the divine ore, by mixing it with the alloy of the mortal metal; because the money of the vulgar has produced many impious deeds, while that which they have is pure; and that of all men in the city, they alone should not be allowed to handle or touch gold or silver, or harbor it under their roof, or carry it about, nor to drink out of silver or gold. By such means they will be likely to preserve both themselves and the state; but whenever they shall possess private lands and houses, and money, they will become stewards and farmers instead of guardians, and hateful masters instead of allies to the other citizens; in hating indeed, and being hated, in plotting, and being plotted against, they will pass the whole of their life; much more frequently and more really terrified by the enemies from within than by those from without, as they and the rest of the state are hastening very near to destruction.

For all these reasons, we must say, that our guardians should be thus regulated, both as to their houses and all other matters. And let us consider these things as law; shall we not?

Glaucon:: By all means.

The end of the third book.

## BOOK IV.

Socrates:: Adimantus hereupon rejoining said:

Adeimantus:: What answer will you make, Socrates, if one were to say that you do not make these men very happy,—and that owing to themselves, whose property the state really is,—yet they enjoy no advantage in the state, such as others do who possess lands, build beautiful and large houses, purchase suitable furniture, offer sacrifices to the gods at their own expense, entertain strangers, and, as you were just now saying, possess gold and silver, and everything generally supposed to contribute towards making men happy. Aye, doubtless, he may say, they seem, like hired auxiliaries, to be settled in the state for no other purpose than keeping guard.

Socrates:: Yes; and that too only for their maintenance, without receiving, like the rest, pay as well as rations;—so that they are not to be allowed so much as to travel abroad privately, though they wish it, nor bestow money on mistresses, nor spend it in such other ways as those do who are reputed to be happy. These and many such like things you leave out of the accusation.

Adeimantus:: Well, let these charges too, be made against them.

Socrates:: What answer then, are we to make, you ask?

Adeimantus:: I do.

Socrates:: While travelling on the same road, we shall find, methinks, what is to be said: for we shall state, that it would be nothing strange, were these men, under these circumstances, to be the happiest possible:—yet it was not with an eye to this, that we are establishing our state,—to have any one tribe in it remarkably happy, but that the whole state might be so to the fullest extent; for we judged, that in such an one more particularly we should meet with justice, and again in that the worst established injustice; and that, on thoroughly examining these, we might determine what we have long been seeking. Now then, as we suppose, we are forming a happy state, not by selection, making some few only so in it, but the whole: and we will next consider one its reverse.

Just as if, when we were painting human figures, a person should come and blame us, saying, that we do not place the most beautiful colors on the most beautiful parts of the creature,—inasmuch as the eyes, the most beautiful part, were not painted with purple, but black; we should seem perhaps to make a sufficient answer to him, by saying, Clever fellow, do not suppose that we ought to paint the eyes so beautifully, as that they should not appear to be eyes, and so with the other parts;—but consider, rather, whether, in giving each particular part its due, we make the whole beautiful.

And especially now, do not oblige us to confer such happiness on our guardians as shall make them anything rather than guardians: for we know too, how to dress out the husbandmen in fine robes and gird them with gold, and bid them till the ground with a view to pleasure only,—and in like manner, those who make earthenware, to lie at their ease by the fire, drinking and feasting, and placing the wheel near them to work just so much as they like;—and so also how to confer happiness on every one in such a manner as to render the whole state happy.

But do not advise us in this way; because, if we obey you, neither will the husbandman be really a husbandman, nor the potter a potter; nor will any one else be really of any of those professions of which the state is composed.

As to all the rest, it is of less consequence:—for, when shoemakers become bad and corrupt, and profess to be shoemakers when they are not so, no great mischief befalls the state; but when guardians of the laws and of the state are not so really, but only in appearance, you see how entirely they destroy the whole state, and, on the other hand, that they alone have the opportunity of managing it well and effecting its happiness.

If then we would appoint men who shall be really guardians of the city, let us choose those who will be least hurtful to it; but he who says that they should be a kind of farmers, and as in a festival meeting, not in a state, jolly entertainers, must speak of something else rather than a city.

We must consider, then, whether we establish guardians with this view, that they may enjoy the greatest happiness,—or, looking to the entire state, we regard whether it is to be found therein; and we must compel these allies and guardians to do this, and persuade them to become the best performers of their own particular work, and act also towards all others in the same manner; and thus, as the whole city becomes prosperous, and well constituted, we must permit its several classes to share in that degree of happiness which their nature admits.

Adeimantus:: I think you say well.

Socrates:: Well then, what is near akin to this, shall I be thought to say rightly.

Adeimantus:: In what particularly?

Socrates:: With respect to all other artificers again, consider whether these things corrupt them, so as to make them bad workmen.

Adeimantus:: To what do you allude?

Socrates:: Riches? and poverty.

Adeimantus:: As how?

Socrates:: Thus:—Would the potter, think you, after he has become rich, have any desire still to mind his art?

Adeimantus:: By no means.

Socrates:: But will he not become more idle and careless than he was before?

Adeimantus:: Much more so.

Socrates:: Will he not then become a worse potter?

Adeimantus:: This too, much more so.

Socrates:: And, moreover, being unable through poverty to supply himself with tools, or other requisites of his art, his workmanship will be more imperfectly executed, and his sons, or others whom he instructs, will be inferior artists.

Adeimantus:: Of course they will.

Socrates:: Owing to both these causes, then, namely poverty and riches, the workmanship in the arts becomes inferior, and the artists themselves inferior too.

Adeimantus:: It appears so.

Socrates:: We have then, it seems, found out other things for our guardians, against which they must by all means watch, that they may not steal into the state without their knowledge.

Adeimantus:: Of what sort are these?

Socrates:: Riches, and poverty;—the one engendering luxury, idleness, and a love of innovation;—the other, illiberality and mischief, as well as a love of innovation.

Adeimantus:: Quite so. But, Socrates, pray consider this;—how is our state to have the power of engaging in war, when she is possessed of no money, especially if compelled to wage war against a great and opulent one?

Socrates:: It is plain, that to fight against one is somewhat difficult; but against two such is more easy.

Adeimantus:: How say you?

Socrates:: First of all, now, if there is any occasion for fighting, will they not, being practiced warriors, fight against rich men?

Adeimantus:: Yes, surely.

Socrates:: What then, Adimantus, would not a single boxer, trained as highly as possible to this exercise, seem to you easily able to fight against two who are not boxers, but on the other hand, are rich and fat?

Adeimantus:: Not perhaps with both at once.

Socrates:: Not even, if he should be enabled to retire a little, and then turn back and give a blow to the furthest in advance, and repeat this frequently in the sun and heat?—would not a person of this kind easily defeat many such as these?

Adeimantus:: Clearly so, and no wonder.

Socrates:: But think you not, that the rich have more science and experience in boxing than in the military art?

Adeimantus:: I do.

Socrates:: In that case, according to appearances, our wrestlers will easily combat with double and threefold their number.

Adeimantus:: I will agree with you; for I believe you say right.

Socrates:: But what,—supposing they were to send an embassy to another state, informing them of their true situation, telling them, We make no use either of gold or silver, neither is it lawful for us to use them, while for you it is so:—if then you become our allies in war, you shall receive the enemy's spoils;—think you that any, on hearing this, would choose to fight against stanch and resolute dogs, rather than in alliance with the dogs to fight against fat and tender sheep?

Adeimantus:: I think not; but, if the wealth of all the rest be accumulated in one single state, take care that it the wealthy state does not endanger that which is poor.

Socrates:: How good you are, to think that any other deserves to be called a state except such as we have established.

Adeimantus:: Why not? Socrates.

Socrates:: To those others, we must give a more magnificent appellation; for each of them comprises very many states, and is not one, as was said in the game; for there are always in them, however small they be, two parties hostile to each other,—the poor and the rich; and in each of these again there are very many;—to which, if you apply as to one, you would be entirely mistaken;—but if, as to many, giving one party the goods and power, or even persons, of the other, you will always have the many for your allies, and the few for enemies; and, so long as your state be managed temperately, as lately established, it will be the greatest,—not I mean in mere repute, but really the greatest, though its defenders were no more than one thousand; for a single state of such size you will not easily find, either among Greeks or barbarians, but many which have the repute of being many times larger than one such as this. Are you of a different opinion?

Adeimantus:: No, by Zeus.

Socrates:: This, then, will probably be the best boundary-mark for our rulers as to the size that a state should attain, and what extent of ground should be marked off for it in proportion to its bulk, without reference to anything further?

Adeimantus:: What boundary?

Socrates:: I suppose, it should be this: So long as the city, as it increases, continues to be one, so far it may increase, but no further.

Adeimantus:: Very right.

Socrates:: We will impose, then, this further injunction on our guardians, to take care by all means that the city be neither small nor great, but of moderate extent, and one only.

Adeimantus:: This probably, will be a trifling injunction.

Socrates:: A more trifling one still, is what we previously mentioned, when we observed, that if any descendant of the guardians be depraved, he should be dismissed to the other classes; and if one from the other classes be worthy, he should be promoted to that of the guardians;—by all which it was intended to show that all the other citizens should apply themselves each to that particular art for which he has a natural genius, that so, each minding his own proper work, should not become many, but one; and thus, consequently, the whole state would have the nature of unity;—not plurality.

Adeimantus:: Well,—this, indeed, is a still more trifling injunction than the other.

Socrates:: We do not here, good Adimantus, as any one might suppose, impose on them many and grave injunctions, but all of them rather trifling, if they take care of one grand point that we speak about, or rather not so much great as sufficient.

Adeimantus:: What is that?

Socrates:: The education, and nurture of children; for if, by being well educated, they become temperate men, they will easily see through all these things, and such other things as we pass by at present,—women, marriages, and the propagation of the species,—inasmuch as these things ought all, according to the proverb, to be made entirely common among friends.

Adeimantus:: Yes,—for that, would be most right.

Socrates:: And moreover, if once a republic is set a-going, it proceeds as a circle, constantly on the increase. For nurture and good education, when maintained, engender good dispositions, and good dispositions, partaking of such education, turn out still better than the former, especially with reference to propagation, just as with all other animals.

Adeimantus:: Probably.

Socrates:: To speak then in brief, this, particularly, the guardians of the state must guard against, that it may not be corrupted unawares,—nay, above all things, must they guard against this, not to make innovations in gymnastics and music, contrary to the established order of the state, but as far as possible maintain it, through fear that while a man adopts that poetical expression;

…… Men most admire that song
Which most partakes of novelty.

one might often think that the poet means not new songs, but some new style of song, and so commends it: but such as this one ought neither to commend nor admit; for as to receiving a new kind of music one should be specially cautious, as endangering the whole: for never, as Damon says, and I quite agree with him, are the measures of music altered without affecting the most important laws of the state.

Adeimantus:: And me too, you may place, among those who are of that opinion.

Socrates:: We must erect then, in music, as it seems, a kind of citadel for our guardians.

Adeimantus:: Nevertheless, neglect of the laws even here, easily and imperceptibly steals in.

Socrates:: Yes, in the way of diversion, and as if it were doing no mischief.

Adeimantus:: No, for it does nothing else, but by gradually insinuating itself into it, insensibly flow into their manners and pursuits; and afterwards in a greater degree it finds its way into their contracts with each other; and from contracts it enters with much boldness into the laws and political establishments, Socrates, till at last it overturns everything, privately as well as publicly.

Socrates:: Well, then, is this the case?

Adeimantus:: It appears so to me.

Socrates:: Ought not our children then, as I said at the beginning, even from infancy, to be allowed diversions more conformable to the laws? because, if their diversions are inconsistent with the laws, and the children such themselves, it is impossible that they should grow up men obedient to the laws and virtuous.

Adeimantus:: How can it be otherwise?

Socrates:: When, therefore, children beginning well set about their diversions conformably to the laws, with music, quite the contrary to what happens in the former case attends them in everything, and grows up with them, and corrects in the state whatever was before neglected.

Adeimantus:: True, indeed.

Socrates:: And regulations, even, that seem but of little importance, these persons discover anew, which the others had allowed altogether to perish.

Adeimantus:: What regulations?

Socrates:: Such as these:—That the younger should keep silence before the elder, as is proper, and give them place, and rise up before them, and show reverence to parents; likewise what shaving, what clothes and shoes are proper, with the whole bodily dress, and all similar matters. Do not you think so?

Adeimantus:: I do.

Socrates:: But to make laws about these things, would, I think, be silly; neither is it done anywhere; nor would it stand, though established both by word and writing.

Adeimantus:: For how can it?

Socrates:: It seems then, Adimantus, that in whatever way a man sets out in his education, such accordingly will be its consequences; for does not the like always attract the like?

Adeimantus:: Of course.

Socrates:: And we may say, I suppose, that it results at last in something complete and vigorous, whether it be good or the contrary?

Adeimantus:: Of course.

Socrates:: I would not then, for these reasons, undertake as yet, to make laws about such matters as these.

Adeimantus:: Very properly.

Socrates:: But what, by the gods, as to those laws relative to matters of contract, and to the traffic which they severally transact with each other in the market, and, if you please, their traffic likewise among their handicrafts, their abusiveness and bodily assaults, their entering of actions at law, their institution of judges, and likewise such imposts and payments of taxes as might be expedient either in the markets or at the ports,—or generally as to laws commercial, municipal, or marine, or any other the like,—shall we venture to establish any of these?

Adeimantus:: It is improper, to prescribe them to good and worthy men; for the greater part of them, such as ought to be established by law, they will easily find out for themselves.

Socrates:: Yes, my friend, if at least God grant them security for those laws which we have above described.

Adeimantus:: But if not so, they will spend the whole of their life making and amending many such regulations, imagining that they will thus attain to what is best.

Socrates:: You say that such as these, will lead a life like that of sick persons, and such as are unwilling, through intemperance, to relinquish a bad mode of living?

Adeimantus:: Quite so.

Socrates:: And truly, these at least pass their time very pleasantly; for though they undergo remedial treatment, they do nothing but make their ailments greater and more complex; and they are ever in hopes, when any one recommends any medicine to them, that by these means they shall soon get well.

Adeimantus:: Aye, that is just the case with diseased persons like these.

Socrates:: But what, is not this pleasant of them, to reckon that man the most hateful of all, who tells them the truth, namely, that, till one abandons drunkenness, gluttony, unchaste pleasures, and laziness, neither drugs nor caustics, nor the use of the knife, nor charms, nor amulets, nor any other such things as these, will be of any avail?

Adeimantus:: That, is not very pleasant; for to be angry with one who tells us what is right, has nothing in it that is pleasant.

Socrates:: You seem to be no admirer, of such men as these.

Adeimantus:: No, truly.

Socrates:: You cannot then surely approve of it, even though the entire city as we were lately saying should act so; or rather, do they not seem to be doing the same that is done by all those cities, which, however ill-governed, command their citizens not to alter any part of the constitution, for that death will be inflicted on all who do any such things; while, on the other hand, whoever most cheerfully serves those who thus govern, gratifying them with insinuating flattery, and exhibits great dexterity in anticipating and satisfying their desires, will be deemed both good and wise in matters of highest importance, and will be held by them also in the greatest honor?

Adeimantus:: They seem to me at least, to do the very same thing, and I cannot by any means commend them.

Socrates:: But what again as to those who desire to manage such states, and are even fond of it, do you not admire their courage and dexterity?

Adeimantus:: I do; excepting, indeed, such as are imposed on by them, and fancy that they are really politicians, because they are praised by the multitude. How do you mean?

Socrates:: Do you not pardon those men? Do you think it even possible that a man ignorant of the art of measuring, supposing he should hear many other such men tell him that he is four cubits high, would not believe this of himself?

Adeimantus:: Impossible.

Socrates:: Be not angry then; for such as these are of all the most ridiculous; because, as they are ever making laws about such things as we have just mentioned, and ever mending them, they conceive they shall find some end to the frauds respecting commerce, and what else I just now spoke about, through ignorance of the fact that they are in fact, as it were, trying to destroy a hydra.

Adeimantus:: Nevertheless, it is nothing else, that they are now attempting.

Socrates:: I think, then, that a true lawgiver ought not to give himself much trouble about such sorts of laws and police, either in an ill or well ordered state; in the one, because it is unprofitable and of no avail; in the other, because, as for some of the laws, any one whatever can find them out, while others flow quite of their own accord out of their former habits and pursuits.

Adeimantus:: What then, in the enactment of laws, yet remains for us to consider?

Socrates:: We have nothing, indeed, remaining: to the Delphian Apollo, however, there remains the greatest, noblest, and most important of legal institutions.

Adeimantus:: Of what kind?

Socrates:: The erection of temples, sacrifices, and other services to the gods, demons, and heroes; likewise the rites of the dead, and what other ceremonies should be gone through, with a view to their propitiation. Such things as these, indeed, we neither know ourselves, nor, in founding the state, would we entrust them to any other, if we be wise; nor would we employ any other interpreter than that of the country: for surely this god, being the natural interpreter to all men about such matters, interprets to them sitting in the middle, and, as it were, navel of the earth.

Adeimantus:: Aye, you say well; and we must act accordingly.

Socrates:: Thus then, son of Ariston, is our state established. And, in the next place, having provided from some source or other sufficient light for it, do you yourself observe, and call on your brother and Polemarchus and these others also to do so also, whether we can at all perceive where justice lies, and where injustice, and in what respect they differ from each other; and likewise which of the two that man ought to possess, who proposes to be happy, whether with or without the knowledge of gods and men.

Glaucon:: You say nothing to the purpose; for you yourself promised to inquire into this, as it was unholy for you not to assist by all possible means the cause of justice.

Socrates:: What you remind me of, is true; and I must act accordingly; still it is proper, that you too should assist in the inquiry.

Glaucon:: Aye, that we will.

Socrates:: I hope then, to be able to find what I want in the following manner:—I think that our city, if at least it has been rightly established, should be perfectly good.

Glaucon:: Necessarily so.

Socrates:: It is evident then, that it is wise, and brave, and temperate, and just.

Glaucon:: Manifestly so.

Socrates:: Whatever then of these virtues we shall find in it, the remainder will be that which is not found?

Glaucon:: Of course.

Socrates:: Supposing of any four things whatever, if we were in quest of one, were we to discover this one at first, we should be satisfied; and were we first to discover the other three, we should discover from this itself what we were inquiring after; for it would be manifestly no other than what was left behind.

Glaucon:: You say right.

Socrates:: Well then, since of the virtues above mentioned there happened to be four in our state, shall we not inquire about them in a similar manner?

Glaucon:: Plainly so.

Socrates:: First of all, indeed, to my mind at least, wisdom appears to hold in it a very conspicuous place; and there appears to be something very peculiar about it.

Glaucon:: What is that?

Socrates:: The state which we have described appears to me to be really wise, for it is well advised; is it not?

Glaucon:: It is.

Socrates:: And surely this very thing, the ability of advising well, is evidently a kind of science; for in no case do men advise well through ignorance, but only by means of science.

Glaucon:: Plainly so.

Socrates:: But there are many and various kinds of science in the state?

Glaucon:: Of course there are.

Socrates:: Is it then owing to the science of builders, that the state is to be termed wise and well-advised?

Glaucon:: By no means through this; for it would only be clever in buildings A state, then, is not to be called wise on account of its skill in advising the best methods of building?

Socrates:: Surely not. And what, as respects skill in brass-work or anything else of a similar nature?

Glaucon:: For none of these.

Socrates:: Nor yet for its knowledge of the productions of the earth is it said to be wise, but only skilled in agriculture.

Glaucon:: I think so.

Socrates:: But what; is there any science among any of the citizens in the state which we have just founded, which deliberates, not about any particular thing in the city, but about the whole, how it may best be conducted, both as regards itself and its intercourse with other cities?

Glaucon:: Yes, there is.

Socrates:: What is it, and among whom to be found?

Glaucon:: This very guardianship; and it may be found among those very governors, whom we lately termed perfect guardians.

Socrates:: On account then of this skill, what do you term the state?

Glaucon:: Well-advised, and really wise.

Socrates:: Whether then, do you imagine that the braziers, or these true guardians, will be the more numerous in the state?

Glaucon:: The braziers, far more so.

Socrates:: And of all, who owing to their skill are to be held in account, will not these guardians be the fewest in number?

Glaucon:: By far.

Socrates:: By this smallest class and portion of the state then, and by the science that presides over and governs it, is the whole city wisely established on natural principles; and this class, as it seems, is by nature the smallest, whose business it is to have a share in that science, which of all others ought alone to be denominated wisdom.

Glaucon:: Your remark, is perfectly true.

Socrates:: We have found then, I know not how, one of the four, both as respects its nature and the part of the state in which it resides.

Glaucon:: And for my part, I think it has been sufficiently described.

Socrates:: But as to fortitude, both as respects itself, and the particular part of the state in which it resides, on account of which the state is termed brave, that can be no difficult matter to discover.

Glaucon:: How so?

Socrates:: Who, would call a state brave or cowardly, with relation to any other than that particular portion which makes war and fights in its defense?

Glaucon:: No one would, with relation to any other.

Socrates:: No, for I do not think that the other classes therein, whether cowardly or brave, can have any influence to make it either the one or the other.

Glaucon:: No, indeed.

Socrates:: The state then is brave in a certain part of itself, because it contains such a power as will constantly maintain its opinion about things dreadful, as to their being these very things, and such like, just as the lawgiver inculcated during training:—Do you not call this fortitude?

Glaucon:: I have not thoroughly comprehended, what you say; so tell it over again.

Socrates:: Fortitude, I term a kind of preservative.

Glaucon:: What sort of preservative?

Socrates:: A preservative of opinion formed by law in a course of education about things dreadful, as to their nature and quality; and I called it a constant preservative, because one retains it both in pains and pleasures, desires and fears, and never casts it off; and, if you please, I will liken it to what I think it closely resembles.

Glaucon:: Pray do.

Socrates:: Do not you know then, that dyers, when they want to dye their wool, that it may be purple, choose out of ever so many colors only the white, and then prepare and manage it with no trifling pains, so that it may best take a bright hue, and then they dye it? And whatever is dyed in this manner is of an indelible dye; nor can any washing, either without or with soap, take away its hue; but as for wool not thus managed, you know of what sort it proves, whether one dye either this or other colors, without previous preparation.

Glaucon:: I know, that they are easily washed out, and get shabby.

Socrates:: Suppose then, that we, too, were to perform according to our ability a similar operation, when selecting our soldiers, and instructing them in music and gymnastics; and that we should attend to no other object, than that they should obediently and in the best manner receive the laws, as they would a color, and so acquire indelible opinions about the dreadful, and other things as well, through having had a suitable temper and education; these leys then, however strongly detersive, could not wash away their dye, whether they be pleasure which is more powerful in effecting this than any alkali or lye whatever, or pain, fear, and desire, which exceed in power all other solvents.—Such a power then, and constant maintenance of right and legitimate opinion about what is dreadful or not so, I term and define to be fortitude, unless you offer some other meaning.

Glaucon:: No; I can offer none; for you seem to me to hold, that when a right opinion about these matters arises without education, it is both savage and slavish, and not at all according to law; and you give it some other name besides fortitude.

Socrates:: Your remark is quite true.

Glaucon:: I admit, then, that this is fortitude.

Socrates:: Admit further, that it is political fortitude, and you will admit rightly; but we will inquire about it, if you please, more perfectly some other time; for, at present, it is not this, but justice, that we are seeking; and with regard to the inquiry about the other, that has, in my opinion, been carried far enough.

Glaucon:: You say well.

Socrates:: There yet remain, two virtues in the state which we must consider,—namely, temperance, and that, for the sake of which we have been searching after all the rest,—that is justice.

Glaucon:: Certainly.

Socrates:: How then can we find out justice, so as to trouble ourselves no further about temperance?

Glaucon:: I truly neither know, nor do I wish it to be developed before the other, if at least we are on that account to dismiss altogether the consideration of temperance; but, pray oblige me, and consider this before the other.

Socrates:: I for my part am quite willing; for I should be acting wrongly not to do so.

Glaucon:: Consider then.

Socrates:: We must consider; and as it appears from this point of view, it seems to resemble a sort of symphony and harmony more than the virtues formerly mentioned.

Glaucon:: How?

Socrates:: Temperance, is somehow a certain decorum, and a restraint, as one may say, exercised over certain pleasures and desires; and when one boasts of being superior to oneself, and many other suchlike expressions, these are mentioned as indications of it; are they not?

Glaucon:: Yes,—they are its leading indications.

Socrates:: But is not the expression, “superior to oneself,” ridiculous?—for he who is superior to himself must somehow also be inferior to himself; and the inferior be the superior,—for the same person is spoken of in all these cases.

Glaucon:: How otherwise?

Socrates:: To me, however, the expression seems to denote, that in the same man, as regards his soul, there is one part better, and another worse; and that when the better part of his nature governs the inferior, this is what is termed being superior to himself, and expresses a commendation; but when, owing to bad education or associations, that better and smaller part is swayed by the superior power of the worse part,—then one says, by way of reproach and blame, that the person thus affected is inferior to himself and altogether in disorder.

Glaucon:: Aye,—it would seem so.

Socrates:: Look then, at our new state, and you will find one of these in it: for you will agree, that it may justly be addressed as superior to itself, if that state, in which the better part governs the worse, is called temperate and superior to itself.

Glaucon:: I do see it;—and you say true.

Socrates:: And moreover one may find very many and various desires, and pleasures, and pains, especially among children, and women, and domestics, and likewise among the greatest and most depraved portion of those who are called free.

Glaucon:: Certainly.

Socrates:: But as for the simple and moderate desires, which are led by the intellect, with judgment and right opinion, you will meet with them only in the few, those, namely, of the best temper and best educated.

Glaucon:: True.

Socrates:: And do not you see that these things are contained in our state, and that there too the desires of the many and the baser part are restrained by the desires and prudence of the smaller and more moderate part?

Glaucon:: I do.

Socrates:: If then, we are to call any state superior to pleasures and desires, and to itself also, this may be so called.

Glaucon:: Yes, by all means.

Socrates:: And is it not on all these accounts temperate?

Glaucon:: Quite so.

Socrates:: And if, again, in any other state, the governors and the governed agree in opinion on the point, as to the fit governing party, it is to be found in this:—do you not think so?

Glaucon:: I am strongly of that opinion.

Socrates:: In whom then of the citizens will you say that temperance resides, when they are thus situated;—in the governors, or the governed?

Glaucon:: In both of them, probably.

Socrates:: Do you see then, that we just now rightly guessed, that temperance resembles a kind of harmony?

Glaucon:: How so?

Socrates:: Because—not as fortitude and wisdom each of which resides in a certain part, the latter making the state wise, and the former courageous, not after this manner does temperance render the state temperate; but it is naturally diffused through the whole, making the weakest and the strongest and the intermediate all to agree, either in prudence, if you will, or if you will, in strength, magnitude, or in substance, or anything else of the same kind; so that most justly may we say, that this concord is temperance, a natural consent between the worse and the better part, with reference to the question which of them ought to govern, either in the state or in each individual.

Glaucon:: I am quite of the same opinion.

Socrates:: Well then, three qualities in our state, it would seem, have been clearly discovered: but with respect to the remaining species, owing to which the state has the quality of virtue; what can it be?

Glaucon:: It is plain that it is justice.

Socrates:: It is plain. Ought we not then, Glaucon, like huntsmen, closely surrounding a thicket, to take great care that justice does not somehow or other escape, and vanish from our sight?—for it is clear that it is somewhere here. Look earnestly, therefore, to spy it out, if you can any how see it sooner than me, and then point it out to me.

Glaucon:: Would that I could; but if you will use me rather as an attendant, and one able only to perceive what is pointed out to him, you will then be treating me just as you ought.

Socrates:: Call on the gods with me, and follow.

Glaucon:: I will do so; do you only lead the way.

Socrates:: To me, this seems a place somehow hard of access, and overcast with shadow:—it is indeed dark, and hard to penetrate;—but still we must go on.

Glaucon:: We must.

Socrates:: Ho! Ho! Glaucon, we seem to have some track; and I think that it will not altogether escape us.

Glaucon:: You tell good news.

Socrates:: Verily, our senses are somewhat blunted.

Glaucon:: As how?

Socrates:: Long since, even from the first, my fine fellow, has it been rolling at our feet; and we perceived it not, but made the most ridiculous figure, like those who sometimes seek for what they already have in their hands:—so we did not perceive it, but were looking out to a distance; and thus perhaps it escaped us.

Glaucon:: How mean you?

Socrates:: Thus;—that I think, although we have been long talking and hearing of it, we do not understand ourselves, as to the manner in which we expressed it.

Glaucon:: A long preamble, to one who is eager to hear.

Socrates:: Well now, listen whether I say anything to the point:—for what we at first settled, when regulating the state, as what ought always to be done,—that, I think, or a species thereof, is justice:—this surely we settled, and frequently mentioned, if you remember;—that every one ought to apply himself to one thing, with reference to the state,—to that, namely, to which his genius most naturally inclines him?

Glaucon:: Yes, we did say so.

Socrates:: And also, that attending to one’s own affairs, and not busying oneself about many things, is justice, and this we have not only heard from many others, but have frequently said ourselves.

Glaucon:: We have said so.

Socrates:: This then, my friend, somehow seems to be justice, to attend to one’s own business.—Do you know whence I infer this?

Glaucon:: No; pray tell me.

Socrates:: Besides what we have already considered in the state,—namely, temperance, fortitude, and wisdom,—this, seems to remain, which enables all these both to have a being in the state and to afford safety to its indwellers as long as it continues therein; and we said likewise, that justice would be that remaining part, if we found the other three.

Glaucon:: It must be so.

Socrates:: But if, you want to judge, which of these, by its presence in the state, will do it the greatest proportionate good; it would be difficult to determine whether the coincidence of opinion between the governors and the governed, or the maintenance of legitimate opinion among the soldiers about what is dreadful, and what is not so,—or what is wisdom and guardianship in the rulers,—or whether this, by its existence in the state, makes it proportionably best,—namely, when child and woman, bond and free, artificer, magistrate, and subject, every one in short attends to his own business, and does not meddle.

Glaucon:: Yes, it is hard to decide, of course.

Socrates:: With reference, then, to the virtue of a state, that power which makes each person in it attend to his own business, rivals, as it seems, its wisdom, temperance, and courage.

Glaucon:: Undoubtedly so.

Socrates:: Will you not then constitute justice as a co-rival with these, with reference to the virtue of a state?

Glaucon:: By all means.

Socrates:: Consider, then, whether you agree with me in this: will you enjoin the rulers to give just decisions in judgment?

Glaucon:: Of course.

Socrates:: And in giving judgment, what else are they to aim at in preference to this,—namely, that no one shall have what belongs to others, or be deprived of his own?

Glaucon:: No; they must aim at this.

Socrates:: And do they not aim at it, when acting justly?

Glaucon:: Yes.

Socrates:: And thus justice is acknowledged to be the habitual practice of one's own proper and special work?

Glaucon:: It is so.

Socrates:: See then, if you agree with me:—suppose a carpenter to take in hand the work of a shoemaker, or a shoemaker the work of a carpenter, exchanging either their tools or wages; or if the same man undertake both, and make all the other exchanges; think you that the state would be much injured?

Glaucon:: Not very much.

Socrates:: But methinks, if a craftsman, or one born to a money-getting employment, should afterwards, through being elated by wealth, popularity, strength, or any thing else of the kind, try to advance into the military class, or out of the military class into that of counselor and guardian, when unworthy of it,—and these should exchange tools and rewards; or if the same man should undertake to do all these things at once; then, I suppose, you will be of opinion, that this interchange of things and this multiplicity of employments by a single person is the destruction of the state.

Glaucon:: By all means.

Socrates:: A meddling spirit, then, in these three classes, and the change from one to another, is the greatest injury to the state, and may be most correctly called its depravity.

Glaucon:: Aye, truly so.

Socrates:: But will not you say that injustice is the greatest ill a state can do itself?

Glaucon:: Of course.

Socrates:: This then is injustice. Again we say, as follows: The peculiar occupation of the money-getting, the auxiliary, and the guardian class, when each of them does his own work in a state, will be the contrary of the other, that is justice, and will make the state just.

Glaucon:: The case appears to me, to be no otherwise than thus.

Socrates:: Let us not as yet, affirm this for certain: but if it shall be conceded by us, that this kind enters into each individual, and that there is justice, we will then agree; for what shall we say? but if not, then we must push our inquiries further.—But now let us finish the inquiry on which we were engaged,—namely, whether, in judging, we should be better able, by first contemplating justice in some of the greater objects that possess it, to distinguish its nature in a single man, and that as a state appeared to us this very object; we thus therefore formed it as well as we possibly could, in the assurance that justice would be found in one that is good.

As to what we have discovered in the state, then, let us now transfer and apply it to a single person; and if the two correspond, it will be well; but if there be any difference in the individual, we will go back again to the state, and put it to the test; and, perhaps, in considering them side by side, and by striking them, we shall make justice shine forth, like fire from flints; and when once clearly apparent, we can then firmly establish it among ourselves.

Glaucon:: Aye, you are speaking quite in the right way; and thus, too, we must act.

Socrates:: With respect then, to what may be termed the same, whether greater or less, does it happen to be dissimilar in that respect in which we call it the same, or is it similar?

Glaucon:: Similar.

Socrates:: The just man then, will not at all differ from the just state, as respects the idea of justice, but will be similar to it.

Glaucon:: Aye, similar.

Socrates:: However a state appeared to be just, because three kinds of dispositions being in it, each performed its own work; but it appeared to be temperate, brave, and wise, on account of certain other affections and habits of these very same kinds.

Glaucon:: True.

Socrates:: And in that case, my friend, we shall deem it proper, that the individual, who has these very same principles in his soul namely, temperance, fortitude, wisdom, should have a good right, from having the same affections with the state, to be called by the same names?

Glaucon:: He needs must.

Socrates:: Here again, my clever fellow, we have fallen into a trifling discussion about the soul, whether it does or does not contain within itself these three principles.

Glaucon:: I do not think it is a trifling one: for probably, Socrates, the common saying is true, that things excellent are difficult.

Socrates:: They seem so. And be assured of this at least, Glaucon, that, in my opinion, we shall never comprehend this matter accurately by such methods as we are now using in our conversation, because the road which really leads to it is longer and of greater extent: still we will consider it in a manner consistent with our former disquisitions and inquiries.

Glaucon:: Ought we not to acquiesce in this for to me at least, and for the present, it would be satisfactory enough.

Socrates:: Aye, and for me too, it will be quite sufficient.

Glaucon:: Do not get tired then; but pursue the inquiry.

Socrates:: Is it then necessary, that we should acknowledge the very same characters and manners to exist in every individual that are found in the state? because there is no other source whence they arrived thither. It were ridiculous, indeed, to imagine that the high spirit for which the Thracians, Scythians, and nearly all the northern nations are reputed, does not arise from individual personages; and the same may be said respecting the love of learning, which one may especially deem natural to the people of this country,—or, with reference to the love of riches, which we may say prevailed especially among the Phoenicians and the people of Egypt.

Glaucon:: Quite so.

Socrates:: It is so, of course; and it is not hard of recognition.

Glaucon:: No, indeed.

Socrates:: This, however, is truly hard to decide, whether we perform our separate acts by one and the same power, or whether, as they are three, we perform one by one, and another by another; that is, learn by one, get angry by another, and by a third covet the pleasures of nutrition and propagation, and others akin to these; or whether, when we devote ourselves to them, we act on each with the whole soul: these matters are difficult adequately to determine.

Glaucon:: I think so too.

Socrates:: Let us try to define these things, whether they are the same with one another, or different.

Glaucon:: How can we?

Socrates:: It is plain that the same thing evidently cannot at the same time produce or experience contrary effects in the same respect, and relatively to the same object; so that, if we ever find anything thus occurring, we shall know that it was not one and the same thing, but several.

Glaucon:: Granted.

Socrates:: Attend now to what I am saying.

Glaucon:: Proceed.

Socrates:: Is it possible for the same thing, considered in the same relation, to be both at rest and in motion?

Glaucon:: By no means.

Socrates:: Let us define this more accurately still, lest, as we proceed, we be inclined to waver:—for, if one were to say that, when a man stands, though yet moving his hands and head, the same person is at once still and in motion; we should not, I conceive, reckon this a correct mode of speaking, but that one part of him is at rest, and another part in motion:—is it not so?

Glaucon:: Just so.

Socrates:: But if a person arguing thus were to proceed jestingly and facetiously allege that tops are wholly at rest, but yet are at the same time in motion, when, fixed on the same point, they are whirled about their centre,—or that anything else going round in a circle in the same position does the same,—we should not admit it, as it is not in the same respect that they both stand still and are in motion; but we should say that they have in them the straight line *i.e.* the axis and the circumference; and that, with relation to the axis they are at rest because it inclines to neither side; but with relation to the circumference, they move in a circle:—and again, if, while it is whirling round, its perpendicularity inclines either to the right or the left, forwards or backwards, then it is by no means at rest.

Glaucon:: Very right.

Socrates:: No assertion then of this kind will frighten us; nor shall any one persuade us, that anything, being one and the same, can do and suffer contraries at one and the same time, in the same respect, and relatively to the same object.

Glaucon:: Me, at any rate, he shall not.

Socrates:: But once more, not to be tedious in going over and refuting all these quibbles, let us proceed on the supposition, that this is really the case, acknowledging, also, that if at any time these things are found to be different from what they now are, all that we have gained will be lost.

Glaucon:: This then, is what we must do.

Socrates:: Well then,—nodding an assent, and making a sign of dissent, desiring to take a thing and refusing it, attracting or repelling—will you reckon all such things contraries respectively, whether actions or passions;—for it matters not which?

Glaucon:: Contraries, certainly.

Socrates:: What then,—thirst, hunger, and the desires generally,—and further, to wish and to will, may not all these be considered as of the same kind with the species just mentioned?—As for instance, will you not always say of a man who desires, that his soul aims after what it desires, or attracts to itself what it wishes to have?—Or again, so far as the soul wishes something to be given to it, does it not make a sign for it, as if a person were asking for it, through desire of acquiring its possession?

Glaucon:: I should say so.

Socrates:: But what?—to be unwilling, not to wish, and not to desire,—shall we not deem them synonymous with repelling and driving off from the soul, and so all things else that are contrary of the former?

Glaucon:: Of course.

Socrates:: This being the case, shall we say that there is a certain species of desires, and that the most conspicuous are those which we call thirst and hunger?

Glaucon:: We shall say so.

Socrates:: Is not one the desire of drinking, the other of eating?

Glaucon:: Yes.

Socrates:: In the case of thirst then, is it, so far as it is thirst, a desire in the soul of anything more than what we were saying; and as far as thirst goes,—is there a thirst for hot drink, or cold, for much or little, or in short for some particular kind of drink?—or again, if heat be added to the thirst, will it not readily occasion a desire for cold drink; but if cold be added to it, then a desire for warm drink: and if the thirst be great, owing to numerous causes, will it not occasion a desire for much drink, but if small, a desire for little; while as for the desire of thirst itself, it never becomes the desire of anything else, but of that only to which it naturally belongs,—and so, also, of hunger with reference to meat?

Glaucon:: Just so, every desire belongs in itself to that alone of which it is the desire; but whether they be desires of such or such a particular kind, are adventitious circumstances.

Socrates:: Let no one then, trouble us, as if we were inadvertent, by objecting to us that no one desires drink, but good drink,—nor meat, but good meat;—inasmuch as all men desire what is good. If then thirst be a desire, it is one of something good; whether it be of drink, or anything else whatever,—and in the same way with all the other desires.

Glaucon:: Aye, perhaps, the man who says this may be deemed to say something to the purpose.

Socrates:: But in truth, things naturally relative, refer in each particular, as I think, to this or that object, to which they belong, while in their individual character they refer only to themselves individually.

Glaucon:: I do not understand.

Socrates:: Do not you understand, that greater is relatively greater than something?

Glaucon:: Certainly.

Socrates:: Is it not greater than the lesser?

Glaucon:: Yes.

Socrates:: And that which is much greater than that which is much less; is it not?

Glaucon:: Yes.

Socrates:: And that which was formerly greater than that which was formerly less, and that which is to be greater than that which is to be less?

Glaucon:: Of course.

Socrates:: And in like manner, the more numerous has reference to the less numerous, and the double to the half, and so in all such-like cases;—and further, the heavier to the lighter, and the swifter to the slower; and further still, the hot to the cold; and all such like, are they not thus related?

Glaucon:: Entirely so.

Socrates:: But what as to the sciences;—is not the case the same?—for, science itself is the science of pure learning, or of whatever else one sees fit to make it the science; while, on the other hand, a certain particular science, of a particular kind, refers to a certain particular kind, and also to a particular object. My meaning is as follows:—when the science of building houses arose, was it not so far separated from the other sciences, as to acquire the name of architecture?

Glaucon:: Of course.

Socrates:: Was it not so, because it was of a kind like none else?

Glaucon:: Yes.

Socrates:: Was it not then from its being the art of such a particular thing, that it became itself such a particular art;—and are not all other arts and sciences in like manner?

Glaucon:: They are so.

Socrates:: Consider then, that this is what I wanted to express, if you now understand me; namely, that things which are relative, taken by themselves alone, relate to themselves alone, but considered as of such a quality, relate to particular objects. I do not say, however, that a science altogether resembles that of which it is the science; as if, for example, the science of healthy and sickly were itself healthy and sickly, or the science of good and evil itself good and evil; but as science is not constituted the science of that generally of which it is the science, but only of a certain quality of it that is, of its healthy and sickly state, so it comes to be itself a particular science; and hence it is no longer called simply a science, but the medicinal science, the particular class to which it belongs being superadded.

Glaucon:: I understand you; and I think it is so.

Socrates:: As for thirst then, will you not class it among those things which have relation to something else, so far as it is what it is? and is not thirst a thirst for something?

Glaucon:: I should, certainly, for drink.

Socrates:: And does not a particular thirst desire a particular drink?—whereas thirst in general is neither of much nor of little, nor of good nor bad, nor, in one word, of any particular kind; but abstractly and in general, the natural desire of drink.

Glaucon:: Assuredly.

Socrates:: The soul of the man then who thirsts, so far as he thirsts, wishes nothing further than to drink; and this he covets, and to this he hurries?

Glaucon:: Clearly so.

Socrates:: If therefore, when the soul is athirst, anything draws it back, must it not be some different principle from that which excites thirst, and leads it as a wild beast to drink;—since it is impossible, we say, for the same thing, by itself, and at the same time, to produce contrary results from the same cause?

Glaucon:: It is indeed impossible.

Socrates:: Just as it is not proper, methinks, to say of an archer, that his hands at once propel and draw in the bow, but that one of his hands propels it, and the other draws it in?

Glaucon:: Assuredly.

Socrates:: Can we say, then, that there are some, who when athirst are not willing to drink?

Glaucon:: Certainly, many, and often.

Socrates:: What then, is one to say of these persons?—Might it not be said, that there is something in their soul that prompts them to drink, and likewise something that restrains them, quite different, and that prevails over the prompting principle?

Glaucon:: I think so.

Socrates:: Does not the restraining principle then, whenever it arises, arise from reason; while those that lead and urge men onwards, proceed from affections and ailments?

Glaucon:: It appears so.

Socrates:: We shall not then, be unreasonable in defining these as distinctly two, and separate from one another, if we call that with which one reasons, the rational part of the soul, but that part with which it loves, and hungers, and thirsts, and is carried away by desires, the irrational and concupiscent part, as associated with certain gratifications and pleasures.

Glaucon:: We shall not; but we may reasonably regard them in this light.

Socrates:: Let these two then, be defined as distinct principles in the soul. But as to that of anger, and by which we are angry, is it a third principle, or is it of like nature with one or other of these two?

Glaucon:: Perhaps, with one of them, the concupiscent.

Socrates:: But I believe, what I have somewhere heard:—Leontius, son of Aglaion, as he was returning from the Piræus, along the outside of the northern wall, perceiving some dead bodies lying close to the place of public punishment, had a desire to look at them, but yet at the same time revolted therefrom and turned away; and for a while he resisted, and covered his eyes, but, at last, overcome by his desire, ran with eyes wide open towards the dead bodies, and said: “Here now, ye wretched eyes of mine! glut yourselves with this fine spectacle.

Glaucon:: I too have heard it.

Socrates:: This story now shows. that anger sometimes opposes the desires, as being distinct from each other.

Glaucon:: Yes, it does show it.

Socrates:: Do we not then in other cases, and very frequently, perceive, when the appetites compel any one against his reason, that he reproaches himself, and is angry at the compelling principle within him; and that like two persons at variance, the anger of such a person becomes an ally to reason; but that it sides with the desires when reason decides that no opposition is to be offered, you will say, I think, that you have never perceived anything of this kind either in yourself, nor yet in any other?

Glaucon:: No, by Zeus.

Socrates:: What then, is it not the case, when a man imagines he is doing a wrong, that the more generous he is, the less is he apt to be angry, however he may suffer hunger or cold, or other like privations, from one, who, as he thinks, inflicts them with justice?—And, as I have said, his anger will not incline him to rise up against such an one.

Glaucon:: True.

Socrates:: But what;—when a man thinks himself injured, does he not in this case boil with rage and become indignant and ally himself on the side of what seems just; and under all the sufferings of hunger, cold, and the like, does he not bear up and strive to conquer; nor does he cease from his generous toils, until he has either accomplished them, or dies, or, like a dog by the shepherd, is called off and pacified by the rational principle within him?

Glaucon:: Certainly, it is precisely like what you say; for, in our state, we appointed the auxiliaries to be obedient, like dogs, to the state rulers, as being shepherds of the state.

Socrates:: You quite understand, what I mean to say:—but have you considered this also?

Glaucon:: What?

Socrates:: That here apparently, as regards the irascible, the reverse takes place from what took place in the former instance,—for then we reckoned it the same as the concupiscent; but now we say it is far from it, or rather that, in the sedition of the soul, it more willingly arrays itself on the side of the rational part.

Glaucon:: Entirely so.

Socrates:: Is it then as something entirely distinct, or as a species of the rational;—so as that there are not three species, but only two in the soul, the rational and concupiscent?—or, as there were three species which completed the city, the money-getting, the auxiliary, the deliberative; so, in the soul, is this irascible a third natural principle, auxiliary to the rational, when not corrupted by bad education?

Glaucon:: Of course, it must, be a third.

Socrates:: Yes, if at least it seem at all different from the rational, just as it seemed to be distinct from the concupiscent.

Glaucon:: Aye, that is not hard to see;—and as a proof of this, one may see, even in little children, that quite from their infancy they are full of anger, while some of them, at least in my opinion, never have any share in reason, the majority indeed only arriving at it but late in life.

Socrates:: Aye, truly, you are right. And in the brute beasts, too, one may observe yet further, that what you say is really the case; and besides this, it is attested also by what we formerly cited from Homer—

> His breast he struck, and thus his heart reproved;—

for, in this passage, Homer has plainly made one part reprove the other; that part, namely, which reasons about good and evil, to reprove the part which is unreasonably angry.

Glaucon:: You are quite right.

Socrates:: These things, we have agreed to after some difficulty; and it is now sufficiently acknowledged, that the same sort of principles that are in a state reside also in the soul of every individual, and equal in number. Must it not, then, necessarily follow, that in whatever manner the state is wise, and in whatever respect, after the same manner and in the same respect, the individual is so also?

Glaucon:: Of course.

Socrates:: And in whatever respects, and after whatever manner, the individual is brave, in the same respect, and after the same manner, a state is brave also? and so in all other respects, both are the same as regards virtue?

Glaucon:: Necessarily so.

Socrates:: And I think, Glaucon, it may be said that a man is so just in the same way as a state is so.

Glaucon:: This also must needs be the case.

Socrates:: Aye; but have we not somehow or other forgotten this, that the state is just, when every one of the three species in it does its own particular work?

Glaucon:: No, I do not think we have forgotten that point.

Socrates:: We must remember then likewise, that each of us will be just, and do his own work, each part of whose soul does its own proper duty.

Glaucon:: Aye, we must be sure to recollect that.

Socrates:: Is it not proper, then, that the rational part should govern, as being wise, and charged with the care of the whole soul; and that the spirited part should obey and ally itself to the other?

Glaucon:: Certainly.

Socrates:: Will not the mixture then, as we said, of music and gymnastics, make the two to harmonize by exalting and nurturing the one with excellent arguments and good discipline, while it unbends the other by soothing and rendering it mild through harmony and rhythm?

Glaucon:: Assuredly.

Socrates:: And when these two are thus nurtured and have been truly taught and practiced in their own affairs, they will preside over the concupiscent part, which in every one occupies the largest part of the soul, and by its nature is insatiable of wealth; and they will take care, lest, having acquired growth and strength by being filled with bodily pleasures, as they are termed, it become discontented with its own work, and so attempt to enslave and rule over those it ought not, and thus wholly upset the entire system of life.

Glaucon:: Certainly.

Socrates:: And by this principle, will not the two maintain a good guard against enemies from without, owing to their joint influence over both soul and body, the one laying down the plans, and the other fighting in obedience to its leader, and executing with fortitude the plans laid down?

Glaucon:: Such is the case.

Socrates:: And I think we call a man brave, when, through all the pains and pleasures of life, the spirit maintains the opinion dictated by reason about what is terrible, and what is not so.

Glaucon:: Right.

Socrates:: And we call a man wise, from that small part which governs him, and dictates this, inasmuch as it possesses the knowledge of what is expedient for each separately, and for the whole of the three together.

Glaucon:: Certainly.

Socrates:: And, do we not moreover term a man temperate, from the association and harmony of these very principles, when the governing and governed agree in one,—namely, when reason governs, and when the others are not at variance therewith?

Glaucon:: Temperance, is no other than this, either as respects the state or the individual.

Socrates:: But he will be just, owing to those causes and in the manner which we have often before mentioned?

Glaucon:: He must.

Socrates:: What then; has anything blunted us, that we should regard justice as anything else than what it is seen to be in a state?

Glaucon:: Not in my opinion at least.

Socrates:: In this manner then if there yet remain any doubt in the soul, let us, by all means, satisfy ourselves by bringing the man into difficult circumstances.

Glaucon:: As what?

Socrates:: For instance, if we be compelled to declare, concerning such a state and a man born and educated conformably thereto, whether such a man, if entrusted with gold or silver, is likely to embezzle it,—who do you think would imagine, that such an one would do it sooner than those of a different character?

Glaucon:: No one would.

Socrates:: Will not such an one then be free from sacrileges, thefts, and treacheries, either privately against his friends, or publicly against the state?

Glaucon:: He will.

Socrates:: Nor will he ever, in any shape, be faithless, either as to his oaths, or other compacts?

Glaucon:: How should he.

Socrates:: Adulteries, neglect of parents, and impiety against the gods, will be found then in any one rather than such a man as this?

Glaucon:: Aye, in any one else, truly.

Socrates:: And is not this the cause of all these things,—that, of all the parts within him each separate one does its own work, as to governing and being governed?

Glaucon:: This is it, and nothing else.

Socrates:: What else do you wish justice to be, except such a power as produces men and states like these?

Glaucon:: Not I, truly, for my part.

Socrates:: Our dream then, which we conjectured, is at last accomplished; that on our very first attempt to found our state we have apparently arrived by divine assistance at a principle and pattern of justice?

Glaucon:: Quite so.

Socrates:: And that, Glaucon, was a certain image of justice, that the man naturally fitted for the office of a shoemaker, should make shoes properly, and do nothing else; and that he also, who is a carpenter, should do that work,—and so also, of the rest.

Glaucon:: It appears so.

Socrates:: In truth, then, of such a kind was justice, as it seems; nor does it regard merely a man's external action, but what is really internal, relating to the man himself, and what is properly his own; not allowing any principle in him to attempt what is another's province, or to meddle and interfere with what does not belong to it; but really well establishing his own proper affairs, and maintaining proper self-government, keeping due order, becoming his own friend, and most naturally attuning these three principles, as three musical strings, base, tenor, and treble, or whatever others may intervene:—thus will he be led to combine all these together, and out of many to form one whole, temperate, attuned, and able to perform whatever is to be done, either in acquiring wealth, or managing the body, or any public affair or private bargain, and in all these cases reckoning that action to be just and good, which always sustains and promotes this habit; and so also calling the knowledge which presides over this action wisdom,—and on the contrary, calling that an unjust action, which destroys this habit,—and the opinion which presides over this, folly.

Glaucon:: Perfectly true, Socrates.

Socrates:: Be it so:—if then we should say, that we have found out a just man and state, and the nature of justice in both, I think we should not be considered altogether in error.

Glaucon:: No, by Zeus.

Socrates:: May we assume it, then?

Glaucon:: We may.

Socrates:: Be it so. But we were next, I think, to consider injustice?

Glaucon:: Clearly so.

Socrates:: Is it not then necessarily a kind of variance between the three principles, a kind of meddling and interfering spirit in things foreign to their proper business, and an insurrection of some one principle against the whole soul, to govern where it is not its province, though it be really of such a nature, that it ought to be in subjection to the governing principle? I imagine then we are to call this tumult and error by some such names as these,—injustice, intemperance, cowardice, folly, and in a word, all vices?

Glaucon:: Just so.

Socrates:: To commit injustice then, and to be injurious, and likewise to act justly, all these must be very manifest, if indeed injustice and justice are so.

Glaucon:: How?

Socrates:: Because, they do not differ from what is salutary or noxious;—as the latter are in the body, so are the former in the soul.

Glaucon:: In what way?

Socrates:: Such things as are healthy produce health, and such as are noxious, disease.

Glaucon:: Yes.

Socrates:: And does not acting justly produce justice,—and acting unjustly, injustice?

Glaucon:: Necessarily so.

Socrates:: To produce health, however, is to establish everything in the body, so that they shall mutually govern and be governed, conformably to nature,—while the production of disease, on the other hand, consists in one part governing and being governed by another, contrary to nature.

Glaucon:: It is indeed.

Socrates:: Then again, to produce justice, is it not to establish all in the soul, so that its parts shall mutually govern and be governed according to nature;—and does not injustice consist in governing and being governed by one another contrary to nature?

Glaucon:: Plainly so.

Socrates:: Virtue then, as it seems, is a kind of health, beauty, and good habit of the soul; and vice its disease, deformity, and infirmity?

Glaucon:: It is so.

Socrates:: Do not honorable pursuits then lead to the attainment of virtue, but dishonorable to that of vice?

Glaucon:: They must.

Socrates:: What remains for us to consider then is,—whether it be profitable to act justly, and pursue what is honorable, and to be just, and whether a man can be of such a character unconsciously or not;—or to act unjustly, and to be unjust, though one be never punished, or reformed by correction?

Glaucon:: But, Socrates, this inquiry seems, to me at least, quite ridiculous;—that if in a corrupt state of the body life be deemed not worth possession, not even though accompanied by all kinds of meats and drinks, and all wealth and power, yet when the nature of the vital principle is disordered and thoroughly corrupted, life will then be worth having, though a man were to do everything else that he likes, except ascertaining how he shall get released from vice and injustice, and cultivate justice and virtue,—since both these things have been proved such as we have represented them.

Socrates:: Aye, it would be truly ridiculous. However, since we have arrived at such a point as enables us most distinctly to perceive that these things are so, we must not get weary.

Glaucon:: On no account, by Zeus, must we be weary.

Socrates:: Come then, and let us see also how many principles vice possesses,—principles indeed that are worthy of attention.

Glaucon:: I am all attention;—only tell me.

Socrates:: And truly now;—since we have reached this part of our discourse, it appears to me, as to one looking from a height, that there is but one principle of virtue, while those of vice are infinite:—and of these there are four, particularly deserving of mention.

Glaucon:: How say you?

Socrates:: There seem to be as many classes of the soul as there are forms of government.

Glaucon:: How many then?

Socrates:: Five, of governments, and five of the soul.

Glaucon:: Name them.

Socrates:: What we have just described, is one species of government; and it may have a twofold appellation; for, if among the rulers one prevails over the rest, it may be termed a Monarchy,—but if there be several, an Aristocracy.

Glaucon:: True.

Socrates:: I call this then, one species; for, whether there be several, or whether it be but one who governs, they will never alter the principal laws of the state,—because they will observe the nature and education we have described.

Glaucon:: It is not likely.

THE END OF THE FOURTH BOOK.

## BOOK V.

Socrates:: Such a state and government then, and such a man as we have described, I term good and upright: and if this government be an upright one, I reckon the others bad and erroneous, both as to the regulations in states, and the establishment of the moral nature in individuals, inasmuch as there are four species of depravity.

Glaucon:: Of what kind are these?

Socrates:: I was about to mention them in order, as they each appeared to me to rise one out of another; but Polemarchus stretching out his hand—for he sat a little further off than Adimantus,—caught him by the robe at his shoulder, and drew him near; and, bending towards him, he spoke something in a whisper, of which we heard nothing but this:

Polemarchus:: Shall we let that pass, then? or what shall we do?

Socrates:: Adimantus, now speaking aloud said;

Adeimantus:: By no means.

Socrates:: What will not you let pass?

Adeimantus:: You, indeed:—for it was to you I alluded. You seem to us to be getting careless and to be stealing through a whole branch of the discourse, and that not the least important, that you may not have the trouble of going through it; and you think you escaped our notice, when you made this speech so simply, viz., that it is clear to every one both as to wives and children, that whatever belongs to friends will be common.

Socrates:: Did not I say right, Adimantus?

Adeimantus:: Yes: but this, which was rightly said, like the rest of your discourse, requires explanation;—namely, to show what is the mode of that community; for there must be many:—do not omit saying then which mode you mean; for we have been expecting it for some time past, thinking you would, some time or other, speak of the propagation of children, how they are to be propagated;—and when born, how they should be brought up, and everything relating to this community that you were mentioning both of wives and children; for we suppose it to be of great, nay—paramount importance to the state, whether this be rightly performed or not. Now then, since you are taking in hand another kind of state-government before you have sufficiently discussed this, we have determined, as you just heard, not to let you pass, without going over all these things, as you did the others.

Glaucon:: And me too you may reckon, as joining in this vote.

Thrasymachus:: Be quite sure, Socrates, that this is the opinion of us all.

Socrates:: What have you done, in seizing me thus? What a mighty talk is this you are again raising, as you did at the beginning, about your republic, which I was so glad at having completely described, pleased to think that any one would let these things pass, and admit what was then said!—And as to what you now challenge me to, you know not what a swarm of disputes you are stirring up: I foresaw them, and let them pass at that time, for fear of making a great disturbance.

Thrasymachus:: What then, think you that these are now come hither to melt gold, and not to hear reasonings?

Socrates:: Aye, but in moderation.

Glaucon:: As for moderation, Socrates, the whole of life serves for hearing such reasonings as these:—but let pass what relates to us; and as to what we are inquiring, do not begrudge explaining what you think about it,—what sort of community of wives and children is to be observed by our guardians, and how the latter ought to be reared while very young, in the period between their birth and their education, which seems to be the most troublesome of all. Try and tell us now, how that is to be accomplished.

Socrates:: It is not easy, my good fellow, to describe them; for many of them are very hard to be believed, even more than those we have before described; for even their possibility we might well disbelieve; and even were they possible, one might still doubt, whether they would best be done in this particular way:—on this account, my dear friend, I somewhat hesitate to touch on these topics, lest our reasoning appear to be a mere wish, rather than absolute reality.

Glaucon:: Do not hesitate now; for your hearers are neither unreasonable, nor incredulous, nor ill-disposed.

Socrates:: Now, my very good Glaucon, is it with the desire of reassuring me, that you say this?

Glaucon:: I do.

Socrates:: Then you have produced quite a contrary effect; for could I trust to myself, that I thoroughly know what I am to say, your encouragement would have been quite right; for among intelligent and friendly persons, one who understands the truth, may speak with safety and confidence about the most important matters; but when one speaks, as of course I do, with diffidence and a sort of searching spirit, there is both fear and danger, not only of being exposed to ridicule for that is but a trifling thing, but lest, mistaking the truth, I not only fall myself, but draw my friends along with me into an error about matters, in which we ought least of all to be mistaken. I conjure Adrasteia, therefore, Glaucon, with respect to what I am going to say:—For I hope it is a smaller offence to be unintentionally a murderer, than an impostor about what is good and excellent, just and lawful: and as for this risk, it were better to risk it among enemies than friends; so that you are not giving me proper encouragement.

Glaucon, laughing, then said:

Glaucon:: Aye, but Socrates, even if we should suffer aught amiss from your discourse, we acquit you as clear of homicide, and as no impostor: so proceed boldly.

Socrates:: But the man, who is acquitted in a court of justice is, at any rate, deemed clear of the crime, as the law says; and if it be so in that case, it should be so in this.

Glaucon:: As respects this then, pray proceed.

Socrates:: We must now, once more return to what perhaps in strict order should have been considered before; and thus perhaps it would be correct, after having entirely completed the men's part, to complete also the women's; especially since you challenge me to do so. Men who have been born and educated as we have described, cannot, in my opinion, otherwise rightly acquire and employ their wives and children than by following the same track, in which we have proceeded from the beginning: for we surely undertook, in our argument, to represent men as the guardians of a flock.

Glaucon:: Yes.

Socrates:: Let us proceed then, to give the children a corresponding birth and education; and let us consider, whether it be proper for us or not.

Glaucon:: How?

Socrates:: Thus: Are we to reckon it proper for the females among our guardian dogs to watch and hunt, and do everything else in common with the males; or rather to manage domestic affairs within doors, as being disabled from other exercises on account of bearing and nursing the whelps, while the males are to labor and take the entire charge of the flocks?

Glaucon:: All in common; except that we employ the females as the weaker, and the males as the stronger.

Socrates:: Is it possible then, to employ an animal for the same purposes with another, without giving it the same nurture and education?

Glaucon:: It is not possible.

Socrates:: If, therefore, we are to employ the women for the same purposes as the men, must we not give them also the same kind of instruction?

Glaucon:: Yes.

Socrates:: Were both music and gymnastics bestowed on the males?

Glaucon:: Yes.

Socrates:: To the women too, then, we must impart these two arts, and those likewise that refer to war; and we must employ them in the same manner.

Glaucon:: It is probable from what you say.

Socrates:: Perhaps, however, many things, concerning what we are now speaking, may appear ridiculous, because contrary to custom,—if they shall be practiced in the way now mentioned.

Glaucon:: Quite so.

Socrates:: But which of them, do you conceive to be the most ridiculous? Would it not clearly be to behold the women naked in the palaestra wrestling with the men, and not only the young women, but even those more advanced in years, just like the old men in the wrestling-schools, who are still fond of the exercises, though wrinkled, and not at all comely to the eye?

Glaucon:: Aye, by Zeus; it would appear truly ridiculous, as present fashions go.

Socrates:: Ought we not then, since we have entered on this discourse, to fear the raillery of wits, which they would probably bestow pretty abundantly on such innovations as respects exercising the women in gymnastics, music, and more especially in the use of arms, and the management of horses?

Glaucon:: You say right.

Socrates:: But since we have entered on this discourse, let us go to the rigor of the law, and beg these men not to be the slaves of prejudice, but to think seriously, and remember, that not long since the sight of naked men appeared base and disgusting to the Greeks, just as now indeed it does to most of the barbarians: and when first the Cretans, and afterwards the Lacedæmonians, began their exercises, the wits of that day might have made a jest of all this: do not you think so?

Glaucon:: I do.

Socrates:: But methinks, when those experienced in the art thought it better to strip themselves, than to cover up such parts, the merely apparent ridiculousness of the thing is set aside by the advantage stated in our reasoning; and this, too, manifestly shows that the man is a fool who deems anything ridiculous except what is bad, and tries to run down as ridiculous any other idea but that of the foolish and the vicious, or employs himself seriously with any other end in view but that of the good.

Glaucon:: Assuredly.

Socrates:: Must we not then, first of all, agree on this,—whether these things be possible or not;—and set forth a question, whether any one, either in jest or earnest, can doubt, if the human nature in the female can in all cases share with the male, or in no case share at all; or in some cases, but not in others; and this too with reference to what concerns war? Would not the man who thus sets out so also probably conclude?

Glaucon:: Certainly.

Socrates:: Do you wish then, that we should argue against ourselves about these things, in order that the opposite side may not, if attacked, be destitute of defense?

Glaucon:: Nothing hinders.

Socrates:: Let us then say this for them: There is no need, Socrates and Glaucon, for others to dispute with you about this matter; for yourselves, in first establishing your state, agreed that each individual ought to practice one business, according to his particular talent.

Glaucon:: We did so agree, I think; for how could we do otherwise?

Socrates:: Does not then the nature of a woman differ widely from that of a man?

Glaucon:: Of course it differs.

Socrates:: And is it not right to allot to each a different work, according to the nature of each?

Glaucon:: Of course.

Socrates:: Are not you in the wrong then, and do you not contradict yourselves, in saying that men and women ought to do the same things, with natures so widely different? Have you any answer to make against this, my clever Glaucon?

Glaucon:: To do so on the moment is no such easy matter; but I will entreat you, and I do so now, to unravel the arguments on our side, whatever they may be.

Socrates:: These, Glaucon, and many other such things, are what I long ago foresaw; and I was both afraid and unwilling to touch on the law concerning the possession of wives and the education of children.

Glaucon:: No, by Zeus, it seems no easy matter.

Socrates:: Certainly not. The case, however, is thus: If a man fall into a small fish-pond, or quite into the ocean itself, still he has to swim no less.

Glaucon:: Certainly.

Socrates:: Let us too, then, swim, and try to escape from this argument, expecting that either some dolphin will rescue us, or that we shall have some other remarkable deliverance?

Glaucon:: It seems we ought.

Socrates:: Come then;—let us see, if we can anywhere find an outlet; for we acknowledged that different natures ought to study different things, and that the natures of a woman and a man are different; yet now we say, that different natures ought to study the same things:—do you accuse us of this?

Glaucon:: Just so.

Socrates:: How admirable, Glaucon, is the power of the art of disputing!

Glaucon:: How?

Socrates:: Because, many seem to fall into it unwillingly, supposing that they are not cavilling, but reasoning truly, owing to their inability to divide a subject rightly and investigate it according to its species: but following the literal sense, they pursue what is quite contradictory to their subject, making use of cavilling instead of argument.

Glaucon:: This is indeed the case with many; but does that extend likewise to us in the present instance?

Socrates:: Quite so; for I think, that without meaning it, we have fallen into a contradiction.

Glaucon:: How?

Socrates:: Because we have very boldly and disputatiously asserted, that unless persons' natures are the same, they ought not to have the same employments; though we have not at all inquired the sort of difference and identity of the nature here referred to, and with reference to which we defined them, when we ascribed different pursuits to different natures, and to the same natures the same pursuits.

Glaucon:: No certainly, we did not consider that.

Socrates:: It would seem then, that we may still ask ourselves the question, whether the nature of the bald and those who wear hair be the same and not different;—and if we agree that it be different, whether, if the bald made shoes, we should let those who wear hair make them;—or if again, those who wear hair made them, whether we should allow the others to do so likewise?

Glaucon:: That were ridiculous.

Socrates:: Is it then ridiculous, for any other reason than that we did not then in general define the sameness and diversity of natures, but observed only that species of diversity and sameness, which respects their peculiar functions, just as we say that a physician, and a man who has a genius for being a physician, have one and the same nature? Do not you think so?

Glaucon:: I do.

Socrates:: But have the physician and the carpenter a different nature?

Glaucon:: Most assuredly.

Socrates:: In that case, as regards the natures of men and women, if they appear different, with respect to any art, or other employment, we are supposed to assign to each separately his proper employment:—but if it appear to differ only in this,—namely, that the female bears children, and the male begets them,—we must not say that it has at all as yet been proved that a man differs from a woman in the sense of which we are speaking, and we must still think, that both our guardians and their wives may pursue the same employments.

Glaucon:: And with reason.

Socrates:: After this, then, should we not require any one who says the contrary, to inform us on this point,—what is that art or function in the arrangements of a state, where the nature of a man and woman is not the same, but different?

Glaucon:: A reasonable demand, too.

Socrates:: Perhaps then some one may reply, as you said some time since, that it is not easy all at once to explain this sufficiently, but yet no hard matter for one who has considered it?

Glaucon:: Yes,—one might well say so.

Socrates:: Do you wish then, that we should request such an opponent to follow us, while we try to show him, that there is no function peculiar to a woman in the management of a state?

Glaucon:: By all means.

Socrates:: Come then we will say to him, answer us:—did you not mean that one man has a natural talent for anything, and another not, in this respect,—namely, that one learns a thing easily, and another with difficulty; and one with a little instruction discovers much in what he learns, while another, after much instruction and care, does not retain even what he has learned; and that with the one, the body is duly subservient to the mind; while in the other it is opposed to it?—Well, and what other marks are there besides these, by which you would distinguish a man that has particular talents from him that has none at all?

Glaucon:: One cannot mention any other.

Socrates:: Know you then of any function performed by mankind, in which the males have not all these characteristics in a superior degree to the females;—and would it not be tedious to specify particularly the weaving art, and the making of pastry and spice-meats, for which female talents seem to have some repute, and cannot be surpassed without the greatest disgrace?

Glaucon:: You are right, in saying that in all things universally the talent of the one is superior to that of the other;—yet many women are superior in many respects to many men; though, on the whole, it is as you say.

Socrates:: There is no function, my friend, then, among the entire members of our state that is peculiar to woman, considered as such, nor to man, considered as such; but natural talents are indiscriminately diffused through both, and the woman naturally shares in all offices, the same as the man, though in all cases the woman is weaker than the man.

Glaucon:: Certainly.

Socrates:: Are we then to commit all state concerns to the men, and none to the women?

Glaucon:: How should we?

Socrates:: It is true then, I think as we say, that one woman too is fitted for being a physician, and another not so,—one is musical, another by nature unmusical.

Glaucon:: How otherwise?

Socrates:: And is one fitted for gymnastics and warlike,—another not fitted either for war or gymnastics?

Glaucon:: That is my opinion too.

Socrates:: And what;—is not one a lover of philosophy, and another averse to it; and one high-spirited, and another timid?

Glaucon:: This is true, too.

Socrates:: And is not one woman naturally suited for being a guardian, and another not so;—and have we not made choice of such a talent as this for our guardian men?

Glaucon:: Yes—-just of such as this.

Socrates:: The nature then of the woman and of the man, as respects the guardianship of the state, is the same,—only that the one is weaker, the other stronger.

Glaucon:: So it seems.

Socrates:: Women such as these then are to be chosen to dwell with such men, and to be their fellow-guardians,—inasmuch as they are naturally suited for them, and of kindred talents.

Glaucon:: Certainly.

Socrates:: And must not the same employments be assigned to the same natures?

Glaucon:: The same.

Socrates:: We have now got round then, to our former point; and, we allow that it is not contrary to nature, to allot to the wives of our guardians the study both of music and gymnastics?

Glaucon:: Assuredly.

Socrates:: We did not establish then what is impossible, or to be only vainly wished for, when we established the law according to nature:—and it would seem rather, that what is at present contrary to these things is contrary to nature?

Glaucon:: It seems so.

Socrates:: Was not then our inquiry, whether our establishment was possible and best?

Glaucon:: It was.

Socrates:: And we have agreed, that it is possible?

Glaucon:: Yes.

Socrates:: And we must next be convinced, that it is best?

Glaucon:: Clearly so.

Socrates:: In order, therefore, that a woman may become a suitable guardian, there will not be one mode of education for making men guardians, and another for women, especially as the latter have received the same natural genius?

Glaucon:: No,—it will not be different.

Socrates:: What think you then of such an opinion as this?

Glaucon:: Of what?

Socrates:: That of imagining in your own mind, that one man is better and another worse;—or do you deem them to be all alike?

Glaucon:: By no means.

Socrates:: In the state then which we were just establishing,—which of the two do you think to make the better men,—the guardians provided with this education we have described, or shoemakers that are taught shoemaking?

Glaucon:: That question, is ridiculous.

Socrates:: I understand you:—but, tell me; of all the other citizens, are not they the best?

Glaucon:: By far.

Socrates:: But what;—will not these women too be the best of women?

Glaucon:: They will, by far.

Socrates:: Is there anything better in a state, than that both women and men be rendered the very best?

Glaucon:: There is not.

Socrates:: And this is to be effected by music and gymnastics being imparted to them, as we have described?

Glaucon:: Of course.

Socrates:: We have been establishing then a law, which is not only possible, but best also for the state?

Glaucon:: Just so.

Socrates:: We must unclothe, then, the wives of our guardians, since they are to put on virtue for clothes; and they must bear a part in war, and all other guardianship of the state, and do nothing else:—but of these special services the lightest part is to be allotted to the women rather than the men, on account of the weakness of their sex:—and the man who laughs at naked women while going through their exercises with a view to the best object, reaps the unripe fruit of a ridiculous wisdom, and seems not rightly to know at what he laughs, or why he does it:—for that ever was and will be deemed a noble saying, that the profitable is beautiful, and the hurtful base.

Glaucon:: Assuredly.

Socrates:: We may say then, that we have escaped one wave, as it were, by thus settling the law with respect to women, and have not been quite overwhelmed, through determining that our male and female guardians are to manage all things in common: and besides that, our reasoning has been consistent with itself, as respects both what is possible and advantageous also.

Glaucon:: Truly, it is no small wave you have escaped.

Socrates:: You will not call it a great one, when you see what follows.

Glaucon:: Tell me; and let me see.

Socrates:: After this enactment, and the others formerly mentioned, the following, I think, comes naturally.

Glaucon:: Which is that?

Socrates:: That these women be all common to all these men, and that no one woman dwell with any man privately, and that their children likewise be common;—so that neither shall the parents know their own children, nor the children their parents.

Glaucon:: This, in comparison with the other, is far more difficult to persuade, both as to its possibility and utility.

Socrates:: I do not think, as to its utility at least, that any one would doubt about it being a very great good to have the women and children in common, if it were but possible:—but the greatest question, methinks, will be, whether it be possible or not?

Glaucon:: One might very well, raise a discussion on both points.

Socrates:: You are mentioning, a combination of discussions; but I thought, at least, that I should escape from one of them, if its utility had been agreed on, and that in that case it would only have remained to consider its possibility.

Glaucon:: But you have not slunk off, quite unobserved; and so, give us an account of both.

Socrates:: I must submit to a trial:—indulge me thus far, however: let me feast myself, as the slow in intellect are wont to feast themselves, when they walk alone:—for men of this sort, I imagine, ere finding out how to attain what they desire, waive that inquiry, in order that they may not tire themselves in deliberating about its possibility or impossibility, supposing they have obtained what they desire, and then they go through what remains,—rejoicing, also, to recount what they will do, when it has happened, and rendering their soul, otherwise indolent, more indolent still.

Glaucon:: Now I too am become languid, and would, therefore, defer such debates, and inquire afterwards into the possibility of these arrangements.

Socrates:: At present, however, supposing them possible, I will, if you please, consider how our rulers are to regulate matters thence arising, in order that the doing of these things may be most advantageous both to the state and the guardians:—this, first, I will try to examine with your assistance, and the other question afterwards, if you allow me.

Glaucon:: Oh, I will give you leave;—so pray proceed with your inquiry.

Socrates:: I imagine then, if our rulers will be worthy of that name, and those also who are their auxiliaries, that the latter will cheerfully do whatever they are bidden, while the former will take the command, giving their directions in some matters conformably to the laws, and imitating their spirit in whatever matters we leave to their sole guidance.

Glaucon:: Very likely.

Socrates:: Do you then, their lawgiver, as you have chosen out the men, so choose out also the women, making them, as far as possible, of similar dispositions:—and these, as they dwell and eat together in common, and none possesses anything whatever in private, will be always together;—and as they mingle in the gymnastic yards and in all their other training exercises, they will, I think, be led by innate necessity, to mutual intimacies:—do not you think I am speaking of what must necessarily happen?

Glaucon:: Not, by any geometrical necessity, but by one founded on love, which seems to be more cogent than the other, in persuading and winning over the bulk of mankind.

Socrates:: Quite so; but in the next place, Glaucon, to form irregular intimacies, or to do anything else of the same character, is not at all right in a city of happy persons, nor ought the rulers to allow it.

Glaucon:: No, it were not just.

Socrates:: It is evident, by right, in the next place, to make marriages as far as possible sacred; and those most advantageous would be sacred.

Glaucon:: Altogether so.

Socrates:: How then are they to be most advantageous? Tell me this, Glaucon;—for in your house I see both sporting dogs, and a great number of well-bred birds; have you, by Zeus, ever attended to their pairing, and bringing forth young?

Glaucon:: How?

Socrates:: First of all, among these, though all be well-bred, are not some of them far better than all the rest?

Glaucon:: They are.

Socrates:: Do you breed then from all alike; or are you anxious to do so, as far as possible, from the best breeds?

Glaucon:: From the best.

Socrates:: But how; from the youngest or the oldest, or those quite in their prime?

Glaucon:: From those in their prime.

Socrates:: And if they are not thus bred, you consider that the breed both of birds and dogs greatly degenerates?

Glaucon:: I do.

Socrates:: And what think you as to horses, and other animals;—is the case otherwise with respect to these?

Glaucon:: It were absurd to think so.

Socrates:: How strange, my dear fellow; what extremely perfect governors must we have,—if the same applies to the human race!

Glaucon:: Nevertheless, it is so; but what then?

Socrates:: Because, they must necessarily use many medicines; but as for a physician, where the body does not want medicines, but men willingly subject themselves to a regimen of diet, we think that an inferior and less skilful one may suffice; but when there is need for taking medicines, we know that we want a more able physician.

Glaucon:: True; but with reference to what do you say this?

Socrates:: With reference to this: it seems likely that our rulers must use an abundance of lying and deceit for the advantage of the governed; and we said somewhere, that all these things were useful in the way of a remedy.

Glaucon:: Rightly too.

Socrates:: This apparent right now seems by no means inconsiderable in marriages and the propagation of children.

Glaucon:: How so?

Socrates:: It necessarily follows, from what has been acknowledged, that the best men should as often as possible form alliances with the best women, and the most depraved men, on the contrary, with the most depraved women; and the offspring of the former is to be educated, but not of the latter, if the flock is to be of the most perfect kind:—and this must be so done, as to escape the notice of all but the governors themselves, if at any rate the whole band of the guardians is to be as free as possible from sedition.

Glaucon:: Quite right.

Socrates:: Are there not to be festivals legally established, in which we shall draw together the brides and bridegrooms;—and must not there be sacrifices, and hymns composed by our poets suitable to the marriages in course of celebration?—But as to the number of the marriages, this we will leave to the rulers, that they may as much as possible keep up the same number of men, having a regard both to wars and diseases, and all other such matters, so that as far as possible our state may be neither great nor small.

Glaucon:: Right.

Socrates:: And chances too, I conceive, should be so well managed, that the depraved man may, on every turn of them, accuse his fortune, and not the governors.

Glaucon:: Of course.

Socrates:: As for those youths, who distinguish themselves, either in war or other pursuits, they ought to have rewards and prizes given them, and the most ample liberty of lying with women, that so, under this pretext, the greatest number of children may spring from such parentage.

Glaucon:: Right.

Socrates:: And as for the offspring born from time to time, are the authorities presiding over these matters to receive them, whether they be men or women, or both?—for somehow these offices belong in common both to men and women.

Glaucon:: Yes, they do.

Socrates:: As respects, then, the children of worthy persons, I think, they should carry them to some retirement, to certain nurses dwelling apart in a certain quarter of the city; but as for the children of the more depraved, and such of the rest as may be maimed or lame, they will hide them, as is right, in some secret and obscure place.

Glaucon:: Yes, indeed, if the race of guardians is to be pure.

Socrates:: Will they not then take care also of their children's nurture, bringing to the nursery mothers with full breasts, taking every precaution that no woman should recognize her own child, and, where the mothers cannot suckle them, providing others who would be able to do so? And they will be careful also of this most particularly, that the nurses suckle only during a proper time, and they will enjoin, both on the nurses and keepers, their watching duties, and every other necessary toil.

Glaucon:: You speak, of a time of great ease to the wives of our guardians, in the breeding of children.

Socrates:: Yes, for it should be so. But let us next discuss what we were so anxious to do, when we said that the procreation of children should take place among persons in the prime of life.

Glaucon:: True.

Socrates:: Do you agree with me then, that this prime season is at twenty in a woman, and at thirty in a man?

Glaucon:: How do you reckon this time for each sex?

Socrates:: The woman, is to bear children to the state from the age of twenty to that of forty; and the man, after having passed the most excitable period of his course, is from that period to beget children to the state up to the age of fifty-five.

Glaucon:: This indeed, is the prime, in both sexes, both as respects body and mind.

Socrates:: If then any one, either older or younger than these, should employ himself in begetting children for the commonwealth, we should say that the trespass is neither right nor just, since he is begetting to the state a child, which if concealed is born and grows up, ushered in neither by sacrifices nor prayers—which, on every marriage, the priestesses and priests, and the whole state offer, that the descendants of the good may be still better, and that from useful descendants others still more useful may arise,—but is born in darkness, and the result of dreadful incontinence.

Glaucon:: Right.

Socrates:: And the law, must be the same, if any of those men, who are yet of the age for procreation, have intercourse with women of a proper age, without the magistrate's leave; for we may consider him as having raised to the state a bastard, born in adultery and unmoored by religious auspices.

Glaucon:: Most right.

Socrates:: And I presume, whenever either the women or the men are past the age of procreation, we are to let the men cohabit with any woman they like, except their daughter and mother, and the children of their daughters, or those upwards from their mother; and so likewise the women are to embrace any, except a son, a father, and the children of these, in either direction: all this liberty we are to grant them, after we have enjoined them to be careful, first, if a child be conceived, not to bring it to the light, but if, by accident, it should be brought forth, so to expose it as if there were no provision for it.

Glaucon:: All these things, are reasonably said:—but how are the fathers and daughters, and the other relations you just mentioned, to be known to one another?

Socrates:: They are not to be known at all; but from the day on which any one is married, whatever children are born between the seventh or tenth month after it, all these he is to call, the males his sons, and the females his daughters, and they are to call him father; and in the same way again, he is to call the children of these—grandchildren; and they in turn are to call them grandfathers and grandmothers; and those who were born during the period in which their fathers and mothers were begetting children, they shall call sisters and brothers, as I just observed,—so that they may have no sexual intercourse.—But as for brothers and sisters, the law will allow them to live together,—if their lot so fall, and the Pythian oracle give consent.

Glaucon:: Quite right.

Socrates:: This, and such as this, Glaucon, is the community of women and children, among the guardians of the state: and that this is consistent both with the rest of our polity, and is by far the best, we must next establish from reason;—or how shall we do?

Glaucon:: By Zeus, just so.

Socrates:: Is not this, then, the beginning of our agreement, to ask ourselves what we can allege to be the greatest good for the establishment of a state, with a view to which the lawgiver is to enact the laws, and what the greatest evil,—and next to examine, whether what we have hitherto described tends to or conforms with the track of the good, and is opposed to that of the evil?

Glaucon:: Most certainly.

Socrates:: Is there, then, any greater evil for a state than that which tears it in pieces, and makes it many instead of one;—or, any greater good than that which binds it together, and makes it one?

Glaucon:: There is not.

Socrates:: Does not then the communion both of pleasure and pain bind men together, when the whole of the citizens as much as possible rejoice and mourn in fellowship, for the same matters, whether gainful or the contrary?

Glaucon:: Assuredly.

Socrates:: And again, any mere private perception of such things dissolves that union, when some grieve exceedingly, and others rejoice exceedingly at the same events, either in the state or those composing it?

Glaucon:: Of course.

Socrates:: Does not this then arise from the following circumstance,—when such words as these are not pronounced at the same time in a state, as mine, and not mine; and with regard to what concerns another, in the same way?

Glaucon:: Aye, surely.

Socrates:: And the state, in which the greatest number unite in saying of the same things, that this concerns me, and that does not concern me,—that is best regulated?

Glaucon:: By far.

Socrates:: And it is that also, which most closely resembles the individual man;—-just as, when a person's finger is wounded, the entire fellowship of feeling, extending through the body towards the soul, and producing that harmony which is the work of the governing principle within it, viz. the soul, experiences a sensation, and at the same time wholly sympathizes with the ailing part; and thus we say that the man has a finger-ache:—and so also, with respect to any part whatever of the human frame, the same reasoning applies either with respect to grief, when a part is in pain, or with respect to pleasure, when it is at ease.

Glaucon:: Aye, the very same: and as to what you are asking, the state that nearest approaches this is the best governed.

Socrates:: When, therefore, any individual citizen receives good or ill, such a state, methinks, will most especially maintain that she herself is the party affected, and will unite as a whole in joy or mourning.

Glaucon:: That must be the case, in a state, governed, at least, by good laws.

Socrates:: It will be time perhaps for us to return to our state, and consider as to the points on which we have agreed in our discussion, whether they belong more particularly to our state than any other.

Glaucon:: Yes,—we must.

Socrates:: What then? there are surely in other states, both governors and people?—and so also in this?

Glaucon:: There are.

Socrates:: And will not all these address one another as citizens?

Glaucon:: Of course.

Socrates:: But besides calling them citizens, what do the people call their governors under the other forms of government?

Glaucon:: In most states, masters, but in democracies, this very name governors.

Socrates:: But what as to the people in our state? besides citizens, what do they say their governors are?

Glaucon:: Saviors, and helpers.

Socrates:: And what do they call the people?

Glaucon:: Paymasters, and supporters.

Socrates:: And in the other states, what do the governors call their people?

Glaucon:: Slaves.

Socrates:: And what do the governors call one another?

Glaucon:: Fellow-governors.

Socrates:: And ours, what?

Glaucon:: Fellow-guardians.

Socrates:: Can you then tell about the governors in other states, whether any one of them can address one of his fellow-governors as an intimate, and another as a stranger?

Glaucon:: Aye, very many can.

Socrates:: Does he not then esteem and speak of his intimate as his own, and the stranger as not his own?

Glaucon:: Just so.

Socrates:: But how is it with your guardians? Is there any one of them, who can esteem or address any of his fellow-guardians as a stranger?

Glaucon:: By no means;—for with whomever a person falls in, he will conceive that he falls in with a brother or sister, or a father or mother, or a son or daughter, or their descendants or ancestry.

Socrates:: You speak exceedingly well:—and further, tell me this also, whether you will give them only a legal right to these familiar names,—or rather bid them perform all their actions in accordance with these names, especially as respects parents, whatever the law enjoins as the parents' due,—such as reverence, and care, and obedience,—it being otherwise not for his advantage, either in the sight of God or of men, inasmuch as he would do what is neither holy nor just, if he acted otherwise than thus?—Will these, or other maxims coming from the whole body of our citizens, echo close round the ears of our children, both about their parents, when pointed out to them, and about other relations likewise?

Glaucon:: These maxims must so; for it were ridiculous, if, without actions, their proper names were uttered by the mouth alone.

Socrates:: Of all states then, in this especially, when any one individual fares either well or ill, the citizens will mostly agree in exclaiming, according to our late expression,—namely, “Mine fares well, or mine ill?

Glaucon:: Quite true.

Socrates:: Did we not say too, that agreeably to this opinion and expression, their common pleasures and pains should agree?

Glaucon:: Aye,—and we said rightly.

Socrates:: Will not then our citizens most especially hold in common that same thing, which they call “*my own*”—and, holding this in common, thus have a special fellowship in pleasure and pain?

Glaucon:: Very much so.

Socrates:: And the cause of all this, independently of other regulations of the state,—is it not the community of women and children among the guardians?

Glaucon:: Most especially so.

Socrates:: We had agreed, moreover, as to the greatest good of a state, by comparing a well-managed state to a body, which feels pleasure or pain affecting any part of it.

Glaucon:: Aye, we were right, in agreeing about this.

Socrates:: The cause then of all this high degree of good to our state was found to be the community of women and children among our defenders?

Glaucon:: Surely.

Socrates:: And in that case, we agree at least with what was before alleged; for we said, I believe, that they ought to have neither houses of their own, nor land, nor any possession, but to receive their subsistence from others, as a reward for their guardianship, and all to consume it in common, if they mean really to be guardians?

Glaucon:: Right.

Socrates:: Do not then, as I say, the circumstances formerly mentioned, and still more those now mentioned, cause them to be true guardians, and prevent those divisions in the state which arise from not calling one and the same thing their own,—but one one thing, and another another;—one drawing to his own dwelling whatever he can acquire separately from the rest, and another, to his likewise that which is separate; and also different wives and children, occasioning both pleasures and pains, individually private, though holding one and the same opinion concerning what is domestic,—all, as far as possible, pointing towards the same thing,—namely, a community of feeling respecting pleasure and pain?

Glaucon:: Of course, we grant that.

Socrates:: But what?—will not lawsuits and criminal charges in the courts be banished from among them so to speak, from the fact of their possessing nothing in private but their body, but all the rest in common,—owing to which, they will be kept free from all the dissensions which men raise about money, or children and relatives?

Glaucon:: It is quite clear, they will be thus relieved.

Socrates:: And, moreover, in these there could not fairly be any suits, as regards personal violence or improper treatment:—for conceiving personal preservation to be an absolute necessity, we will own it to be handsome and just for compeers in age to help their compeers.

Glaucon:: Right.

Socrates:: And this privilege, at any rate this law possesses:—if a man be in a passion with any one, be will in such a case be less apt to venture on still greater seditions.

Glaucon:: Certainly.

Socrates:: The elder, moreover, will be ordered both to govern and chastise all the younger.

Glaucon:: Clearly so.

Socrates:: And moreover, as to the younger, with regard to the elder, unless the magistrates order it, he will never attempt to beat the elder, or otherwise offer him violence,—nor, methinks, will he by any other means dishonor him:—for there are two sufficient guardians to hinder it, fear and respect,—respect on the one hand restraining him from laying hands on a parent, and fear on the other, that others might come to the defense of the sufferer;—some as sons, others as brothers, and others as fathers.

Glaucon:: Yes,—such is the case.

Socrates:: In every respect then, in consequence of the laws, these men, *i.e.* the warriors, will enjoy peace with one another?

Glaucon:: Yes, much.

Socrates:: And so long as these do not quarrel among themselves, there is no danger of the rest of the state rising or mutually splitting into factions.

Glaucon:: No, of course not.

Socrates:: As for the least important evils, I am unwilling for propriety's sake even to mention from how many they will have been relieved,—the poor, for instance, as regards the work of flattering the rich,—and the difficulties and anxieties, which people have in bringing up their children and procuring money for the support of servants,—sometimes borrowing, sometimes denying debts, and at other times using all manner of shifts in procuring money, and then giving it to the management of their wives and domestics;—about these matters, friend, how many slavish and ignoble troubles they suffer are not even worthy to be mentioned.

Glaucon:: Yes, they are manifest, even to one blind.

Socrates:: From all these troubles, therefore, they will be relieved, and will live more blessedly than that most blessed life which those live who gain the Olympic prizes.

Glaucon:: How?

Socrates:: On one small account only are those esteemed happy, compared with what these enjoy;—for the victory of these is more noble, and their maintenance at the public expense more complete: inasmuch as the victory that they gain brings safety to the entire state,—and by way of crown and reward, both they and their children receive their maintenance and all other necessaries of life, thus winning honors from their own state while living, and at their death an honorable funeral.

Glaucon:: Noble rewards! indeed.

Socrates:: Do you remember, then, that in a former part of our discussion, some one,—I know not who,—objected to us, that we were not making our guardians happy, by decreeing that those who had the whole wealth of the citizens at their command should nevertheless have nothing at all?—and we said, I believe, that we would consider this afterwards, if it fell in our way; but that at present we were making our guardians real guardians, and the state itself as happy as possible, without exclusively regarding any single class in it, with a view to make it happy?

Glaucon:: I remember.

Socrates:: What think you now of the life of our auxiliaries, which appears far more noble and happy than that of those of the Olympic prizemen;—do you think it can be compared to the life of the leather-cutter, or any other kind of craftsman, or even the farmer?

Glaucon:: I do not think so.

Socrates:: Still even, what I said before, it is proper that I mention here also,—if the guardian should try to become happy in such a way as to lose his character as a guardian, and not be content with a life thus moderate and steady, and as we say, of the best quality, but on the other hand be impelled by a silly boyish notion about happiness, to appropriate to himself all the property in the state, because he has the power, he will know that Hesiod was really wise, in saying that “the half is considerably more than the whole.

Glaucon:: ” If he take me for his counselor, he will remain in such a life.

Socrates:: You agree then, as to the fellowship of the women with the men, which we have explained, in matters referring to education and children, and the guardianship of the other citizens;—that whether they remain in the state, or go forth to war, they ought to keep guard with them, and hunt with them like hounds, and in every case take a share in all things, as far as they can; and that doing these things they will do what is best, and not contrary to the nature of the female, as regards the male,—by which nature, indeed, they act jointly with one another?

Glaucon:: I agree.

Socrates:: Does not this then, still remain to be discussed, whether it be possible that this community of habits can take place among men, even as among other animals? and how it is possible?

Glaucon:: You have forestalled me, by mentioning what I was just going to ask.

Socrates:: Aye;—for as to war, it is plain, methinks, how they will fight.

Glaucon:: How?

Socrates:: They will go out jointly on their military expeditions, and will carry along with them to battle also such of their children as are robust, in order that those of the craftsmen may see what they ought to practice when arrived at full age, and, apart from mere observation, may serve and minister in all such matters subserviently both to their fathers and mothers. Have you not observed also what happens in the common arts, as, for instance, among the children of the potters,—how long a time they help and look on, before they apply themselves to the making of pottery?

Glaucon:: Yes, indeed.

Socrates:: Should these then, or our guardians, be more careful in instructing their children by their own experience, and by observation of what is suitable for them?

Glaucon:: To suppose that the craftsman would, were truly ridiculous.

Socrates:: Yet every creature whatever will fight more valiantly in the presence of its offspring?

Glaucon:: It is so: but there is no small danger, Socrates, should they be defeated, as is often the case in war, that when their children, as well as themselves, are cut off, it will be impossible to restore the rest of the state.

Socrates:: You speak truly: but think you, that our first duty should be never to expose them to risk?

Glaucon:: No, by no means.

Socrates:: What then: if they are to hazard themselves in any case, is it not—where they will become better men, if they succeed?

Glaucon:: Clearly so.

Socrates:: But do you think it a small matter, and unworthy of the risk, that children destined for military life should or should not be observers of the transactions of war?

Glaucon:: No;—for it is highly important with reference to what you now mention.

Socrates:: This then, we must first contrive,—to make our children spectators of war, yet providing for their safety:—and then all will go well, will it not?

Glaucon:: Yes.

Socrates:: And surely their fathers, in the first place, as far as men can, will not be ignorant, but well informed as to the kinds of expeditions which are dangerous or not so.

Glaucon:: Probably so.

Socrates:: Into the one then, they will take them; but will be cautious of exposing them to the other.

Glaucon:: Right.

Socrates:: And they will probably, set governors over them, not such as are the most depraved, but such as by experience and years are able leaders and trainers of the young.

Glaucon:: Yes, quite proper.

Socrates:: Yet many things, we may say, happen to many contrary to expectation.

Glaucon:: Quite so.

Socrates:: With reference, therefore, to such events as these, it is fit that we should provide the children with things while quite young, in order, if need be, that they may escape by flight.

Glaucon:: How do you mean?

Socrates:: We must mount them on horseback, when extremely young; and when they have learnt to ride, they must be taken to see battles, not on high-mettled war-horses, but on the fleetest and most obedient to the rein; for thus they will best observe their proper work, and in case of need, escape with the greatest safety, following the aged leaders.

Glaucon:: I think, your remark is correct.

Socrates:: What then, as to the affairs of war; how are you to manage our soldiers, both as respects each other and their enemies? Is my opinion correct or not?

Glaucon:: Tell me what it is.

Socrates:: As for that man among them, who has left his rank, thrown away his arms, or done any such like act from mere cowardice, ought we not to make him a craftsman, or field laborer?

Glaucon:: Certainly.

Socrates:: And the man who is taken alive by the enemy, should he not be given away as a present to those inclined to use their booty just as they please?

Glaucon:: Yes, surely.

Socrates:: And as to him who has signalized himself and attained to high renown, think you not, that he ought, first of all in the field itself, to be crowned successively by each of the youths and boys who are his fellow-soldiers?—is it not so?

Glaucon:: Yes, I think so.

Socrates:: And will they give him the right hand likewise?

Glaucon:: And that too.

Socrates:: But what I am going to tell you, will not, methinks, be quite so pleasing.

Glaucon:: What?

Socrates:: That they should kiss and be kissed by each individually?

Glaucon:: This is by far the best of all: and for myself, I would add this regulation,—that, so long as they are on this expedition, no one shall be allowed to refuse the man, whoever it be that he pleases to kiss,—so that if a warrior happen to be in love with any one, male or female, he may be the more animated to win the noblest prize of velour.

Socrates:: Very well:—for it has been already said, that more opportunities for marriage should be provided for the brave citizen than for others, and more frequent choice in such matters should be allowed to them than to all others, in order that such a man's descendants maybe as numerous as possible.

Glaucon:: Yes, we did say so.

Socrates:: Moreover, even according to Homer, it is just that really brave youths should be honored in this way; inasmuch as Homer said, that Ajax, who on account of the renown he had gained in battle, was rewarded with a large share at the entertainments,—fit reward, too, for a brave and youthful man, from which he at once acquired both honor and strength.

Glaucon:: Most right.

Socrates:: In this matter, at least, then, we are to obey the authority of Homer; and as a proof of this, we will so honor the brave, both at our sacrifices, and on such like occasions, in as far as they appear deserving, both with hymns, and the honors just mentioned; and besides this, with seats and viands, and brimming cups, so as at once both to honor and exercise the virtue of worthy men and women.

Glaucon:: You speak capitally well.

Socrates:: Well, of those then that die in the campaign, shall we not, in the first place, say, of the man that closes his life with glory, that he is of the golden race?

Glaucon:: Quite so, indeed.

Socrates:: And are we not to believe Hesiod, when he tells us, that if any of this race die, then—

> Chaste, holy, earthly spirits they become,
> Expelling evil, guardians of mankind?

Glaucon:: Yes, we will believe him.

Socrates:: We will ask the oracle then, how we ought to bury noble and divine men, and with what marks of distinction; and then we will bury them in the very manner that the God directs.

Glaucon:: Of course.

Socrates:: And in all aftertime we will reverence and worship their tombs as those of demigods, and enact that the same ceremonies shall be observed with regard to persons dying of old age, or from any other cause, after having been deemed remarkably good during their lifetime?

Glaucon:: Aye, it is only just.

Socrates:: But what?—how are our soldiers to behave towards enemies?

Glaucon:: In what respect?

Socrates:: First, as respects enslavement, think you it just, that Greeks should enslave Greek cities?—nay, ought they not, as far as they can, to prevent others from doing it, and act on the principle of sparing the Grecian tribe, cautiously looking to the possibility of being themselves enslaved by barbarians?

Glaucon:: Aye; both generally, and in every particular case, it is the best plan to be sparing.

Socrates:: Are they then not to keep any Greek slave themselves, and to counsel the rest of the Greeks to agree to the same plan?

Glaucon:: Surely: because they will thus at least, turn themselves the more against the barbarians, and abstain from one war against another.

Socrates:: But what?

Glaucon:: Stripping the dead, of anything but their arms after conquering them, is that right;—or does it not rather furnish cowards with an excuse not to go against a foe, as if they were doing some duty when bending over a mere corpse; and have not many armies been destroyed by this kind of plunder?

Socrates:: Very many.

Glaucon:: Do not you think it also illiberal and forbidden to plunder a corpse, and the mark of a feminine and little mind to deem the body of the deceased an enemy, after the enemy has fled away, and naught remains behind, but the instrument with which he fought?

Socrates:: Do you think that they who act thus do any otherwise than dogs do, who snap at the stones with which they are pelted and do not touch the man who throws them?

Glaucon:: Not at all.

Socrates:: We must have done then with this stripping of the dead, and these hindrances arising from the carrying off of booty.

Glaucon:: Aye, by Zeus, we must have done with them.

Socrates:: Moreover, we shall not at any time bring arms into the temples, for the purpose of dedicating them, at least not the arms of Greeks,—if we at all care for the kind feeling of the rest of the Greeks; but we shall rather fear its being a kind of profanation to bring into the temple such things as these from our close connections, unless the oracle direct us otherwise.

Glaucon:: Quite right.

Socrates:: And as regards the laying waste of Grecian lands and the burning of houses, how would your soldiers treat their enemies?

Glaucon:: Aye,—I should be glad, to hear you state your opinion on that point.

Socrates:: Truly then, my opinion is, that we should do neither of these things, but only carry off the year's crop:—and would you have me tell you the reason, why this should be done?

Glaucon:: By all means.

Socrates:: It appears to me, that as these two words, war and discord, are different, so two different things are signified by them; and I call them different—the latter between members of the same community, and the former between foreigners and strangers.—When hatred is among one's own people, it is called discord; when it respects foreigners, war.

Glaucon:: What you say, is not at all unreasonable.

Socrates:: But consider, whether what I now state is also to the purpose; for I assert that the Greek nation itself is friendly and in alliance with itself, though foreign and strange to the barbarian.

Glaucon:: Well observed.

Socrates:: When therefore Greeks fight with barbarians, and barbarians with Greeks, we may then say, that they are at war, and naturally enemies; and this hatred we may call war: but when Greeks act thus towards Greeks, we may say that they are naturally friends, and that Greece in such a case is distempered, and at discord; and such a hatred is to be called discord.

Glaucon:: I agree, that we must view it thus.

Socrates:: Consider then, that in the discord just mentioned, whenever such a thing happens, how the state is split in factions, and when they sequester each other's lands and burn each other's houses, how destructive the discord seems, and neither of them seem to be lovers of their country; for otherwise they would never have dared to pillage their nurse and mother, but it would have been sufficient for the victors to carry off the crops of the vanquished, and to conceive that they would one day be reconciled, and not perpetually be at war.

Glaucon:: This indeed is by far a milder sentiment than the other.

Socrates:: But what then? this state that you are founding, is it to be a Greek one?

Glaucon:: It ought.

Socrates:: Are they not then to be good and mild?

Glaucon:: By all means.

Socrates:: And will they not be lovers of Greece; and will they not account Greece as related to them; and will they not observe the same religious rites as the rest of the Greeks?

Glaucon:: Most decidedly.

Socrates:: Any difference then, that they have with Greeks, as kinsmen, will they not consider that as discord,—not war?

Glaucon:: Yes, for it is not war.

Socrates:: And they will behave then, as those capable of being reconciled?

Glaucon:: Quite so, of course.

Socrates:: They will be mild then and moderate, not punishing so far as to enslave or destroy,—as advocates for correction, and not as enemies.

Glaucon:: Just so.

Socrates:: Neither then, as they are Greeks, will they pillage the lands, or burn the houses of Greeks; nor will they allow, that in every state, individually, all are their enemies, men, women, and children, but that in all cases a few only are enemies,—the originators of the quarrel: and on all these accounts they will not choose to lay waste their lands, since the majority of the occupants are their friends; nor will they overturn the houses:—and so far only will they carry on the war, until the real originators be obliged by the innocent to make reparation to those whom they have grieved.

Glaucon:: I agree, that we ought so to behave towards opponents among our own citizens,—but towards the barbarians, as the Greeks now act towards each other.

Socrates:: This law, then, also, let us enact for our guardians, that they shall neither lay waste the lands, nor burn the houses.

Glaucon:: Aye, let us enact it; and this further, that these things are right, and those also, that you before mentioned. It appears to me, however, Socrates, that if one allow you to go on speaking in this fashion, you will never remember what you formerly put aside, when you entered on all that you have now said;—namely, how far such a government is possible, and in what way it is at all possible? For, if it be at all possible, I will allow that all these high advantages will belong to that state in which it exists, and the following also, which you omitted; and I now tell you, that they will, with all possible courage, fight against their enemies, and least of all abandon each other, recognizing, and calling one another by these names,—fathers, sons, and brothers; and if the females encamp along with them, whether in the same rank, or drawn up behind them, they will strike terror into the enemies, and at the same time, in case of need, give all assistance:—in this way, I know, they will be utterly unconquerable; and as for the advantages they have at home, which we have omitted, those at any rate I plainly see.—But as I allow, that all these, and ten thousand other things, will belong to this form of government, if it actually does exist, let us talk no more about it, but try to persuade each other of this itself, how far it is possible, and in what way:—and let us omit the other points.

Socrates:: You have suddenly, made an attack on my argument, and make no allowance for one who is but a bungler; because, perhaps, you do not know with what difficulty I have got over two breakers, and now you are driving me on the greatest and most dangerous of all the three. After having seen and heard this, you will, I am sure, forgive me; allowing, that I had reason for hesitation, and was frightened by the mention of so great a paradox from undertaking its examination.

Glaucon:: The more, you mention such things, the less will you be excused from explaining in what respect this government is possible. Proceed then without delay.

Socrates:: Must we not then, first remember this, that we are come hither to inquire into the nature of justice and injustice?

Glaucon:: We must. But what is this to the purpose?

Socrates:: Nothing. But supposing we find out the nature of justice, are we to judge then, that the just man ought nowise to differ therefrom, but in every respect to resemble justice; or are we to be satisfied, if he approach to it, as nearly as possible, and, of all others, partake of it the most?

Glaucon:: This will satisfy us.

Socrates:: For example's sake, then, we were inquiring into this,—what is the nature of justice; and we were in quest also of the perfectly just man, how he became so, and what was his nature, if he really existed,—and so also with respect to injustice, and the supremely unjust man, in order that, looking to them as regards their apparent qualities in relation to happiness and its opposite, we might be obliged to acknowledge concerning ourselves, that whoever most resembles them in character will have a fortune most resembling theirs; and not for the purpose of showing that these things are possible or not.

Glaucon:: It is quite true.

Socrates:: Think you, then, that he is in any degree an inferior painter, who having painted the portrait of a very handsome man, and having expressed everything fully in his picture, is yet unable to show that such a man really exists?

Glaucon:: By Zeus, I do not.

Socrates:: Well, have we not now then logically defined, shall we say, the model of a good state?

Glaucon:: Yes, indeed.

Socrates:: Have we, indeed, less ably stated the case, think you, for this reason, because we are unable to show the possibility of a state being established as we have described?

Glaucon:: No, indeed.

Socrates:: This then, is the truth of the case:—but if indeed, I must now, on your account, be anxious on this point,—that is, to show how and in what respects it is most possible, with a view to this discovery, you must again allow what you did before.

Glaucon:: What?

Socrates:: Can anything possibly be executed as perfectly as it is described; or, is it the nature of practice, that it does not approach so near to truth as theory, though some may think otherwise:—will you allow this or not?

Glaucon:: I allow it.

Socrates:: Do not oblige me then to show you, that all these things in every respect positively exist in as great perfection as we have described in our reasoning:—if, however, we can find out how a state may be established as closely as possible to what has been mentioned, you will agree that we have discovered the possibility of what you require; or will you not even be satisfied, if this be proved? For my own part I should be satisfied.

Glaucon:: Yes, and I too.

Socrates:: Next then, it seems, we must endeavor to find out and show what is the evil now existing in states, owing to which they are not established in the manner we have described,—and what is that smallest change, by making which we could bring the state to this model of government;—and let us chiefly see, if this can be effected by the change of one thing,—if not, by the change of two,—if not that, by the change of the fewest things in number, and the smallest in power.

Glaucon:: By all means.

Socrates:: By changing one thing only then, methinks, I can show that the state may be molded into this form of government:—that change, however, is neither small nor easy, though possible.

Glaucon:: What is it?

Socrates:: I am now come, to what I compared to the greatest wave: and it shall now be mentioned, even though, as with a wave, I should be overwhelmed with ridicule and infamy. Consider, however, what I am now going to say.

Glaucon:: Proceed.

Socrates:: Unless either philosophers, govern in states, or those who are at present called kings and governors philosophize genuinely and sufficiently, and both political power and philosophy unite in one,—and until the bulk of those now pursuing each of these separately are of necessity excluded, there will be no end, Glaucon, to the miseries of states, nor yet, as I think, to those of the human race; nor till then will that government, which we have described in our reasonings, ever spring up to a positive existence, and behold the light of the sun.—And this is what all along made me dislike mentioning it, that I saw what a paradox I was about to advance: for one can scarcely be convinced that no other government but this can enjoy happiness, either public or private.

Glaucon:: You have thrown out such an expression and argument, Socrates, as you think may bring on you a great many, and these too so specially bold as to put off their clothes, and snatch naked whatever weapon each happens to have ready as if about performing prodigies for rushing forward in battle-array:—and if you do not mow them down with argument, and so make your escape, you will pay for it by suffering the severest ridicule.

Socrates:: And are not you the cause of all this?

Glaucon:: Aye, through acting well at least:—yet in this affair, I will not betray but defend you, as far as I can; and I am enabled to do so both by my own good-will and your encouragement; and your questions probably I shall answer more carefully than any other:—only do you try, by help of such assistance, to show those who are loath to believe these things, that they really are what you represent them.

Socrates:: I must try; especially, as you afford me so much assistance. And here it seems necessary, if we can at all escape from those you mention, that we should at any rate define clearly what kind of men those are whom we call philosophers,—those, who, we are bold enough to say, ought alone to govern;—so that, when they are clearly pointed out, an able defense may be set up, by asserting that it is their natural province both to study philosophy, and also assume to themselves the government of the state,—while the other members of the state study neither philosophy nor politics, but only obey their leader.

Glaucon:: It is quite fit, that we should define them.

Socrates:: Come then, follow me this way, and see if we can in some way or other sufficiently explain this matter.

Glaucon:: Lead on then.

Socrates:: Will it be necessary then, to remind you,—or do you recollect, that when we say of any one, that he loves a thing, he would not appear, if we speak strictly, to love one part of it, and not another, but to have an affection for the whole?

Glaucon:: I need, it seems, to be reminded of that; for I do not understand it perfectly.

Socrates:: Some one else, indeed, Glaucon, might say what you say; but it does not become a man who is a lover, to forget that all things in their bloom somehow excite, and agitate an amorous person and lover, as seeming worthy both of respect and of proper salutes:—do you not behave in this manner towards the beautiful? One, because flat-nosed, will be called agreeable, and be an object of praise; and the hooked nose of another, you call princely; and that between these, formed with exact symmetry: the dark are said to have a manly look, and the fair to be the children of the gods: but this name of delicate white, think you it is the invention of any other than a flattering lover, who easily bears with the paleness, if it be in the season of youth?—in one word, do you not make all kinds of pretences, and say everything that you can, so as not to reject any one who is in the prime of life?

Glaucon:: If you are disposed, to judge by me of other lovers, that they act in this manner, I agree to it for argument’s sake.

Socrates:: And what, as to lovers of wine:—do not you find they act in the same manner, cheerfully drinking every kind of wine on every pretext?

Glaucon:: Yes, indeed.

Socrates:: And you perceive, I suppose, that the ambitious likewise, if they cannot obtain the command of an army, will take the command of a τριττύς; and if they cannot get honor from greater and nobler men, are content to be honored by the lesser and the meaner sort, because they are desirous of honor at any rate?

Glaucon:: Perfectly true.

Socrates:: Will you allow this or not: if we say, one desires a thing, are we to say that he desires the whole species, or that he desires one part of it, but not another?

Glaucon:: The whole.

Socrates:: May we not then likewise say, that the philosopher desires wisdom, and that too, not one part only, but the whole?

Glaucon:: True.

Socrates:: He then, who is averse to a course of discipline, especially if he be young, and has not understanding to discern what is good and what is otherwise, should not be called a lover of learning, nor a philosopher;—just as we say of a person disgusted with meats, that he neither hungers after nor desires meats, and is not a lover but a hater of them.

Glaucon:: Aye,—and we shall say right.

Socrates:: But the man who has a ready inclination to taste of every branch of learning, and enters with pleasure on its study, and is insatiable thereof, this man we may with justice call a philosopher, may we not?

Glaucon:: Many such philosophers as those will go into great absurdities; for all your lovers of shows appear to me to be of this kind, from taking a pleasure in learning; and your story-lovers are of all persons to he reckoned the most stupid,—among philosophers at least. These indeed would not willingly attend to such reasoning, or to such a disquisition as this. But yet, as if they had hired out their ears to listen to every public ditty, they run about to the Dionysia, omitting neither the civic nor village festivals. Are all these then, and others who run after such matters, and those likewise who devote themselves to the inferior arts, to be called by us philosophers?

Socrates:: By no means, but, only like philosophers.

Glaucon:: Who are they, however, whom you call the true ones?

Socrates:: Those, who are desirous of discerning the truth.

Glaucon:: That too, is correct:—but how do you mean?

Socrates:: It is not easy, to tell another this; but you, I think, should agree with me in this.

Glaucon:: In what?

Socrates:: That since the beautiful is contrary to the deformed, these are two things.

Glaucon:: Of course, they are.

Socrates:: And if they are two, then each of them is one.

Glaucon:: Granted also.

Socrates:: And as regards justice and injustice,—good and evil,—and also respecting all ideas whatever, the argument is the same—that each of them is one in itself, though, as to their relation with actions and bodies, and each other mutually, they take an all-varying number of forms, so as to make the one appear many.

Glaucon:: Right.

Socrates:: In this manner then, do I distinguish and set apart those that you just mentioned, the lovers of public shows, from craftsmen and mechanics; and then quite apart from these I place those of whom we are now discoursing, whom alone we may properly call philosophers.

Glaucon:: How say you?

Socrates:: The lovers of common stories and spectacles, delight in fine sounds, colors, and figures, and everything made up of these; but the nature of beauty itself their intellect is unable to discern and admire.

Glaucon:: That is the case, indeed.

Socrates:: As to those, however, who are able to approach this beauty itself and behold it in its real essence, surely they must be few in number?

Glaucon:: Extremely so.

Socrates:: He then who deems some things beautiful, but neither knows beauty itself nor is able to follow, should any one lead to the knowledge of it, do you think he lives in a dream, or is awake? consider: is not this to dream, when a man, either asleep or awake, imagines the likeness of a thing not to be its likeness, but the real thing itself which it resembles?

Glaucon:: I for my part would assert, that such a person is really in a dream.

Socrates:: But what now as to him who comes to an exactly opposite conclusion, who understands the real nature of beauty, and is able to discern both it and its accessories, and deems neither the accessories to be beauty, nor beauty the accessories;—does such a man, think you, live in a waking or dreaming state?

Glaucon:: Wide awake.

Socrates:: May we not then properly call this man's intellectual power, so far as he really knows, knowledge, but that of the other, opinion,—as he only opines?

Glaucon:: Surely so.

Socrates:: But what,—if the person, who, we say, only opines things, but does not really know them, becomes indignant, and raises a dispute, alleging that our position is not true, shall we have any method of soothing and gently persuading him, and yet at the same time concealing that he is not in a sound state?

Glaucon:: We surely ought.

Socrates:: Come then, bethink you what we are to say to him.—are you disposed that we should question him thus,—saying, that if he knows anything, no one envies him, and we should gladly see him possessed of more knowledge;—and tell us this too, does the man who has so much knowledge, know something or nothing? Do you answer me in his behalf.

Glaucon:: I will answer, that he knows something.

Socrates:: Is it something then, that does or does not exist?

Glaucon:: What does exist: for how can that, which does not exist, be known?

Socrates:: This, then, we have sufficiently considered;—though we might have considered it more fully,—that what really is, may be really known, but what does not at all exist, cannot be known at all?

Glaucon:: Yes,—this we have examined quite sufficiently.

Socrates:: Be it so: but if there be anything of such character, as both to be and not to be, must it not lie between what has a perfect existence, and what has none at all?

Glaucon:: Between them.

Socrates:: If then there is knowledge as to what really exists, and necessarily ignorance as to what does not exist,—as to what lies between these, must we not seek for something between ignorance and science, if there be any such thing?

Glaucon:: By all means.

Socrates:: Are we to allege, then, that opinion is anything?

Glaucon:: Of course.

Socrates:: Is it a different faculty from science, or the same?

Glaucon:: Different.

Socrates:: Opinion then is conversant about one thing, and science about another, each according to its own peculiar faculty?

Glaucon:: Just so.

Socrates:: Is not then the nature of science as regards that which exists, to know what existence is? It seems to me, however, far more necessary to lay down the distinction thus.

Glaucon:: How?

Socrates:: We will say, that faculties are a certain kind of real existences, by which both we can do whatever we are able, and every being else also whatever it is able: for instance, I say, that seeing and hearing are faculties, if you understand what I mean to call 'the species" or idea.

Glaucon:: I understand.

Socrates:: Hear then what is my opinion about them: for I do not see any color nor figure, nor any of such qualities of a faculty, as of many other things, with reference to which I form a mental internal perception of their differences: but in a faculty, I regard that alone, about which it is employed, and what it accomplishes; and on this account I call each of these a faculty; and that which is employed about and accomplishes one and the same purpose, this I call the same faculty; but what is employed about and accomplishes a different purpose, that I call a different faculty:—what say you? In what manner do you call it?

Glaucon:: Just the same.

Socrates:: Here again, excellent Glaucon,—do you allege, that science is itself a certain faculty, or to what class do you refer it?

Glaucon:: To this, the strongest of all the faculties.

Socrates:: But what then;—are we to refer opinion to faculty, or to some other species?

Glaucon:: By no means; for that by which we have the power of forming opinions is nothing else but opinion.

Socrates:: But some time since, you allowed that science and opinion were not the same.

Glaucon:: How, can any one with common sense reduce under one, what is infallible, and what is not infallible?

Socrates:: Right;—and it is plain, that we have allowed opinion to be a different thing from science.

Glaucon:: Yes,—different.

Socrates:: Each of them then has naturally a different faculty in reference to a different object?

Glaucon:: Of course.

Socrates:: Science surely as regards that which exists, so as to know the nature of real existence?

Glaucon:: Yes.

Socrates:: But we say that opinion opines?

Glaucon:: Yes.

Socrates:: Is it cognizant of the same thing that science is;—and will that which is known, and that which is matter of opinion, be the same;—or is this impossible?

Glaucon:: Impossible, from what has been granted: since they are naturally faculties of different things, and both of them are faculties,—opinion and science,—and each of them different from the other, as we have said; hence it cannot be, that what is opined is the same with that which is known.

Socrates:: If then that which exists is known, must it not differ from what is perceived by opinion?

Glaucon:: It does differ.

Socrates:: Does opinion then entertain what has no existence;—or is it impossible to opine what does not exist at all?—Consider now, does not the man who opines, refer his opinion to some standard;—or is it possible to opine, and yet opine nothing at all?

Glaucon:: Impossible.

Socrates:: But whoever opines, opines some one thing?

Glaucon:: Yes.

Socrates:: But surely that which does not exist, cannot be called any one thing, but most properly nothing at all?

Glaucon:: Certainly.

Socrates:: But we necessarily referred ignorance to that which has no true being, and knowledge to real existence?

Glaucon:: Right.

Socrates:: He does not, therefore, opine true being, nor yet that which has no being?

Glaucon:: He does not.

Socrates:: Opinion then is neither knowledge, nor is it ignorance?

Glaucon:: It seems not.

Socrates:: Does it then exceed these, either knowledge in perspicuity, or ignorance in obscurity?

Glaucon:: Neither.

Socrates:: Think you then, that opinion is more obscure than knowledge, but clearer than ignorance?

Glaucon:: Far.

Socrates:: Does it lie then between them both?

Glaucon:: Yes.

Socrates:: Opinion then is between the two?

Glaucon:: Entirely so.

Socrates:: And have we not already said, that if anything appeared of such a nature, as at once to exist and yet not exist, such a thing would lie between what really exists, and that which has no existence at all, and neither science nor ignorance would take cognizance of it, but that only which appeared to be between ignorance and science?

Glaucon:: Right.

Socrates:: And now, what we call opinion has been shown to lie between them.

Glaucon:: It has been so shown.

Socrates:: This then yet remains for us, as it seems, to discover,—what participates in both—that is, being, and non-being, and what can properly be called neither of them perfectly,—so that if it seems to be what it is reputed, we may with justice term it so, assigning to the extremes what are extreme, and to the middle what are between the two;—must we not?

Glaucon:: Just so.

Socrates:: These things being determined, I will say, let this worthy man tell and answer me,—he who reckons that there is neither beauty, nor idea of beauty, always the same; but that lover of beautiful objects reckons that there are many beautiful objects, not enduring to be told that there is only one beautiful, and one just, and so of the rest. Of all these many things, excellent man! shall we say, whether there be any which will not appear deformed, and of those just which will not appear unjust, and of those holy which will not appear profane?

Glaucon:: No; but, the objects themselves must in some respects necessarily appear both beautiful and deformed, and whatever else you ask.

Socrates:: But what?—Do double quantities generally seem to have less capacity for being halves than the doubles of others?

Glaucon:: Not at all.

Socrates:: And things great and small, light and heavy, are they to be termed what we call them, any more than the opposite?

Glaucon:: No;—each of them, always participates of both.

Socrates:: Is then, or is not, each of these many things just what it is said to be?

Glaucon:: It resembles their equivocal jokes at feasts, and the riddle of children about the eunuch's striking the bat, with what and on what part they guess he strikes it: for all these things have a double meaning, and it is impossible to know accurately whether they are, or are not,—or are both, or neither of the two.

Socrates:: How can you act with them then, or what better position have you for them than a medium between being and non-being?—For nothing seems more obscure than non-being as compared with having no being at all, nor more clear than being in respect of real being.

Glaucon:: Most true.

Socrates:: We have discovered then, it seems, that most of the maxims of the people about the beautiful, and those other things, fluctuate somehow between being and non-being.

Glaucon:: Yes, we have discovered it.

Socrates:: But it was formerly agreed at least, that if such a thing were apparent, it ought to be called that which is opined, and not what is known; and that which fluctuates between the two is to be perceived by the intermediate faculty.

Glaucon:: We agreed.

Socrates:: Those then, who contemplate many beautiful things, but yet never perceive beauty itself, and cannot follow another who would lead them to it,—and many just things, though not justice itself, and all other things in like manner, these persons, we will say, hold opinions on all things, yet have no accurate knowledge of what they opine.

Glaucon:: It must be so.

Socrates:: But what then, as regards those who perceive each of the objects themselves, always existing in the same manner, and in the same relations,—shall we not say that they know, and do not opine?

Glaucon:: This must be the case also.

Socrates:: And shall we not say, that these embrace and love the things of which they have knowledge, and the others the things of which they entertain only opinions;—and remember we not, that we alleged them to behold and love fine sounds and colors, and such things; though beauty itself they do not admit to have any real being?

Glaucon:: Yes,—we remember.

Socrates:: Shall we be wrong then in calling them lovers of opinion, rather than philosophers?—And yet they will be greatly enraged at us, if we call them so.

Glaucon:: Not if they be persuaded by me; for it is not right to be enraged at the truth.

Socrates:: Those then who embrace and love what has real being, we must call philosophers, and not lovers of opinion?

Glaucon:: Most assuredly.

THE END OF THE FIFTH BOOK.

## BOOK VI.

Socrates:: Philosophers then, Glaucon, and those who are not so, have, at length, after a long parade of talk and with some difficulty, been respectively defined.

Glaucon:: Aye,—for perhaps, it was not easy to do it briefly.

Socrates:: It appears not.—I still think, however, that their qualities would have been better exhibited, had we deemed it right to speak about this alone, and not discussed a multitude of other matters while considering the difference between a just and an unjust life.

Glaucon:: What then, are we to consider next?

Socrates:: What else, but that which is next in order?—Since those are philosophers who are able to concern themselves with what always maintains a constant relation, whereas those who cannot effect this, but ruminate among a host of material objects that are every way shifting, are not philosophers;—which of these ought to be the rulers of the state?

Glaucon:: Which way, shall we define the matter, and define correctly?

Socrates:: Such of them, as seem capable of preserving the laws and institutions of states, these are to be made guardians.

Glaucon:: Right.

Socrates:: This then, is of course evident,—whether we ought to seek for a guardian one that is blind or one that is sharp-sighted.

Glaucon:: Of course, that is quite evident.

Socrates:: What difference then is there between blind persons and those who are in fact deprived of the knowledge of each individual essence, and have no clear demonstration of it in the soul, and cannot like painters who look at what is positively true, and refer everything thereto, examining it with all possible accuracy, if need be, form settled notions, of the beautiful, just, and good, and so maintain them, as if sanctioned by law?

Glaucon:: No, by Zeus;—they do not differ much.

Socrates:: Shall we then rather appoint these as our guardians, or those rather who know each individual being, and in experience are not at all inferior to those others, nor behind them in any other department of virtue?

Glaucon:: It were absurd, to choose any others, if at least they be not deficient in all other matters; since they excel in this, which is the most important.

Socrates:: Must we not inquire this then,—in what manner the same persons will be able to have both the one and the other?

Glaucon:: Certainly.

Socrates:: As we observed then, at the opening of this discussion, we must first of all thoroughly understand their disposition; and I think, if we are pretty well agreed about that, we shall agree also, that the same persons are able to possess both these qualities; and none else but these ought to be the governors of states.

Glaucon:: How so?

Socrates:: Let us then so far agree about philosophic dispositions, that as respects learning they always covet that which discovers to them that ever-existing essence which does not vary through generation or corruption.

Glaucon:: Let it be agreed.

Socrates:: And likewise, that they desire the whole of such learning, and do not willingly omit any part of it, either small or great, more honorable or more dishonorable, as we formerly observed concerning the ambitious and those engaged in love.

Glaucon:: You say right.

Socrates:: Consider then, in the next place, whether, besides, what we have mentioned, it be necessary for those who would be such as we have described, to have this also in their natures.

Glaucon:: What?

Socrates:: Freedom from falsehood, and never willingly to admit a lie, but rather to hate it through love of truth.

Glaucon:: It probably would.

Socrates:: It is not only probable, my friend, but quite necessary, that one who naturally loves a thing should love everything that is allied and belongs to the object of his affection.

Glaucon:: Right.

Socrates:: Is there anything that you can find more nearly allied to wisdom than truth?

Glaucon:: I cannot.

Socrates:: Is it possible, then, for the same disposition to be both philosophic, and fond of falsehood?

Glaucon:: By no means.

Socrates:: He then who is really a lover of learning, ought from early infancy wholly to desire all truth?

Glaucon:: By all means.

Socrates:: But we know somehow, that whoever has his desires vehemently set on one object, for this very reason has them weaker as regards other things,—just as a current diverted from its channel.

Glaucon:: Certainly.

Socrates:: Whoever then has his desires running out after learning and such like matters, would be engaged, methinks, with the pleasure of the soul itself, and forsake the pleasures arising from the body,—if indeed, he be not a pretender, but a real philosopher.

Glaucon:: This of course must necessarily follow.

Socrates:: Such an one moreover is prudent, and by no means fond of money;—for the reasons why money is so anxiously sought at so great a sacrifice are likely to make any one anxious rather than a man like this.

Glaucon:: Certainly.

Socrates:: And surely you should consider this too, when deciding about a philosophic disposition, and one that is not so.

Glaucon:: What?

Socrates:: That it shall not unconsciously take an illiberal turn,—since narrow-mindedness is most revolting to a soul that is ever earnestly pursuing all that is divine and human.

Glaucon:: Most true.

Socrates:: Think you then, that he who possesses magnificent intellectual conceptions and can contemplate all time and all being, can possibly consider human life as a thing of great consequence?

Glaucon:: It is impossible.

Socrates:: Such an one then will not regard death as anything terrible.

Glaucon:: Least of all, surely.

Socrates:: It seems then, that a cowardly and illiberal disposition will not readily connect itself with true philosophy.

Glaucon:: I do not think it will.

Socrates:: What then;—can the well-disposed man, who has moderate desires, and is not a lover of money, nor illiberal, nor arrogant, nor cowardly, ever possibly be unjust, or a breaker of engagements?

Glaucon:: It is impossible.

Socrates:: And this also you will likewise consider, when viewing from its very source what is and is not a philosophic soul, whether it be just and gentle, or unsocial and savage.

Glaucon:: By all means.

Socrates:: Neither, as I think, will you omit this.

Glaucon:: What?

Socrates:: Whether it learn easily or with difficulty:—in fact, do you expect that a person will ever love a thing sufficiently, while he is uneasy in its performance, and makes but small progress?

Glaucon:: It cannot be.

Socrates:: But what if he be oblivious and retains nothing of what he learns, can he then possibly acquire science?

Glaucon:: How is it possible?

Socrates:: And when he thus vainly labors, think you not that he will be forced at last to hate both himself and such employment?

Glaucon:: Of course he must.

Socrates:: We can never reckon then among philosophic souls, that which is forgetful; but we shall on the other hand require it to have a good memory?

Glaucon:: By all means.

Socrates:: And we can never say this at any rate, that an unmusical and ill-regulated disposition leads anywhere but towards irregularity.

Glaucon:: Where else should it?

Socrates:: But as regards truth, think you it is allied to irregularity or regularity?

Glaucon:: To regularity.

Socrates:: Let us require then, in addition to all other qualities, an intellect naturally well-regulated and gracious, as a willing and naturally well-disposed guide in realizing the idea of individual being.

Glaucon:: Of course.

Socrates:: What then;—do you not think, that we have in some measure discussed the necessary qualifications, and such as are mutually connected in a soul that would attain a fitting and perfect apprehension of being?

Glaucon:: Aye, the most necessary.

Socrates:: Can you then any how blame such a study as this, which a man can never sufficiently pursue, unless he has a naturally good memory, learns with facility, and is generous, kind-hearted, the friend and ally of truth, justice, manliness, and temperance?

Glaucon:: Not even Momus himself, could find fault with such a study.

Socrates:: Aye, and will it not be to such as these alone, when perfected by education and age, that you will entrust the state?

Glaucon:: No one, indeed, Socrates, can contradict you on these points; but all who from time to time bear you advancing what you do at present, feel somehow thus;—being led a little astray by your reasoning on each question, through inexperience in this mode of question and answer, when all these littles are collected together, they reckon at the close of the discussion that the mistake appears considerable, and the contrary of their first concessions; and just as those who play at talus with such as are dexterous, themselves being unskillful, are in the end driven into a corner and cannot move a piece, so your hearers have nothing to say, being driven into a corner, at this different kind of play, not with the dice, but your reasonings;—though the truth at least is not thus at all advanced.—I say this with reference to the present inquiry; for a person may tell you, that he has nothing to allege as an argument against your questions individually, but sees in fact that all those who plunge into philosophy do not pursue it with the view of being taught in it during childhood, and liberated from it when they arrive at mature age, but rather in order that they may continue in it much longer, becoming most of them quite perverse,—not to say, altogether depraved; while even such of them as appear most worthy, are still so far affected by this pursuit that you so much commend, as to become useless to the public.

Socrates:: Think you then, that such as say these things are telling a falsehood?

Glaucon:: I know not; but I should like to hear what is your opinion.

Socrates:: You will hear then, that in my opinion they speak the truth.

Glaucon:: How, can it be right to say that the miseries of states are never to come to a close, till they be governed by philosophers, whom we now acknowledge as useless thereto?

Socrates:: You ask a question, which needs a figurative reply. And yet, I do not think you usually speak by figures. Granted:—and are you not jesting me, after having involved me in a subject so hard of explanation?—Yet attend to the comparison, in order that you may the better see how nicely I make it:—for the sufferings of the best philosophers in the management of public affairs are so grievous, that there is not one other suffering so severe: but in making our simile, and putting in a defense for them, we must collect from many particulars, in the same way as painters mingle together different figures, and paint a creature both goat and stag in one, and others of the same kind.

Conceive now such a person as this to be the pilot of a fleet or a single ship, one who surpasses all in the ship both in bulk and strength, but is somewhat deaf, and short-sighted as well, and whose skill in nautical affairs is much of the same kind;—and also that the sailors are all quarrelling among each other about the pilotage, each thinking he ought to be pilot, though he never learned the art, and cannot show who was his master, nor at what time he got his learning;—that besides this, they all say that the art itself cannot be taught, and are ready to cut in pieces any one who says that it can.—Imagine further, that they are constantly crowding round the pilot himself, begging, and forming all schemes to induce him to commit the helm into their hands, and that sometimes even, when they do not so well succeed in persuading him as others may, they either kill these others, or throw them overboard, and after having, by mandragora or wine or something else, rendered the noble pilot incapable, they manage the ship by aid of the crew, and sail on, thus drinking and feasting, as may be expected of such people;—and besides this, if any one be clever at assisting them in getting the management into their own hands, and either by persuasion or force, setting aside the pilot, they praise such an one, calling him sailor and pilot, and versed in navigation, but despise as useless every one not of this character,—not in the least considering that the true pilot must necessarily study the year, the seasons, the heavens, and stars, and winds, and everything belonging to his art, if he would be a real commander of a ship; but at the same time as respects the art and practice of governing men, whether some be willing or not, they think it impossible for a man to attain it in connection with the art of navigation.—Whilst affairs are thus situated as regards ships, do you not think that the true pilot will be called by the sailors on board of ships thus regulated, a mere stargazer trifler, and of no use to them whatever?

Adeimantus:: Undoubtedly.

Socrates:: I think then, that you do not want this comparison explained, in order to see that it represents how people feel in states towards true philosophers, but that you quite understand what I mean.

Adeimantus:: Perfectly.

Socrates:: First of all then, as regards this,—namely, a person's wondering that philosophers are not honored in states,—you must acquaint him with our comparison, and try to persuade him, that it would be much more wonderful if they were honored.

Adeimantus:: I will so.

Socrates:: And further, that it is quiet true, as you were just observing, that the best of those who study philosophy are useless to the bulk of mankind:—but nevertheless, for all this, they intend to lay the blame not on the philosophers, but on such as make no use of them,—for it is not natural that the pilot should beg of the sailors to allow him to govern them, nor that the wise should hold attendance at the gates of the rich:—and whoever wittily said this was mistaken; for this indeed is the natural method, that whoever is sick, whether rich or poor, must necessarily go to the gates of the physician, and whoever wants to be governed must wait on a person able to govern; for it is not natural that a really worthy governor should beg of the governed to subject themselves to his government.—You will not be far wrong, however, in comparing our present political governors to those sailors we now mentioned, and those whom they call insignificant and star-gazers to those who are truly pilots.

Adeimantus:: Quite right.

Socrates:: Hence, then, it would seem, that the best pursuit is not likely to be held in much honor by persons engaged in those of an opposite nature,—but by far the greatest and most violent outcry against philosophy is caused by those who profess its study;—the very persons, whom most of all, you say, your reviler of philosophy calls downright wicked, and the very best useless; and I agreed that you spoke correctly,—did I not?

Adeimantus:: Yes.

Socrates:: Have we not now fully explained the cause, why the best of them are useless?

Adeimantus:: We have.

Socrates:: Do you wish, then, that we should next explain the reason, why most of them must necessarily be depraved, and try also to show, that philosophy is not the cause of this.

Adeimantus:: Certainly.

Socrates:: Let us open our argument then, by carefully calling to mind what we before observed about the natural disposition necessarily belonging to the good and worthy philosopher;—and if you remember, the leading part therein was truth, which he must by all means wholly pursue, or else be a vain boaster, having no fellowship with true philosophy.

Adeimantus:: Aye,—so it was said.

Socrates:: Is not this single part of his character wholly the reverse of what is at present held respecting him?

Adeimantus:: Quite so.

Socrates:: We shall be urging, therefore, no trifling argument in his defense, if we can show that the true lover of learning is naturally inclined to aspire after the knowledge of real being, and, so far from being arrested by the numerous individual things which are the objects of opinion, that he proceeds undauntedly forward and desists not from his love of truth till he becomes acquainted with the nature of all existing things through the agency of that part of the soul whose business it is to take cognizance of such matters:—but it is the office of that part of the soul which is allied to real being; and when this true lover of learning approaches thus far, and mingles therewith, thus giving rise to intellect and truth, he will attain to true knowledge, and truly live and be maintained, and at length become liberated from the pains of production, —but not before.

Adeimantus:: As good a defense, as there possibly can be.

Socrates:: What then;—will it be a part of such a person's business to love falsehood, or quite the contrary, to hate it?

Adeimantus:: To hate it.

Socrates:: While truth, how ever, leads the way, we can never say, I think, that any band of evils follows in her train?

Adeimantus:: No, we cannot.

Socrates:: But on the contrary, sound and just morals accompanied with temperance?

Adeimantus:: Right.

Socrates:: Well then;—is it necessary that we again examine and re-arrange all the qualities of a philosophic nature?—for, no doubt, you remember that men of this character possess fortitude, magnanimity, aptitude for learning, and a good memory; and when you said by way of rejoinder, that every one would be compelled to agree to our statement, we quitted that subject, and turned to the subject of our present discourse—your assertion of having found some of the philosophers useless, and the majority also completely depraved.—And in investigating the cause of that calumny, we are at length come to inquire, how it is, that the greater part of them are bad; and on this account we have again analyzed the nature of true philosophers, and necessarily defined it.

Adeimantus:: It is so.

Socrates:: We must therefore, consider, the corruptions of this nature, how it becomes ruined in many, so that only some few escape, whom men call not depraved, but useless; and next we must consider those dispositions that counterfeit this nature, and only pretend to pursue it, and what is the nature also of those souls, which aspire to a pursuit not belonging to them, and above their reach: for these persons, by their multiplied errors, have everywhere and among all men, attached this opinion to philosophy which you are now mentioning.

Adeimantus:: To what kind of corruptions, do you allude?

Socrates:: I will try to recount them, if I can.—And this now, methinks, every one will allow us, that such a nature, with all the qualifications that we just now enjoined to a person aspiring to be a perfect philosopher, is rarely to be found among men, and of these there are but very few: do you not think so?

Adeimantus:: Quite so.

Socrates:: And among those few, just consider how many and how great are the causes of corruption.

Adeimantus:: What are they?

Socrates:: The most surprising of all to hear,—namely, that of those qualities which we commended in the nature of a philosopher, each corrupts the soul possessing them, and withdraws it from philosophy—from fortitude, I mean, and temperance, and all those other qualities which we enumerated.

Adeimantus:: That is a strange saying.

Socrates:: And further still;—besides these things, all that are commonly called good,—such as beauty, riches, bodily strength, a powerful family connection in the state, and all that relates to these, corrupt and withdraw it from philosophy:—there, you now have the outline of what I mean.

Adeimantus:: I have, and would be glad more clearly to understand what you say.

Socrates:: Apprehend, therefore, the whole of it aright; and it will become perfectly clear, and what we before said will not be thought absurd.

Adeimantus:: How then, do you bid me act?

Socrates:: With respect to every kind of seed, or plant, whether of vegetables or animals, we know, that what is not properly nurtured and has not its proper nourishment, or season, or place, the stronger it is, so many more kindly influences does it require,—for evil is more contrary to good, than to that which is not good.

Adeimantus:: Of course.

Socrates:: It is reasonable then, I suppose, that the very best nature, if supported on diet unsuited to it, should become worse than one which is inferior?

Adeimantus:: It is.

Socrates:: Well then, Adimantus, are we to say, that souls naturally the best, if badly trained, become more than commonly depraved;—or think you that gross iniquity and extreme wickedness arise from an inferior rather than from a good disposition ruined in its education; whereas a weak disposition will never produce either great good or great evil?

Adeimantus:: No,—I think not;—and the case is as you say.

Socrates:: If then this philosophic nature, that we have here defined, meet with suitable training, it will of necessity grow up, I suppose, and attain to every virtue; but if it be sown in an improper soil, and grow up and be nurtured accordingly, it will become quite the reverse, unless one of the gods should by chance come to its assistance;—think you then, as most do, that some youths are corrupted by sophists, and that these sophists are men in private life who corrupt them in any matter soever that is worthy of their attention;—or rather, that the very persons who say these things are themselves the greatest sophists, conveying their instruction with most perfect skill, and rendering young and old, men and women, such as they wish them to be?

Adeimantus:: When is that?

Socrates:: When many of them, are seated and crowded together in an assembly, in their law-courts, theatres, camps, or other public meetings of the people, and when they blame with much tumult some speeches and acts, and commend others, shouting and stamping, to see which shall out vie the other;—and besides this, the echo from the rocks and the place where they are sitting, redoubles the tumult of their disapprobation and applause;—in such a situation as this, what kind of heart, as the saying is, do you think the youth has; or what private instruction can so restrain him, as to prevent him from being quite overwhelmed by such blame or applause, and from yielding and being carried along the stream wherever it bears him;—and will he not call things beautiful and base, according as these people call them, and just as they pursue them, thus becoming of the very same character?

Adeimantus:: This, must of course be the case, Socrates.

Socrates:: And yet, we have not yet mentioned what is the greatest necessity of all.

Adeimantus:: What is that?

Socrates:: What these, your teachers and sophists, add, by way of acts to their talk, when they cannot persuade:—know you not that they punish with disgraces and fines and deaths, the man whom they cannot persuade?

Adeimantus:: I know that, extremely well.

Socrates:: What other sophist then, or what private reasonings, do you think, will counteract and overpower these?

Adeimantus:: I know none.

Socrates:: Is it not besides, great folly also even to attempt it?—For there neither is, nor was, nor can ever possibly be, any other system as regards virtue, to be compared with this education by the sophists,—I mean a human method, my friend; for a divine one, according to the proverb, we keep out of the question.—Indeed, you must well know, with respect to whatever is preserved, and becomes what it ought in such a constitution of government, that you will not be far wrong in deeming it preserved by divine destiny.

Adeimantus:: Nor am I, of a different opinion.

Socrates:: But further now, besides this, you must also be of this opinion.

Adeimantus:: Of what?

Socrates:: That each of these hired private teachers, whom these men call sophists and consider as rival artists, teach nothing else but those dogmas of the vulgar, which they approve in their assemblies, and term wisdom;—just as if a man were to learn the tempers and desires of a great and strong animal that he is training,—how it must be approached, how touched, and when it is most fierce or most mild,—and from what sorts it springs, and the sounds also which it is used occasionally to utter, and by what sounds when uttered by another, this beast is rendered either gentle or savage; and if, after learning all these things by long associating with this animal, he should call this wisdom and, apply himself to the teaching thereof, as to an established art,—while yet, as regards these dogmas and desires, he has no real knowledge of what is beautiful or base, good or ill, just or unjust, but defines them all by the opinions of that great animal, calling those things good by which it is pleased, and those evil with which it is vexed, having no other measure respecting them, but calling things necessary both just and beautiful, though he has never himself seen, nor can show to another, the nature of the necessary and the good, and how far they really differ from each other. Being such as this, then, do you not, by Zeus, think him a ridiculous teacher?

Adeimantus:: I do.

Socrates:: And, think you, he in any way differs from the man, who deems it wisdom to have understood the tempers and pleasures of the multitude, and of mixed assemblies, either in painting, music, or politics?—For if any one converse with these, and show them either a poem, or other work of art, or piece of service connected with the state, and make the multitude the judges thereof, he is, beyond all other necessities, under what is called a “Diomedean” necessity,—that of doing whatever they commend.—But as respects these things being really good and beautiful, did you ever hear any of them advance a reason that was not quite ridiculous?

Adeimantus:: No;—and I think, I never shall.

Socrates:: Considering all these things, then, bear this in mind, that the multitude never will admit or reckon that there is the one beautiful itself, and not many beautiful,—one thing itself individually existing, and not many such individual things.

Adeimantus:: They will be the last to do so.

Socrates:: It is impossible, then, for the multitude to be philosophers.

Adeimantus:: Impossible.

Socrates:: And those who philosophize must necessarily be subject to their reproach?

Adeimantus:: Necessarily so.

Socrates:: And likewise to that of those private persons, who, in conversing with the multitude, desire to please them?

Adeimantus:: Clearly.

Socrates:: In consequence of this, then, what security do you see for the philosophic nature to continue its pursuit, and arrive at perfection?—And consider from what has gone before; for it has been admitted, that aptitude for learning, memory, fortitude, and magnanimity belong to this kind of disposition.

Adeimantus:: Yes,—it has.

Socrates:: Will not such an one as this, then, be the first of all men in all things whatever, especially if he have a body naturally suited to his soul?

Adeimantus:: Of course he will.

Socrates:: And when he is further advanced in years, his kindred and citizens, methinks, will be disposed to employ him in their affairs.

Adeimantus:: Why not?

Socrates:: As suppliants then they will pay him homage, and submit to him, anticipating and flattering beforehand his growing power.

Adeimantus:: Aye, such is usually the case.

Socrates:: What then, think you such an one will do under such circumstances, especially if he be a member of a great state, rich, and nobly born, handsome withal and of large stature?—Will he not be filled with extravagant hopes, deeming himself capable of managing the affairs both of Greeks and barbarians, and on this account demean himself loftily, being full of ostentation and vain conceit, but without judgment?

Adeimantus:: Quite so.

Socrates:: If one should gently approach a man of this disposition, and tell him the truth, that he has no judgment, but needs it;—as judgment is only to be acquired by one who devotes himself as a slave to its acquisition, think you, that, amidst all these evils it would be easy for him to hearken?

Adeimantus:: Far from it.

Socrates:: But if, through a good natural temper, and innate attachment to reasoning, he were to acquire penetration, and thus be bent and drawn towards philosophy,—what, think we, will those others do, when they reckon on losing his services and company:—will they not by every action, and every speech, say and do all to the man to prevent his being persuaded,—and as respects his adviser, take away all his influence, both by forming private plots and arraigning him at public trials?

Adeimantus:: This, of course, must necessarily be the case.

Socrates:: Is it likely then, that such an one as this will be a philosopher?

Adeimantus:: Not at all.

Socrates:: You see then, that we were not wrong in saying, that even the very essentials of the philosophic disposition, are, when badly directed, in some measure the cause of a falling off from this pursuit, as well as from those vulgarly reputed goods,—riches, and all such-like matters.

Adeimantus:: No, certainly;—that was correctly observed.

Socrates:: Such then, admirable friend! is the ruin, such and so great the corruption of the best nature for the best of all pursuits, and which, as we observe, is rarely elsewhere to be found: and among these are the men who do the greatest harm both to states and private persons, and those also who do the greatest good, such as are drawn to one particular side, viz. what is good:—whereas small talents do nothing great for any one, either private person or state.

Adeimantus:: Most true.

Socrates:: Since those, then, who thus fall off, whose chief business was to apply to philosophy, and who, leaving her deserted and imperfect, lead themselves a life neither becoming nor true,—while on this same philosophy other unworthy persons have intruded and disgraced her, loading her with reproaches, such as those with which you say her revilers reproach her:—of those who engage with her,—some are worth nothing, and most of them deserve great punishments.

Adeimantus:: Aye surely, this, is commonly said.

Socrates:: Aye,—and said too with reason;—for other contemptible men seeing the field unoccupied, and the possession of it followed by dignities and honorable names, just like persons who take refuge from their prisons in the temples, these likewise gladly leap from their trade-crafts to philosophy;—such of them I mean, as are most adept in their own little art.—Indeed, even in this position of philosophy, her remaining dignity, in comparison with all the other arts, is still of surpassing magnificence,—which dignity many eagerly covet, who yet are of an imperfect nature, and have bodies not only deformed by their arts and crafts, but souls likewise that are broken and crushed by their servile occupations:—must it not necessarily be so?

Adeimantus:: Undoubtedly.

Socrates:: Think you, then, that they at all differ in appearance from a bald and puny blacksmith, who having made a little money, has been newly liberated from chains, and washed in the bath, with a new robe on him, just decked out as a bridegroom, presuming, on account of his masters poverty and forlorn situation, to propose for his daughter’s hand?

Adeimantus:: There is no great difference.

Socrates:: What sort of a race must such as these produce;—must it not be bastardly and abject?

Adeimantus:: Certainly,—it must.

Socrates:: But what;—when persons unworthy of instruction study it, and meddle with it unworthily, what kind of sentiments and opinions must we say come from them?—Must they not be such as to be properly termed sophisms, and neither genuine, nor allied to true discretion?

Adeimantus:: Wholly so, of course.

Socrates:: An extremely small number is left, Adimantus, of those who engage worthily in philosophy,—men of that noble and well-cultivated nature, which somehow seeks retirement, and naturally persists in philosophic study, through the absence of corrupting tendencies; or it may be, in a small state, some mighty soul arises, who has despised and wholly neglected civil honors;—and there may be some small portion perhaps, who, having a naturally good disposition, hold other arts in just contempt, and then turn to philosophy.—These the bridle of our friend Theages will probably be able to restrain; for all other things are calculated to withdraw Theages from philosophy, while the care of his health occupies him to the exclusion of politics:—and as to what concerns myself, namely the sign of my demon, it is not worth while to mention that; for I think it has heretofore been met with only by one other, if any at all.—And even of these few they are such as taste, and have tasted, how sweet and blessed is the acquisition of philosophy, and have withal sufficiently observed the madness of the multitude, and that none of them, as I may say, does what is wholesome in state matters, and that a man can get none to aid him in securely succoring the just, but is like one falling among wild beasts, neither willing nor able to aid them in doing wrong, as one only against a host of wild creatures, and so without doing any good either to the state or his friends, perishes unprofitably to all the world.

Adeimantus:: Quietly reasoning on all these things, and attending to his own affairs, like a man sheltered under a wall in a storm of dust and foam borne along on the wind, by which he sees all about him overwhelmed in disorder, such an one is content anyhow to pass his life pure from injustice and unholy deeds, and to effect his exit hence with good hopes cheerful and agreeable.

Socrates:: Aye,—and he will make his exit, without having done even the least of them.

Adeimantus:: Nor the greatest either;—because he has not found a suitable form of government; for in one that suits him, he will both make greater progress himself, and together with the affairs of private persons, will preserve those of the public also.

Socrates:: As respects philosophy, then, for what reasons it has been traduced, and that it has been so unjustly, we have, I think, sufficiently stated,—unless you have anything else to allege.

Adeimantus:: Nay;—I can say nothing further about this point:—but which of the present forms of government do you conceive to be suited to philosophy?

Socrates:: None whatever; and this particularly is what I complain of, that no existing constitution of a state is worthy of the philosophic nature; and on this account therefore it is turned and altered, just as a foreign seed sown in an improper soil becomes worthless, and has a tendency to fall under the influence of the soil in which it is placed;—so this race likewise has not at present its proper power, but degenerates to some pattern foreign to it;—but in case that it does meet with the best form of government, being itself also best, it will then be evident that this is really divine, and all others only human, both as to their natures and pursuits:—but as a matter of course you are evidently about to ask what is this form of government?

Adeimantus:: You are mistaken,—for this I was not going to ask; but whether it be this, which we have described in establishing our state, or some other.

Socrates:: As regards all other things, it is this one:—and this very thing was then mentioned, that there must always be in our state something having the same regard for the government, which you the legislator had in establishing the laws.

Adeimantus:: Aye,—that was mentioned.

Socrates:: Yes, but, it was not made sufficiently clear, owing to the fear of what you objected, when you showed also, that the illustration of the thing would be both tedious and difficult;—for indeed it is not on the whole quite easy to discuss what remains.

Adeimantus:: What is that?

Socrates:: In what manner a state is to undertake the study of philosophy, so as not itself to be destroyed; for all great pursuits are dangerous; and,—as the saying is,—those noble even are truly difficult.

Adeimantus:: But still, let our demonstration be completed by making this evident.

Socrates:: Want of inclination, will not hinder, though possibly want of power may:—and now you shall at once be assured of my readiness.—Consider indeed, how readily and adventurously I am about to assert, that a state ought to attempt this study in a way opposite to what it does at present.

Adeimantus:: How?

Socrates:: At present, those who engage in it are striplings, who, quite from childhood, amidst their domestic affairs and lucrative employments, betake themselves to most abstruse inquiries, considering themselves consummate philosophers,—and I call what respects reasoning, the most difficult of all;—and should they in after-time be invited by others practicing this art, they are pleased to become hearers, and think it a great condescension, reckoning they ought to do it as a by-work:—but towards old age, with the exception indeed of some few, they are extinguished even more than the Heraclitean sun, because they are never again rekindled.

Adeimantus:: But how should they act?

Socrates:: Quite the reverse of what they do:—while they are lads and youths they should study youthful learning and philosophy, and, take special care of the body, during its growth and strengthening by inviting its services to the aid of philosophy; and then, as that time of life progresses, during which the soul is attaining its perfection, they should vigorously apply to her exercises;—but when strength decays, and is no longer suited for civil and military employments, they should then be dismissed, and live at pleasure, with the exception of a by-work, that is, studying philosophy,—if indeed they propose to live happy, and, when they die, possess in the other world, a destiny suited to the life which they have led in this.

Adeimantus:: How truly do I think, Socrates, that you speak with ready zeal:—I think, however, that most of your hearers will still more zealously oppose you, and by no means be persuaded, and Thrasymachus even first.

Socrates:: Do not divide Thrasymachus and me, who are now become friends, though not enemies heretofore; for we will not at all relax our efforts, till we either persuade both him and the rest, or make some advances towards that life, on attaining which they will again meet with such discourses as these.

Adeimantus:: You have spoken, only for a short time.

Socrates:: No time at all, as compared at least with the whole of time: but that the multitude are not persuaded by what is said, is no wonder; for they have never as yet seen that what was mentioned actually came to pass, but rather that they were certain mere words cleverly fitted to each other, and not as now coming out spontaneously:—and as regards the man, who is, as completely as possible, squared and made consistent with virtue both in word and deed, holding power in a state of such different character; they have never at all seen either one or more of the kind:—do you think they have?

Adeimantus:: By no means.

Socrates:: And again, as respects arguments, my excellent friend, they have not sufficiently listened to what are fair and liberal, such as persevere in the search for truth, by every method, for the mere sake of knowledge, saluting at a distance such intricate and contentious questions, as tend only to opinion and strife, either in their law-courts or private meetings.

Adeimantus:: Not even as respects these.

Socrates:: On these accounts then, and foreseeing these things, we, although with fear, still asserted compelled by truth, that neither state nor government, nor even a man in the same way, could ever become perfect, till some need of fortune should compel those few philosophers, who at present are termed not depraved but useless, to take the government of the state, whether they will or not, and oblige it to be obedient to them; or till the sons of those who are now in high offices and magistracies, or they themselves, be by some divine inspiration filled with a true love of sincere philosophy: and I am sure that no one can reasonably suppose either or both of these to be impossible; for thus might we justly be derided, as saying things which otherwise are only like wishes:—is it not so?

Adeimantus:: It is.

Socrates:: If then, in the infinite series of past ages, absolute necessity has compelled men who have reached the summit of philosophy to take the government of a state,—or even if such is now the case in some barbarous region, remote from our observation, or is likely to be the case hereafter, we are ready, in that case, to advance in argument, that this form of government just described has existed and now exists in possibility, and will actually arise, when this our muse shall obtain the government of the state: for this is neither impossible to happen, nor do we speak of impossibilities, though we ourselves confess that they are difficult.

Adeimantus:: I too, am of the same opinion.

Socrates:: But you will say, that the multitude are not of that opinion?

Adeimantus:: Very likely.

Socrates:: My excellent friend, do not thus altogether condemn the multitude; and do not upbraid them for their opinion, but rather encourage them,—remove the reproach thrown on philosophy,—and point out to them the persons you call philosophers, defining distinctly, as at present, both their genius and pursuits, that they may not think that you speak of such as they themselves call philosophers.—Indeed, if they talk of the same men, will you not say that they have conceived a different opinion of the men from what you have, and give very different replies from yours; and think you that one man can be angered at another, who is not angry himself; or that a man will envy the envious, who is himself free from envy, and of a gentle temper? I will anticipate you by saying, that I think some few, though not the great mass of mankind, have naturally so bad a temper as you have described.

Adeimantus:: I am quite of that opinion also.

Socrates:: Are you then of my opinion in this also,—namely, that, as regards the ill-feeling of the populace towards philosophy, those people from without, *i.e.* the sophists, are the real cause of it, by making an indecent and turbulent irruption thereinto, insulting and showing a downright hatred of philosophers, ever directing their discourses at particular men, and so doing what least of all becomes philosophy?

Adeimantus:: Certainly.

Socrates:: In fact, Adimantus, the man who really applies his intellect to reflect on true being, probably has no leisure to look down on the little affairs of mankind, and by fighting with them, become filled with envy and ill-nature; but on the other hand, beholding and contemplating objects that are orderly, always self-consistent and stable, such as neither injure nor are injured by each other, but are in all respects beautiful and consonant with reason, these he imitates and resembles as far as possible:—what, think you it at all possible, that a man will not imitate what he admires as soon as he is conversant therewith?

Adeimantus:: Impossible.

Socrates:: The philosopher then, who is occupied with what is divine and orderly, becomes himself divine and orderly, as far as lies in man's power:—yet in all there is great room for blame.

Adeimantus:: Most assuredly.

Socrates:: If then, he should be any how compelled to try to introduce among men what he beholds there in his world of contemplation, with a view of forming their manners, both in private and public, and not merely to form himself alone,—would he prove, think you, a bad artist, in the matter of temperance and justice and every civil virtue?

Adeimantus:: Not at all.

Socrates:: But, supposing that the multitude should perceive that we are speaking the truth about him, *i.e.* the philosopher, will they be angry at philosophers and discredit our assertion, that the state can never otherwise be happy, except as portrayed by painters who employ a divine pattern?

Adeimantus:: They will not be angry, if they do perceive it: but what method of painting do you mean?

Socrates:: When they have got for their groundwork, the state and manners of mankind, they would first make them pure, which is not altogether an easy matter; for you know, that in this they differ from others,—in being unwilling to meddle either with a private man or state, or to prescribe laws, till they have either received them as pure, or themselves have made them so.

Adeimantus:: Rightly too.

Socrates:: And after this, think you not they will draw a sketch of their form of government?

Adeimantus:: Of course.

Socrates:: Afterwards, I think, as they proceed in their work, they will frequently look in two directions,—not only to what is naturally just and beautiful, and temperate and the like, but also, again, to that which they can establish among mankind, blending and compounding their human form out of different human characters and pursuits, drawing from what Homer calls the divine likeness, and the divine resemblance subsisting among men?

Adeimantus:: Right.

Socrates:: They will, of course, I think, erase one thing, and put in another, till they have, as far as possible, made human morals pleasing to the gods?

Adeimantus:: At that rate, the picture will be most beautiful.

Socrates:: In this case, do we at all succeed in persuading these men, who, you said, were coming upon us in battle-array, that a person who can thus depict governments is the man we then recommended to them,—and on whose account they were angry with us, for committing to him our states:—and will they now be more mild, when they hear our mention thereof?

Adeimantus:: Certainly, if they be wise:—for what is there now, that they can further question?

Socrates:: Will they assert that philosophers are not lovers of real being and truth?

Adeimantus:: That, were absurd.

Socrates:: Or that their disposition, as just described, is not allied to what is best?

Adeimantus:: Nor this either.

Socrates:: What then;—will not a disposition such as we have described, by finding suitable employments, become perfectly good and philosophic, if any other be so;—will men say that those more attain to it, whom we have selected?

Adeimantus:: Not at all.

Socrates:: Will they still then be indignant at us for saying, that until the philosophic race have the government of the state, the miseries neither of state nor citizens can have an end, nor can this government, which we ideally describe, be ever perfectly realized?

Adeimantus:: Perhaps somewhat less indignant.

Socrates:: Is it your wish, then, that we say—not that they are somewhat less indignant, but that they have become altogether mild, and are persuaded, that they will at least consent, if no more, through very shame?

Adeimantus:: By all means.

Socrates:: Let them then, be persuaded of this:—and is there any one who will dispute this,—that men of a philosophic disposition do not usually spring from kings and sovereigns?

Adeimantus:: No one, would assert that.

Socrates:: And though they be born of such a character, one may say they are necessarily prone to be corrupted; for indeed, it is a hard matter for them to be preserved untainted, even we ourselves agree;—but will any one contend throughout all time, that not one of the whole human race, would be preserved pure and untainted?

Adeimantus:: How can there be?

Socrates:: But surely, any individual born with adequate abilities, and who has his state in obedience to him, can accomplish everything now so much disbelieved?

Adeimantus:: Yes, for he is adequate to his task.

Socrates:: And when the governor, establishes the laws and customs here detailed, it is not at all impossible for him to make the citizens willingly obey him?

Adeimantus:: In no way whatever.

Socrates:: But is it wonderful or impossible, that what is our opinion should be the opinion of others also?

Adeimantus:: I, at least, do not think so.

Socrates:: And that these things are best, if they be possible, we have, I think, sufficiently explained in the former part of our discourse.

Adeimantus:: Yes, quite sufficiently.

Socrates:: Now then, it seems, we are agreed about our legislation; that the laws we mention are the best, if they could be realized,—and that if it be hard to establish them, yet it is not impossible?

Adeimantus:: Yes,—we are agreed.

Socrates:: Since this then has been with difficulty brought to a conclusion, shall we not next consider what remains;—in what manner, and in consequence of what sciences and pursuits, they will become installed as the preservers of the government, and at what periods of life they will all apply to their several pursuits?

Adeimantus:: Aye, we must talk of this.

Socrates:: My cunning has done me no service, in having left untouched, in the former part of our discourse, the difficulty attending the possession of women, and the procreation of children, and the establishment of governors, knowing how invidious the business is, and full of difficulty, even though it be perfectly true and correct:—for we are now under no less a compulsion of entering into these details.—What relates to women and children has already been brought to a close; and as to what concerns the governors, we must now from the beginning reconsider that subject.—We have alleged, if you remember, that they should appear to be lovers of the state,—proved to be so both by pleasures and pains, and not seen to abandon this principle, either through toils or fears or any other change; and that he who cannot do this should be rejected; while as for him who comes forth altogether pure, as gold tried in the fire, we should appoint him ruler, and endow him with honors and rewards both during life and after death. Such was what we said, when our argument was wandering and assuming a veil, through fear of disturbing the present state of things.

Adeimantus:: You speak quite truly;—for I remember it.

Socrates:: Yes,—for I was loath, to say, my friend, what I must now venture to assert:—but now this assertion must at any rate be ventured,—that the most perfect guardians must be established philosophers.

Adeimantus:: Yes,—that has been stated.

Socrates:: But consider, I pray, that you will probably have only a few of these; for such a disposition, as we declared that they must necessarily have, is but rarely used to centre in one single individual; though its different parts are commonly found in many different persons.

Adeimantus:: How say you?

Socrates:: That such as learn with facility, have a good memory, are sagacious and acute, and endued with all qualifications thereto allied, are yet not at the same time of so vigorous and lofty an intellect, as to live orderly, with calmness and constancy, but are carried hapchance by mere buoyancy of spirits, and are deserted by everything like stability.

Adeimantus:: Your remark is true.

Socrates:: Well then, these firm habits of the mind, which are not easily changeable, and which one might specially employ as trusty, and which in time of war are hard to be excited to terror;—and similarly also as regards learning,—they move heavily, and learn with difficulty, as if benumbed, and oppressed with sleep and yawning, when compelled to labor at any work of this description?

Adeimantus:: It is so.

Socrates:: But we said, that he ought to have a good and fair share of both these, or else should have no share whatever either in the most perfect kind of education, or in magisterial dignities or state-honors?

Adeimantus:: Right.

Socrates:: Do not you think then, that this will but rarely happen?

Adeimantus:: Of course it will.

Socrates:: They must be tried then both in what we before alluded to,—labors, fears, and pleasures;—and likewise in what we then passed over, and are now mentioning;—we must exercise them in various kinds of learning, with due regard for the power of their talents to go through the highest branches of study, or else their failure, as that of persons failing in all other things.

Adeimantus:: It is fit now, that we consider this question in this manner:—but what kind of studies are they, which you call the highest?

Socrates:: You remember, perhaps, that when we divided the soul into three parts, we defined the nature respectively of justice, temperance, fortitude, and wisdom?

Adeimantus:: If I did not remember, I should have no right to hear what remains.

Socrates:: Do you remember likewise what was said before that?

Adeimantus:: What was it?

Socrates:: We somewhere said, that it was possible to behold these in their most beautiful forms, but that the journey would be tedious, which a person must make, who would see them clearly; yet that it was possible, to approach them through our proofs before mentioned, and you said also, that these were sufficient; so, what was then asserted fell in my opinion far short of the truth; though if agreeable to you, you may say so.

Adeimantus:: I at least thought, that they had been discussed in fair measure; and the rest seemed to think so too.

Socrates:: But my friend, in speaking of things of this kind, such a measure as omits any part whatever of the truth is not wholly in measure;—for nothing imperfect is the measure of anything;—though people sometimes think that things are sufficiently well when thus circumstanced, and there is no need for further inquiry.

Adeimantus:: Very many, thus behave through indolence.

Socrates:: But the guardian of the state and the laws, should least of all be thus affected.

Adeimantus:: So it seems.

Socrates:: Such an one, then, my friend, must make a more comprehensive circuit, and labor as much in learning as in exercising himself: otherwise, as we were just saying, he will never arrive at the summit of the greatest and most suitable learning.

Adeimantus:: But are not these branches the highest:—or is there, any one yet higher than justice, and those virtues which we have discussed?

Socrates:: There is something greater; and even of these we must not, as just now, only contemplate the mere rude sketch; but we must not omit even its complete elaboration: is it not ridiculous in other things of small moment to employ our whole labor, and strive to attain the utmost accuracy and perfection, and yet not deem the highest and most important affairs worthy of our highest attention, with a view to making them as perfect as possible?

Adeimantus:: The sentiment, is very just:—but with respect to the question,—what is this most important branch of study, and about what you say it is employed,—think you that any one will let you go without asking its nature?

Socrates:: Not at all:—but do you ask; although you have assuredly often heard it, but at present you do not bear it in mind, or else intend to embarrass me by raising objections:—and I think this the more, as you have often heard at least, that the idea of the good is the highest branch of study;—about which, when justice and the other virtues employ themselves, they then become useful and advantageous.—Now then, you know pretty well that I mean to say this, and besides, that we do not sufficiently know that idea; and without this knowledge, though we were to understand everything else as fully as possible, yet you know that it could be of no service whatever to us: in the same manner as no possession whatever would be of aught avail, without the possession of the good:—and think you that it is more profitable to possess all things without the possession of the good than to know all things without the knowledge of the good, having no perception at all of the beautiful and good?

Adeimantus:: Not I, by Zeus.

Socrates:: Of this, moreover, you may be quite certain, that to the multitude pleasure seems to be the good, while the more refined think it to be virtue.

Adeimantus:: How otherwise?

Socrates:: And you know also, my friend, that those who hold this opinion, are unable to show what knowledge is, but are compelled at last to call it the knowledge of the good.

Adeimantus:: Aye, and most absurdly too.

Socrates:: How indeed can it be otherwise, if when upbraiding us for not knowing the good, they yet speak as to persons knowing it, and say that knowledge is good itself, as if we understood their meaning when pronouncing the word “the good?

Adeimantus:: Most true.

Socrates:: But what? those who define pleasure to be good, are they less in error than the others; or are not these too compelled to confess that pleasures are evil?

Adeimantus:: Quite so.

Socrates:: It happens then, I think, that they acknowledge the same things to be both good and evil,—do they not?

Adeimantus:: Undoubtedly.

Socrates:: Is it not clear, then, that on this point there are great and manifold varieties of opinion?

Adeimantus:: Of course there are.

Socrates:: But what;—is it not clear also, that with reference to things just and beautiful, the multitude choose what is apparent, even though it has no real existence, yet acting and possessing and appearing to possess it;—though the acquisition of only apparent goods, never yet satisfied any one:—for people on the other hand seek what is real, and all men despise what is only apparent?

Adeimantus:: Just so.

Socrates:: This then is what every soul pursues, and for the sake of which it does everything, conjecturing it to be something, though still in doubt, and unable either fully to comprehend its nature, or employ belief alone respecting it as of other things; and hence is it, that they fail of success even in other matters however useful.—Are we to say then, that about a matter of this nature, and of such vast consequence, even the best men in the state, to whom we commit the management of all things, will be thus in the dark?

Adeimantus:: By no means.

Socrates:: I am of opinion then, that the just and the beautiful, so long as they are unknown in what particular way they are good, cannot be of any great importance to have a guardian who is ignorant of this; and I suspect that no one will before this attain a sufficient knowledge thereof.

Adeimantus:: Yes,—you guess rightly.

Socrates:: Will not our government, therefore, have been completely set in order, if a guardian be set over it that is scientifically acquainted with these things?

Adeimantus:: It must of necessity:—but yet with respect to yourself, Socrates, say you that the good is science, or pleasure, or something independent of these?

Socrates:: Oh, you fine fellow, you long ago, clearly showed that you were not to be satisfied with other men's opinions about these matters.

Adeimantus:: Nor does it seem to me just, Socrates, that a man should keep talking of other men's opinions, and not his own, after having spent so much time in inquiring about these particulars.

Socrates:: But what;—do you think it just then, that a man should talk about matters of which he is ignorant, just as if he knew them?

Adeimantus:: By no means as if he knew them; yet, according to his thoughts, whatever he thinks he should willingly tell us.

Socrates:: But what;—have you not observed respecting unscientific opinions, how contemptible they all are, and the best of them blind;—and think you, that these persons, who without intellect form true opinions, are at all different from blind men walking on the right road?

Adeimantus:: Not at all.

Socrates:: Do you wish, then, that we should contemplate things base, blind, and crooked, when it is in our power to hear from others what is clear and beautiful?

Glaucon:: By Zeus, Socrates, do not stop here, as if you had come to a close; for we shall be satisfied, if, in the same way as you have spoken of justice, temperance, and the other virtues, you will in like manner discourse of the good.

Socrates:: And I too shall be very well satisfied, my friend; but I am afraid that I shall not be able, and so, by my readiness may incur the ridicule of unmannerly persons.—But, my excellent friends, let us at present dismiss this inquiry about the nature of the good, for it seems to me more, as far as I now think, than we can attain, in our present attempt: but I am willing to tell you, if you please, what I conceive to be the offspring of the good, and its nearest representation; and if not, I shall dismiss it.

Glaucon:: Well then, tell us; for you shall afterwards acquit yourself of your debt by telling us of its parent.

Socrates:: I could wish, both that I were able to oblige you by explaining that, and not as now the offspring only and interest of my debt. This child and offspring of the good itself, pray receive;—but still take due care that I deceive you nowise unwillingly by paying my account of this offspring in base coin.

Glaucon:: We will take care of that, as far as we can:—only do you tell us.

Socrates:: I will then, when we are once thoroughly agreed, and I have reminded you of what was before mentioned, and has been often said on other occasions.

Glaucon:: What is that?

Socrates:: That there are many things beautiful, and many good also; and each of these we declare to be so, and so define them in our argument.

Glaucon:: Yes, so we say.

Socrates:: But as to the beautiful itself and the good itself, and similarly as to all those things which we then considered as of various natures, we are now again establishing them according to the unity of the general idea, to which we conceive each related; and these indeed, we say, are observed by the eye, but are not objects of intellectual perception; whereas the ideas are perceived by the intellect, not seen by the eye.

Glaucon:: Assuredly.

Socrates:: By what part then of ourselves do we see things visible?

Glaucon:: By the sight.

Socrates:: And is it not, by hearing, that we perceive what is heard; and by the other senses, all the other objects of sense?

Glaucon:: Of course.

Socrates:: But have you not perceived, as regards the artificer of the senses, with what perfect skill he has formed the power of seeing, and being seen?

Glaucon:: Not quite.

Socrates:: But consider it thus:—is there a third kind of faculty required by the hearing and voice, in order that the one may hear and the other be heard, in the absence of which the one will not hear, and the other not be heard?

Glaucon:: There is not.

Socrates:: I conceive, that many others also not to say, none at all require no such thing:—can you name any one that does?

Glaucon:: Not I.

Socrates:: But with reference to the sense of seeing and the object of sight, do you not perceive that they require something?

Glaucon:: How?

Socrates:: When there is sight in the eyes, and when he who has it attempts to use it, and when there is color in the objects before him, unless there concur some third kind of medium naturally formed for the purpose,—the sight, you are aware, will see nothing, and colors will be invisible.

Glaucon:: What is this of which you are now speaking?

Socrates:: What you call light.

Glaucon:: Your remark is true.

Socrates:: This sense of seeing then, and power of being seen, are no unimportant ideas, and are connected by a bond more precious than all other bonds, if light be not valueless.

Glaucon:: But it is far, from being valueless.

Socrates:: Whom then of the gods in heaven can you assign as the cause of this,—that light makes our sight to see, and visible objects to be seen, in the best manner?

Glaucon:: The same, as you and others do; for it is evident that you mean the sun.

Socrates:: Does not sight then derive its nature through its relation to this god?

Glaucon:: How?

Socrates:: The sight is not the sun, nor is that the sun, in which sight is engendered,—which we call the eye.

Glaucon:: It is not.

Socrates:: But yet, methinks, this at least of all the organs of sense is most sun-like?

Glaucon:: Very much so.

Socrates:: And the power which it possesses, does it not possess, as dispensed and emanating hence?

Glaucon:: Certainly.

Socrates:: Is not the sun then, though not sight itself, but the principle thereof, seen by sight itself?

Glaucon:: It is so.

Socrates:: This then, be assured, is what I called the offspring of the good, which the good generates, analogous to itself; and what this is in the sphere of intelligence, with reference to intellect, and the objects of intellect, that the sun is in the visible world with reference to sight and visible things.

Glaucon:: How is that pray further explain it.

Socrates:: You are aware, that the eyes, when directed towards objects, whose colors are no longer visited by the light of day, but by the glimmerings of the night, grow dim and appear almost blind, as if they had in them no pure vision.

Glaucon:: Just so.

Socrates:: But when they turn to objects which the sun illuminates, then, methinks, they see clearly, and in those very eyes there now appears vision.

Glaucon:: There does.

Socrates:: Understand the same, then, to be the case with reference to the soul.—When it firmly adheres to what is enlightened by truth and real being, then it understands and knows it, and appears to possess intellect; but when it adheres to what is blended with darkness, and is subject to generation and destruction, it then has to do with opinion, and is dull, wandering from one opinion to another, like one without intellect.

Glaucon:: So it seems.

Socrates:: That therefore which imparts truth to what is known, and dispenses the faculty of knowledge to him who knows, you may call the idea of the good and the principle of science and truth, as being known through intellect. And as both these,—knowledge and truth, are so beautiful, you will be right in thinking that the good is something different, and still more beautiful than these. Science and truth here are as light and sight there, which we rightly judged to be sun-like, but yet did not think them to be the sun:—so here it is right to hold, that both of them partake of the form of the good,—but yet not right to suppose that either of them is the good, inasmuch as the good itself is worthy of still greater honor.

Glaucon:: You speak, of some inestimable idea of "the beautiful," which exhibits science and truth, and yet is itself their superior in beauty;—for you have nowhere said, that it was pleasure.

Socrates:: Hope better things; but thus rather consider its image still further.

Glaucon:: How?

Socrates:: You will say, I think, that the sun imparts to things which are seen, not only their visibility, but likewise their generation, growth, and nourishment, though not itself generation?

Glaucon:: Of course.

Socrates:: We may say, therefore, as to things cognizable by the intellect, that they become cognizable not only from *the good*, by which they are known, but likewise that their being and essence are thence derived, while the good itself is not essence, but beyond essence, and superior to both in dignity and power.

—Here Glaucon, heartily laughing, said;

Glaucon:: By Apollo, here is a marvelous transcendency! You yourself, are the cause of it, by compelling me to relate what I think about it. And by no means stop, unless there be some cause; from again discussing the analogy about the sun, if you have omitted anything.

Socrates:: Aye, I have omitted many things.

Glaucon:: Ah, but, pray do not omit the smallest particular.

Socrates:: I think, that much will be omitted: yet, as far as I can at present, I will not willingly omit anything.

Glaucon:: Do not.

Socrates:: Understand then, that we allege these to be two; ruling—the one over the intelligible genus and place, and the other over the visible world,—not to say the heavens, lest I should seem to you to employ a sophistical expression: you understand then these two descriptions of being,—the visible and intelligible?

Glaucon:: I do.

Socrates:: Supposing now you to take a line cut into two equal sections, then again cut each part according to the same ratio, both that of the visible and that of the intelligible species, you will then have them placed in contrast with each other, either in clearness or obscurity,—the second section in the visible species being images. Now images I call, in the first place, shadows,—in the next, appearances in water, and such as subsist in opaque, polished and bright bodies, and all such-like representations, if you understand me.

Glaucon:: Yes, I understand.

Socrates:: Consider now the other section of the visible which this resembles,—the animals around us, and all kinds of plants, and everything of an artificial nature.

Glaucon:: I do consider it.

Socrates:: Do you wish to assert, then, that this section is divided by truth and its opposite;—and just as the objects of opinion are opposed to the objects of true knowledge, so also that which is compared as opposed to that with which it is compared?

Glaucon:: Aye, indeed: I am quite willing.

Socrates:: Consider once more about this section of the intelligible, how it is to be effected.

Glaucon:: How?

Socrates:: That with respect to one part thereof, the soul uses the former sections as images, and is compelled to investigate by means of hypothesis, not going back to first principles, but advancing onward to conclusions; and the other part, again, is that where the soul proceeds from hypothesis to an unhypothetical principle, and makes its way even without those images by means of the ideas themselves.

Glaucon:: What you now say, I do not fully understand.

Socrates:: Once more,—for you will more easily understand me, from what has been previously stated,—you are not unaware, methinks, that persons versed in geometry, and computations, and such-like, after laying down hypotheses of the odd and even, and figures, and three kinds of angles, and other similar matters, according to each method, proceed on them as known, after establishing them as mere hypotheses, and give no further reason about them, either to themselves or others, as being things obvious to all;—but, beginning with these, then directly discuss the rest, and end by meeting at the point where the inquiry set out?

Glaucon:: I know this, perfectly well.

Socrates:: And do you not likewise know that they use the visible species, and reason about them, not employing their intellect about these species, but about those of which they are the resemblances, arguing about the square itself, and the diameter itself, and not about what they describe;—and, so also, with reference to other particulars, those very things which they form and describe, among which are shadows and images in water, these they use as images, trying to behold those very things, which a man can only perceive by his intellect?

Glaucon:: You say true.

Socrates:: This then was what I meant by the idea of the intelligible; but I said also, that the soul was obliged to use hypotheses in its investigation, not going back to the principle, as though unable to ascend higher than hypotheses, and employed comparisons formed from things below, to lead to those above, as to clearly-seen objects of thought, distinct from the things themselves.

Glaucon:: I understand, that you are speaking of what concerns geometry and its sister arts.

Socrates:: By that other section of the intelligible, then, you must understand me to mean what reason itself attains by its dialectic faculty, forming hypotheses, not as principles, but really hypotheses, just like steps and starting-points, in order that by proceeding up to the unhypothetical,— that is, the principle of the universe, coming in contact therewith, and so again coming into union with what is united to it in principle, it may thus reach the end without making use of anything sensible, but only of ideas themselves, proceeding through some to others, and so ending in ideas.

Glaucon:: I understand, but not fully:—for I think you are talking of some difficult work: but I understand it is your wish to prove that knowledge obtained by dialectic science respecting real and intelligible being is clearer than that acquired by means of what are called arts, which take hypotheses for their first principles, and which those who contemplate must view with the understanding and not the perceptive faculties; whereas, through their inability to go back to first principles, and as they reason only from hypotheses, you think they do not exercise intellect νοῦν in these matters, much as they might become intelligible with some principle for a foundation:—-and as for understanding or reasoning,—that which we acquire through geometry and its kindred arts, and not pure reason, this is something lying between opinion and pure intellect.

Socrates:: You have fully understood me:—and understand me now, that analogous to these four branches of knowledge are four affections or faculties of the soul,—pure reasoning answering to the highest,—understanding or reasoning to the second, faith to the third,—conjecture to the last:—and so arrange them, as to assign to them respectively more or less of clearness, as they are more or less allied to truth.

Glaucon:: I understand, and quite agree; and so let us adopt your proposed arrangement.

THE END OF THE SIXTH BOOK.

## BOOK VII.

Socrates:: After this then, compare our nature as respects education, or the want thereof, to a condition such as follows:—Behold men, as it were, in an underground cave-like dwelling, having its entrance open towards the light and extending through the whole cave,—and within it persons, who from childhood upwards have had chains on their legs and their necks, so as, while abiding there, to have the power of looking forward only, but not to turn round their heads by reason of their chains, their light coming from a fire that burns above and afar off, and behind them; and between the fire and those in chains is a road above, along which one may see a little wall built along, just as the stages of conjurers are built before the people in whose presence they show their tricks.

Glaucon:: I see.

Socrates:: Behold then by the side of this little wall men carrying all sorts of machines rising above the wall, and statues of men and other animals wrought in stone, wood, and other materials, some of the bearers probably speaking, others proceeding in silence.

Glaucon:: You are proposing, a most absurd comparison and absurd captives also.

Socrates:: Such as resemble ourselves;—for think you that such as these would have seen anything else of themselves or one another except the shadows that fall from the fire on the opposite side of the cave?

Glaucon:: How can they, if indeed they be through life compelled to keep their heads unmoved?

Socrates:: But what respecting the things carried by them:—is not this the same?

Glaucon:: Of course.

Socrates:: If then they had been able to talk with each other, do you not suppose they would think it right to give names to what they saw before them?

Glaucon:: Of course they would.

Socrates:: But if the prison had an echo on its opposite side, when any person present were to speak, think you they would imagine anything else addressed to them, except the shadow before them?

Glaucon:: No, by Zeus, not I.

Socrates:: At all events then, such persons would deem truth to be nothing else but the shadows of exhibitions.

Glaucon:: Of course they would.

Socrates:: Let us inquire then, as to their liberation from captivity, and their cure from insanity, such as it may be, and whether such will naturally fall to their lot;—were a person let loose and obliged immediately to rise up, and turn round his neck and walk, and look upwards to the light, and doing all this still feel pained, and be disabled by the dazzling from seeing those things of which he formerly saw the shadows;—what would he say, think you, if any one were to tell him that he formerly saw mere empty visions, but now saw more correctly, as being nearer to the real thing, and turned towards what was more real, and then, specially pointing out to him every individual passing thing, should question him, and oblige him, to answer respecting its nature:—think you not he would be embarrassed, and consider that what he before saw was truer than what was just exhibited?

Glaucon:: Quite so.

Socrates:: Therefore, even if a person should compel him to look to the light itself, would he not have pain in his eyes and shun it, and then, turning to what he really could behold, reckon these as really more clear than what had been previously pointed out?

Glaucon:: Just so.

Socrates:: But if, a person should forcibly drag him thence through a rugged and steep ascent without stopping, till he dragged him to the light of the sun, would he not while thus drawn be in pain and indignation, and when he came to the light, having his eyes dazzled with the splendor, be unable to behold even any one thing of what he had just alleged as true?

Glaucon:: No, he could not, at the moment at least.

Socrates:: He would require, at least then, to get some degree of practice, if he would see things above him:—and first, indeed, he would most easily perceive the shadows, and then the images of men and other animals in the water, and after that the things themselves;—and after this he would more easily behold the things in heaven, and heaven itself, by night, looking to the light of the stars and the moon, than after daylight to the sun and the light of the sun.

Glaucon:: How else?

Socrates:: Last of all, then, methinks, he might be able to perceive and contemplate the nature of the sun, not as respects its images in water or any other place, but itself by itself in its own proper station?

Glaucon:: Necessarily so.

Socrates:: And after this, he might reason with himself concerning the sun, that it is the body which gives us the seasons and years and administers everything in its stated place, being the cause also in a certain manner of all natural events.

Glaucon:: It is evident, after what has been formerly stated, that one must arrive at this conclusion.

Socrates:: What then,—when a man remembers his first habitation and the wisdom therein residing, and his fellow captives also,—think you not, that he would congratulate himself on the change and pity the rest?

Glaucon:: Quite so.

Socrates:: And whatever honors and praises and rewards were assigned by mutual consent to him that had the most acute perception of the present, and the best recollection both of long past and recent events, and from such observations was best able to conjecture the future,—think you that he would desire such honors, or envy those honored by these, or possessing influence, or would not he rather experience what Homer says, and ardently desire

As laborer, for some ignoble man
To work for hire,—

and rather endure anything than entertain such opinions and live in such a manner?

Glaucon:: I think, that he would choose to suffer anything rather than live in that way.

Socrates:: And consider this, whether, in the case of such an one going down and again sitting in the same place, his eyes would not be blinded in consequence of coming so suddenly from the sun?

Glaucon:: Quite so.

Socrates:: As for those shadows again, if he were compelled to split straws and dispute about them with those persons who had been in constant captivity, while yet he was in darkness before the establishment of his sight,—and this time of getting habituated would not be short,—would he not excite ridicule; and would it not be said of him, that after having once ascended he had come back with his eyesight destroyed, and should not even try to ascend again; and as for any one that attempted to liberate him and lead him up, they ought to put him to death, if they could get him into their hands?

Glaucon:: Especially so.

Socrates:: As respects this image then, we must apply the whole of it to our preceding discourse; comparing the region that is seen by the eyes to the prison-habitation, and the light of the fire therein to the power of the sun;—and if you were to consider the ascent above, and the contemplation of things above as the soul's ascent into the region of intellect, you would not disappoint my expectations, since this it is which you desire to hear;—but God knows whether it be true. As respects appearances then, it thus seems, that in the subjects of human knowledge the idea of the good is the last object of vision, and hard to be seen; and when beheld it must be inferred from reason to be the cause of what is right and beautiful in all things, generating in what is visible, both light and its parent also, viz. the sun, while in that which is intelligible, it is itself the sovereign producing truth and intelligence; and it must be seen too by him that would act with judgment, either privately or in public.

Glaucon:: I too, am quite of your opinion, as far indeed as I can be.

Socrates:: Come then, agree on this point also;—and be not surprised that those who come here are unwilling to act in human affairs, but have their souls ever urged to dwell on things above; for it is surely reasonable it should be so, since these things take place according to the above-mentioned image.

Glaucon:: Aye, quite reasonable.

Socrates:: But what;—think you it at all surprising, that a man coming from divine contemplations to mere human woes, should appear awkward and extremely ridiculous, while he is yet dazzled,—and when, ere being used to the present darkness, he is obliged to contend in courts of law or elsewhere about the shadows of justice, or the statues of which they are the shadows, and then to dispute how these matters are apprehended by those who have never contemplated justice itself?

Glaucon:: No wonder this.

Socrates:: Nay, if a man has intelligence, he will be conscious, that there are two disturbances of vision arising from two causes,—viz., when we turn from light into darkness and from darkness into light;—and when a man thinks that the same takes place with reference to the soul likewise, when it beholds him disturbed and unable to realize its perceptions, he will not laugh immoderately, but rather consider whether the soul has come out of a more brilliant existence and is now darkened by ignorance, or else emerging out of gross ignorance into a more luminous existence, be overpowered by dazzling splendor;—and thus he will congratulate the former on its life and destiny, while he pities the life and destiny of the other; and even if he wished to laugh at it, his laughter will be less ridiculous than if it were directed to the soul which comes from light into darkness.

Glaucon:: Your remark is perfectly reasonable.

Socrates:: It is fit then, if these things be true, that we form such an opinion as this respecting them,—that education is not of that character which some persons announce it to be, when they somehow assert that, there is no science in the soul, but that they can implant it just as if they implanted sight in the eyes of the blind.

Glaucon:: Aye, they say so.

Socrates:: Our present argument however, shows this power to reside in the soul of every person, and to be the organ by which every one learns.—Just as the eye cannot turn otherwise than with the whole body from darkness to the light, so also one must turn with the whole soul from sensible objects until it has become able to endure the contemplation of what is real, and what is most apparent of the real, and this we term *the good*: do we not?

Glaucon:: Yes.

Socrates:: It will be the art then of this very person, in turning about, to contrive this; namely, how he may turn with the greatest ease and advantage, not for the sake of implanting sight in him, but viewing him as already possessing it, though not rightly turned, and not looking in the right direction?

Glaucon:: It seems so.

Socrates:: The other virtues of the soul, as they are called, seem to me somewhat like those of the body; for in fact those not before contained therein are afterwards engendered by custom and practice:—but the faculty of intellect possesses, it seems, a nature somewhat more god-like than all the rest;—never losing its power, but by exertion becoming useful and profitable,—by the opposite, useless and hurtful. Have you never yet observed of those that are termed wicked yet clever,—how sharply the little soul looks, acutely distinguishing all to which it is turned, having indeed no contemptible power of vision, but compelled to be so far the servant of wickedness, that in proportion as its vision is more acute, the more crime it perpetrates?

Glaucon:: Quite so, of course.

Socrates:: As regards this part of such a disposition, if from childhood upwards it should be stripped and cut off from what belongs to human production, as from leaden weights,—which have a relation to feastings, and pleasures, and lusts, that turn the sight of the soul to things downward;—if the soul can free itself and turn towards truth, the very same principle in the same individuals would as acutely see those things as the objects to which it is now turned.

Glaucon:: Certainly.

Socrates:: What then, is not this probable, and a necessary consequence of what has just been stated, that those who are untaught and inexperienced in truth can never exercise a sufficient superintendence over the state, nor yet those who are allowed to spend the whole of their time in philosophical pursuits,—the former, because they have no single object in life, towards which they should direct all their actions both private and public,—and the latter, because, as far as their will is concerned, they will not engage in public life, from the idea that even while yet living they have been transported to the islands of the blessed?

Glaucon:: True.

Socrates:: It is our business then, to compel those of the inhabitants, who possess the greatest talent, to devote themselves to that learning which we formerly considered most important, both to contemplate the good and go in search of it;—and when they have gained it, and taken a sufficient view thereof, yet they are not to be allowed what is now allowed them.

Glaucon:: What is that?

Socrates:: To abide there, and show an unwillingness to descend again to those captives of whom we were speaking, or share with them both their labors and honors, whether trifling or more important.

Glaucon:: In that case, are we to do them injustice, and make them live a worse life, when they could have lived a better?

Socrates:: You have forgotten again, that this is not the lawgivers concern, how any one class in a state may be especially happy, but to contrive rather that happiness shall be generated throughout the state, uniting the citizens both by persuasion and compulsion, making them share each others services, such as they can confer on the community at large; and when he introduces such men as these into the state, he does so, not that he may dismiss them and let them turn whichever way each likes, but that he may employ them as a bond of the state.

Glaucon:: True indeed, for I had forgotten that.

Socrates:: Anxiously consider then, Glaucon, that we must do no injustice to the philosophers born among us, but tell them what is just, when we compel them to take charge of and guard the remainder:—for we will assert, that those who in all other states become such philosophers, do not probably take a share in the labors going on therein, as they spring up of their own accord without the consent of the government in each; and it is just that what is voluntary, inasmuch as it owes its nurture to none, should willingly pay no one the price of its nurture;—but as for you, we brought into being both yourselves and the rest of the state, as leaders and kings in beehives, brought up better and more perfectly than the others, and better able to take a share in both public life and philosophical pursuits. Each must then in turn descend to the dwelling of the rest, and accustom himself to behold obscure objects; for, when once used to them, you will perceive the individual images of each, what they are and whence sprung, ten thousand times better from having already seen the truth concerning what is beautiful, and just, and good:—and thus the state will be settled as a real vision, both by us and yourselves, and not as a dream, like most of those inhabited by persons fighting about shadows, and quarrelling about government, as if it were some great good.—The truth, however, is as follows: in whatever state those about to rule are least anxious to take the government, this must necessarily be the best and most peacefully governed, while one that has governors of an opposite character, must of course be the opposite.

Glaucon:: Certainly.

Socrates:: Think you then, that those under our charge, when they hear these things, will disobey us, and be unwilling to take their individual share in the labors of the state, and spend the greater part of their time with one another in a state of leisure?

Glaucon:: Impossible;—for we will prescribe what is just to just men, and each of them will enter on his office from this consideration above all others, that he should act in a manner directly contrary from those who now govern individual states.

Socrates:: Yes, for so it is, my friend;—if you find the life of those appointed to official stations superior to the dignity of their office, then your state may possibly be well settled; as in that alone will the really wealthy govern,—not those rich in gold, but as happy men should be rich, in a life of virtue and good sense;—whereas, should they be poor, and destitute of property of their own, and then come into public life, thinking that they ought to plunder the public of its property, it is not possible that such a state can be rightly settled:—for as the contest is about the possession of the ruling power, such a war being domestic and intestine, is destructive to themselves as well as the rest of the state.

Glaucon:: Most true.

Socrates:: Do you conceive then that any other kind of life despises political offices except that of true philosophy?

Glaucon:: No, by Zeus.

Socrates:: But still it is fitting, at least, that those should enter upon it who are not fond of governing, otherwise the rivals will fight about it.

Glaucon:: Of course, it cannot be otherwise.

Socrates:: Whom else, then, would you compel to enter on the guardianship of a state, except such as are most intelligent in what concerns the best establishment of a state, and possess other honors, and a mode of life superior to that of a mere politician?

Glaucon:: None other.

Socrates:: Do you wish, then, that we should now consider this,—in what manner such persons will be produced and how any one can draw them upward into light, just as some are said to have ascended from Hades to the gods?

Glaucon:: Of course that is my wish.

Socrates:: This then, as it seems, is not a mere turning of a die, but a movement of the soul, which ascends from some half-night kind of day to the true light of existence, which we will term true philosophy.

Glaucon:: Certainly.

Socrates:: Ought we not, then, to inquire what branch of learning possesses this influence?

Glaucon:: Of course.

Socrates:: What then, Glaucon, may that training of the soul be, which draws it from what is generated and unstable towards that which has a positive existence? And talking of this, I am reminded:—did we not say that it is necessary for these persons even while young to engage in warlike exercises?

Glaucon:: We did say so.

Socrates:: We should add this, then, to the training which we are now seeking.

Glaucon:: What is that?

Socrates:: That of not being useless to military men.

Glaucon:: Aye, we must indeed, if it be possible.

Socrates:: Moreover, in our former discourse, we somewhere said we would have them taught gymnastics and music.

Glaucon:: We did so.

Socrates:: The art of gymnastics has to do, I think, with what is unstable and perishable; for it presides over corporeal growth and decrease.

Glaucon:: It appears so.

Socrates:: This then cannot be the branch of study, of which we are in pursuit.

Glaucon:: It cannot.

Socrates:: Is it music then, such as we have previously described?

Glaucon:: That, if you remember, corresponded to gymnastics, as it trains the habits of the guardians, giving them a sort of concord founded on harmony—not science,—and good rhythm on the principles of rhythm, and other things in discourses which are akin to these both in such as are fabulous and such as more resemble truth; but as to its being a branch of science that refers to a good such as you are now investigating, music had no such character.

Socrates:: Most correctly, do you remind me; for it is in reality no such thing: but, excellent Glaucon, what branch of science is it, that possesses this character?—for all the arts somehow seem to be mechanical and illiberal.

Glaucon:: Of course;—and moreover what other branch of science is there, that is distinct from music, gymnastics, and the arts?

Socrates:: Come, if we cannot conceive any except these, let us take one of those which extends over all.

Glaucon:: Of what kind is that?

Socrates:: Such as this common idea which all arts, and intellects, and sciences employ, and which every person must learn at the outset.

Glaucon:: What is that?

Socrates:: This trifling matter;—how to distinguish one, and two, and three, which I call in general terms arithmetic and computation:—is it not thus as regards these, that every art and science must necessarily have a share in these?

Glaucon:: Surely.

Socrates:: Must not then the art of war?

Glaucon:: Necessarily.

Socrates:: What a ridiculous general then, does Palamedes in his tragedies constantly represent Agamemnon to be.—And have you not observed how he says, that after inventing numeration he adjusted the ranks at Ilium, and numbered the ships and the rest of the forces, as if they had never been numbered before, even when Agamemnon, as it seems, did not know how many feet he had, since he did not know how to count;—what kind of a general would you think him to be?

Glaucon:: I should think him a mighty absurd one, if this be true.

Socrates:: Shall we not say, then, that the power of computing and reckoning is a necessary attainment for a military man?

Glaucon:: Most certainly, if he intends to understand anything at all about marshalling troops,—or rather, if he means to be a man.

Socrates:: Do you then understand, about this branch of learning just what I do?

Glaucon:: What is that?

Socrates:: It seems in its nature to be among the number of those things which lead to pure reason—of which indeed we are in search; but no one seems rightly to employ it, as evidently leading the mind to the consideration of true being.

Glaucon:: How say you?

Socrates:: I will at least, try, to explain what is my opinion.—As to what I distinguish in my own mind as leading or not leading whither we are saying, viz., to true being, do you assist me in contemplating them, and either agree or dissent, so that we may more distinctly see whether they be such as I conjecture.

Glaucon:: Pray show me.

Socrates:: I will show you then, if you will observe that some things relating to the perceptions do not invite intellect to the inquiry, as being sufficiently determined by perception; while there are other things which by all means bid its interference, as perception alone does nothing correct.

Glaucon:: You are evidently speaking, of objects seen at a distance, and things sketched in a picture.

Socrates:: You have not quite comprehended my meaning.

Glaucon:: What are you speaking of then?

Socrates:: There are some things, which do not appeal to the intellect, and yet do not issue at once into a contrary perception; while those that do so issue I consider as so appealing, when the perceptive faculty takes cognizance of one thing more than another, on meeting it either near or afar off.—And you will thus more clearly know what I mean: these we say are three fingers, the little finger, the next to it, and the middle finger.

Glaucon:: Just so.

Socrates:: Consider me then to speak of them as seen only from a short distance, and consider this also, respecting them.

Glaucon:: What?

Socrates:: Each of them appears equally to be a finger, and so far it makes no difference whether one looks at the middle one or the last, whether it be white or black, thick or slender, or anything of the kind; for in all these the soul of man is not compelled to ask the intellect what of many things a finger is, for sight itself never at the same time indicates a finger to be a finger, and its contrary.

Glaucon:: Of course not.

Socrates:: It is probable, then, that such a case as this would neither appeal to nor rouse the intellect.

Glaucon:: Probably.

Socrates:: But what then;—does the sight sufficiently distinguish their large or small size, and does it make no difference to it whether one of them be placed in the middle or at the end?—And so in like manner does the sense of touch take cognizance of thickness and slenderness, softness and hardness?—And as for the other perceptions, are they not defective in showing such things, or rather does not each of them so act; and first of all, is not the sense which is affected by hardness necessarily also affected by softness, and does it not, when it perceives this, announce to the soul, that hard and soft are one and the same thing?

Glaucon:: Just so.

Socrates:: It must necessarily follow then, that in such matters, the soul will be in doubt as to what the perception indicates as hard, since it calls the same thing soft also;—and so also as regards the sense referring to light and heavy, the soul must be in doubt what is light and what is heavy, if the sense intimates heavy to be light, and light heavy?

Glaucon:: These at least, are truly absurd reports made to the soul, and require investigation.

Socrates:: Probably then, in such cases as these the soul would first call in reason and intelligence to investigate the question whether the things reported be one or whether they be two.

Glaucon:: Of course.

Socrates:: If then they appeared to be two, each of them will appear to be one and distinct from the other?

Glaucon:: Yes.

Socrates:: If then each of them be one and both of them two, he will understand them to be two distinct; for, were they not distinct, he would not perceive two, but only one.

Glaucon:: Right.

Socrates:: The sight, moreover, we say, could contemplate what is great and small, though not as distinct from each other, but as somewhat confused:—could it not?

Glaucon:: Yes.

Socrates:: But for the sake of clearness in this matter, the intellect is once more obliged to consider great and small, not as confused, but as distinct in an opposite way from the other,—viz., the sense of sight.

Glaucon:: True.

Socrates:: And is it not hence somehow, that it first sets on questioning us, as to what is the great and what is the small?

Glaucon:: Assuredly.

Socrates:: And thus then we call the one intelligible, and the other visible.

Glaucon:: Very right.

Socrates:: This then is what I just now attempted to express, that some things appeal to the intellect and others not; defining those that make such an appeal, as what affect the senses at the same time as their opposites, while such as do not, do not excite the intellect.

Glaucon:: I quite understand now; and I am of the same opinion.

Socrates:: What then;—to which of them, think you, do number and unity belong?

Glaucon:: I do not understand.

Socrates:: But let us reason by analogy, from what we have already said:—for if unity can be sufficiently seen of itself, or comprehended by any other sense, it still would not lead to true being, just as we remarked about the finger:—but if there be always seen at the same time an exact opposite thereto, so that it shall no more appear unity than it does the contrary, some one would then be wanted to judge respecting it; and in that very matter the soul would necessarily be in difficulty, exciting reflection within itself, and would inquire into the nature of this same unity, and thus that branch of science which concerns unity would be among those which lead and turn the soul to the contemplation of real being.

Glaucon:: Ah;—this is what the very sight of it does in no small degree; for we at once behold the same thing, both as one and as an infinite multitude.

Socrates:: If then, unity be thus affected, will not number generally be so likewise?

Glaucon:: Of course.

Socrates:: Yet, again, all computation and arithmetic concern number?

Glaucon:: Quite so.

Socrates:: But these at least seem to lead towards truth?

Glaucon:: Especially so, of course.

Socrates:: They belong then, it seems, to the branches of learning which we are now investigating;—for a military man must necessarily learn them with a view to the marshalling of his troops, and so must a philosopher with the view of understanding real being, after having emerged from the unstable condition of becoming, or else he can never become an apt reasoner.

Glaucon:: That is the fact.

Socrates:: But that guardian of ours happens to be both a military man and a philosopher?

Glaucon:: Unquestionably so.

Socrates:: It would be proper then, Glaucon, to lay down laws for this branch of science and persuade those about to engage in the most important state-matters to apply themselves to computation, and study it, not in the common vulgar fashion, but with the view of arriving at the contemplation of the nature of numbers by the intellect itself,—not for the sake of buying and selling as anxious merchants and retailers, but for war also, and that the soul may acquire a facility of turning itself from what is in course of generation to truth and real being.

Glaucon:: A capital remark.

Socrates:: And, moreover, I now observe, respecting that branch of science which concerns computation, how refined it is, and in many ways useful to us as respects our wishes, if we will apply thereto for the sake of getting knowledge, and not with a view of traffic.

Glaucon:: In what way?

Socrates:: Just what we now said,—that it powerfully leads the soul upwards, and compels it to reason on abstract numbers, without in any way allowing a person in his reasoning to advance numbers which are visible and tangible bodies;—for perhaps you know of some persons skilled in these matters, who, if one were in argument to attempt dividing unity itself, would at once both ridicule him and not allow it; though, were you to divide it into parts, they would multiply them, lest unity should somehow seem not to be unity, but numerous parts.

Glaucon:: A very true remark.

Socrates:: What think you then, Glaucon, if a person should ask them—You wonderfully clever men, about what kind of numbers are you reasoning;—in which unity, such as you deem it, is equal, each whole to the whole, without any difference whatever, and having no parts in itself?—what think you they would reply? This, as far as I think;—that they speak of such numbers only—as can be comprehended by the intellect alone, but in no other way. You see then, my friend, I observed, that our real need of this branch of science, is probably because it seems to compel the soul to use pure intelligence in the search after pure truth.

Glaucon:: Aye, it does this to a remarkable extent.

Socrates:: Have you yet considered this,—that persons naturally skilled in computation seem clever in all branches of science,—whereas those naturally slow, if instructed and exercised in this, will yet all of them, if they derive no other advantage, make such progress, as to become cleverer than they were before?

Glaucon:: Exactly so.

Socrates:: And, moreover, I think you will not easily find that many things give the learner and student more trouble than this.

Glaucon:: Of course not.

Socrates:: On all these accounts, then, we must not omit this branch of science, but those with the best of talents should be instructed therein?

Glaucon:: I agree with you.

Socrates:: Let this one thing then, that has just been discussed, be settled between us; and now let us consider, in the second place, with respect to what follows from it,—whether and how far it concerns ourselves.

Glaucon:: What is it;—is it geometry you mean?

Socrates:: That very thing.

Glaucon:: So far, as it bears a relation to the concerns of war, it evidently does concern us;—for in pitching encampments, occupying positions, contracting and extending a line of troops, and as respects all the varied forms in which they draw up armies, either in battle itself or during a march, it would make a vast difference, whether a general were a geometrician or not.

Socrates:: Of coarse, for such purposes as these a very slender knowledge of geometry, and a small portion of arithmetic would suffice;—but as for any considerable amount thereof, and great progress in it, we must inquire how far they tend to this,—namely, to make us apprehend more easily the idea of the good:—and we say that all things contribute thereto, which compel the soul to turn itself to that region in which is the happiest portion of true being, which it must by all means perceive.

Glaucon:: Your remark is correct.

Socrates:: If then it compels the soul to contemplate true being, it is suitable,—but if only what is sensible and evanescent, it is not suitable.

Glaucon:: Aye, truly, we say so.

Socrates:: This point then, at least, those who have but little acquaintance with geometry, will not argue with us,—that this science has an entirely opposite nature to the words employed in it by those who practice it.

Glaucon:: How?

Socrates:: They speak somehow most absurdly, and necessarily so, since all the terms they use seem to be with a view to operation and practice,—such as squaring, producing, adding, and such-like sounds; whereas on the other hand, the whole science should be studied for the sake of real knowledge.

Glaucon:: Assuredly.

Socrates:: Is this, then, further to be agreed on?

Glaucon:: What?

Socrates:: That it be studied with a view to the knowledge of eternal being, and not of that which is subject to generation and destruction?

Glaucon:: We may well grant that; for it is the business of geometry to concern itself with eternal being.

Socrates:: It would have a tendency, therefore, gentle sir, to draw the soul to truth, and to cause a philosophic intelligence to direct upwards the thoughts which we now improperly cast downwards.

Glaucon:: As much as possible.

Socrates:: As far as possible, then, we must give special orders, that the inhabitants of that fine state of yours should by no means omit the study of geometry, since even its by-works are not inconsiderable.

Glaucon:: What are they?

Socrates:: Those which you have just mentioned that concern war;—and indeed with reference to all branches of science, for the better understanding thereof, we are some how sure that it makes an entire difference every way, whether a man be acquainted with geometry or not.

Glaucon:: Every way, indeed, by Zeus.

Socrates:: Let us fix on this then, as the second branch of learning for youth.

Glaucon:: Let us so fix it.

Socrates:: But what; shall we fix upon astronomy, as the third, or think you otherwise?

Glaucon:: I quite think we should; for to have unusually acute perceptions respecting the times of months and years, is suitable not only for agriculture and navigation, but not less so for the art of war.

Socrates:: You are jesting, when you seem to be afraid that the multitude will charge you with enjoining useless objects of study:—yet it is not altogether a trifle, but rather difficult to persuade that by these branches of study some organ of the soul in each individual, is purified and rekindled like fire, after having been destroyed and blinded by other kinds of study,—an organ, indeed, better worth saving than ten thousand eyes, since by that alone can truth be seen. Among such, then, as join me in this opinion, you will have the reputation of reasoning admirably well; though such as never had any perception of this will think perhaps that you say nothing to the purpose, as they see no advantage therefrom accruing that is worthy of notice. Consider, then, from this point, against which of the parties you are arguing,—or whether against neither, but chiefly for your own sake you are carrying on the discussion; moreover, do not envy any other, if therefrom any one could derive any possible advantage.

Glaucon:: Thus, do I choose, on my own account chiefly, to argue and ask questions, and make replies.

Socrates:: Let us go a little back then, in our argument, for just now, indeed, we did not rightly take what is next in order after geometry.

Glaucon:: How then did we act?

Socrates:: After a plain surface, we took a solid in a state of revolution, without first considering it by itself, in the abstract; but the correct plan is to take the third in order, after the second dimension:—and this, probably, refers to the dimension of cubes, and what has to do with depth.

Glaucon:: Aye, it is so: but these matters, Socrates, do not seem yet to have been investigated.

Socrates:: Aye, there are two causes for this: because no state holds them in honor, they are only slightly investigated, as being difficult; and those that do so investigate them require a guide, without whom they cannot discover them,—one whom, first of all, it would be hard to get, and, when he is got, as things are at present, the investigators of these matters having lofty notions of themselves, would not obey him; whereas, if the whole state were to hold such pursuits in honor, and superintend them, these persons would be obedient, and the investigations being conducted with assiduity and vigor, would exhibit their true character; whereas now, despised and mutilated by the multitude, as well as by those who study them without being able to account for their usefulness, they still, in spite of all things, increase through their native grace; and it is no wonder that they should appear so to do.

Glaucon:: Aye, indeed, this gracefulness is especially remarkable; but tell me more plainly what you were just now saying,—for you somehow defined geometry to be a study that concerns plane surfaces.

Socrates:: I did.

Glaucon:: Then next in order you mentioned astronomy; but afterwards you drew back.

Socrates:: Yes, because when I am in a hurry to get quickly over the discussion, I get on the more slowly; for as regards the mode of measuring depth, which is next in order, that I passed over, as a hopeless investigation, and proceeded, after geometry, to speak about astronomy, which is the motion of solids.

Glaucon:: You say rightly.

Socrates:: Let us fix on astronomy then, as a fourth branch of science; as if that which we now omit, viz. solid geometry, may have an existence, whenever the state enters on that pursuit.

Glaucon:: Probably: and as to what you just now urged on me, Socrates, about astronomy, as having needlessly praised it, I now praise it in accordance with your notions: for I think it is clear to every one, that it is this which compels the soul to look upwards, and from what is here conducts it thither.

Socrates:: Perhaps, it may be clear to all except myself;—to me it does not seem so.

Glaucon:: Ah! how is that?

Socrates:: As those who introduce it into philosophy, nowadays pursue it, it makes the soul look altogether downwards.

Glaucon:: How say you?

Socrates:: I am of opinion, that you are not ungenerous in forming your mental estimate of the real nature of that branch of science which concerns things above; for you seem to be of opinion, that if a person were to look up and discover some of the heavenly bodies in an enclosed space, be would contemplate them with his intellect and not his eyes. Perhaps, then, you judge rightly, and I am wrong; though I, on the other hand, cannot hold the opinion that any other branch of science can make the soul look upwards, except that which concerns real being and the invisible,—whether one were to gape upwards, or try by peering downwards to get acquainted with those matters:—and if any one were to gape upwards and so try to get acquainted with any perceptible object, I think that he never would get acquainted with it; as his soul has no scientific knowledge of such things,—nor would his soul look upwards, but downwards,—even though he were to try to learn, swimming on his back at sea or lying so on the ground.

Glaucon:: I am punished;—for you have rightly reproved me:—but in what manner did you say we ought to learn astronomy different from that in which they now teach it, if people are to be taught advantageously for the purposes of which we now speak?

Socrates:: Thus:—these various bright bodies in the heaven,—since indeed they are so variously placed in visible space,—ought to be deemed very beautiful and most perfect in their kind, though much inferior to the true magnificence of movement, with which real velocity and real retardation mutually bear along those bodies with all that belongs to them, in their true number and in all their true shapes;—which things, indeed, can be apprehended only by reason and intelligence, not by sight:—do you think they can?

Glaucon:: By no means.

Socrates:: Must we not then, use the various heavenly phenomena, as an exhibition for the purpose of instructing us in those real concerns,—just as one might meet with sketches, capitally well drawn and elaborated by Dædalus, or some other artist or painter?—For one skilled in geometry, on seeing such drawings, would, perhaps, think them to be exceedingly well wrought, and nevertheless deem it absurd to give them a serious consideration,—as if he were thence to get his conception of truth about equals, or doubles, or any other proportion.

Glaucon:: Of course, it would be absurd.

Socrates:: And think you not then, that the true astronomer will feel just the same, when he looks up to the orbits of the stars,—reckoning, indeed, that the heavens and all in them are established by the heavenly architect in the most beautiful manner possible for the formation of such works; and would not one deem it absurd of a man to conceive that this proportion of night with day, and of both these to a month, and of a month to a year, and of other stars to both of these, and towards each other has existed always in the same manner, and without experiencing any change, because they have a body, and are visible, and so to take all possible means to apprehend the truth of these things?

Glaucon:: So I think, whilst I listen to you.

Socrates:: Let us then, make use of problems, or hypotheses, in astronomy, as in geometry, and dismiss the heavenly bodies,—if we intend really to get acquainted with astronomy, and render useful instead of useless that portion of the soul which is naturally intelligent.

Glaucon:: You really impose, a far harder task on astronomers than is enjoined them at present.

Socrates:: I think, however, that we must enjoin other duties likewise, according to the same fashion, if we would be of any service as lawgivers. But have you anything to suggest about the fitting branches of study?

Glaucon:: I have not,—at present at least.

Socrates:: Motion, moreover, affords us, I think, not one indeed, but many species thereof;—all of which any wise man can probably tell; but those which occur to me are two.

Glaucon:: What are they?

Socrates:: In addition to this, there is its counterpart.

Glaucon:: Which?

Socrates:: As the eyes, seem formed for studying astronomy, so do the ears seem formed for harmonious motions; and these seem to be twin sciences to one another, as also the Pythagoreans say; and we too, Glaucon, agree with them:—how shall we do?

Glaucon:: Just so.

Socrates:: Shall we not, then, since it is a matter of high importance, inquire of them how they speak concerning them, and whether they have anything else to say besides this; but we, notwithstanding all this, shall defend our own conclusion?

Glaucon:: What is that?

Socrates:: That those whom we educate should never attempt to learn these things imperfectly, nor without always aiming at the object, to which all ought to be directed,—as we just stated with reference to astronomy:—and do not you know that they do some such thing with regard to harmony?—for, while they measure one with another the symphonies and sounds which are heard, they go through a fruitless toil, like the astronomers.

Glaucon:: Aye, by the gods,—and absurdly too, when they make very frequent trials of the notes, lending their ears to catch the sound as from a neighbor's voice,—some indeed saying that they hear some middle note, with the smallest appreciable interval, and others again doubtingly saying that the notes are just what were sounded before,—both parties placing the ears above the intellect.

Socrates:: But you are now speaking, of those thrifty, money-making musicians, who are ever harassing and tormenting their strings, turning them on the pegs:—but, that the comparison may not be too tedious, I refrain from speaking of their complaints about the refusal and stubbornness of the strings, and at once give up the simile, saying that we do not mean to speak of these, but of those true musicians whom we before mentioned:—for these do here just what the others did in astronomy; for they search for numbers, in the symphonies which they hear, but do not go on to the inquiry proposed,—what numbers are symphonious, what not, and the reason why they are either the one or the other.

Glaucon:: You speak, of a noble undertaking.

Socrates:: It is serviceable, of course, in the search for the beautiful and good,—but, if pursued in another manner, it is quite useless.

Glaucon:: Aye, probably so.

Socrates:: Still, methinks, the plan of inquiry into all these matters that we have described, if it touches on their mutual communion and alliance, and proves how they are mutually related, will contribute something to what we require, and our labor will not be fruitless; but otherwise it will.

Glaucon:: I likewise, guess the very same thing:—but you are speaking, Socrates, of a most laborious undertaking.

Socrates:: Mean you the introduction, or what else?—what,—know we not, that all these things are introductory to the strain itself; which we ought to learn?—for even persons clever in these things you perhaps do not think skilled in dialectics.

Glaucon:: No, by Zeus, only some very few of such as I have met.

Socrates:: But supposing some of them not able, to offer and admit reasoning, will they ever be able to get acquainted with what we say they ought to know?

Glaucon:: They will never be able to do this.

Socrates:: Is not this then the very strain, Glaucon, which dialectic science executes,—which also, being cognizable by the intellect, may be said to be imitated by the power of sight,—which faculty seeks, first, as we observed, to gaze at animals, then at the stars, and last of all at the sun himself:—so when a man attempts to discuss a subject without the aid of his perceptive faculties, he is impelled by reason to what is individual and real being; and if he stops not, till he apprehends by intelligence what is the good itself, then, indeed, he arrives at the end of the intelligible, as the other does at the end of the visible.

Glaucon:: Assuredly. What then;—do not you call this the dialectic process?

Socrates:: What else? And now, to revert to our former simile of the man in the cave, there is his liberation from chains, his turning from shadows towards the images and the light, and his ascent from the underground cavern to the sun,—and when there, his looking at images in water, owing to a want of power at first of beholding animals and plants, and the sun itself;—so also here in the intellectual world you have the contemplation of divine phantasms, and the shadows of real beings, and not the shadows of images shadowed out by another similar light, as by the sun.—All this exercise in the arts which we have discussed has this tendency,—namely, to lead back again the best part of the soul to the contemplation of what is best in existing beings; as in the former case, what is brightest in the body is led to what is most splendid in bodily and visible existence.

Glaucon:: I admit these things; though it really seems to me extremely difficult to admit them, though in other respects difficult not to admit them.

Socrates:: However, granting what has been asserted for we shall not only now hear these things, but often again discuss them, let us proceed to and discuss the strain itself, as we have finished the introduction. Say, then, of what kind is the power of dialectic,—into what species is it divided,—and what are the paths leading to it;—for these probably conduct us to that place, which we shall find a resting-place, and the end of our journey. You will not as yet, dear Glaucon, be able to follow:—had you been so, no zeal would be wanting on my part; nor should you any longer only see the image of what we are now speaking about, but the truth itself, or what to me seems so. Whether it be so really or not, however, it is not proper positively to affirm; but that it is somewhat of this kind may be most strongly affirmed:—may it not?

Glaucon:: Of course.

Socrates:: And further, that it is the power of dialectics alone, which can discover this to a person skilled in what we have discussed, and that it can be done by no other power.

Glaucon:: This also, we may positively affirm.

Socrates:: This statement at least no one, will dispute with us,—that no other method can attempt to ascertain through a regular process the nature of each particular being; for all other arts respect either the opinions and desires of men, or generations and compositions, or are employed wholly in the study of what is generated and compounded:—but as for those others, which we alleged to have some relation to being, as geometry, and its dependent sciences, we behold them, as if dreaming indeed about real existence, it being impossible to have a true vision, so long as they employ hypotheses and keep them immovable, without the power of accounting for their existence:—for where the starting-point is the unknown, and the conclusion and intermediate steps are connected with that unknown principle, how can any such kind of assent ever possibly become science?

Glaucon:: By no means.

Socrates:: Is it not then the dialectic method only, that proceeds thus onwards,—removing all hypotheses back to the starting-point, that it may become firmly established, and so gradually draw and lead upward the eye of the soul, which was truly buried in a certain barbaric mire, by the aid and guidance of those arts we have mentioned, which through custom we frequently call sciences, but which require another name clearer indeed than opinion, but more obscure than science?

Glaucon:: We have somewhere in the former part of our discourse termed it reflection, or reasoning.

Socrates:: But the controversy is not, as it appears to me, about a mere name, when people are investigating things of such great importance as those now before us.

Glaucon:: It is not.

Socrates:: You are pleased, then, as formerly, to call the first part science, the second reflection, the third faith, the fourth conjecture,—both these last being opinion, and the two former intelligence;—and that opinion is employed also about generation, and intelligence about true being;—likewise, that true being bears to generation the same relation as intelligence to opinion, science to faith, and reflection to conjecture;—but as for the analogy of the things which these powers respect, and the twofold division of each,—viz., into the objects of opinion, and those of intellect, these we omit, Glaucon, that we may not be more prolix here than in our former discussions.

Glaucon:: As for me, as regards those other things, so far as I can comprehend, I am of the same opinion.

Socrates:: But do not you call that man skilled in dialectics, who apprehends the reason of the essence of each particular?—and as for the man who is unable to give a reason to himself, and to another, so far as regards this inability, will you not so far say he wants intelligence of the thing?

Glaucon:: Of course I shall.

Socrates:: And is not the case the same with reference to *the good*?—whoever cannot logically define it, abstracting the idea of *the good* from all others, and taking as in a fight one opposing argument after another, and cannot proceed with unfailing proofs, eager to rest his case, not on the ground of opinion, but of true being,—such an one knows nothing of the good itself nor of any good whatever: and should he have attained to any knowledge of *the good*, we must say he has attained it by opinion, not science; that he is sleeping, and dreaming away his present life; and before he is roused, will descend to Hades, and there be profoundly and perfectly laid asleep.

Glaucon:: By Zeus, I will certainly affirm all these things.

Socrates:: But surely, methinks, you will not allow those children of yours, whom you are ideally training and educating,—if ever in fact you should educate them,—to have the supreme government of the most important affairs in the state, while they are void of reason, as letters of the alphabet?

Glaucon:: By no means.

Socrates:: You will lay this down then as a law: that they shall most especially get that amount of education which may enable them to question and answer in the most scientific manner.

Glaucon:: I will make that a law, by your assistance at least.

Socrates:: Are you of opinion then, that dialectic science is to be placed on high as a bulwark to moral training, and that no other training can with propriety be more elevated than this, but that this is the completion of scientific training?

Glaucon:: I am.

Socrates:: There now remains for you, the regulation of the persons to whom we shall assign these studies, and after what manner.

Glaucon:: That is evident.

Socrates:: Do you remember then, in our former election of rulers, what kind we chose?

Glaucon:: Of course I do.

Socrates:: As to other things then, conceive, that those dispositions should be selected, and that we should prefer the bravest, most resolute, and, as far as possible, the most handsome; and besides, we must not only seek for those whose manners are noble and grave, but such as have dispositions adapted to this education.

Glaucon:: What dispositions do you enjoin?

Socrates:: They must have, my excellent friend, acuteness as respects instruction, that they may learn without difficulty; for souls are much more daunted by severe mental studies, than by strenuous bodily exercise; for the employment which is most familiar to them is of a peculiar nature, having no connection with the body.

Glaucon:: True.

Socrates:: And we must seek for one of good memory, hardy, and in every way fond of toil:—or how think you any one would willingly endure bodily fatigue, and at the same time accomplish such learning and study?

Glaucon:: No one, unless he be in all respects of a naturally good disposition.

Socrates:: The mistake then about philosophy, and the dishonor done to it, have been occasioned by this, as I formerly said, that it is not studied in a way suitable to its dignity: for it ought not to have been attempted by bastards, but the well-born.

Glaucon:: How?

Socrates:: In the first place, he who is to apply to philosophy, must not be lame in his love of labor, half-laborious, and half-averse to it; and this is the case, when a man is fond of wrestling and hunting, and all bodily exercises, but has no fondness for learning, or hearing instruction or making investigations, but in all these respects has an aversion to labor.—He too is lame, though in an opposite manner from the man who has wrongly employed his love of labor.

Glaucon:: You say most truly.

Socrates:: And shall we not, in like manner account that soul lame as to truth, which, though it hates a voluntary falsehood and is troubled by it, and is vastly indignant when others tell a lie, yet easily admits the involuntary lie, and if at any time it be found ignorant, is not displeased, but like a savage sow willingly wallows in ignorance?

Glaucon:: Assuredly.

Socrates:: And in like manner, as to temperance and fortitude, and magnanimity, and all other branches of virtue, we must no less carefully attend to what is bastardly, and what is well-born; for when either private persons or a state understand not how to attend to all these things, they unwarily employ the lame and the bastardly for whatever they want,—private persons employing them as friends, and states as governors.

Glaucon:: Such is exactly the case.

Socrates:: But we must be on our guard, about all such things; so that if we select for such extensive discipline such as are entire in body and mind, and take care to instruct them in suitable exercises, justice herself will not blame us, and we shall preserve both the state and constitution; but if we introduce persons of a different description into these affairs, we shall do everything the reverse, and pour still greater contempt on philosophy.

Glaucon:: That indeed were shameful.

Socrates:: Certainly. But I myself seem at present to be somewhat ridiculous.

Glaucon:: How so?

Socrates:: I forgot, that we were amusing ourselves, and I spoke with too great keenness; for, while speaking, I was referring to philosophy; and seeing her most unworthily abused, I seem to have been filled with indignation, and, through rage, as it were, with those who are the cause of it, to have said what I did somewhat too earnestly.

Glaucon:: No truly, not for me as a listener at least.

Socrates:: Aye, but for me, who said it:—but let us not forget this, that in our former election we made choice of old men, which in this will not be allowed;—for we must not believe Solon, that a man in years can learn many things, far less even than running, but that all the most important and numerous kinds of toil are assigned to the young.

Glaucon:: Of necessity.

Socrates:: Everything then relating to arithmetic and geometry and all the previous instruction which they should receive before they learn dialectics, ought to be set before them while they are children, and on such a plan of teaching that they may learn without compulsion.

Glaucon:: Why so?

Socrates:: Because, a free man ought to acquire no learning under slavery: for the labors of the body when endured through compulsion do not at all deteriorate the body: but as for the soul, it can endure no compulsory discipline.

Glaucon:: True.

Socrates:: Do not then, my best of friends, force boys to their learning; but train them up by amusements, that you may be better able to discern the direction of each one's genius.

Glaucon:: What you say, is reasonable.

Socrates:: Do not you remember our stating then, that the boys should even be carried to war, as spectators, on horseback, and be brought as near as possible with safety, and allowed like young hounds, to taste the blood?

Glaucon:: I remember.

Socrates:: Whoever then, shall appear the most forward in all these labors, studies, and dangers, such as these are to be selected to a certain number.

Glaucon:: At what age?

Socrates:: When they have finished their necessary exercises; for this period of life, even should it last two or three years, cannot accomplish anything else; for fatigue and sleep are hostile to learning; and this too is none of the least of their trials, what each will prove himself in his exercises.

Glaucon:: Certainly.

Socrates:: And after this period, such as have formerly been selected of the age of twenty are to receive greater honors than others; and those studies, which in their youth they have pursued promiscuously, must be brought before them in one view, that they may see the connection of the whole with each other, and with the nature of real being.

Glaucon:: This indeed is the only kind of instruction that will abide permanently in those in whom it is engendered.

Socrates:: And this, is the best criterion for distinguishing talents naturally fitted for dialectics, from those which are not so. He who perceives this alliance is skilled in dialectics; he who does not, is not so.

Glaucon:: I am of the same opinion.

Socrates:: You will need then, after observing these things, and seeing who are most distinguished herein, and who persevere both in learning and in war, and in other things established by law, to make choice of them after they exceed thirty years, selecting from those before chosen, and then advance them to greater honors. Observing them likewise by the test of dialectics, in order to ascertain which of them can without aid from the eyes, or any other sense, proceed with truth to being itself. And here, my companion, is a work of great caution.

Glaucon:: In what principally?

Socrates:: Do not you perceive, how great is the evil which at present attends dialectics?

Glaucon:: What is it, you mean?

Socrates:: Its followers are somehow or other full of disorder.

Glaucon:: Very much so.

Socrates:: Think you then, that their being so is at all extraordinary; and will you not forgive them?

Glaucon:: How do you mean?

Socrates:: Just as if, a certain supposititious child were brought up in great opulence in a rich and noble family, and amidst many flatterers, and were to perceive, when grown up to manhood, that he is not descended from those alleged to be his parents, but yet cannot discover his real parents; can you guess how such an one would feel both towards his flatterers and his supposed parents, both at the time when he knew nothing of the cheat, and again at the time when he came to perceive it?—are you willing to hear me while I give a guess?

Glaucon:: I am willing.

Socrates:: I guess then, that he will honor his father and mother, and other supposed relatives, more than the flatterers, and that he will neglect them less in case of their need, and be less apt to do or say anything amiss to them, and in matters of consequence will disobey them less than those flatterers, during that period in which he knows not the truth.

Glaucon:: It is likely.

Socrates:: But when he perceives the real state of the case, I again guess, he will relax in honor and respect for them, and attend to the flatterers, and be much more persuaded by them now than formerly, and live also according to their fashion,—while for the father, and the rest of his fictitious relations, if he be not of an entirely good natural disposition, he will have no regard.

Glaucon:: You mention everything, just as it would happen.

Socrates:: But in what manner does this comparison respect those conversant with dialectics? In this:—there are certain doctrines about justice and honor, in which we have been bred, as by parents, from childhood to render them respect and obedience.

Glaucon:: There are.

Socrates:: Aye,—and there are other pursuits also, the opposite of these, attended by pleasures, that flatter and seduce the soul, but do not persuade those who are in any degree well-mannered; because these honor their relations, and obey them.

Glaucon:: Such is the case.

Socrates:: What then, if to a person thus affected the question be proposed, What is the beautiful? and, in reply to what he has heard from the lawgiver, he be refuted by reason; which frequently and in all ways convicts him and brings him round to the opinion, that objects are no more beautiful than they are deformed; and so also, as respects what is just and good, and whatever else he held in highest esteem, what do you think such an one will after this do, with regard to these things, as to honoring and obeying them?

Glaucon:: Of necessity, he will no longer either honor or obey them, as he formerly had done.

Socrates:: If then, he no longer deems these things honorable, and allied to him as formerly, and cannot discover those which really are so, can he possibly with readiness join himself to any other life than that of flattery?

Glaucon:: It is not possible.

Socrates:: And from being an observer of the law, he will now, I think, appear to be a law-breaker.

Glaucon:: Of necessity.

Socrates:: Is it not likely then, that the affections of persons who thus engage in reasoning, are deserving, as I was just now saying, of great consideration?

Glaucon:: We, and pity too.

Socrates:: While you take care then, that this pitiable case befall not those of the age of thirty, ought they not by every method to apply themselves to reasoning?

Glaucon:: Certainly.

Socrates:: And is not this one prudent caution,—that they meddle not with discussions while young: for you have not forgotten, I suppose, that youths, when they first join in discussions, abuse them by way of mere amusement, ever using them for the purpose of contradiction; and in imitation of those who are refuters, they themselves oppose others, ever delighting like whelps to drag and tear to pieces, by arguments, those who are their neighbors.

Glaucon:: Especially so.

Socrates:: And after they have confuted many, and been themselves confuted by many, then they vehemently and speedily fall into an indifference about their former opinions; and by these means they themselves, and the whole of philosophy, are calumniated by the rest of the world.

Glaucon:: Most true.

Socrates:: But he who is of a riper age, will not like to share in such madness, but will imitate him who is disposed to reason and inquire after truth, rather than one who, for the sake of diversion, amuses himself by contradiction; and he will himself be more modest, thus rendering the practice of disputing honorable instead of dishonorable.

Glaucon:: Right.

Socrates:: Have not then all our former remarks been rightly premised, by way of precaution on this point, that those who are to be taught dialectics should have gracious and steady dispositions, and not as now, when every chance person, even when quite unfit, is admitted thereto?

Glaucon:: Certainly.

Socrates:: Is twice the former period then sufficient for a man to be diligently and constantly engaged in acquiring dialectics without doing anything else but practicing by way of contrast all bodily exercises?

Glaucon:: Do you mean six years, or four?

Socrates:: No matter;—make it five:—for after this they must be made to descend to that cave again, and obliged to govern both in things relating to war, and in other youthful offices, so as not to fall short of others in experience; and among these they must be still further tested, that it may be seen whether they will continue firm, when drawn in all directions, or be somewhat drawn aside.

Glaucon:: And how long a time, do you reckon for this?

Socrates:: Fifteen years. And when they are of the age of fifty, such of them as have been kept safely, and have in every way obtained all the prizes both in actions and sciences, are now to be led to the end, and are to be obliged to incline the eye of their soul to look at that which imparts light to all things, and, when they contemplate *the good itself* to use it as a pattern, each in turn, either state or private persons, for adorning themselves, during the remainder of their life, for the most part, indeed, occupying themselves with philosophy, and when it is their turn, toiling in political affairs, and taking the government, each for the good of the state performing this office, not as something honorable, but as a thing necessary; and after bringing up others also from time to time to be of the same character, and leaving them to be state-guardians, they depart to inhabit the islands of the blest:—and the state, will erect monuments for them at the public cost, and if the Pythian goddess consent, will offer sacrifice, as to superior beings,—if not, as to happy and divine men.

Glaucon:: Socrates, you have made our governors all-beautiful, just as a sculptor would.

Socrates:: And our governesses likewise, Glaucon;—for suppose not that what I have said referred more to men than women,—such at least as have sufficient talent.

Glaucon:: Right, if at least, as we said, they are to share in all things equally with the men.

Socrates:: What then;—do you agree, that with reference to a state and form of government, we have not altogether stated mere wishes,—but such things as though difficult, are yet in a certain respect possible, and not otherwise than has been mentioned,—that is, when true philosophers, whether one or more of them, on becoming governors in a state, despise present honors, and deem them illiberal and of no value; but esteem, above all things, rectitude and the honors therefrom derived; account justice as a thing of all others the greatest, and most absolutely necessary; and, by ministering to it and advancing it, thoroughly regulate the constitution of their own state?

Glaucon:: How?

Socrates:: Such, of the more advanced in life, as have lived ten years in the state, let them send all into the country; and, removing their children away from the habits now contracted by domestics, let them bring them up according to their own manners and laws, as we formerly described them:—thus the state and government that we have described being most speedily and easily established, will both be happy itself, and of the greatest service to the people among whom it is established.

Glaucon:: Very much so indeed;—and you seem to me, Socrates, to have very well described how this state will rise, if it rise at all.

Socrates:: Well then, have we not had sufficient talk, both about such a state as this, and the individual that corresponds thereto?—For it is now clear perhaps, what kind of a man we shall say he ought to be.

Glaucon:: It is evident; and your inquiry, methinks, is now at an end.

THE END OF THE SEVENTH BOOK.

## BOOK VIII.

Socrates:: Well then, Glaucon, these things have been agreed on, that in a state that is to be perfectly administered the women are to be in common, the children in common, and their education also.—so likewise their employments both in war and peace in common, and their kings the best possible both in philosophy and warfare.

Glaucon:: It has been so agreed.

Socrates:: And this, moreover, we agreed on, that when the commanders are appointed and leading their soldiers, they should dwell in habitations, such as we have described, containing nothing particularly belonging to any individual, but common to all; and besides these habitations, we agreed also, if you recollect, as to their possessions, to what sort they should be entitled.

Glaucon:: Aye, I recollect, that we thought them entitled to no possessions whatever, like the other citizens, but that, like military wrestlers and guardians, they should receive the yearly pay of their service in maintenance provided by the rest, and should take care both of themselves and the rest of the state.

Socrates:: You say rightly:—but come,—since we have settled these matters, let us recollect from what point we made this digression, in order that we may again take up the same argument.

Glaucon:: No hard matter;—for you were pursuing much about the same argument respecting the state, as you did just now, when saying that you considered such a state to be good as you then described, and the individual man also analogous thereto,—and this, too, as it seems, when you were able to define both a better state and a better man. You said, moreover, that all the rest were wrong, if this were right;—and of the other kinds of states you said, I remember, that four were deserving of consideration, with the view of seeing the errors therein and the people thereto corresponding,—in order that by seeing all these and deciding on the best and worst man, we might inquire whether the best be the happiest, and the worst the most wretched or otherwise:—and when I inquired which were the four kinds of states to which you referred, on this Polemarchus and Adimantus interrupted us; and so now resuming the subject you have arrived at this point.

Socrates:: You have recollected it, with great accuracy.

Glaucon:: Once more then, like a wrestler, furnish me with the same handle; and when I ask the same question, try to say just what you were then about to tell me.

Socrates:: Aye, if I can.

Glaucon:: Moreover, I am anxious also myself to hear what those four kinds of states were.

Socrates:: You shall hear that, and welcome:—for, of those which I can mention and which have names,—that praised by the multitude is the Cretan and Lacedæmonian polity,—the second, and that which deserves the second praise, called oligarchy, a polity full of abundant evils,—that which differs from it, and follows next in order, democracy,—and then genuine tyranny, or monarchy, differing from all the others, the fourth and last ailment of the state:—surely you have no other form of polity, having a distinct and established species?—for small principalities and purchased kingdoms, and such-like polities as these, are of an intermediate class, and may be found no less among barbarians than Greeks.

Glaucon:: Aye, indeed, many are mentioned, and those, too, absurd enough.

Socrates:: Do you know, then, that of men there are as many descriptions as of states?—or do you think that states, somehow or other, spring out of an oak or a rock, and not out of the habits of those in the state, whither, indeed, everything else must verge and be attracted?

Glaucon:: I, for my part, think it is derived from no other source than that.

Socrates:: In that case, if there be five kinds of states, the intellectual distinctions of the individuals will be five likewise.

Glaucon:: Of course.

Socrates:: As for the person then, who resembles an aristocracy, we have already described him, and rightly pronounced him to be both good and just.

Glaucon:: Aye, we have described him.

Socrates:: Are we then, in the next place, to argue about the inferior,—the contentious and ambitious man formed according to the Spartan model, and him again, who resembles an oligarchy, or a democracy, or a tyranny, in order that we may contemplate the most unjust, and contrast him with the most just, and thus our inquiry may be complete, how unmingled justice stands in opposition to unmingled injustice, as respects the happiness or misery of its possessor,—thus either pursuing injustice in compliance with Thrasymachus's suggestion, or else justice in compliance with our present argument?

Glaucon:: We must do so, by all means.

Socrates:: Are we then, just as we began, to consider moral habits in states primarily, or rather in private individuals, as being there more clearly developed; and now must we not thus first consider the ambitious republic for I cannot call it by any other term, but only denominate it a timocracy or a timarchy, and in connection with it an individual of the same character,—then again an oligarchy and a man of oligarchical character,—and so also, when considering a democracy, must we contemplate a democratic person,—and, fourthly, coming to a state governed by a tyrant, consider a person of tyrannical disposition;—thus trying to become competent judges about what we proposed?

Glaucon:: According to reason, indeed, such should be both our view and decision.

Socrates:: Come then;—let us try to show in what way a timocracy arises out of an aristocracy:—is it not plain, at any rate, that every government changes through the agency of that portion which holds the public offices, whenever sedition arises in that particular part; whereas, if it only agree with itself, however small the state, it cannot possibly be disturbed?

Glaucon:: Such is the case.

Socrates:: How then, Glaucon, will our state be disturbed and how will our allies and rulers fall into quarrels with each other and amongst themselves:—do you wish, like Homer, that we implore the muses to tell us how first sedition rose, and address them in tragic fashion, as if we were children, playing and jesting, so to speak, with seriousness uttering lofty language?

Glaucon:: How so?

Socrates:: Somehow thus:—it is hard indeed for a state thus constituted to become disturbed;—but, as everything generated is liable to corruption, not even such a constitution as this can abide for ever, but must be dissolved:—and its dissolution is as follows.—Not only as regards terrestrial plants, but likewise terrestrial animals, a fertility and sterility both of soul and body take place, when the revolutions of the heavenly bodies complete the periphery of their respective orbits, which are shorter to the shorter-lived, and contrariwise to the contrary: and with reference to the fertility and sterility of your race, though those are wise whom you have trained as governors of the state, yet they will never, by intellect and sense united, observe the proper season for procreation, but let it slip by, and sometimes generate children when they ought not.—To that, however, which is divinely generated, there is a period which is comprehended by the perfect number; whereas, to that generated by man, there is one, in which the augmentations, both surpassing and surpassed, after having received three separations and four boundaries of things similar and dissimilar, increasing and decreasing, will render all things correspondent and rational;—of which the sesquiternian root, conjoined with the pentad and thrice increased, affords two harmonies,—one of these, the equally equal, just a hundred times as much;—while the other, of equal length indeed, but of oblong shape, is of a hundred numbers from effable diameters of the pentad, each wanting one, two of which are irrational and of a hundred cubes of the triad.—And the whole of this geometric number is, having such an influence, concerned with worse and better generations. Now, if our governors be ignorant of this, and join our couples together unseasonably, the children will neither possess talent, nor be fortunate either; and though former governors should have placed the best of them in office, nevertheless as they are unworthy of it, and only come into the power which their fathers had, they will begin to neglect us in their guardianship, holding music first of all, and then gymnastics in less esteem than they ought, and hence our young men will become too little disposed to music;—in consequence of which the governors to be appointed from among them will not be very clever guardians, as respects proving, according to Hesiod and ourselves, what are the several species of talents, the golden, the silver, the brazen, and the iron. Where iron, however, mingles with silver, and brass with gold, then there arises a dissimilitude and unharmonious unevenness;—and when this is the case, wherever it prevails, it perpetually generates war and hatred;—we must say that sedition belongs to such a race as this, whenever it arises.

Glaucon:: Aye,—and we shall say that the answer was correctly given.

Socrates:: Aye, and it must be so too,—as they are Muses.

Glaucon:: What then, do the Muses say next?

Socrates:: Sedition having once arisen, two classes of genius,—the iron and the brazen, will be allured to gain, and the acquisition of land and houses, gold and silver,—while the golden and silver, not being in poverty but naturally rich, will lead souls to virtue and their original constitution; whereas, should they be violent and strive one against the other, they would agree to divide their lands and houses as individual possessions; and then, enslaving those formerly guarded by them as freemen, friends, and tutors, keep them as denizens and slaves, themselves providing for war and their own protection.

Glaucon:: This revolution, seems to me to have just this origin.

Socrates:: Will not then this government, be a medium between aristocracy and oligarchy?

Glaucon:: Certainly.

Socrates:: Thus then will the revolution be effected, and when it has taken place, what arrangement will then be made?—Is it not plain, that in some things they will follow the pattern of the former republic, and in others oligarchy, as halfway between the two, and having something also peculiar to itself?

Glaucon:: Just so.

Socrates:: Will they, then, in honoring their rulers, in allowing their military to abstain from agriculture, as with us from mechanical and other money-making pursuits, in establishing common meals, and in studying both gymnastics and military contests,—in all these things will they not follow the pattern of the last form of government?

Glaucon:: Yes.

Socrates:: But, through the fear of admitting wise men into the magisterial office, inasmuch as the state no longer possesses men who are simple and resolute, but only such as are of a mixed character,—and through an inclination towards the high-spirited and even simple, naturally more suited for war than peace, and also towards those who are clever at tricks and schemes, spending their whole time in continual war;—in all these respects, will it not possess many such things as are peculiar to itself?

Glaucon:: Yes.

Socrates:: And such as these, will ever be lovers of wealth, just like those in oligarchies, and will have a wild though disguised love for gold and silver, as if they possessed treasuries of their own and domestic storehouses in which to hoard and hide them,—and, circularly-enclosed houses also,—nests as it were wholly their own, in which they can lose and spend much, together with their own wives and such others as they fancy.

Glaucon:: Most true.

Socrates:: Well then,—will they not from their love of wealth be sparing of it also, though not openly acquiring it, but disposed to squander other people's property through lustful desire and secret indulgence in pleasure;—-just as children escaping from parental law, who have been brought up not by persuasion but force, owing to their neglect of the true muse, which unites reasoning and philosophy and the preference also which they give to gymnastics over music?

Glaucon:: It is quite a mixed government, of which you are now speaking,—compounded of good and ill.

Socrates:: Aye, mixed indeed:—but the most remarkable thing in it is what simply arises from the prevalence of high spirit,—contention and ambition.

Glaucon:: Aye, just so.

Socrates:: Such then is the origin and character of this form of government, if one may ideally sketch it without giving a complete description,—though enough for us to see from this sketch,—who is the just and the unjust man; and it were a work of tedious length to argue on all governments and all the various manners of men without any exception whatever.

Glaucon:: Quite right.

Socrates:: What then will the individual be, who corresponds to this form of government;—how did he become so: and what is his nature?

Adeimantus:: I think indeed, he has a tendency to be like this Glaucon here, as far at least as concerns the love of contention.

Socrates:: Perhaps so, as to this particular;—but I think, that in these respects he cannot at all resemble him.

Adeimantus:: How?

Socrates:: He must necessarily, be more self-willed, and somewhat unapt to music, though fond of it; and fond of hearing, but by no means a rhetorician:—such an one will be rough towards the slaves, without despising them, as the man does who is fairly educated. He will be polite towards the free, submissive to governors, a lover of dominion and honor,—not thinking it proper to govern by eloquence or anything of the kind, but by political management and military achievements, being a lover of gymnastics and hunting.

Adeimantus:: This indeed, is the spirit of that form of government.

Socrates:: And will not such an one, despise money during his youth, but the older he grows, always value it the more, because he partakes of the covetous disposition, and is not sincerely affected towards virtue, because destitute of the best guardian?

Adeimantus:: Of what guardian?

Socrates:: Reason, accompanied with music, which being the only inbred preservative of virtue, dwells with the possessor through the whole of life.

Adeimantus:: You say well.

Socrates:: And surely the timocratic youth, resembles such a state.

Adeimantus:: Certainly.

Socrates:: And such an one, is somehow thus formed.—He may happen perhaps to be the youthful son of a worthy father, dwelling in an ill-governed state, and shunning public honors, magisterial offices, lawsuits, and all such public business, content to live neglected in obscurity, that he may have no trouble.

Adeimantus:: In what manner then, is he formed?

Socrates:: First of all, when he hears his mother complaining that her husband is not in magisterial office, and that she is on this account neglected among other women, and then sees that he is not over attentive to the acquisition of wealth, and does not wrangle and quarrel privately and publicly in the law courts, but on all these occasions acts indolently;—and when she perceives him always attentive to himself, and treating her neither with extreme respect nor contempt;—on all these accounts, she is filled with indignation, and tells her son that his father is unmanly, extremely careless, and whatever else wives are wont to chant about such matters.

Adeimantus:: Aye,—many things, truly, and quite in accordance with their spirit.

Socrates:: And you know, that the domestics likewise of such families, such of them as would be thought good-natured, sometimes say privately the very same to the sons; and if they see either a debtor whom the father does not sue, or any one otherwise acting unjustly, they exhort him to punish all such persons when he comes to manhood, and to be more of a man than his father.—And when he goes abroad, he hears other such-like things, and sees also that such in the state as attend to their own affairs are called simple, and held in little esteem, while such as do not attend to their affairs are both honored and commended.—The youth then who hears and sees all this, and then again hears his fathers speeches, and closely observes his pursuits in contrast with those of others, is drawn in two opposite directions,—his father irrigating and promoting the growth of his rational part, and the others his passions and high spirit;—and so, being not naturally bad, but spoiled only by evil connection with others, he is brought to a mean between both and delivers up the government within himself to a middle power,—the love of contention and high spirit:—and so he becomes a haughty and ambitious man.

Adeimantus:: I think, you have quite correctly explained the training of such a person.—We have here then, the second form of government and the second individual.

Socrates:: Aye,—we have.

Adeimantus:: Shall we not then after this say with Æschylus,—

> Where state to state,—then each to each incline;—

or rather, shall we, according to our plan, establish the state first?

Adeimantus:: Certainly.

Socrates:: It would be an oligarchy then, methinks, that would succeed such a government as this.

Adeimantus:: But what constitution is it, that you call an oligarchy?

Socrates:: That government, which is founded on the estimate of men's property;—in which the rich rule, and the poor have no share in the government.

Adeimantus:: Aye,—I understand.

Socrates:: Should we not, first of all explain, how the change is made from a timocracy to an oligarchy?

Adeimantus:: We should.

Socrates:: And surely the way, in which this change is made, is manifest even to the blind!

Adeimantus:: How?

Socrates:: That treasury, which each one fills with gold destroys such a state; for, first of all, they discover for themselves modes of expense, for which they set aside the laws,—both themselves and their wives disobeying them.

Adeimantus:: Very likely, and afterwards, I think, when one observes another, and enters into rivalry, the people generally become of this character.

Socrates:: It is likely. And thence then, as they advance in the intensity of the desire for acquiring wealth, the more honorable they account this, the more dishonorable will they deem virtue;—for is not virtue so at variance with wealth, that, supposing each to be placed at the opposite end of a balance, they would always weigh the one against the other?

Adeimantus:: Justly so.

Socrates:: While wealth then and the wealthy are honored in the state, both virtue and good men must necessarily be held in dishonor?

Adeimantus:: It is plain.

Socrates:: And what is honored is always pursued, while what is dishonored is neglected?

Adeimantus:: Just so.

Socrates:: Instead then of being contentious and ambitious men, they have at last become lovers of gain and wealth;—and the rich they praise and admire, elevating them to the magistracy, while the poor man they quite despise.

Adeimantus:: Certainly.

Socrates:: And do they not enact laws, marking out the boundary of the oligarchal constitution, and regulating the quantity of oligarchal power by the quantity of wealth,—allotting more to the more wealthy and less to those less so, intimating that he who has not the amount settled by law can have no share in the government;—and do they not settle these matters compulsorily, by force of arms, establishing such a state after previous intimidation?—Is it not thus?

Adeimantus:: Aye, indeed.

Socrates:: This then, so to speak, is its constitution?

Adeimantus:: Yes. What then is the nature of the government, and what are the faults thereto ascribed?

Socrates:: First of all, of this very thing, the constitution itself, what think you?—for consider, if a person were thus to appoint pilots of ships, by the amount of their property, never intrusting one of them with a poor man, though better skilled in piloting,—what would then be the consequence?

Adeimantus:: They would make a very bad voyage.

Socrates:: And is it not the same about any other matter, or any presiding office whatever?

Adeimantus:: I think so.

Socrates:: Is it always so, except in a state; or is it so as regards a state likewise?

Adeimantus:: There, beyond all others; inasmuch as it is the most difficult, and most important kind of government.

Socrates:: Oligarchy then would seem to have this unquestionably very great fault.

Adeimantus:: So it seems.

Socrates:: But what;—is this no less a fault?

Adeimantus:: What?

Socrates:: That such a state is not integrally one, but necessarily two; one containing the poor, and the other the rich, dwelling in one place and always plotting against one another.

Adeimantus:: By Zeus, not a whit less;—and this besides is a fine thing,—the incapacity of waging war, through the necessity, either of employing the armed multitude, who are to be dreaded more than the enemy themselves, or else refusing to employ them at all, and so appearing quite oligarchical in battle,—being unwilling also to advance money for the public service, through a natural disposition to covetousness? This is not well.

Socrates:: What then;—with reference to what we long ago condemned,—engaging in a variety of pursuits, the same persons in such a state giving their attendance all at once to agriculture, money-making, and military affairs; does this seem right?

Adeimantus:: Not at all, of course.

Socrates:: Let us see, then,—does this form of government above all others introduce this greatest of all evils?

Adeimantus:: What is that?

Socrates:: The permission to each person of selling the whole of his effects, and to another of purchasing them from him, and the privilege to the seller of dwelling in our state, though he belongs to no one class therein, and can be called neither a money-maker, nor mechanic, nor horseman, nor foot-soldier, but poor and destitute.

Adeimantus:: Yes, above all others.

Socrates:: Such a thing is not prevented in oligarchal governments; for, in that case some of them would not be over-rich, and others altogether poor.

Adeimantus:: Right.

Socrates:: But consider this likewise;—when such a rich man as this spends his property, would it do the state any more service, as regards the objects just mentioned; or did he only seem to be one of the magistrates, while in truth he was neither magistrate nor servant to the state, but only a consumer of its substance?

Adeimantus:: Aye,—he did seem so;—he was nothing but a consumer.

Socrates:: Do you desire, then, that we should say of him, that, as a drone in a beehive brings ailment among the whole swarm, just so, such a person as this, like a drone in his house, is the ailment of a state?

Adeimantus:: Quite so, Socrates.

Socrates:: And has not God, Adimantus, made all the winged drones without any sting,—and those that have feet, some without stings, and some with dreadful stings?—And do not those that are without stings continue poor to old age:—whereas those that have stings, are those that we called mischievous?

Adeimantus:: Most true.

Socrates:: It is plain then, that in a state where you would observe poor people, there are doubtless concealed thieves, cutpurses, sacrilegious persons, and workers of all such evils.

Adeimantus:: Evidently so.

Socrates:: What then? Do not you find poor people in states that are placed under oligarchal government?

Adeimantus:: Almost all are so, except the governors themselves.

Socrates:: And do we not think, that they contain within them many mischievous persons with stings, whom the magistrates must restrain by vigilance and compulsory measures?

Adeimantus:: We do indeed think so.

Socrates:: And must we not say, that it is through want of education, bad nurture, and a corrupt constitution of state, that persons of this character are here engendered?

Adeimantus:: Yes we must.

Socrates:: Well then, is not the state oligarchally governed when under an oligarchy of this character; and is it not affected by all these evils, and probably more too?

Adeimantus:: It is nearly so.

Socrates:: Let us distinguish then this form of government likewise, which they call oligarchy, as one having its governors elected according to the valuation of their property. Next let us consider the man who is analogous to this form of government, how he is formed and what is his character.

Adeimantus:: By all means.

Socrates:: Is it not thus then chiefly that the individual man changes from the timocratic to the oligarchic form?

Adeimantus:: How?

Socrates:: When such an one has a son, he, first of all, emulates his father, and follows his steps; afterwards, when he sees him suddenly dashed on the state like a ship on a rock, squandering his property and ruining himself, either at the head of the army, or in some other high magisterial office,—then falling into the law-courts, ruined by public informers, and either put to death, or exiled, and stripped of his honors and entire property.

Adeimantus:: It is likely.

Socrates:: Aye, my friend, and after seeing and suffering this, and losing his property, he instantly, through fear, I think, pushes headlong from the throne within his soul, his ambitious, lofty temper, and at length, humbled by poverty, turns his attention to gain, lives meanly and sparingly, and by hard labor acquires wealth;—do you not think that such a man will seat on that throne in his soul a covetous and money-loving spirit, making it a mighty king within himself, and girding it, as it were, with tiaras, and bracelets, and scepters?

Adeimantus:: I think so.

Socrates:: But, as for the principles of reason and high spirit, having laid them both at his feet on either side as mere slaves, he forbids the one to reason at all, or at any rate to inquire into aught else, except by what means a smaller amount of property can be made greater; and the other, again, to admire and honor anything but riches and the rich, and to receive honor with any other view than the acquisition of money, or whatever else may tend thereto.

Adeimantus:: There is no change, so sudden and powerful as that of an ambitious to an avaricious man.

Socrates:: Is not this, then, the oligarchic man?

Adeimantus:: Aye—the change which he undergoes is from a person who resembles that government from which oligarchy arises.

Socrates:: Shall we consider, now, if he does at all resemble it?

Adeimantus:: Let us consider.

Socrates:: Does he not, in the first place, resemble it in valuing money above all things?

Adeimantus:: Of course he does.

Socrates:: And he does so surely in being sparing and laborious, satisfying only his necessary desires, and not allowing himself any other expenses, but subduing the other desires as foolish.

Adeimantus:: Certainly.

Socrates:: And in being, a sordid kind of man, making gain of everything, intent on hoarding,—one, such as the multitude extols, will not this be the man that resembles such a form of government?

Adeimantus:: Aye, I think so: wealth at least must be highly valued by the state, as well as by the individual of such a character.

Socrates:: Aye,—for I do not think, that such a man has attended to education.

Adeimantus:: I do not think he has; for he would not then have chosen a blind guide for his chorus.

Socrates:: But further still, consider this attentively;—must we not say that, owing to his want of education, dronish desires springing in him, some of them beggarly, and some mischievous, forcibly kept under restraint by the rest of his pursuits?

Adeimantus:: Just so.

Socrates:: Do you know, then, where you will best observe their wickedness?

Adeimantus:: Where?

Socrates:: By looking at their tutelage of orphans, or whatever else of this kind comes in their way, so as to give them much power to do injustice.

Adeimantus:: True.

Socrates:: Is not this then quite clear, that in all other kinds of contracts, wherever such an one gains approbation, by the mere semblance of justice, he restrains the other wrong desires within him by exercising a certain moderation, not from any persuasion that it is not better to indulge them, nor from sober reason, but from necessity and fear, because he trembles for the remainder of his property?

Adeimantus:: Certainly.

Socrates:: Aye, by Zeus, my friend, most of them, when they want to spend the property of others, display passions much akin to those of drones.

Adeimantus:: Yes, exceedingly so.

Socrates:: Such a person as this, then, will not be free from internal discord; nor be integrally one, but a kind of double man; possessing desires, however, that are at variance with one another, the better, usually, governing the worse.

Adeimantus:: It is so.

Socrates:: On these accounts, then, such an one, methinks, will present a better appearance than many others; though the true virtue of a harmonized and consistent soul will wholly escape him.

Adeimantus:: Aye, it seems so.

Socrates:: And the sparing man, either privately or in the state, will be but a poor rival, as regards any victory or other struggle for honor; because either for reputation’s sake, or any such contests, he is unwilling to spend his property, through fear of kindling expensive desires, and calling them into alliance or rivalry;—and warring, as he does, in oligarchic fashion, with only a few of his resources, he is in most cases defeated, though he still contrives to get rich.

Adeimantus:: Quite so.

Socrates:: Can we any longer hesitate, to rank the niggard and the money-maker as resembling a state under an oligarchy?

Adeimantus:: By no means.

Socrates:: Democracy, as it seems, must next be considered,—how it arises, and when once arisen, what kind of man it produces;—in order that understanding the nature of such a man, we may at once bring him to trial.

Adeimantus:: Yes;—that would be our consistent course.

Socrates:: Well then, is not the change from oligarchy to democracy produced in some such way as this,—through the insatiable desire of the proposed good, viz. the desire of becoming as rich as possible?

Adeimantus:: How?

Socrates:: Inasmuch as its governors govern through the possession of great wealth, they will have no wish, methinks, to restrain by law the profligate portion of the young men from squandering and wasting their property at pleasure; because, by purchasing such persons’ effects, and lending on usury, they will not only be still more enriched, but held in higher repute.

Adeimantus:: Far more so than any other.

Socrates:: This, then, is already quite clear in our state, that to honor riches, and at the same time practice temperance, is impossible, since either the one or the other must necessarily be neglected.

Adeimantus:: Of course, that is quite plain.

Socrates:: While, therefore, they are neglectful in oligarchies, and allow the youths to indulge in licentiousness, they must necessarily sometimes bring men to poverty, even those that are not ignoble.

Adeimantus:: Quite so.

Socrates:: And these, I suppose, stand in our state both spurred, and in armor; some in debt, others in disgrace, others in both, hating and conspiring against those who have got what belonged to them, and against others also, for mere love of change.

Adeimantus:: Aye, such is the case.

Socrates:: These usurers, however, bent on their own interests, and apparently unobservant of these, wound all that ever yield to them by advancing them money, and so, by getting multiplied interest for the parent principal, fill the state with many a drone and pauper.

Adeimantus:: Aye, with many a one.

Socrates:: And even when such an evil is raging in the state, they are not willing to extinguish it, not even by restraining people from spending their property at pleasure, nor yet in this way by making another law to destroy such disorders.

Adeimantus:: What law?

Socrates:: One that shall follow the other, compelling the citizens to cultivate virtue; for if they were bidden to engage in voluntary contracts chiefly at their own hazard, their usurers would create less scandal in the state, and fewer also of the evils now mentioned would arise therein.

Adeimantus:: Far fewer.

Socrates:: At present, however, it is by all these means that the governors in the state thus dispose of the governed; and both as to themselves and those belonging to them, do they not render the youths luxurious and idle as respects all bodily and mental exercises, effeminate in bearing pleasure and pains, and indolent likewise?

Adeimantus:: What else?

Socrates:: And as to themselves, they neglect everything but the acquisition of wealth, and pay no more regard to virtue than the poor?

Adeimantus:: No, surely.

Socrates:: Having then been thus trained up, when the governors and their subjects are thrown together, either on a journey along the road, or in other meetings, either at public spectacles, or on warlike expeditions, either as fellow-sailors or fellow-soldiers, or when they see one another in real dangers, the poor in this case are by no means despised by the rich;—but very often a robust fellow, poor and sun-burnt, whose post in battle is by the side of a rich man bred up in the shade, and swollen with much unnecessary fat, if he should see him panting for breath and in agony,—think you not, he will consider such persons to grow rich to their own injury, and will say to his fellow, when meeting in private, that our rich men are good for nothing?

Adeimantus:: Of course, I well know, that they do so.

Socrates:: Well then, as a diseased body needs but the smallest shock from without to give it pain, and is sometimes thrown into disorder without any interference from without, so also the state that resembles it will, on the smallest occasion from without, either when one party forms an alliance with an oligarchal, or the other with a democratic state, become discorded, and fight with itself, and also rise in revolt without any external interference.

Adeimantus:: Yes, certainly.

Socrates:: A democracy then, I think, arises, when the poor prevailing over the rich, kill some, and banish others, and share the state-offices and magistracies equally among the remainder; and for the most part the magistracies therein are disposed of by lot.

Adeimantus:: Aye, this is the establishment of a democracy, whether it be effected through force of arms, or from the withdrawal of the other party through fear.

Socrates:: In what way then, do these live,—and what will be the character of this government;—for it is plain, that a man of this kind will appear democratic?

Adeimantus:: It is plain.

Socrates:: First, then, are they not free, and is not the state full of freedom of action, and speech, and each one at liberty to do what he pleases?

Adeimantus:: So it is said.

Socrates:: And where there is liberty, every one will evidently regulate his own plan of life just as he pleases?

Adeimantus:: Plainly so.

Socrates:: Under such a government especially, methinks, men of all characters will spring up.

Adeimantus:: Of course.

Socrates:: This, seems likely to be the best of all governments;—just as a various-colored robe, embroidered with flowers of all kinds,—so will this appear best, variegated as it is with all sorts of manners.

Adeimantus:: Of course.

Socrates:: And perhaps too, the multitude will reckon this the best, just as children and women looking at embroidered dresses.

Adeimantus:: Very likely.

Socrates:: Aye, my excellent friend, here is a state in which we may fitly look for a government.

Adeimantus:: How so?

Socrates:: Because it comprises all kinds of government on the score of its liberty; and it seems necessary for one that desires to establish a state, as we are now doing, to come to any democratic state, the form of which he likes, as to a general political fair, and establish that which he has chosen.

Adeimantus:: Aye, he would probably be in no want of models.

Socrates:: Is not this, a divine and pleasant kind of life for the present,—that there be no need of governing in this state, even though you be able to do so,—nor yet of being a subject, unless you please,—nor of engaging in war because others do,—nor of keeping peace when others keep it, unless you desire peace;—nor again, though there be a law that restrains you from governing or administering justice, yet you no less shall govern and administer justice, if so disposed?

Adeimantus:: It is likely;—in this particular at least.

Socrates:: But what; is not their lenience towards some of those who are condemned very polite; and in such a government did you never yet see its lenity towards men condemned to death or banishment, who nevertheless remain there in open intercourse, the banished man, too, returning like a hero as if no one attended to or observed him?

Adeimantus:: Aye, many.

Socrates:: But this indulgence of the state,—not to mention the small regard, and even contempt which it shows for all that we deemed so important when settling our state, as that, unless a man had a most exalted nature, he would never become a good man, except he had from childhood upwards delighted in noble actions, and diligently followed all such pursuits;—how magnanimously does it despise and think as naught all these things, evincing an utter disregard as to the kind of pursuits from which a man comes to engage in politics, though it honors him if he only declares himself well affected towards the multitude?

Adeimantus:: How very generous.

Socrates:: These then, and others akin to these, are to be found in democracy; and it seems to be a pleasant sort of government, both anarchical and variegated, distributing a certain equality to all alike, both equals and unequals.

Adeimantus:: Aye, you say, what is perfectly well known.

Socrates:: Consider then, what kind of man such an one is in private; or shall we first consider, as we did with respect to the government, in what manner he is formed?

Adeimantus:: Yes.

Socrates:: Is he not then formed in this manner,—namely, from the parsimonious man who was under the oligarchy,—as a son, trained up under his father according to his habits?

Adeimantus:: Of course.

Socrates:: Such an one forcibly governs his own pleasures,—such as are expensive, but not tending to the acquisition of wealth, which are hence called unnecessary.

Adeimantus:: It is plain.

Socrates:: That we may not argue in the dark then, let us first, if you please, determine what desires are necessary, and what are not.

Adeimantus:: Willingly.

Socrates:: May not such be justly called necessary, which we cannot get rid of, and the gratification of which does us service? For both these kinds our nature must necessarily seek after; must it not?

Adeimantus:: Quite so.

Socrates:: This then, we may justly say, is a necessary part to these desires?

Adeimantus:: Justly. But what now?

Socrates:: Such desires as a man may relinquish, if he try to do so from his youth, and which while they remain, do no good, if we say of these that they are not necessary, shall we not say right?

Adeimantus:: Right, indeed.

Socrates:: Let us select a pattern of each, that we may understand from example what they are.

Adeimantus:: Quite right.

Socrates:: Is not the desire of eating necessary so far as is conducive to health and a good habit of body, and the desire of food and victuals?

Adeimantus:: I think so.

Socrates:: The desire of food, at least, is necessary on two accounts, as being advantageous in itself, and because the want of it must bring life to an end.

Adeimantus:: It is.

Socrates:: And the desire of victuals is likewise necessary, as contributing towards a good habit of body.

Adeimantus:: Certainly.

Socrates:: But what?—even such desire as goes beyond these things, or any other sorts of meats, and yet can be curbed from youth, and trained to abstain from most things, and which is hurtful both to body and soul as regards the attainment of wisdom and temperance, may not that be rightly called unnecessary?

Adeimantus:: Most rightly, indeed.

Socrates:: May we not say then that these too are expensive, and the others frugal, as they conduce towards the actions of life?

Adeimantus:: Of course.

Socrates:: We may speak in the same manner, surely, of venereal, and the other desires?

Adeimantus:: In the same manner.

Socrates:: And did we not, by him whom we just now called the drone, indicate a person full of such desires and pleasures, and governed by those that are unnecessary; but one governed by those merely necessary, a parsimonious man, and disposed to an oligarchy?

Adeimantus:: Without doubt.

Socrates:: Let us again mention, how the democratic man arises out of the oligarchic; and to me he appears to arise chiefly thus.

Adeimantus:: How?

Socrates:: When a young man brought up, as we now mentioned, without proper instruction, and in niggard fashion, comes to taste the drones' honey, and associates with those fiery, terrible creatures who can procure all sorts and varieties of pleasures, and from every quarter;—

then you may conceive, he somehow begins to change the oligarchic for the democratic character.

Adeimantus:: It must be so.

Socrates:: Well then, just as the state was changed by the aid of another party from without to which it was related, is not the youth so changed likewise, through the aid of one species of desires from without, to others within him, which resemble them and are allied thereto?

Adeimantus:: By all means.

Socrates:: And methinks, if any alliance should come to counteract the oligarchic principle within him, either through his father or other relatives, admonishing and upbraiding him, then truly will arise sedition, opposition, and an internal struggle against himself.

Adeimantus:: Undoubtedly.

Socrates:: And sometimes, indeed, I think the democratic yields to the oligarchic principle, and some of the desires are destroyed, while others retire, because a certain modesty is engendered in the youth's soul, and he is again restored to order.

Adeimantus:: This is sometimes the case.

Socrates:: And again, I suppose, when some desires retire, others allied to them secretly grow up, which through neglect of parental instruction, become both many and powerful.

Adeimantus:: This is usually the case.

Socrates:: They draw them then towards the same intimacies as before, and through their connections secretly generate a multitude?

Adeimantus:: What else?

Socrates:: And in the end, I think, they seize the citadel of the youth's soul, because they find it empty, as regards virtuous pursuits and true reasoning,—the best guardians and preservers of the rational part of men dear to the gods.

Adeimantus:: Just so.

Socrates:: And then, indeed false and arrogant reasonings and opinions rush up in their stead, and take their place in such people.

Adeimantus:: Assuredly.

Socrates:: And does he not then come once more, and dwell openly among those Lotophagi?—And if any aid come from intimate friends to strengthen the parsimonious principle within him, these said arrogant reasonings, by shutting against it the gates of the royal wall, neither permit the alliance itself, nor allow the ambassadorial admonitions of individual old men, but struggle against them and maintain themselves in power;—and as for modesty, they call it stupidity, and thrust it out into disgraceful exile, while temperance they call unmanliness, load it with abuse, and then expel it;—and as for moderation and decent expense, they persuade themselves that they are nothing else but rusticity and illiberality, and banish them from their territories, with many other unprofitable desires.

Adeimantus:: Assuredly, they do.

Socrates:: Having emptied and purified from all these desires, the soul, thus held by them, and initiated in the great mysteries, they next introduce with encomiums and false eulogies, indolence and anarchy, extravagance and shamelessness, shining with a great retinue, and wearing crowns,—calling insolence, good-breeding,—anarchy, liberty,—luxury, magnificence,—and impudence, manliness. Is it not, somehow thus,—that a youth, after being bred up with necessary desires falls away into the license and dissoluteness induced by needless and unprofitable pleasures?

Adeimantus:: Yes, plainly so.

Socrates:: Such an one, then, methinks, thenceforth passes his life, spending his property, labor, and time as much on necessary as unnecessary pleasures, but if he be fortunate and not unusually excited by passion, he, as he advances in years, and the sovereignty of the passions is subdued, re-admits part of those expelled, and does not deliver himself wholly up to mere intruders, but regulates his pleasures on the principle of equality, and so lives, giving himself up to each incidental desire that happens to rule him, till he is sated,—and then another, undervaluing none, but indulging all alike.

Adeimantus:: Quite so, of course.

Socrates:: And yet such an one, will not listen to true reasoning, nor admit it into his stronghold,—should he be told that some pleasures are attached to honorable and virtuous desires, others to those that are depraved, and that he should pursue and honor the former, but chastise and hold captive the latter,—but in all these cases will dissent, and say that they are all alike, and to be held in equal honor.

Adeimantus:: Assuredly, one thus affected, does this.

Socrates:: Well then, thus does he daily live, gratifying every incidental desire, sometimes getting drunk to the sound of the flute, at others temperately drinking water,—at others, again exercising gymnastics; sometimes indolent and wholly careless; then again applying, as it were, to philosophy,—often too acting the politician, saying and doing by skips and jumps whatever comes first:—and if he would imitate any of the military tribe, thither he is carried; if the mercantile, then again thither; nor is his life regulated by any plan or law, but, deeming this particular life pleasant, and free, and blessed, he follows it throughout.

Adeimantus:: You have most fully described, the life of the man who places all laws on a level.

Socrates:: I at least am of opinion, that he is multiform, and filled with different habits; like the state, too, he is handsome and of varied complexion, a man whose life many men and women would emulate, because he contains within himself numerous patterns both of forms of government and moral habits.

Adeimantus:: He does. What then?

Socrates:: Have we then so described and arranged such an one on the principles of democracy, as that he may be truly called one of democratic character.

Adeimantus:: We will allow that it has.

Socrates:: It still remains, however, that we discuss, that most excellent form of government and that most excellent man,—tyranny and the tyrant.

Adeimantus:: Surely.

Socrates:: Come then, my dear fellow;—what is the manner in which tyranny arises?—for it is almost plain, that it is a change from democracy.

Adeimantus:: Plain.

Socrates:: Does not tyranny arise in the same manner from democracy, as democracy does from oligarchy?

Adeimantus:: How?

Socrates:: As respects the good then, which oligarchy proposed to itself, and according to which it was constituted; was it not with a view of becoming extremely rich?

Adeimantus:: Yes.

Socrates:: An insatiable desire then for riches, and a neglect of all besides, through attention to the acquisition of wealth, destroys it.

Adeimantus:: True.

Socrates:: And with reference to what democracy denominates good, an insatiable thirst for it destroys it likewise?

Adeimantus:: But what say you, it denominates as good?

Socrates:: Liberty:—for this, you are told, is best found in a state under democratic rule, and hence any one naturally free would choose to dwell in this alone.

Adeimantus:: This word liberty, is vastly much talked about.

Socrates:: Well then, observed I, as I was just going to say, does not the insatiable desire for this, and the neglect of other things, change even the form of government, and prepare it to need a tyrant?

Adeimantus:: How?

Socrates:: When a state, is under democratic rule, thirsts after liberty, and happens to have bad cupbearers appointed it, and gets immoderately drunk with an unmixed draught thereof, it punishes even the governors, unless they be quite tame-spirited, and allow them excessive liberty, by accusing them of being corrupt and oligarchical.

Adeimantus:: They do so.

Socrates:: But such as obey the magistrates, it abuses as willing and good-for-nothing slaves; both publicly and in private they commending and honoring magistrates who resemble subjects, and subjects who resemble magistrates: must it not happen in such a state, that we must necessarily arrive at the acme of liberty?

Adeimantus:: Of course.

Socrates:: And must it not descend, too, my friend, into private families, and at last reach even the brutes?

Adeimantus:: How, can we assert aught like this?

Socrates:: For instance, when a father gets used to become like his child, and fears his sons, and the son in like manner his father, and has neither respect nor fear of his parents, in order, forsooth, that he may be free;—and thus a mere resident is placed on a level with a citizen, and a resident with a stranger, and so likewise a foreigner.

Adeimantus:: Just so.

Socrates:: Aye, these indeed happen, and other similar little things also:—and in such cases a teacher fears and flatters his scholars, and the scholars despise their teachers, and so also their tutors; and on the whole the youths resemble those more advanced in years, and rival them both in speech and action: while the old men sit down with the young, and imitate them in their love of merriment and pleasantry, for fear of appearing morose and despotic.

Adeimantus:: Quite so, of course.

Socrates:: But as to this extreme liberty of the multitude, what a height it attains in a state like this, where purchased slaves, male or female, are no less free than their purchasers, and how much equality and liberty wives enjoy with their husbands, and husbands with their wives,—this we have almost forgotten to mention.

Adeimantus:: Are we not then to say, according to Æschylus, whatever now comes into our mouth?

Socrates:: By all means; and accordingly I thus speak:—with reference even to brutes, such as are under the care of men, how much more free they are in such a state; he who has no experience thereof will not easily believe—for according to the proverb, even dogs resemble their mistresses; and horses and asses are used to run about at large, surlily driving against whomsoever they meet, unless they get out of their way; and many other such-like things happen, that indicate an abundance of liberty.

Adeimantus:: You are just telling me my dream, for this has often happened to me when going into the country.

Socrates:: But do you observe, when all these things are collected together in a whole, that they make the soul of the citizens so sensitive, that if they were any how to be brought into slavery, they would be indignant and not endure it;—for in the end, you know, they regard laws neither written nor unwritten, and hence no one will by any means become their master?

Adeimantus:: I know it well.

Socrates:: This then, my friend, I suppose, is that government so beautiful and youthful, whence tyranny springs.

Adeimantus:: Youthful, indeed; but what then?

Socrates:: The same malady, that existed in an oligarchy, destroys this form likewise; rising also to a higher pitch of power, and enslaving the democracy by its very licentiousness; for, in fact, the doing of anything to excess usually causes great change in an opposite direction: and so it is in the seasons, as in vegetable and animal bodies, and so also not least of all in forms of government.

Adeimantus:: Probably so.

Socrates:: Aye, for excessive liberty seems only to degenerate into excessive slavery, either in private individuals or states.

Adeimantus:: It is probable, indeed.

Socrates:: Probably then, tyranny is established out of no other form than democracy;—out of the highest degree of liberty, methinks, the greatest and fiercest slavery.

Adeimantus:: Yes, it is reasonable.

Socrates:: This, however, methinks, was not what you asked:—but what is that same disease which arises in an oligarchy and a democracy, and reduces each to slavery?

Adeimantus:: Your remark is true.

Socrates:: I meant, that there was a race of idle and profuse men, the bravest of whom were the leaders, and the more cowardly their followers, whom indeed we compared to drones; some to those with stings, others to those without stings.

Adeimantus:: Rightly too.

Socrates:: These two now, when they spring up in a government, disturb it, just like phlegm and bile in a natural body,—and against these it is the duty of a wise physician and lawgiver of a state, no less than of a wise bee-master, to take much fore-caution,—first, that they never gain admittance;—and if they should enter, that they be as soon as possible cut off, with their cells as well.

Adeimantus:: Yes, by Zeus; altogether so.

Socrates:: Let us thus then conceive the matter, that we may more distinctly see what we want.

Adeimantus:: How?

Socrates:: Let us ideally divide a democratic state into three parts, as it in fact is; for some such classification is natural to it, owing to its liberty, no less than to an oligarchy.

Adeimantus:: It is so.

Socrates:: Yet it is much more fierce at least in this than in the former.

Adeimantus:: How?

Socrates:: In an oligarchy, from not being held in honor, but excluded from the magisterial office, it is unexercised and gains no strength;—but in a democracy it is, with a few exceptions, the presiding party, the fiercest of them ever talking and agitating, while the rest bustle about at the law-courts, and cannot endure any one else to speak differently from itself; and thus all things, with only a few exceptions, under such a government, are managed by a party.

Adeimantus:: Very much the case.

Socrates:: Some other party, then, is always separated from the multitude.

Adeimantus:: Which?

Socrates:: While the general body are engaged in the pursuit of gain, such as are naturally the most temperate generally become the wealthiest.

Adeimantus:: Very probably.

Socrates:: And hence is it, methinks, that the greatest quantity of honey, and what comes with the greatest ease, is pressed out of these by the drones.

Adeimantus:: Yes,—for how, can any one press it from those who have but little?

Socrates:: Such wealthy people, I think, are called the pasture of the drones.

Adeimantus:: Nearly so.

Socrates:: And the people will be a sort of third species,—such as mind their own affairs, without meddling with others, who have little property, but are yet the most numerous, and most prevailing in a democracy, whenever it is densely populated.

Adeimantus:: It is so; but this it will not often consent to do without getting some share of the honey.

Socrates:: This class, of course, always obtains a share, as far as their leaders are able, by robbing those that have property, and giving it to the people, in order that they may eat most themselves.

Adeimantus:: Aye, that is the way in which these become sharers.

Socrates:: These, then, are obliged to defend themselves. Those thus despoiled are compelled to defend themselves, saying and doing all they can among the people.

Adeimantus:: Of course.

Socrates:: And though they have no inclination to introduce a change of government, they are charged with forming plots and plans against the common people, and being oligarchally disposed.

Adeimantus:: What next?

Socrates:: After seeing that the people, not willingly, but through ignorance and the impositions of these slanderers, attempt to injure them, do they not then, indeed, even against their wills, become truly oligarchic?—though not spontaneously, for this very mischief is generated by the drone that stings them.

Adeimantus:: Quite so.

Socrates:: And so they lay informations, make lawsuits, and have contests one with another.

Adeimantus:: Very much so.

Socrates:: And are not the people always used to place some one in special presidency over themselves, and to cherish him, and promote him to great power?

Adeimantus:: They are.

Socrates:: And this, is plain, that whenever a tyrant rises, it is from the fact of thus presiding, and nothing else, that he flourishes.

Adeimantus:: This is very clear.

Socrates:: How, then, begins the change from a president into a tyrant?—is it not clearly when the president begins to do the same as is told in the fable, about the temple of the Lycean Zeus, to whom the wolf was dedicated in Arcadia?

Adeimantus:: What is that?

Socrates:: That whoever tastes human entrails mixed with those of other offerings, must necessarily become a wolf:—have you not heard the story?

Adeimantus:: I have.

Socrates:: Well, then, supposing him to be thus the president of the people, and having to deal with an extremely compliant multitude, he should not refrain from shedding even kindred blood, but by unjust charges, as usual, should bring men into the law-courts and murder them, as if he set no value on human life, and, tasting with unholy mouth and tongue even the blood of relations, should banish men and slay them, proposing the abolition of debts and fresh division of lands,—must not such an one of necessity, and by destiny, be either destroyed by his enemies, or else act the tyrant, and from a man, become a wolf?

Adeimantus:: Of great necessity.

Socrates:: This then, is he,—the same who rises in sedition against those who have property.

Adeimantus:: Yes.

Socrates:: And when he has been banished and returns against the will of his adversaries, he comes back, of course, an accomplished tyrant.

Adeimantus:: It is plain.

Socrates:: And if they cannot expel him, or put him to death on a state accusation, then they conspire to cut him off privately by a violent death.

Adeimantus:: It usually so happens.

Socrates:: And besides this, all who have advanced to this station invent this much-vaunted tyrannical demand, asking the people for certain body-guards, that the people's aid may be secured them.

Adeimantus:: Of this, they take special care.

Socrates:: And methinks they grant them this through fear of his safety, though secure as to their own.

Adeimantus:: Quite so.

Socrates:: And when a man observes this, who has property, and who, besides that, is further charged with hating the people,—he then, my friend, according to the answer of the oracle to Croesus;

…… To pebble-bedded Hermus flies,
Nor waits the brand of cowardice;……

Adeimantus:: Because he would not, be a second time in fear.

Socrates:: But surely, he at least, methinks, that is caught, is put to death.

Adeimantus:: Of necessity so.

Socrates:: It is plain, then, that this president of our state does not like a noble person, nobly lie, but, after hurling down many others, sits in his chair of office, a consummate tyrant of the state,—and not a president.

Adeimantus:: Of course, he is likely to be so.

Socrates:: Shall we then examine the happiness both of the man and the state, in which such a mortal as this is engendered?

Adeimantus:: Let us do so by all means.

Socrates:: Does he not, then, in the first days, and for a brief season, smile and salute every one he meets, and asserting himself to be no tyrant, and promise many things, both in public and private, and liberate men from debts, and distribute land both to the public and those about him, and affect to be mild and liberal towards all?

Adeimantus:: He must.

Socrates:: But, methinks, when he becomes reconciled to some of his foreign enemies, and has destroyed others, and there is quiet respecting these, he first of all is ever exciting wars, that the people may be in need of a leader.

Adeimantus:: Aye, that is likely.

Socrates:: Is it not also then, that, being rendered poor by contributing to the public treasury, they may be compelled to be anxious for daily sustenance, and so less readily conspire against him?

Adeimantus:: Plainly so.

Socrates:: And methinks, if he suspects that any of a free spirit will not allow him to govern,—in order that he may have some pretext for destroying them, he exposes them to the enemy; for all these reasons a tyrant must necessarily be always raising war.

Adeimantus:: Necessarily so.

Socrates:: And, while he is doing these things, he will necessarily become more hateful to the citizens.

Adeimantus:: Of course.

Socrates:: And, therefore, some of those who have been promoted along with him and are in power, use great plainness of speech, towards him and among themselves, finding fault with what is done,—such at least, as are of a more manly spirit.

Adeimantus:: Aye, probably so.

Socrates:: The tyrant, therefore, if he means to govern, must cut off all these, till he leave no one, either friend or foe, worth anything.

Adeimantus:: It is plain.

Socrates:: He must carefully notice them,—who is courageous, who is magnanimous, who wise, who rich; and in this manner is he happy, that, willing or unwilling, he is under a necessity of being an enemy to all like these; and to form plots against them, till he has purged the state.

Adeimantus:: A fine purging indeed!

Socrates:: Yes, the reverse of what the physicians do with regard to animal bodies; for they take away the worst and leave the best; but he does the contrary.

Adeimantus:: Because it seems, if he is to govern, he must necessarily do so.

Socrates:: By a blessed necessity, then truly, is he bound; which compels him either to live with a depraved multitude,—hated by them too, or not live at all.

Adeimantus:: In such necessity he is.

Socrates:: And the more he is hated by the citizens whilst he does these things, will he not so much the more require a greater number of guards, and those more faithful?

Adeimantus:: It is impossible he should not.

Socrates:: Who then are the faithful, and whence shall he procure them?

Adeimantus:: Many, will come flying to him of their own accord, if he give them pay.

Socrates:: By the dog, you seem again to be talking of certain drones, both foreign and multiform.

Adeimantus:: Aye, you think right.

Socrates:: But those of the state itself,—would he not desire to have them also as guards?

Adeimantus:: How?

Socrates:: After he has taken away the slaves from the citizens, would he not give them their liberty, and make of them guards about his person?

Adeimantus:: By all means; for these are the most faithful to him.

Socrates:: What a blessed possession of the tyrants, is this which you mention, if he employ such friends and faithful men, after having destroyed the former ones!

Adeimantus:: But at any rate, such he surely does employ.

Socrates:: And then his companions, admire him, and the young citizens flock around him: but those that are respectable men both hate and fly from him.

Adeimantus:: Of course they would.

Socrates:: It is not without reason, then, that tragedy is generally thought a wise thing, and that Euripides is thought to excel in it.

Adeimantus:: Why?

Socrates:: Because he uttered this, the result of deep reflection, that tyrants are wise, by intercourse with the wise;—and he plainly said, those were wise with whom they hold converse.

Adeimantus:: And he commends tyranny too, as some divine thing, and says a great deal else about it, as do the other poets.

Socrates:: Those composers then of tragedy, as they are wise, will forgive both ourselves and others who establish governments analogous to our own, for not admitting them into our republic, as being panegyrists of tyranny.

Adeimantus:: Methinks, such of them, at least, as are well mannered, will forgive us.

Socrates:: But they will go about through other states, methinks, drawing together the crowds, and put to sale their fine, magnificent, and persuasive words, and so draw over governments to tyrannies and democracies.

Adeimantus:: Just so.

Socrates:: And do they not further receive rewards and are specially honored, first by tyrants, as is natural, and next by a democracy; but the higher they advance in the forms of government, the more does honor forsake them, disabled as it were by an asthma from pursuing its progress.

Adeimantus:: Entirely so.

Socrates:: Thus far, have we digressed: and now let us go back and talk about the army of the tyrant, beautiful as it is numerous, multiform, and ever the same,—how it is to be maintained.

Adeimantus:: It is plain, that whatever sacred things there be in the state, these they will despoil, and make the sale-proceeds therefrom to be such from time to time as to cause the commons to pay lighter taxes.

Socrates:: But when these fail, what will they do?

Adeimantus:: It is plain, that he and his boon-companions, and associates, male and female, will be maintained out of his paternal inheritance.

Socrates:: I understand:—the party that made the tyrant is to maintain him and his companions.

Adeimantus:: Surely it must be so.

Socrates:: How, say you?—if the people were to be enraged, and say, that it is not just for a son arrived at mature age to be maintained by the father, but on the contrary, the father by the son, and that he did not beget and bring him up for this purpose, to be himself a slave to his slaves after they have grown up, and to maintain him and his slaves with the rest of the riotous crew,—but rather that under his auspices he might be liberated from the rich in the state, who are also called the good and worthy:—and now he orders him and his companions to leave the state as a father drives from home his son and his rackety boon-fellows.

Adeimantus:: By Zeus, then, the people, such as they are, will know what sort of a creature they have begotten, embraced, and nurtured, and that being themselves the weaker party, they are still trying to drive out the stronger.

Socrates:: How say you;—will the tyrant dare to offer violence to his father, and actually strike him if he will not yield?

Adeimantus:: Yes, for he has stripped him of his armor.

Socrates:: The tyrant, you call a parricide and a hard-hearted nourisher of old age; and this, as it seems, would be an acknowledged tyranny; and, as the saying is,—the common people, flying from the smoke of slavery among freemen, have fallen into the slavish fire of despotism, and instead of excessive and unreasonable liberty, they embrace the most rigorous and bitterest captivity of actual slaves.

Adeimantus:: Aye,—this is very much the case.

Socrates:: What then, may it not be concluded with due consideration, that we have shown in sufficient detail how tyranny arises out of democracy, and its nature also, when it does arise?

Adeimantus:: Quite sufficiently, of course.

THE END OF THE EIGHTH BOOK.

## BOOK IX.

Socrates:: We have yet, to consider the tyrannical man himself, how he arises out of the democratic,—and, when he does arise, what is his nature, and what kind of life he leads, whether wretched or happy.

Adeimantus:: Yes, we have.

Socrates:: Know you, what I still want?

Adeimantus:: What?

Socrates:: We do not seem to have sufficiently distinguished as regards the desires; what is their nature and amount; and how many; and while there is any defect in this, the inquiry we make will not be very clear.

Adeimantus:: Is it not good time for that yet? I wish to know about them;—for it is this. Of pleasures and desires that are not necessary, some seem to me contrary to law,—which indeed seem engendered in all men:—though owing to the correction of the laws, and of improved desires aided by reason, they either forsake some men altogether, or are less numerous and feeble, while in others they are more powerful and more numerous. Will you inform me what these are?

Socrates:: Such, as are excited in sleep, when the rest of the soul—which is rational, mild, and its governing principle, is asleep, and when that part which is savage and rude, being sated with food and drink, frisks about, drives away sleep, and seeks to go and accomplish its practices;—in such an one, you know, it dares to do everything, because it is loosed and disengaged from all modesty and prudence: for, if it pleases, it scruples not at the embraces, even of a mother, or any one else, whether gods, men, or beasts; nor to commit murder, nor abstain from any sort of meat,—and in one word, it is wanting neither in folly nor shamelessness.

Adeimantus:: You speak most truly.

Socrates:: But when a man is in good health, methinks, and lives temperately, and goes to sleep, after exciting his reason, and feasting it with noble reasonings and investigations, having thus attained to an internal harmony, and given up the appetites neither to want nor repletion, that they may be at rest, and not disturb that part which is best, either by joy or grief, but suffer it by itself alone without interruption to inquire and long to apprehend what it knows not,—either something of what has existed, or now exists, or will exist hereafter; and so also, having soothed the spirited part of the soul, and not allowed it to be hurried into transports of anger, or to fall asleep with agitated passion;—but after having quieted these two parts of the soul, and roused to action that third part, in which wisdom dwells, he will thus take his rest;—you know, that by such an one the truth is best apprehended, and the visions of his dreams are then least of all portrayed contrary to the law.

Adeimantus:: I am quite of this opinion.

Socrates:: We have digressed indeed a little too far in talking of these things;—but what we want to be known is this, that in every one resides a certain species of desires that are terrible, savage, and irregular, even in some that we deem ever so moderate:—and this indeed becomes manifest in sleep.—Now consider, if I seem to be speaking to the purpose, and whether you agree with me.

Adeimantus:: Aye, indeed, I do.

Socrates:: As for the people’s man then, recollect how we described him, as being brought up somehow from infancy under a parsimonious father, who valued avaricious desires only; and despised all such as were unnecessary, arising only out of a love of amusement and finery. Was he not?

Adeimantus:: Yes.

Socrates:: But getting acquainted with the more refined, who are full of the desires just mentioned, running into all sorts of insolence, and imbibing their manners through detestation of his father's parsimony;—and yet having a better natural temper than his corrupters, and being drawn opposite ways, he at length settles down into a mode of life equidistant from either, and so in his opinion, participating moderately of each, leads a life neither illiberal nor lawless, after having thus become a democrat instead of an oligarchist.

Adeimantus:: Yes,—this, was and is our opinion of such an one.

Socrates:: Suppose now again, that, when such an one has become old, he has a young son educated according to his own habits.

Adeimantus:: I suppose it.

Socrates:: And suppose, too, that the same happens to him as to his father;—that he is drawn into all lawlessness, which his seducers call all freedom; and that his father and his domestics are aiding those intermediate desires;—and that others also lend their assistance when these clever conjurers and tyrant-makers have no hopes of otherwise keeping youth in their power, and so contrive to excite in him a certain love which is to preside over the passive desires, which distribute what may be at hand to all the rest,—a certain large-winged drone;—or what else think you, is that kind of love?

Adeimantus:: For my part, I think, it is no other than this.

Socrates:: Well,—when the rest of the desires buzz about him, full of their odors and perfumes, and crowns and wines, and the dissolute pleasures belonging to such associations,—and at last by their increase and nurture, add to the drone a sting of desire, then truly he is sentinelled by madness as a life-guard, and this president of the soul becomes frenzied; and even should he find in himself any opinions or desires which are deemed good and modest, he kills them and pushes them from him, till he has ridded himself of temperance and has become brimful of madness.

Adeimantus:: You perfectly describe, the formation of a tyrannical man.

Socrates:: Is it not for some such reason as this, that love has of old been said to be a tyrant?

Adeimantus:: It seems so.

Socrates:: Well, my friend, and is not a drunken man likewise somewhat of a tyrannical spirit?

Adeimantus:: He is indeed.

Socrates:: And besides that, he that is mad and disturbed in his mind, undertakes and hopes to be able to govern not only men, but the gods as well.

Adeimantus:: Entirely so.

Socrates:: The tyrannical- character then, happy man! becomes so in full perfection, when either by temper or pursuits, or both, he becomes drunken and given up to love and melancholy.

Adeimantus:: Perfectly so, indeed.

Socrates:: Such an one, it seems, then, is thus engendered,—but how does he pass his life?

Adeimantus:: Just as they say in their games;—“this you shall tell me too.

Socrates:: I will tell you then;—for I think, that in the next place, they have feastings and reveling and banqueting and mistresses, and all such things as may be expected among those with whom dwells the tyrant love, and governing all in the soul.

Adeimantus:: Necessarily so.

Socrates:: Will there not then, each day and night, blossom forth numerous fierce desires, eagerly in want of many things?

Adeimantus:: Many indeed.

Socrates:: And if they get any supplies of their wishes, these are soon spent?

Adeimantus:: Of course.

Socrates:: And after this there are borrowings and forfeitures of property?

Adeimantus:: Of course.

Socrates:: And when everything fails them, must it not follow, that while the numerous and powerful desires nestled in the mind, will on the one hand raise a clamor, the men, on the other hand, who are driven and goaded by the rest of the passions, but especially by love itself, which commands all the others as its life-guards, will rage with frenzy, and seek after people's property, to see if they can plunder it either by fraud or violence?

Adeimantus:: Quite so.

Socrates:: Of necessity, then, they must either plunder from all quarters, or else be hampered with great pain and anguish.

Adeimantus:: Necessarily so.

Socrates:: And as in such a man his new pleasures are greater than those he had before, and depreciate the value of the others, will he not similarly deem it right for himself, however young, to have more than his father and mother, and to take away from them, when he has spent his own portion, applying to his own use what belongs to his parents?

Adeimantus:: Of course he will.

Socrates:: And if they will not give it up to him, will he not at first try to pilfer or defraud his parents?

Adeimantus:: By all means.

Socrates:: And should he be unable to do this, he will next use rapine and violence?

Adeimantus:: I think so.

Socrates:: But supposing, my fine fellow, that the old man and woman fall out and fight, will he not be very cautious and wary of doing what is tyrannical?

Adeimantus:: I, for my part, am not quite sure about the safety of such a person's parents.

Socrates:: But by Zeus, Adimantus, think you, that for the sake of a newly beloved and unnecessary mistress, such a person would abandon his long loved and closely connected mother; or for the sake of a youth newly loved and with whom he has no ties, give up to stripes his withered but time-honored father, and the most ancient of all his friends, suffering them to be the slaves of these others, by bringing them into the same house?

Adeimantus:: Yes, by Zeus, I do.

Socrates:: It seems indeed, a vastly blessed thing to be the father of a tyrannical son! Not at all so. But what, when the father and mother's riches are beginning to fail such an one, and when the great swarm of pleasures has been already collected within him, will he not be the first to scale the wall of some house, or strip some one of his coat late at night, and after that rifle some temple?—And in all these acts, as respects the opinions which he formerly held from boyhood, and which guided his decisions concerning good and evil, the passions, that are newly loosed from slavery and placed as the body-guards of Love, will prevail therewith;—and these indeed had only just been loosed from their dreamy sleep, when he was himself still under the law and governed by his father, as under a democracy:—yet afterwards, when tyrannized over by love, such as he rarely was when in his dreams, he will ever be when awake, nor will he abstain from slaughter, however horrid, or food, or any deed whatever:—but that tyrant love within him, living without restraint of law or government, as if it were sole monarch, will lead on the man it possesses, as it would a state, to every act of madness, whereby he can support himself and the mob of passions about him, which partly entering from without, through evil company, and partly through the manners of the man and his associates, have been unchained and set at liberty: now is not this the life of such an one?

Adeimantus:: It is this truly.

Socrates:: And if, there be, only a few such in the state, and the rest of the people are sober, they go out and serve as guards to other tyrants, or assist them for hire in case of war: but remain at home during peace and quiet, giving rise in the state to a great many minor evils.

Adeimantus:: What mean you?

Socrates:: Such as these: they steal, break open houses, cut purses, strip people of their clothes, rifle temples, make people slaves, and, where they can speak, sometimes turn false informers, give false testimony, and take bribes.

Adeimantus:: These then you call minor mischiefs,—if there be but a few such persons.

Socrates:: What is small, is small in comparison to the great; and all these things with regard to the tyrant, when compared with the wickedness and misery of the state, do not, as the saying is, come near the mark; for when the state has many such, and others for their companions, and when they perceive their own number, then these are the persons who, led by the people's folly, elevate to the tyranny the man among them who has within his soul most of the tyrant, and in the greatest strength.

Adeimantus:: Probably so, indeed; for he will be most suited for a tyrant.

Socrates:: Of course, if they voluntarily submit to him:—but if the state will not allow him to use the violence towards them, with which he formerly treated his father and mother, so he will now again, if he can, chastise his country by bringing in his youthful associates, and enslaving under them, as the Cretans say, his once dear mother-land and fatherland:—and this will of course be the issue of such a man's desire.

Adeimantus:: Entirely so.

Socrates:: Do not these then behave thus in private life;—even before becoming rulers; first with the company they keep, either associating with their own flatterers and those who are ready to supply their every want; or if they ask one for anything, falling down as suppliants, and deigning to assume the disguise of friends; but after they have gained their own purposes, acting as foes?

Adeimantus:: Quite so.

Socrates:: Throughout life then they live as real friends to no one whatever, but always either as masters or slaves to another;—because for liberty and true friendship the tyrant's nature has no relish whatever.

Adeimantus:: Quite so.

Socrates:: May we not rightly call these men faithless?

Adeimantus:: Of course.

Socrates:: And as unjust, moreover, as they possibly can be, if indeed we, in what we said before were rightly agreed as to the nature of justice?

Adeimantus:: Aye, we were quite right.

Socrates:: Let us then give a summary account, of this worst man of ours; he is the same kind of person, awake perhaps, whom we just described as asleep.

Adeimantus:: Entirely so.

Socrates:: And does not that man become such, who with a tyrannical nature holds the sovereign sway, and the longer he lives in tyrant-life become so more and more?

Glaucon:: Necessarily so.

Socrates:: And will not the man, who appears the most wicked, appear likewise the most wretched; and will not he who holds the tyranny longest and exercises it most, be really such in the greatest measure and for the longest time?—but many as are men, so many are their minds.

Glaucon:: Of necessity, these things must be so.

Socrates:: And would not the tyrant man, as closely resemble a state under tyranny, at the democratic man resembles the state under democracy, and so likewise as respects the others?

Glaucon:: Of course.

Socrates:: As state then is to state with regard to virtue and happiness, so surely will man be to man likewise?

Glaucon:: Of course.

Socrates:: What then is the state governed by a tyrant as compared with one under a kingly government,—such as we first described?

Glaucon:: The exact contrary; for the one is best, and the other the worst.

Socrates:: I will not ask, which you mean, for that is plain; but do you judge is it thus or otherwise, that you judge of their happiness and misery?—and let us not be struck with admiration when considering the tyrant himself, or the few about him; but let us, as we ought, enter into the whole state, and declare our opinion, after going through and viewing every part.

Glaucon:: You propose what is right:—and it is clear to all that no state is more wretched than one under tyranny, and none more happy than that under regal power.

Glaucon:: Well then, in proposing these same things with respect to individual men, should I rightly propose, if I accounted that man a suitable judge of them, who can by intellectual power penetrate into and inspect a man's disposition, and is not, as a child looking at exteriors, astounded by the pomp, which tyrants exhibit to those without, but has the power of looking properly through him? If then I thought that we should all listen to the man, who from having dwelt with him in the same house, and been joined in his family transactions, is able to judge how he behaves to each of his domestics, in which most especially a man appears stripped of his actors finery, and so also in public dangers; and if when he has observed all this, I were to bid him declare how the tyrant stands, as regards happiness and misery, in comparison with others.

Glaucon:: You would be quite right in proposing this.

Socrates:: Are you willing then, that we should set up to be of the number of those who are able to judge, and who have already fallen in with such characters, so that we may have some one to answer our questions?

Glaucon:: By all means.

Socrates:: Come then, thus consider it:—call to mind the mutual resemblance of the state and individual man; and thus, considering each by turns, describe to us the passions of each.

Glaucon:: What passions?

Socrates:: To begin first, with the state;—do you call the one under tyranny, free or enslaved?

Glaucon:: Enslaved, in the greatest degree possible.

Socrates:: And moreover, you see in it some who are masters and freemen?

Glaucon:: I see some indeed, but exceedingly few:—but the greatest and best part therein generally is shamefully and wretchedly enslaved.

Socrates:: If then, the individual man resembles the state, will he not necessarily be placed under like circumstances, and his soul be filled with slavery and illiberality, and those parts of it too be enslaved which were the most noble, and that small part of it too assume the mastery, which is the most wicked and insane of all?

Glaucon:: Quite so.

Socrates:: What then,—will you say, that such a soul is slavish or free?

Glaucon:: Slavish perhaps, I say.

Socrates:: But is not the state that is slavish, and governed by tyranny, least of all able to do what it likes?

Glaucon:: Aye,—quite so.

Socrates:: And speaking of a soul generally, will it not, when governed by tyranny, least of all do what it likes,—but being constantly hurried by some stinging passion, be full of tumult and inconstancy?

Glaucon:: Of course it must be so.

Socrates:: But will the state governed by tyranny be necessarily rich or poor?

Glaucon:: Poor.

Socrates:: And must a soul under a tyranny then be ever penurious and insatiable?

Glaucon:: Just so.

Socrates:: But what,—must not such a state and such an individual be necessarily full of fear?

Glaucon:: It must be so.

Socrates:: As for lamentations, and groans, and weepings, and torments, think you that you would find more in any other kind of state?

Glaucon:: By no means.

Socrates:: And in a man, think you that such things exist in any one to a greater extent than in this tyrannical one who is maddened by his desires and lusts?

Glaucon:: How can they?

Socrates:: It is with reference, I suppose, then to all these, and other such like things, that you have deemed this the most wretched of all states?

Glaucon:: Was I not right then in doing so?

Socrates:: Certainly. But what say you again as respects the tyrannical man, with regard to these same things?

Glaucon:: That he is by far, the most wretched of all in the world.

Socrates:: This, you are not quite correct in saying.

Glaucon:: How?

Socrates:: He is not as yet, methinks, as unhappy as he can be.

Glaucon:: But who is so?

Socrates:: The following person probably you will deem even yet more miserable than the other.

Glaucon:: Which?

Socrates:: That man, who being naturally tyrannical, remains not in private life, but is unfortunate enough to be induced by his destiny to become a tyrant.

Glaucon:: From what has been formerly observed, I presume that what you say is true.

Socrates:: Yes;—but we ought not merely to conjecture about matters so important as these, but to sift them to the bottom, in the way we are now about to do; for most momentous is the inquiry about a good life and a bad one.

Glaucon:: Quite right.

Socrates:: Consider, then, whether there be anything in what I say; for, in considering this question, it is my opinion that we ought to perceive it from what follows.

Glaucon:: From what?

Socrates:: From every individual private man, among such as are rich, and possess many slaves; for these have at least this resemblance to tyrants, that they rule over many,—the difference being in the multitude of the latter.

Glaucon:: Aye,—there is some difference.

Socrates:: Are you sure then that these live securely, without dread of their domestics?

Glaucon:: Aye,—for what should they fear?

Socrates:: Nothing; but do you understand the reason?

Glaucon:: Yes;—because the whole state assists each particular individual.

Socrates:: You say right:—but what,—if one of the gods were to take a man who had fifty slaves or upwards out of the state,—both himself, his wife, and children,—and set them down in a desert with the rest of his property, and his domestics, where no freemen would be likely to lend him aid,—what kind of fear, think you, he would entertain about himself, his children, and his wife, of being destroyed by the domestics?

Glaucon:: The greatest possible, methinks.

Socrates:: Would he not be obliged to flatter some of his very slaves and make them many promises, and set them at liberty without need, and so appear to be himself the flatterer of servants?

Glaucon:: He must of course be compelled to do so, or else be destroyed.

Socrates:: But what;—if the god were to place round him many other neighbors who could not endure for any one to pretend to lord it over another,—and, wherever they find such an one, punished him with extreme rigor?

Glaucon:: Methinks, he would be still more distressed, when thus beset by a whole host of foes.

Socrates:: And is not the tyrant bound in such a prison-house, if he be of such disposition as we have described,—full of many and all kinds of aversions and desires; and whilst he is most eager in his soul, he alone of all in the state is not allowed to go abroad, or to see what others love to see, but huddles himself at home, and lives mostly as a woman, envying the other citizens, whenever they travel abroad, and see what is good?

Glaucon:: Wholly so, of course.

Socrates:: Well, then, through such evils as these, does not the man reap still more, who, being ill-governed within himself, a person whom you just now deemed to be the most of all wretched, remains not in private station, but through some fortune or other is obliged to act the tyrant, and, though unable to control himself, attempts to govern others, as if with a body diseased, and unable to support itself, one were compelled to live not in a state of privacy, but in wrestling and fighting against other bodies?

Glaucon:: What you say, Socrates, is altogether most probable and true.

Socrates:: Is not this condition, then, dear Glaucon, altogether wretched; and does not the tyrant live more wretchedly even than the man that you conceive to live the most wretchedly of all?

Glaucon:: Quite so.

Socrates:: True is it, then, though one may fancy otherwise, that the really tyrannical man is really a slave to the greatest flatteries and slaveries, and a flatterer of the most abandoned men; and without ever in the smallest degree satisfying his desires, he is of all men most in want of most things, and poor indeed, if one could but look into his whole soul, and full of fear throughout life, filled with terrors and griefs,—if, indeed, he resembles the constitution of the state he rules:—and he does resemble it; does he not?

Glaucon:: Extremely.

Socrates:: And in addition to this, shall we not ascribe also to the tyrant-man what we formerly mentioned that he must necessarily be, and by governing become increasingly, envious, faithless, unjust, unfriendly, impious,—the entertainer and encourager of all vice; and from all these causes be specially happy himself, and render all about him happy likewise?

Glaucon:: No one of understanding will, contradict you.

Socrates:: Come, then, as a judge who is examining the whole case; so tell me,—who, in your opinion, is first in happiness, and who second, and the rest in order, five in all; namely, the regal, the timocratic, the oligarchical, the democratic, and the tyrannic.

Glaucon:: Easy, indeed, is this decision:—for as they came before us, I have judged of them as public actors, by their virtue and vice,—happiness and its contrary.

Socrates:: Shall we then hire ourselves a herald? or shall I myself declare, that the son of Ariston has judged the best and justest man to be the happiest, and that this is the man who is fittest to be as king, and as king too over himself; and that the worst and the most unjust is the most wretched; and that he is the most tyrannical, who in the greatest degree tyrannizes over himself and the state?

Glaucon:: So let it be pronounced by you.

Socrates:: Must I, then, state in addition, whether they be unknown to be such or not, to all men, and the gods too?

Glaucon:: Pray do so.

Socrates:: Well then;—this would seem to be one of our proofs; and this, if you please, must be the second.

Glaucon:: Which is this?

Socrates:: Since the soul, of every individual is divided into three parts, just as we divided our state, it will, in my opinion, admit of a second illustration.

Glaucon:: What is that?

Socrates:: It is this:—of the parts of the soul there appear to me to be three pleasures, one peculiar to each, with desires and governments in like manner.

Glaucon:: How say you?

Socrates:: One part we say, by which a man learns, another by which he is roused to spirit; but as for the third, it is so multiform, that we cannot express it by any one word peculiar to itself, but have named it from the greatest and most impetuous part thereof; calling it the desiderative, from the impetuosity of the desires for eating and drinking, and sexual pleasures, and such-like enjoyments, and calling it money-loving also, as it is through wealth most especially that such desires are accomplished.

Glaucon:: And we said rightly.

Socrates:: Well, then, if we are to call it the pleasure and delight in gain, shall we not do best to reduce it under one head in our discourse, so that we may have something quite clear to ourselves, when we are speaking of this part of the soul? And in calling it money-loving, and profit-loving, shall we not be giving it its proper term?

Glaucon:: Yes, I think so.

Socrates:: But what; do not we say, that the spirited principle ought to be wholly impelled to superiority, victory, and applause?

Glaucon:: Especially so.

Socrates:: If, then, we term it the contentious and ambitious, shall we not accurately express it?

Glaucon:: Most accurately.

Socrates:: But as regards that part of the soul by which we gain knowledge, it is clear to every one, that it is wholly intent on always knowing the truth, wherever it may be; and as to wealth and glory, least of all does it care for these.

Glaucon:: Just so.

Socrates:: By terming it, then, the love of learning, and philosophy, we shall be defining it correctly?

Glaucon:: Of course.

Socrates:: And in these people’s souls, one governs in some, and the other in others, as it happens?

Glaucon:: Just so.

Socrates:: This was why we said then, that of men also there were three original species; the philosophic, the ambitious, and the avaricious?

Glaucon:: Surely so.

Socrates:: And likewise three species of pleasures,—corresponding to each of the others?

Glaucon:: Yes, certainly.

Socrates:: You know, then, that if you were to ask these three men, by turns, which of these lives is the pleasantest, each would most commend his own; and the money-maker would say, that, compared with the pleasures of acquiring wealth, those arising from honor, or learning, are of no value, unless they bring in money?

Glaucon:: True.

Socrates:: And what says the ambitious man? does not he deem the pleasure arising from moneymaking a sort of burden;—and again, that which arises from learning, unless it bring him honor, mere smoke and trifling?

Glaucon:: So it is.

Socrates:: And as for the philosopher, we may suppose that he deems all other pleasures in comparison with that of knowing the nature of truth as a mere nothing, and that, while constantly employed in learning something of this kind, he is not far off from pleasure,—and calls them really necessary, because he wanted none else, except when compelled by necessity.

Glaucon:: This, you should well know.

Socrates:: When these several lives then, and the pleasures peculiar to each, are at variance with each other, not with reference to a mode of life, worthier or more base, worse or better,—but merely with reference to living more pleasantly or painfully;—how can we know which of the two speaks most in accordance with truth?

Glaucon:: I am not, quite able to tell.

Socrates:: But consider it thus:—by what criterion ought we to judge about matters rightly presented for our judgment;—is it not by experience, prudence, and reason,—or can we find any better criterion than these?

Glaucon:: How can we?

Socrates:: Consider now;—of the three men, who is the most experienced in all the pleasures?—Think you that the money-loving man, by learning the real nature of truth, gains more experience in the pleasure arising from knowledge, than the philosopher has in that resulting from the acquisition of wealth?

Glaucon:: There is a great difference: for the philosopher must necessarily from early childhood taste the other pleasures; but what it is to know real beings, and how sweet is its pleasure, the money-getting man need not taste, or become experienced therein;—nay, indeed, it is no easy matter, even should he earnestly try to accomplish it.

Socrates:: The philosopher then, far surpasses the money-getting man, at least in experience of both the pleasures.

Glaucon:: Far indeed.

Socrates:: But what as regards the ambitious man—has he any more experience in the pleasure arising from honor, than the philosopher in that which arises from the exercise of intellect?

Glaucon:: Honor, indeed, attends them all, if each obtains his object: for the rich man is honored by many, and so is the brave, and the wise; so all of them have experience, as to the kind of pleasure attending honor, but in the contemplation of being itself, as to the pleasure which it gives, it is impossible for any other than the philosopher to have tasted it.

Socrates:: On the ground of experience then, he of all men is the best judge.

Glaucon:: By far.

Socrates:: And surely, including prudence also, he alone has experience.

Glaucon:: Of course.

Socrates:: But the organ, by which these pleasures must be judged, is not the organ of the money-getter, nor of the ambitious man, but of the philosopher.

Glaucon:: Which is that?

Socrates:: We said somewhere, that they must be judged of by reason,—did we not?

Glaucon:: Yes.

Socrates:: But reasoning is chiefly the organ of the philosopher?

Glaucon:: Of course it is.

Socrates:: If then the things to be determined could be best determined by riches and gain, what the money-getting man commended, or despised, would necessarily be most agreeable to truth?

Glaucon:: Quite so.

Socrates:: And if by honor, victory, and courage,—must it not be as the ambitious and contentious man determined?

Glaucon:: It is evident.

Socrates:: But since it is by experience, prudence, and reason, it follows of course, that what is praised by the philosopher and the lover of reason must be the most true.—Of the three pleasures, then, that which belongs to that part of the soul by which we learn most is the most pleasant, and that man in whom this part of us holds the chief sway lives the pleasantest life.

Glaucon:: How can it be doubted?—for the wise man, who has the supreme right to commend, commends his own life.

Socrates:: But which life, does our judge pronounce the second, and which the second pleasure?

Glaucon:: Plainly, that of the warlike and ambitious man; for this is nearer to his own than that of the money-getter.

Socrates:: And that of the covetous, as it appears, is last of all?

Glaucon:: Of course.

Socrates:: These things then will succeed one another in order; and the just man will twice prevail over the unjust:—the third victory now, as at the Olympic games, is sacred to Olympian Zeus, the Savior; for you must consider, that, with the exception of that of the wise man, the pleasure of the others is by no means genuine nor pure, but somehow shadowed over, as I think I have myself heard from one of the wise men:—and this truly would be the greatest and most complete downfall.

Glaucon:: Extremely so;—but how mean you?

Socrates:: I will thus trace it out, whilst in searching you answer my questions.

Glaucon:: Ask then.

Socrates:: Tell me then, do we not say that pain is contrary to pleasure?

Glaucon:: Quite so.

Socrates:: And do we not say likewise, that to feel neither pleasure nor pain is something?

Glaucon:: We say it is.

Socrates:: And that the state between both of these is a certain tranquility of the soul with reference to them;—do you not so understand it?

Glaucon:: Just so.

Socrates:: Do you not remember, the speeches of the diseased, which they utter when they are sick?

Glaucon:: What are they?

Socrates:: That nothing is sweeter than health, but that it escaped their notice before they became sick, that it was the sweetest.

Glaucon:: I remember it.

Socrates:: And are you not wont to hear those who are under acute pain say, that there is nothing sweeter than a cessation from pain?

Glaucon:: I do hear them.

Socrates:: And you may perceive the same thing in men, I think, when they are in other but similar circumstances, where, if in pain, they extol a freedom from pain and the tranquility of such a state, as being most sweet, though they do not extol that of feeling joy.

Glaucon:: Because perhaps the latter, becomes at that time sweet and desirable,—namely, tranquility.

Socrates:: And when any one ceases, from feeling joy, the tranquility of pleasure will be painful.

Glaucon:: Perhaps so.

Socrates:: This tranquility, then, which we just now said was between the two, will at times become both pain and pleasure.

Glaucon:: It seems so.

Socrates:: What,—is it possible, that what is neither of the two should become both?

Glaucon:: I do not think so.

Socrates:: And moreover, when what is pleasant or painful is in the soul, both sensations are a certain excitement; are they not?

Glaucon:: Yes.

Socrates:: But did not that which is neither painful nor pleasant appear just now to be tranquility, and between these two?

Glaucon:: It did appear so.

Socrates:: How is it right, then, to deem it sweet not to be in pain, or painful not to enjoy pleasure?

Glaucon:: It is by no means right.

Socrates:: In these cases, then, tranquility is not really so; but it appears pleasant by comparison with the painful, and painful compared with the pleasant; and there is nothing genuine in these appearances as regards the truth of pleasure, but a certain magical delusion.

Glaucon:: Aye,—just as our argument proves.

Socrates:: Consider the pleasures then, which do not arise from the cessation of pain, so as not frequently during our discussion to hold the frequent notion that these two naturally thus subsist; viz., that pleasure is the cessation of pain, and pain the cessation of pleasure.

Glaucon:: How, and to what pleasures do you allude?

Socrates:: There are many others, particularly if you wish to consider the pleasures that arise from smell; for these, without any preceding pain, are on a sudden immensely great, and, when they cease, they leave no pain behind them.

Glaucon:: Most true.

Socrates:: Let us not then be persuaded that pure pleasure is the removal of pain, or pain the removal of pleasure.

Glaucon:: No, we will not.

Socrates:: But yet, those which extend through the body to the soul, and which are called pleasures, the greatest part of them almost, and the most considerable, are of this species,—certain cessations from pain?

Glaucon:: They are so.

Socrates:: And are not the preconceptions of pleasure and pain, which arise in the mind from their expectation, of the same kind?

Glaucon:: Of the same.

Socrates:: Do you know then, of what class they are, and what they chiefly resemble?

Glaucon:: What?

Socrates:: Do you conceive, there is any such thing in nature as this, the above, the below, and the middle?

Glaucon:: I do.

Socrates:: Do you think then that any one, when brought from the below to the middle, imagines anything else than that he is brought to the above; and when he stands in the middle, and looks down whence he was brought, will he imagine that he is anywhere else than above, whilst yet he has not seen the true above?

Glaucon:: By Zeus, I do not think that such an one will imagine otherwise.

Socrates:: But if he should again, be carried to the below, he would conjecture he was carried to the below, and conjecture rightly?

Glaucon:: He would of course.

Socrates:: Would he not be thus affected from his want of experience in what is really above, and in the middle, and below?

Glaucon:: Plainly so.

Socrates:: Would you wonder then, that while men are inexperienced in the truth, they have unsound opinions about many other things,—and that as to pleasure and pain, and what is between these, they are likewise affected in the same manner; so that, even when they are brought to what is painful, they conceive truly, and are really pained; but when from pain they are brought to the middle, they strongly imagine that they have arrived at the highest pitch of pleasure, in the same manner as those, who along with the black color look at the gray, through inexperience of the white, and so are deceived? and just so those who consider pain along with the freedom from pain, are deceived through inexperience of pleasure.

Glaucon:: By Zeus, I should not wonder, but much rather if it were not so.

Socrates:: Consider the matter thus; are not hunger and thirst, and such-like things, certain emptinesses in the bodily habit?

Glaucon:: Of course.

Socrates:: And are not ignorance and folly an emptiness in the habit of the soul?

Glaucon:: Quite so.

Socrates:: And is not the one filled when it receives food, and the other when it acquires intelligence?

Glaucon:: Surely.

Socrates:: But which is the more real repletion, that of the less, or the more truly real being?

Glaucon:: It is plain, that of the more real.

Socrates:: Which species, then, do you think, participate most of a purer essence; those which partake of bread and drink, and meat, and all such sort of nourishment; or that species which partakes of true opinion and science, and intelligence, and, in short, of all virtue?—And judge of it thus:—That which is connected with what is always similar, and immortal, and true, and is so of itself, and arises in what is of the same character, think you that it has more of the reality of being, than what is connected to what is never similar and mortal, and is such itself, and is generated in a thing of the same character?

Glaucon:: Aye, this differs greatly from that which is always similar.

Socrates:: Does then the essence of that which is always similar participate more of essence than of science?

Glaucon:: By no means.

Socrates:: But what as regards truth?

Glaucon:: Nor of this neither.

Socrates:: If it participate less of truth, does it not likewise do so of essence?

Glaucon:: Of necessity.

Socrates:: In short, then, do not those species which relate to the care of the body partake less of truth and essence, than those relating to the care of the soul?

Glaucon:: By far.

Socrates:: And the body likewise less than the soul; do you not think so?

Glaucon:: I do.

Socrates:: Is not that which is filled with more real beings, and is itself a more real being, in reality more truly filled than that which is filled with less real beings, and is itself a less real being?

Glaucon:: Of course it is.

Socrates:: If then it be pleasant to be filled with what is suitable to nature, that which is in reality filled, and with more real being, must be made both more really and more truly to enjoy true pleasure; but that which participates of less real being, must be less truly and solidly filled, and participates of a more uncertain and less genuine pleasure.

Glaucon:: Most necessarily.

Socrates:: Such then as are unacquainted with wisdom and virtue, and are always conversant in feastings and things of that kind, are carried, as it appears, to the below, and back again to the middle;—and there they wander during life:—but as they never pass beyond this, they do not look towards the true above, and are not carried to it; nor are they ever really filled with real being; nor have they ever tasted solid and pure pleasure; but, after the manner of brutes looking always downwards, bowed towards earth and their tables, they live feeding and coupling; and from a lust for such things, they kick and push at one another as with iron horns and hoofs, and perish through their own in satiety, just like those who are filling with unreal being that which is no real being, nor friendly to themselves.

Glaucon:: You are describing, Socrates, with quite oracular perfection what is the life of the multitude.

Socrates:: Must they not then, of necessity be conversant with pleasures mixed with pains, images of the true pleasure, shadowed in outline, and colored by their position beside each other; so that both their pleasures and pains will appear vehement, and engender their mad passions in the foolish? Hence also they must fight about these things, as Stesichorus says those at Troy fought about the image of Helen, through ignorance of the true one.

Glaucon:: Of necessity, something of this kind must take place.

Socrates:: But what? must not the same things necessarily happen to the irascible part of the soul, whenever any one gratifies it, either through envy from ambition, or violence from contentiousness, or anger from moroseness, pursuing a glut of honor, of conquest, and of anger, both without reason, and without intelligence?

Glaucon:: Such things as these, must necessarily happen with relation to this part of the soul.

Socrates:: What then;—can we confidently say concerning all the pleasures, both as respects the avaricious and the ambitious part, that such of them as obey science and reason, and, in conjunction therewith, pursue and obtain the pleasures of which the prudent part of the soul is the leader, that these will obtain the truest pleasures, as far as it is possible for them to attain true pleasure, and in as much as they follow truth, pleasures properly their own; if indeed what is best for each be most properly his own?

Glaucon:: Aye, it surely is most properly his own.

Socrates:: When then the whole soul is obedient to the philosophic part, and there is no sedition in it, then every part in other respects performs its proper business, and is just, and also reaps its own pleasures, and such as are the best, and as far as is possible the most genuine.

Glaucon:: Certainly, indeed.

Socrates:: But when any of the others governs, it happens that it neither attains its own pleasures, and it compels the other parts to pursue a pleasure foreign to them, and not at all genuine.

Glaucon:: It does so.

Socrates:: Will not then those parts, which are most remote from philosophy and reason most especially effect such things?

Glaucon:: Very much so.

Socrates:: And is not that which is most remote from law and order, most remote likewise from reason?

Glaucon:: It plainly is.

Socrates:: And have not the amorous and the tyrannical desires appeared to be most remote from law and order?

Glaucon:: Extremely so.

Socrates:: And the royal and the moderate ones, the least remote?

Glaucon:: Yes.

Socrates:: The tyrant then, I think, will be the most remote from true pleasure, and such as is most properly his own, and the other will be the least.

Glaucon:: Of necessity.

Socrates:: And the tyrant, will lead a life the most unpleasant, and the king the most pleasant.

Glaucon:: Of great necessity.

Socrates:: Do you know then, how much more unpleasant a life the tyrant leads than the king?

Glaucon:: If you tell me.

Socrates:: As there are three pleasures, as it seems, one legitimate, and two illegitimate; the tyrant in carrying the illegitimate to extremity, and flying from law and reason, dwells with slavish pleasures as his life-guardians, and how far he is inferior cannot easily be told, unless it be done in this manner.

Glaucon:: How?

Socrates:: The tyrant is somehow in the third degree remote from the oligarchic character; for the democratic was halfway between them.

Glaucon:: Yes.

Socrates:: Will he not then dwell in the third picture of pleasure, distant from him as regards truth, if our former reasonings be true?

Glaucon:: Just so.

Socrates:: But the oligarchic is the third again from the royal, if we suppose the aristocratic and the royal the same?

Glaucon:: He is the third.

Socrates:: The tyrant then, is remote from true pleasure, the third from the third?

Glaucon:: So it seems.

Socrates:: A plain surface then, may be the image of tyrannical pleasure, as to the computation of length.

Glaucon:: Certainly.

Socrates:: But as to power, and the third augment, it is manifest by how great a distance it is remote.

Glaucon:: It is manifest, to the computer at least.

Socrates:: If now, conversely, any one shall say the king is distant from the tyrant as to truth of pleasure, as much as is the distance 9, and 20, and 700, shall he not, on completing the multiplication, find him leading the more pleasant life, and the tyrant the more wretched one, by this same distance?

Glaucon:: You have heaped up, a prodigious account of the difference between these two men, the just and the unjust, with reference to pleasure and pain.

Socrates:: Yet the numbers are true, and corresponding to their lives, if indeed days, and nights, and months, and years, correspond to them.

Glaucon:: But they do correspond.

Socrates:: If then the good and just man surpasses so far the evil and unjust man in pleasure, in what a prodigious degree further shall he surpass him in decorum of life, in beauty, and in virtue!

Glaucon:: Prodigious, indeed, by Zeus.

Socrates:: Well then, since we have reached this part of our argument, let us recapitulate what we first said, on account of which we came hither: now it was said, if I mistake not, that it is advantageous to one who is thoroughly unjust, but who has the character of being just, to commit injustice. Was it not so said?

Glaucon:: It was indeed.

Socrates:: Now then, let us settle this point, since we have now settled the other, with reference to acting justly and unjustly, what power each of these possesses in itself.

Glaucon:: How?

Socrates:: Let us ideally fashion an image of the soul, that the man who said those things may know what he said.

Glaucon:: What kind of image?

Socrates:: One of those creatures, which are fabled to have been of old, as that of Chimæra, of Scylla, of Cerberus; and many others are Spoken of, where many particular natures existed together in one.

Glaucon:: They are spoken of indeed.

Socrates:: Let us form now the figure of a creature, various, and many-headed, having all around heads of tame creatures, and of wild, and having power in itself of changing all these heads, and of breeding them out of itself.

Glaucon:: This is the work, of a skilful modeler: however, as the formation is easier in reasoning, than in wax and such-like, let it be formed.

Socrates:: Let there be now one other figure of a lion and one of a man; but let the first be by far the greatest, and the second be the second in bulk.

Glaucon:: These are easy, and they are formed.

Socrates:: Unite now these three in one, so that they may somehow coexist.

Glaucon:: They are united.

Socrates:: Form now around them the external appearance of one of them, that of the man; so that to one who is not able to see what is within, but who perceives only the external covering, the man may appear one creature.

Glaucon:: It is formed all round.

Socrates:: Let us now tell him who asserts that it is profitable to this man to do injustice, but to do justice unprofitable, that he asserts nothing else, than that it is profitable for him to feast the multiform creature, and to make it strong; and likewise the lion, and what respects the lion, whilst the man he kills with famine, and renders weak, so as to be dragged whichever way either of those drag him; and that he will also find it advantageous never to accustom the one to live in harmony with the other, nor to make them friends, but suffer them to bite one another, and to fight and devour each other.

Glaucon:: He, who commends the doing injustice, undoubtedly asserts these things.

Socrates:: And does not he again, who says it is advantageous to act justly, say that he ought to do and to say such things by which the inner man shall come to have the most entire command of the man, and, as a tiller of the ground, shall take care of the many-headed creature, cherishing the mild ones, and nourishing them, and hindering the wild ones from growing up, taking the nature of the lion as his ally, and, having a common care for all, make them friendly to one another, and to himself, and so nourish them?

Glaucon:: He who commends justice undoubtedly says such things as these.

Socrates:: In all respects, then, he who commends justice would seem to speak the truth, but he who commends injustice, to speak what is false; for, as respects pleasure, applause, and profit, he who commends justice speaks the truth, and he who discommends it speaks nothing genuine; nor does he discommend with understanding what he discommends.

Glaucon:: Not at all, as appears to me at least.

Socrates:: Let us then in a mild manner persuade him for it is not willingly he errs, asking him, O blessed man! do not we say that the maxims of things beautiful and base become so upon such accounts as these? Those are good which make the brutal part of our nature most subject to the man, or rather perhaps to that which is divine; while those are evil which enslave the mild part of our nature to the brutal will he agree with us,—or how?

Glaucon:: He will, if he be advised by me.

Socrates:: Is there then any one, whom it avails, from this reasoning, to take gold unjustly, supposing some thing of this kind to happen, if, while taking the money, he at the same time subjects the best part of himself to the worst? Or, if, taking gold, he should enslave a son or daughter, and that even to savage and wicked men, shall we not say this would not avail him, not though he should receive for it a prodigious sum? But if he enslaves the most divine part of himself to the most impious and most polluted part, without any pity, is he not wretched? and does he not take a gift of gold to his far more dreadful ruin, than Eriphyle did when she received the necklace for her husband's life?

Glaucon:: By far: for I will answer you for him.

Socrates:: Do you not, then, think that intemperance has of old been blamed on these accounts, because in such persons that terrible, great, and multiform beast was indulged more than was decent?

Glaucon:: Plainly so.

Socrates:: And are not arrogance and moroseness blamed, when the lion-like and serpentine disposition increases and stretches beyond measure?

Glaucon:: Certainly.

Socrates:: And are not luxury and effeminacy blamed because of the remissness and looseness of this disposition, when it engenders cowardice in the man?

Glaucon:: What else?

Socrates:: Are not flattery and illiberality blamed, when any one makes this irascible part itself subject to the brutal crew, and, for the sake of wealth and its insatiable lust, accustoms the irascible to be affronted from its youth, and instead of a lion to become an ape?

Glaucon:: Entirely so.

Socrates:: But why is it, do you think, that mechanical arts and handicrafts bring disgrace? Shall we say it is on any other account than this, that when a man has the form of that which is best in his soul naturally weak, so as not to be able to govern the creatures within himself, but ministers to them, he is able only to learn what flatters them?

Glaucon:: It is likely.

Socrates:: In order then that such an one may be governed in the same manner as the best man is, do we not say that he must be the servant of one who is the best, and who has within him the divine governing principle? not at all conceiving that he should be governed to the hurt of the subject as Thrasymachus imagined, but, as it is best for every one to be governed, by one divine and wise, most especially possessing it as his own within him, if not subjecting himself to it externally; that as far as possible we may all resemble one another and be friends, governed by one and the same?

Glaucon:: Rightly, indeed.

Socrates:: And law at least, plainly shows it intends such a thing, being an ally to all in the city; as does likewise the government of children, in not allowing them to be free till we establish in them a proper government, as in a city; and having cultivated that in them which is best, by that which is best in ourselves, we establish a similar guardian and governor for youth, and then at Length we set it free.

Glaucon:: It shows it indeed.

Socrates:: In what way then shall we say, Glaucon, and according to what reasoning, that it is profitable to do injustice, to be intemperate, or to do anything base, by which a man shall indeed become more wicked, but yet shall acquire more wealth, or any kind of power?

Glaucon:: In no way.

Socrates:: But how shall we say it is profitable for the unjust to be concealed, and not to suffer punishment? or does he not indeed, who is concealed, still become more wicked? but he who is not concealed, and is punished, has the brutal part quieted, and made mild, and the mild part set at liberty. And the whole soul being settled in the best temper, in possessing temperance and justice, with wisdom, acquires a more valuable habit than the body does, in acquiring vigor and beauty, with a sound constitution; in as far as the soul is more valuable than the body.

Glaucon:: Entirely so.

Socrates:: Will not everybody then, who possesses intellect, regulate his life, first by extending hither the whole of his powers, honoring those branches of science which will render his soul of this kind, and despising all other things?

Glaucon:: It is plain.

Socrates:: And next, with regard to a good habit of body and its nourishment, he will spend his life in attention to these, not that he may indulge the brutal and irrational pleasure; nor yet with a view to health, nor principally with reference to becoming strong, healthy, and beautiful, unless by these means he is to become temperate likewise: but he always appears to adjust the harmony of the body for the sake of the symphony which is in the soul.

Glaucon:: By all means, if indeed he is to be truly musical.

Socrates:: Will he not then, in acquiring wealth, maintain accord and symphony? nor moved by the congratulations of the multitude will he increase the bulk of his treasures to an infinite amount, occasioning thereby infinite evils?

Glaucon:: I think not.

Socrates:: But looking, to the government of it himself, and taking care that nothing there be moved out of its place, through the greatness or smallness of his property, thus governing as far as he is able, he will add to his property, and spend out of it.

Glaucon:: Entirely so.

Socrates:: He will regard honors, likewise, in the same manner; of some he will willingly take a share, and taste of those which he judges will render him a better man, but as for those which he thinks would dissolve that habit of soul which subsists within him, he will fly from both those privately and in public.

Glaucon:: He will not be willing, then, to act the politician, if he takes care of this.

Socrates:: Yes, truly, in his own state, and greatly too; but not probably in his country, unless some divine fortune befall him.

Glaucon:: I understand. You mean in the state we have now established, which exists only in our reasoning, but I think has no existence on earth.

Socrates:: But in heaven, probably, there is a model of it, for any one who inclines to contemplate it, and on contemplating to regulate himself accordingly; and to him it matters not whether it does exist anywhere, or will ever exist here:—for he would perform the duties of this city alone, and of no other.

Glaucon:: It is reasonable.

THE END OF THE NINTH BOOK.

## BOOK X.

Socrates:: Moreover, both in many other respects, I observe that we have been rightly establishing our state, better indeed than all others; and not least so do I say, as regards our sentiments concerning poetry.

Glaucon:: What are they?

Socrates:: That no part of it which is imitative should by any means be admitted;—for that it must not be admitted appears now, methinks, exceedingly clear, since the several forms of the soul hare been distinguished apart from one another.

Glaucon:: How do you mean?

Socrates:: That I may tell it to you,—for you will not denounce me to the composers of tragedy, and the rest of the imitative class,—all such things as these seem to be the ruin of the intellect of the hearers,—that is, of such of them as have not a test to enable them to discern their peculiar nature.

Glaucon:: What consideration, leads you to say this?

Socrates:: It must be stated; although a certain friendship, at least, and reverence for Homer, which I have had from my childhood, almost restrains me from telling it; for he seems truly both to have been the first leader and teacher of all the good composers of tragedy; but still the man must not be honored in preference to truth. But what I mean must be spoken.

Glaucon:: By all means.

Socrates:: Hear me then, or rather answer me.

Glaucon:: Put your question then.

Socrates:: Can you tell me perfectly, what is the nature of imitation?—for I do not myself altogether understand its meaning.

Glaucon:: Is it possible then, that I shall any how understand it?

Socrates:: That would be no way strange; since those who are dim-sighted perceive many things sooner than those who see more clearly.

Glaucon:: The case is so; but while you are present, I would not venture to tell, even though I had some inkling of it, but consider it yourself.

Socrates:: Do you wish then, that we hence begin our inquiry in our usual method? for we used to suppose a certain idea relating to many individuals, to which we give the same name;—do you not understand?

Glaucon:: I do understand.

Socrates:: Let us suppose now any one you please among the many, as for example, if you will, there are many beds and tables.

Glaucon:: Of course.

Socrates:: But the ideas, at least respecting these pieces of furniture, are two, one of bed, and one of table.

Glaucon:: Yes.

Socrates:: And do we not usually say, that the workman of each of these pieces of furniture, looking towards the idea, makes them thus—one of them the beds, and the other the tables which we use;—and all other things in like manner?—for surely not one of the artificers makes the idea itself; for how can he?

Glaucon:: By no means.

Socrates:: See now then, what kind of an artificer do you call this?

Glaucon:: Which?

Socrates:: He who makes all things which each several artificer makes.

Glaucon:: You are alluding to some skilful and wonderful person.

Socrates:: Not yet, at least; but you will much more say so presently; for this same mechanic is not only able to make all sorts of utensils, but makes everything also which springs from the earth, and he makes all sorts of animals, himself as well as others; and besides these things, he makes the earth, the heaven and the gods, and all things in heaven, and in Hades under the earth.

Glaucon:: You are speaking, of a perfectly wonderful sophist.

Socrates:: Do you disbelieve me? but tell me, do you not think that there is such an artificer; or that in one respect, he is the maker of all these things, and in another not so?—or do you not perceive, that even you yourself might be able to make all these things, in a certain manner at least?

Glaucon:: And what, is this manner?

Socrates:: It is not difficult, but is done in many ways, and quickly too; but in the quickest way of all, if I mistake not, if you please to make a mirror, and carry it round everywhere; for then you will very quickly make the sun, and the heavenly bodies, the earth, yourself, and the other animals and utensils and plants, and all that we have just now mentioned.

Glaucon:: Yes, the appearances, but not surely the realities.

Socrates:: You come in, both well and seasonably, with your remark; for the painter too, methinks, is an artificer of this kind;—is he not?

Glaucon:: He cannot possibly be otherwise.

Socrates:: You will say then, I suppose, that he does not make what he makes real and true, although the painter too, in a certain manner at least, makes a bed, does he not?

Glaucon:: Aye; but he too makes only the appearance.

Socrates:: But what as to the bed-maker?—did you not just now say, that he does not make the idea which we say exists, and is a bed, but only a particular bed?

Glaucon:: I did say so.

Socrates:: If then he does not make that which really exists, he does not make real being, but something resembling being, though not being itself: but if any one should say that the work of the bed-maker, or any other craftsman, were real being, it seems he would not say what is true.

Glaucon:: He would not, as it should seem to those who are acquainted with such discussions.

Socrates:: We must not then be surprised if this likewise should seem somewhat obscure compared with the truth.

Glaucon:: Certainly not.

Socrates:: Are you willing then, that as regards these very things we inquire concerning the real nature of their imitator?

Glaucon:: If you please.

Socrates:: Are there not then these three sorts of beds:—one existing in nature, and which we may say, I suppose, God made, or who else?

Glaucon:: No one, I think.

Socrates:: And another which the joiner makes?

Glaucon:: Yes.

Socrates:: And a third which the painter makes:—is it not so?

Glaucon:: Granted.

Socrates:: Now the painter, the bed-maker, God, these three are the masters of three species of beds?

Glaucon:: They are three indeed.

Socrates:: But God, whether it were that he was unwilling, or whether there was some necessity that he should only make one bed in nature, made this one only, which is really a bed; while two or more of such other species have never been produced, nor ever will be produced by God.

Glaucon:: How so?

Socrates:: Because, if he had made but two, one again would have appeared, the idea of which both these two would have possessed, and that idea would be that of a bed, and not those two.

Glaucon:: Right.

Socrates:: God then, methinks, being aware of these things, and willing to be the maker of a bed really, and having real being, though of no one particular bed, and not to be any particular bed-maker, produced but one in nature?

Glaucon:: It seems so.

Socrates:: Are you willing then that we should call him the producer of this, or of something of a similar nature?

Glaucon:: It is just, since he has in their essential nature created this, as well as all other things.

Socrates:: But what as to the joiner?—is not he the maker of a bed?

Glaucon:: Yes.

Socrates:: And is the painter, too, the workman and maker of something similar?

Glaucon:: By no means.

Socrates:: But what will you say he has to do with a bed?

Glaucon:: This, as I think, we may most reasonably call him, an imitator of what the others actually make and contrive.

Socrates:: Be it so; then him you call the imitator who makes what is generated the third from nature?

Glaucon:: Quite so.

Socrates:: And this composer of tragedy will in like manner, as being an imitator, rise as a sort of third from the king and the truth; and so likewise all other imitators?

Glaucon:: Aye, so it seems.

Socrates:: We have agreed, then, as to the imitator?—but tell me this concerning the painter, whether you think he undertakes to imitate each particular thing in nature, or the works of artificers?

Glaucon:: The works of artificers.

Socrates:: Whether, such as they really are, or such only as they appear? for this we must define more correctly.

Glaucon:: How say you?

Socrates:: Thus; does a bed differ at all in itself, whether a man view it obliquely or directly opposite, or in any particular position?—or, is it not at all different, but only apparently different, and so on as respects other things?

Glaucon:: Thus it appears, yet it does not really differ.

Socrates:: Consider this too, with reference to which of the two does painting work, in each particular work; whether with reference to real being, to imitate it as it really is, or with reference to what is apparent, as it appears; and whether is it the imitation of appearance, or of truth?

Glaucon:: Only of appearance.

Socrates:: The imitative art, then, is far from the truth: and on this account it seems, he is able to make these things, because he is able to attain only to some small part of each particular, and that but an image. Thus we say that a painter will paint us a shoemaker, a joiner, and other craftsmen, though having no acquaintance with any of these arts; yet he will be able to deceive children and ignorant people, if he be a good painter, when he paints a joiner, and shows him at a distance, so far as to make them imagine he is a real joiner.

Glaucon:: Of course.

Socrates:: But this, I think, my friend, we must take into consideration in connection with all these things; that when any one tells us of any one, that he has met with a man skilled in all kinds of workmanship, and everything else which each particular artist understands, and that he knows everything whatever more accurately than any one else, we ought to reply to such an one, that he is a simpleton, and that it seems, he has been deceived by falling in with some conjurer, or imitator, so as to seem to himself, to know everything owing to his very incapacity of distinguishing between science and ignorance and imitation.

Glaucon:: Most true.

Socrates:: Ought we not then next, to consider tragedy and its leader, Homer?—Since from some we hear that these poets understand all arts, and all human affairs, respecting virtue and vice, and likewise all divine things; for a good poet must necessarily compose with knowledge, if he means what he composes to compose well,—else he is not able to compose. It is our business then to consider whether those who have fallen in with these imitators have been deceived, and on viewing their works have not perceived that they are the third distant from real being, and their works such as can easily be made by one not knowing the truth for they make phantasms, and not real beings; or whether do they say something to the purpose, and do the good poets really know the things about which the multitude think they speak well.

Glaucon:: This, is by all means to be inquired into.

Socrates:: Think you then, that if any one could make both of these, that which is imitated, and likewise the original idea, he would allow himself seriously to apply to the workmanship of the images, and propose that to himself as the best thing in life?

Glaucon:: I do not.

Socrates:: But if he were really intelligent in these things which he imitates, he would, I think, far more seriously study the things themselves than the imitations, and would try to leave behind him many and beautiful actions, as monuments of himself, and rather study to be himself the person commended than the mere eulogist.

Glaucon:: I think so; for neither is the honor nor the profit equal.

Socrates:: As to other things, then, let us not call them to account,—asking Homer or any other of the poets, whether they were skilled in medicine, and not mere imitators of medical discourses;—for which of the ancient or more recent poets is said to have restored any to health, as Æsculapius did? or what disciples of medical science has any of them left behind, such as he left his descendants?—Neither let us ask them about the other arts, but leave them out of the question; and with reference to those greatest and most beautiful things on which Homer tries to discourse,—about wars and armies, and civic constitutions, and human education, it is just, perhaps, to question and inquire of him: Friend Homer, if you be not the third from the truth with regard to virtue, as being the artificer of an image for thus we have defined an imitator, but rather the second, and can discern what pursuits render men better or worse, in private as well as public, tell us which of the states has been better constituted by you, as Lacedæmon was by Lycurgus, and great and small cities by many others;—but as respects yourself, what state is it that acknowledges you to have been a good lawgiver, and to have done them good service? Italy and Sicily acknowledge Charondas, and we Solon; but who acknowledges you? Will he be able to mention any one?

Glaucon:: I think not.

Socrates:: That is not pretended even by the Homeridæ themselves. But what war in Homers days is recorded to have been conducted by him as general, or adviser?

Glaucon:: Not one.

Socrates:: What then are his discoveries?—since among the works of a wise man there are many discoveries and inventions mentioned, that concern the arts, and other affairs; as of Thales the Milesian, and of Anacharsis the Scythian.

Glaucon:: There is not any one such to be found.

Socrates:: But if not in a public manner, has Homer the repute of having lived as a private instructor to any who delighted in his conversation, and to have delivered down to posterity a certain Homeric manner of life,—just as Pythagoras was remarkably beloved on this account, and, as even to this day, such as denominate themselves Pythagoreans appear to be somehow eminent beyond others in their manner of life?

Glaucon:: Neither, is there anything of this kind related about Homer:—for Creophilus, Socrates, the friend of Homer, may probably appear even still more ridiculous in his education, than in his name, if what is said of Homer be true:—for it is said that he was greatly neglected by him when he lived.

Socrates:: It is said so indeed:—but think you, Glaucon, that if Homer had really been able to educate men, and to make them better, as being capable not only of imitating in these matters, but of understanding them likewise, he would not then have won many intimate friends, and have been loved and honored by them? Whereas on the other hand, Protagoras of Abdera, and Prodicus of Ceos, and many others, have the power of persuading the men of their day, by private conversation, that they will neither be able to govern their family or the state, unless they themselves direct their education; and for this wisdom of theirs, they are so exceedingly beloved, that their friends almost carry them about on their heads. Would then the men of Homer's time have left either him or Hesiod to go about singing their songs, if he could have done men service in the way of virtue, and not rather have kept him with offers of gold, and so obliged him to stay with them; or,—had they been unable to prevail on him, would they not as disciples have followed him everywhere, till they had gained a sufficient education?

Glaucon:: Assuredly, Socrates, you appear to me to say what is true.

Socrates:: Shall we not then establish this point,—that all the poets, beginning from Homer, are imitators of the images of virtue, and of other things about which they compose, but yet do not attain to the real truth; but, as we just now said, a painter, who himself knows nothing about the making of shoes, will draw a shoemaker, apparently real only to such as are not intelligent, but look at him only as to color and figures?

Glaucon:: Certainly.

Socrates:: In the same manner, I think, we shall say that the poet colors over with his names and words certain colors of the several arts, without understanding anything himself, but merely imitating, so that to others such as himself who view things in his compositions, he has the appearance of possessing knowledge: and if he says anything about shoemaking in measure, rhythm, and harmony, he seems to speak perfectly well, whether it be respecting the art of a general or any other subject; so great is the enchantment which these things naturally have, because you know, I think, in what manner poetry appears when stript of the color of music, and expressed apart,—for you have somewhere beheld it.

Glaucon:: I have.

Socrates:: Do they not, resemble the faces of people who are in the prime of their life, but yet not beautiful, such as they appear when their bloom forsakes them?

Glaucon:: Quite so.

Socrates:: Come then, consider this:—the maker of the image, whom we call the imitator, knows nothing of real being, but only of that which is apparent:—is it not so?

Glaucon:: Yes.

Socrates:: Let us not then leave it expressed by halves, but let us examine it fully.

Glaucon:: Say on.

Socrates:: A painter, we say, will paint reins and a bridle.

Glaucon:: Yes.

Socrates:: And the leather-cutter, and the smith, will make them.

Glaucon:: Certainly.

Socrates:: Does the painter then understand what kind of reins and bridle there ought to be;—or not even he who makes them, the smith, nor the leather-cutter, but he who knows how to use them, the horseman alone?

Glaucon:: Most true.

Socrates:: Shall we not say that this is the case in everything else?

Glaucon:: How?

Socrates:: That with reference to each particular thing there are these three arts:—that which is to use it, that which is to make it, and that which is to imitate it?

Glaucon:: Yes.

Socrates:: Are then the virtue, and the beauty, and the rectitude of every utensil, and animal, and action, for nothing else but for the use for which each particular was made, or generated?

Glaucon:: Just so.

Socrates:: Very necessarily, then, must he who uses each particular, be the most skilful, and most able to tell the maker what he makes good or bad, with regard to the use in which he employs it: thus, for example, a flute-player will tell the flute-maker concerning flutes, what things are expedient for playing on the flute, and will give orders how he ought to make them, but the latter will attend to his directions.

Glaucon:: Of course.

Socrates:: Will not the one then, being intelligent, pronounce concerning good and bad flutes, and the other, believing him, make them accordingly?

Glaucon:: Yes.

Socrates:: With reference then to one and the same instrument, the maker will form a correct opinion concerning its beauty or deformity, while he is conversant with one who is intelligent, and is obliged to hear from the intelligent; but he who uses it must have science.

Glaucon:: Certainly.

Socrates:: But will the imitator have science from using the things he paints, whether handsome and correct, or otherwise? or will he form a correct opinion from being necessarily conversant with the intelligent, and from being ordered how he ought to paint?

Glaucon:: Neither of the two.

Socrates:: The imitator then will neither know nor form a correct opinion about what he imitates with reference to beauty or deformity?

Glaucon:: It seems not.

Socrates:: The imitator then will be very skilful in his imitation, with regard to wisdom, concerning what he paints?

Glaucon:: Not wholly so.

Socrates:: Nevertheless he will at least imitate, without knowing about each particular in what respect it is bad or good; and he will probably imitate such as appears to be beautiful to the multitude, and those who know nothing?

Glaucon:: Of course.

Socrates:: We have now, indeed, sufficiently, as it appears, at least, settled these things;—that the imitator knows nothing worth mentioning in those things which he imitates, but imitation is a sort of amusement, and no serious business:—and likewise, that those who apply to tragic poetry in iambics and epics, are all imitators in the highest degree?

Glaucon:: Certainly.

Socrates:: By Zeus, though, this business of imitation is placed somehow in the third degree from the truth:—is it not?

Glaucon:: Yes.

Socrates:: To what part then of man does it belong, having the power that it has?

Glaucon:: What part do you speak of?

Socrates:: Of such as this:—the same magnitude perceived by sight, does not appear in the same manner, both near and at a distance.

Glaucon:: It does not.

Socrates:: And the same things appear crooked and straight, when we look at them in water, and out of the water, and concave and convex, through error of the sight, as to colors. All this disturbance is manifest in the soul; and it is this infirmity of our nature which pointing attacks, leaving nothing of magical seduction unattempted, as well as the wonder-working art, and many other such-like devices.

Glaucon:: True.

Socrates:: And have not the arts of measure, number, and weight been deemed in these matters most ingenious helps, that so the apparent greater or less, the apparent more or heavier, may not govern us, but that which numbers, measures, and weighs?

Glaucon:: It must be so.

Socrates:: But this again is, at least, the work of the rational part in the soul.

Glaucon:: It is so, indeed.

Socrates:: But while reason often measures and pronounces some things to be greater or less than other things, or equal, the contrary appears at the same time as regards these things?

Glaucon:: Yes.

Socrates:: But did not we say that it was impossible for the same person to have contrary opinions about the same things at the same time?

Glaucon:: Thus far indeed we said rightly.

Socrates:: That part of the soul, then, which judges contrary to the measure, would seem not to be the same with that which judges according to the measure.

Glaucon:: It would not.

Socrates:: But surely that, at least, which trusts to measure and computation would seem to be the best part of the soul?

Glaucon:: Of course.

Socrates:: That then which opposes itself to this will be one of our depraved parts.

Glaucon:: Necessarily so.

Socrates:: It was this then I wished should be agreed upon, when I said that painting, and imitation, in general, being far from the truth, delights in its own work, conversing with that part in us which is far from wisdom, and is its companion and friend, to no sound nor genuine purpose.

Glaucon:: Entirely so.

Socrates:: Imitation, then, being depraved in itself, and joining with that which is depraved, generates depraved things.

Glaucon:: It seems so.

Socrates:: Whether, is the case thus, with reference to the imitation which is by the sight only, or is it likewise so with reference to that by hearing, which we call poetry?

Glaucon:: Probably as to this also.

Socrates:: We shall not therefore, trust to the appearance in painting, but we shall proceed to the consideration of the intellectual part with which the imitation through poetry is conversant, and see whether it is depraved or worthy.

Glaucon:: It must be done.

Socrates:: Let us proceed then thus: Poetic imitation, we say, imitates men acting either voluntarily or involuntarily; and imagining that in their acting they have done either well or ill, and in all these cases receiving either pain or pleasure: is the case any otherwise than this?

Glaucon:: Not at all.

Socrates:: In all these, now, does the man agree with himself? or, as he disagreed with reference to sight, and had contrary opinions in himself of the same things at one and the same time, does he, in the same manner, disagree likewise in his actions, and fight with himself? But I recollect that there is no occasion for us to settle this at least; for, in our previous discussion, we sufficiently determined all this,—that our soul is full of a thousand such internal contrarieties.

Glaucon:: Right.

Socrates:: Right indeed, but it appears to me necessary to discuss now, what was then omitted.

Glaucon:: What is that?

Socrates:: We said somewhere formerly, that a good man, when he meets with such a misfortune as the loss of a son, or of anything else which he values the most, will bear it of all men the easiest.

Glaucon:: Certainly.

Socrates:: But let us now consider this further,—whether will he not grieve at all, or is this indeed impossible, but will he moderate his grief?

Glaucon:: The truth, is rather this last.

Socrates:: But tell me this now concerning him, whether do you think that he will struggle more with grief and oppose it, when he is observed by his equals, or when he is in solitude, alone by himself?

Glaucon:: Much more, when he is observed.

Socrates:: But when alone, he will venture, I think, to utter many things, which, if any one heard him, he would be ashamed of, and he will do many things which he would not wish any one saw him doing.

Glaucon:: Aye, such is the case.

Socrates:: Do not then reason and law command him to restrain his grief,—while it is the passion itself that excites grief?

Glaucon:: True.

Socrates:: As then there is a twofold inducement for man's conduct, with regard to the same thing, at one and the same time, we must necessarily say that he has two conductors.

Glaucon:: Of course.

Socrates:: And shall we not say that one of them is ready to obey the law wherever law leads him?

Glaucon:: How?

Socrates:: Law in a manner says that it is best to maintain the greatest possible tranquility in misfortunes, and not to bear them ill; since the good or evil of such things as these is not manifest, and since no advantage follows the bearing these things ill; and as nothing of human affairs deserves great interest; and, besides this, their grief proves a hindrance to that within them which we ought to have most at hand.

Glaucon:: What is it, you here mean?

Socrates:: Deliberating on the event; and, as on the throw of the dice, regulating our affairs according to what turns up, in whatever way reason shall dictate as best; and not as children, when they fall, to lie still, and waste the time in crying; but always to accustom the soul to apply in the speediest manner to heal and raise up what was fallen and sick, putting an end to lamentation by medicine.

Glaucon:: One would thus, behave in the best manner in every condition.

Socrates:: And did not we say that the best part is willing to follow this which is rational?

Glaucon:: Plainly so.

Socrates:: And shall we not say that the part which leads to the remembrance of affliction and to wailings, and is insatiably given to these, is irrational, and idle, and a friend to cowardice?

Glaucon:: We shall, indeed, say so.

Socrates:: Is not the grieving part then that which admits of much and various imitation? But the prudent and tranquil part, which is ever uniform with itself, is neither easily imitated, nor, when imitated, easily understood, especially by a popular assembly, where all sorts of men are assembled together in a theatre. For surely it is the imitation of a disposition which is foreign to them.

Glaucon:: Entirely so.

Socrates:: It is plain, then, that the imitative poet is not made for such a part of the soul as this:—nor is his skill fitted to please it, if he means to gain the applause of the multitude; but he applies to the passionate and the multiform part, as it is easily imitated.

Glaucon:: It is plain.

Socrates:: May we not then, with justice, lay hold of the imitative poet, and place him in correspondence with the painter? for he resembles him, both because, as to truth, he effects but depraved things, and resembles him too in this being conversant with a different part of the soul from that which is best:—and thus we may, with justice, not admit him into our city which is to be well regulated, because he excites and nurtures this part of the soul, and, by strengthening this, destroys the rational:—and just as he, who in a state gives power to the wicked, betrays the state, and ruins the best men, we may in like manner say that the imitative poet establishes a bad republic in the soul of each individual, gratifying the foolish part of it, which neither discerns what is great, nor what is little, but deems the same things sometimes great, and sometimes small, forming little images in its own imagination, altogether remote from the truth?

Glaucon:: Certainly.

Socrates:: Still we have not yet brought the greatest accusation against it: for that is, somehow, a very dreadful one, that it has the power of corrupting even the good, except only a very few.

Glaucon:: It must, if it acts in this manner.

Socrates:: But hear now, and consider; for somehow, the best of us, when we hear Homer, or any of the tragic writers, imitating some of the heroes when in grief, pouring forth long speeches in their sorrow, bewailing and beating their breasts, you know are delighted; and, yielding ourselves, we follow along, and, sympathizing with them, seriously commend him as an able poet whoever most affects us in this manner.

Glaucon:: I know it, of course.

Socrates:: But when any domestic grief befalls any of us, you perceive, on the other hand, that we value ourselves on the opposite behavior, if we can be quiet and endure, this being the part of a man, but that of a woman, which in the other case we commended.

Glaucon:: I perceive it.

Socrates:: Is this commendation proper, then, when we see such a man as one would not deign to be oneself, but would be ashamed of, not to abominate but to delight in and commend him?

Glaucon:: No, by Zeus; it appears unreasonable.

Socrates:: Certainly, if you consider the matter thus.

Glaucon:: How?

Socrates:: If you reflect that the part of us, which in our private misfortunes is forcibly restrained, and is kept from weeping and bewailing to the full, being by nature of such a kind as desires these, is the very part which by the poets is filled and gratified; but that part in us, which is naturally the best, being not sufficiently instructed, either by reason or habit, grows remiss in its guardianship over the bewailing part, by attending to the sufferings of others, and deems it no way disgraceful to itself, to commend and pity one who grieves immoderately, whilst he professes to be a good man;—but this it thinks it gains, even pleasure, which it would not choose to be deprived of, by despising the whole of the poem:—for, methinks, it falls to the share of few to be able to consider, that what we feel for others' misfortunes must necessarily be felt with respect to our own,—because it is no easy matter for a man to bear up under his own troubles, who strongly cherishes the bewailing disposition over those of others.

Glaucon:: Most true.

Socrates:: And is not the reasoning the same with reference to the ridiculous?—For when you hear, by comic imitation, or in private conversation, what you would be ashamed to do yourself to excite laughter, and are delighted with it, and imitate it, you do the same thing here as in tragedy: for that part, which, when it wanted to excite laughter, was formerly restrained by reason from a fear of incurring the character of scurrility, by now letting loose, and allowing there to grow vigorous, you are often imperceptibly brought to be in your own conduct a buffoon.

Glaucon:: Extremely so.

Socrates:: And with respect to venereal pleasures, and anger, and the whole of the passions, as well the sorrowful as the joyful in the soul, which truly, we have said, attend us in every action; the poetical imitation of these has the same effect upon us; for it nurtures and irrigates them, whereas they ought to be dried up, and makes them govern us, whereas they ought to be governed, in order to our becoming better and happier, instead of being worse and more miserable.

Glaucon:: I can say no otherwise.

Socrates:: When therefore, Glaucon, you find the eulogists of Homer saying that this poet instructed Greece, and that he deserves to be taken as a master to teach both the management and the knowledge of human affairs, and that a man should regulate the whole of his life by the rules of this poet, we should indeed love and embrace such people, as being as good as they can be; and agree with them that Homer is a fine poet, and the first of tragic writers:—yet they must know, that hymns to the gods, and the praises of worthy actions, are alone to be admitted into our state:—for if you were to admit the pleasurable muse likewise, in songs, or verses, we should have pleasure and pain reigning in our state instead of law, and that reason which always appears best to the community.

Glaucon:: Most true.

Socrates:: Let these things now, be our apology, when we recollect what we have said with reference to poetry, that we then very properly dismissed it from our republic, since it is such as is now described: for reason obliged us. And let us address it further, that it may not accuse us of a certain roughness and rusticity, that there is an ancient variance between philosophy and poetry; for such verses as these;

> That brawling whelp, which at her mistress barks.

And

> He apes the great with empty eloquence.

And

> On trifles still they plod, because they're poor;

and a thousand such-like, are marks of an ancient opposition between them. Notwithstanding, however, it may be said, that if any one can assign a reason why the poetry and the imitation which are calculated for pleasure ought to be in a well-regulated city, we, for our part, shall gladly admit them, as we are at least conscious to ourselves that we are charmed by them. But to betray what appears to be truth, were an unholy thing. For are not you yourself, my friend, charmed by this imitation, and most especially when you see it performed by Homer?

Glaucon:: Very much so.

Socrates:: Is it not just, then, that we introduce it as speaking its own defense, either in song, or in any other measure?

Glaucon:: By all means.

Socrates:: And we may at least grant, even to its defenders, such as are not poets, but lovers of poetry, to speak in its behalf, without verse, and show that it is not only pleasant, but profitable for states, and human life also; for surely we shall derive some benefit if it shall be found to be not only pleasant but profitable.

Glaucon:: How can we do otherwise than derive benefit from it?

Socrates:: And if it happen otherwise, my friend, we shall do as those who have been in love, when they deem their love unprofitable,—they desist, though with violence; so we in like manner, through this innate love of such poetry that prevails in our best forms of government, shall be well pleased to see it appear to be the best and truest; and we shall hear it till it is able to make no further apology. But we shall take along with us this discourse which we have held, as a counter-charm, and incantation, being afraid to fall back again into a childish and vulgar love. We may perceive then that we are not to be much in earnest about such poetry as this, as if it were a serious affair, and approached to the truth; but the hearer is to beware of it, and to be afraid for the republic within himself, and to entertain those opinions of poetry which we mentioned.

Glaucon:: I entirely agree.

Socrates:: For great is the contest, friend Glaucon, great not such as it appears, to become a good or a bad man: wherefore it is not right to be moved, either by honor, or riches, or any magistracy whatever, or poetry, so to neglect justice, and the other virtues.

Glaucon:: I agree with you, from what we have argued, and so I think will any one else.

Socrates:: However, we have not yet, discussed the greatest prize of virtue, and the rewards laid up for her.

Glaucon:: You speak of some prodigious greatness, if there be other greater than those mentioned.

Socrates:: But what is there, can be great in a little time? for all this period from infancy to old age is but little in respect of the whole.

Glaucon:: Nothing at all indeed. What then?

Socrates:: Do you think an immortal being ought to be much concerned about such a period, and not about the whole of time?

Glaucon:: I think, about the whole. But why do you mention this?

Socrates:: Have you not perceived, that our soul is immortal, and never perishes?

On which he, looking at me, and wondering, said;

Glaucon:: By Jupiter, not I indeed. But are you able to show this?

Socrates:: I should otherwise act unjustly. And I think you yourself can show it, for it is not at all difficult.

Glaucon:: To me at least, it is difficult; but I would willingly hear from you this which is not difficult.

Socrates:: You shall hear then.

Glaucon:: Only speak.

Socrates:: Is there not something, which you call good, and something which you call evil?

Glaucon:: I own it.

Socrates:: Do you conceive of them, then, just in the way that I do?

Glaucon:: How?

Socrates:: That which destroys and corrupts everything is the evil, and what preserves and profits it is the good.

Glaucon:: I do. But what?

Socrates:: Do you say, that there is something which is good, and something which is bad, to each particular? as blindness to the eyes, and disease to every animal body, blasting to corn, rottenness to wood, rust to brass and iron, and, as I say almost every thing to its connate evil and disease?

Glaucon:: I do.

Socrates:: And when anything of this kind befalls anything, does it not render that which it befalls base, and in the end dissolve and destroy it?

Glaucon:: How should it not?

Socrates:: Its own connate evil then and baseness destroys each particular; or, if this does not destroy it, nothing else can ever destroy it:—because that which is good can never destroy anything, nor yet that which is neither good nor evil.

Glaucon:: How can they?

Socrates:: If then we shall be able to find among beings, any one which has indeed some evil which renders it base, but is not however able to dissolve and destroy it, shall we not then know that a being thus constituted cannot be destroyed at all?

Glaucon:: So it seems.

Socrates:: What then?—is there not something which renders the soul evil?

Glaucon:: Certainly; all these things which we have now mentioned,—injustice, intemperance, cowardice, ignorance.

Socrates:: But does any of these then dissolve and destroy it?—And attend now, that we may not be imposed on, in thinking that an unjust and foolish man, when detected acting unjustly, is then destroyed through his injustice, which is the baseness of his soul: but consider it thus:—As disease, which is the baseness of animal body, dissolves and destroys body, and reduces it to be no longer that body; so all those things we mentioned, being destroyed by their own proper evil adhering to them and possessing them, are reduced to non-existence.

Glaucon:: Is it not so?

Socrates:: Yes. Consider now the soul in the same manner. Does injustice, and the rest of vice, possessing it, by possessing, and adhering to it, corrupt and deface it, till, bringing it to death, it separates it from the body?

Glaucon:: By no means.

Socrates:: But it were absurd, that anything should be destroyed by the baseness of another, but not by its own.

Glaucon:: Absurd.

Socrates:: For you must reflect, Glaucon, that neither by the baseness of victuals, whether owing to moldiness, or rottenness, or whatever else, do we think our body can be destroyed; but if this baseness in them create in the body a depravity of the body, we may allege, that through their means, the body is destroyed by its own evil, which is disease. But we will never allow that by the baseness of food, which is one thing, the body, which is another thing, can ever by this foreign evil, without creating in it its own peculiar evil, be at any time destroyed.

Glaucon:: You speak most correctly.

Socrates:: According to the same reasoning, then, unless the baseness of the body create a baseness of the soul, let us never allow that the soul can be destroyed by an evil which is foreign, without its own peculiar evil, one thing by the evil of another.

Glaucon:: There is reason for it.

Socrates:: Let us, then, either refute these things as not good reasoning; or, so long as they are unrefuted, let us at no time say, that the soul shall be ever in any degree the more destroyed, either by burning fever, or by any other disease, or by slaughter, not even though a man should cut the whole body into the smallest parts possible, till some one show that, through these sufferings of the body, the soul herself becomes more unjust and unholy. But we will never allow it to be said, that when a foreign evil befalls anything, whilst its own proper evil is not within it, either the soul or anything else is destroyed.

Glaucon:: But this, at least, no one can ever show, that the souls of those who die are by death rendered more unjust.

Socrates:: But if any one, shall dare to contend with us in reasoning; and, in order that he may not be obliged to own that souls are immortal, should say, that when a man dies he becomes more wicked and unjust, we shall surely require if he who says this speaks truly, that injustice is deadly to the possessor, as a disease; and that those who embrace it are destroyed by it as by a disease destructive in its own nature,—those most speedily who embrace it most, and those more slowly who embrace it less. And not as at present, where the unjust die having this punishment inflicted on them by others.

Glaucon:: By Jupiter, injustice would not appear perfectly dreadful, if it were deadly to him who practices it for that were a deliverance from evil; but I rather think it will appear to be altogether the reverse, destroying others as far as it can, but rendering the unjust extremely alive, and, in conjunction with being alive, wakeful likewise; so far, as it seems, does it dwell from being deadly.

Socrates:: You say well; for, when a man's own wickedness and peculiar evil is not sufficient to kill and destroy the soul, that evil, which aims at the destruction of another, can scarcely destroy a soul, or anything else but that against which it is aimed.

Glaucon:: Hardly, indeed, as I think at least.

Socrates:: Since, therefore, it is destroyed by no one evil, neither peculiar nor foreign, is it not plain that, of necessity, it always is? and, if it always is, it is immortal?

Glaucon:: Necessarily so.

Socrates:: Let this then, be so settled:—and if it be, you will perceive that the same souls will always remain, for their number will never become less, none being destroyed, nor will it become greater; for if, anyhow, the number of immortals was made greater, you know it would take from the mortal, and in the end all would be immortal.

Glaucon:: You say true.

Socrates:: But let us not, think that this will be the case for reason will not allow of it, nor yet that the soul in its truest nature is of such a kind as to be full of much variety, dissimilitude, and difference considered in itself.

Glaucon:: How mean you?

Socrates:: That cannot easily, be eternal which is compounded of many things, and which has not the most beautiful composition, as hath now appeared to us to be the case with reference to the soul.

Glaucon:: It is not likely.

Socrates:: That the soul then is something immortal, both our present reasonings, and others too, may oblige us to own: but in order to know what kind of being the soul is, in truth, one ought not to contemplate it as it is damaged both by its conjunction with the body and by other evils, as we now behold it, but such as it is when become pure, such it must by reasoning be fully contemplated; and he who does this will find it far more beautiful at least, and will more plainly see through justice, and injustice, and everything which we have now discussed. We are now telling the truth concerning it, such as it appears at present. We have seen it, indeed, in the same condition in which they see the marine Glaucus, where they cannot easily perceive his ancient nature, because the ancient members of his body are partly broken off, and others are worn away; and he is altogether damaged by the waves: and, besides this, other things are grown to him, such as shellfish, seaweed, and stones: so that he in every respect resembles a beast, rather than what he naturally was. In such a condition do we behold the soul under a thousand evils. But we ought to behold it there, Glaucon.

Glaucon:: Where?

Socrates:: In its philosophy; and to observe to what it applies, and what intimacies it professes, as being allied to that which is divine, immortal, and eternal; and what it would become, if it wholly pursued a thing of this kind, and were by this pursuit brought out of that sea in which it now is, and had the stones and shellfish shaken off from it, which, at present, as it is fed on earth, render its nature, to a great extent, earthy, stony, and savage, through those aliments, which are said to procure felicity: and then one might behold its true nature, whether multiform, or uniform, and everything concerning it. But we have, I think, sufficiently discussed its passions, and forms in human life.

Glaucon:: Assuredly.

Socrates:: Have we not now, discussed everything else in our reasonings, though we have not produced those rewards and honors of justice as you say Hesiod and Homer do? but we find justice itself to be the best reward to the soul; and that it ought to do what is just, whether it have or have not Gyges’ ring, and, together with such a ring, the helmet likewise of Pluto.

Glaucon:: You say most true.

Socrates:: Will it not now, then, Glaucon, be attended with no envy, if, besides these, we add those rewards to justice and the other virtues, which are bestowed on the soul by men and gods, both whilst the man is alive, and after he is dead?

Glaucon:: By all means.

Socrates:: Will you, then, restore me what you borrowed in the reasoning?

Glaucon:: What, chiefly?

Socrates:: I granted you, that the just man should be deemed unjust, and the unjust be deemed to be just. For you were of opinion, that though it were not possible that these things should be concealed from gods and men, it should, however, be granted, for the sake of the argument, that justice in itself might be compared with injustice in itself; do you not remember it?

Glaucon:: I should, indeed, be unjust, if I did not.

Socrates:: Now after the judgment is over, I demand again, in behalf of justice, that as you allow it to be indeed esteemed both by gods and men, you likewise allow it to have the same good reputation, that it may also receive those prizes of victory, which it acquires from the reputation of justice, and bestows on those who possess it; since it has already appeared to bestow those good things which arise from really being just, and that it does not deceive those who truly embrace it.

Glaucon:: You demand what is just.

Socrates:: Will you not, then, in the first place, restore me this? That it is not concealed from the gods, what kind of man each of the two is.

Glaucon:: We will grant it.

Socrates:: And if they be not concealed, one of them will be beloved of the gods, and one of them hated, as we agreed in the beginning.

Glaucon:: Such is the case.

Socrates:: And shall we not agree, that as to the man who is beloved of the gods, whatever comes to him from the gods, will all be the best possible, unless he has some necessary ill from former miscarriage?

Glaucon:: Certainly.

Socrates:: We are then to think thus of the just man. That if he happen to be in poverty, or in diseases, or in any other of those seeming evils, these things to him issue in something good, either whilst alive or dead. For never at any time is he neglected by the gods, who inclines earnestly to endeavor to become just, and practices virtue as far as it is possible for man to resemble God.

Glaucon:: It is reasonable, that such an one should not be neglected by him whom he resembles.

Socrates:: And are we not to think the reverse of these things concerning the unjust man?

Glaucon:: Certainly.

Socrates:: Such, then, would seem to be the prizes which the just man receives from the gods.

Glaucon:: Such they are, indeed, in my opinion.

Socrates:: But what, do they receive from men? Is not the case thus if we are to suppose the truth? Do not cunning and unjust men do the same thing as those racers, who run well at the beginning, but not so at the end? for at the first they briskly leap forward, but in the end they become ridiculous, and, with their ears on their neck, they run off without any reward. But such as are true racers, arriving at the end, both receive the prizes, and are crowned. Does it not happen thus, for the most part, as to just men; that at the end of every action and intercourse of life they are both held in esteem, and receive rewards from men?

Glaucon:: Entirely so.

Socrates:: You will then suffer me to say of these what you yourself said of the unjust. For I will aver now, that the just, when they are grown up, shall arrive at power if they desire magistracies, they shall marry where they incline, and shall settle their children in marriage agreeably to their wishes; and everything else you mentioned concerning the others, I now say concerning these. And on the other hand, I will say of the unjust, that the most of them, though they may remain concealed while young, yet, being caught at the end of the race, are ridiculous; and, when they become old, are wretched and ridiculed, and shall be scourged both by foreigners and citizens, and afterwards tortured and burnt; which you said were terrible things;—and you spoke the truth. You may suppose that you hear from me that they suffer all these things. But see if you will admit what I say.

Glaucon:: Certainly, for you say what is just.

Socrates:: These then, are the prizes, the rewards and gifts, which a just man receives during life, both from gods and men; besides those good things which justice contains in itself.

Glaucon:: And they are extremely beautiful, and permanent.

Socrates:: But these now, are nothing, in number or magnitude, when compared with those which await each of the two at death. And these things must likewise be heard, that each of them may completely have what is their due in the reasoning.

Glaucon:: You may say on, as to one who would not listen to many other things with greater pleasure.

Socrates:: But, however, I will not, tell you the apologue of Alcinous; but that, indeed, of a brave man, Erus the son of Armenius, by descent a Pamphylian; who happening on a time to die in battle, when the dead were on the tenth day carried off, already corrupted, as taken up sound; and being carried home, as he was about to be buried on the twelfth day, when laid on the funeral pile, revived; and being revived, he told what he saw in the other state, and said, that after his soul left the body, it went with many others, and that they came to a certain mysterious, hallowed place, where there were two chasms in the earth, near to each other, and two other openings in the heavens opposite on them, and that the judges sat between these;—that when they gave judgment, they commanded the just to go on the right hand, and upwards through the heaven, having fitted marks on the front of those that had been judged; but the unjust they commanded to the left, and downwards, and these likewise had behind them marks of all that they had done.

But when he came before the judges, they said he ought to be a messenger to men concerning things there, and they commanded him to hear, and contemplate everything therein;—and that he saw there, through two openings, one of the heaven, and one of the earth, the souls departing, after they were there judged; and through the other two openings he saw, rising through the one out of the earth, souls full of squalidness and dust; and through the other, he saw other souls descending pure from heaven; and that on their arrival from time to time they seemed as if they came from a long journey, and that they gladly went to rest themselves in the meadow, as in a public assembly, and such as were acquainted saluted one another, and those who rose out of the earth asked the others concerning the things above, and those from heaven asked them concerning the things below, and that they told one another: those wailing and weeping whilst they called to mind, what and how many things they suffered and saw in their journey under the earth for it was a journey of a thousand years; and that these again from heaven explained their enjoyments, and spectacles of amazing beauty.—To narrate many of them, Glaucon, would occupy much time; but this, was the sum, that whatever unjust actions a man had committed, and whatever injuries a man had committed, they were punished for all these separately tenfold, and that it was in each, according to the rate of a hundred years the life of man being considered as so long, that they might suffer tenfold punishment for the injustice they had done;—so that if any had been the cause of many deaths, either by betraying cities or armies, or bringing men into slavery, or being confederates in any other wickedness, for each of all these they reaped tenfold sufferings; and if, again, they had benefited any by good deeds, and had been just and holy, they were rewarded according to their deserts.

Of those who died very young, and lived but a little time, he related other things not worth mentioning;—but of impiety and piety towards the gods and parents, and of suicide, he told the more remarkable retributions; for he said he was present when one was asked by another, where the great Aridæus was?

This Aridæus had been tyrant in a certain city of Pamphylia a thousand years before that time, and had killed his aged father and elder brother, and had done many other unhallowed deeds, as was reported: and he said, that the one who was asked, replied: He neither comes, nor ever will come hither.

Well then we saw this likewise, among other dreadful spectacles: When we were near the mouth of the opening, and were about to ascend after having suffered everything else, we on a sudden beheld both him, and others likewise, most of whom were tyrants, and there were some private persons who had committed great iniquity, whom, when they thought they were to ascend, the mouth of the opening did not admit, but bellowed when any of those who were so polluted with wickedness, or who had not been sufficiently punished, attempted to ascend.

And then, fierce men, and fiery to look on, standing by, and perceiving the bellowing, took some of them and led them apart, but Aridæus and the rest, having bound their hands and feet, and head, they thrust down and flayed, and then dragged them to an outer road, tearing them on thorns; declaring always to those who passed by, on what accounts they suffered these things, and that they were carrying them to be thrown into Tartarus.

And hence, that amidst all their various terrors, this terror surpassed, lest the mouth should bellow, and that when it was silent every one most gladly ascended; and that the punishments and torments were such as these, and their rewards were the reverse of these.

He also added, that every one arising thence, after they had been seven days in the meadow, was required to depart on the eighth day, and arrive at another place on the fourth day after, whence they perceived from above through the whole heaven and earth, a light extended as a pillar, mostly resembling the rainbow, but more splendid and pure; at which they arrived in one day's journey; and thence they perceived, through the middle of the light from heaven, the extremities of its ligatures extended; as this light was the belt of heaven, like the transverse beams of ships keeping the whole circumference united;—that from the extremities the distaff of Necessity is extended, by which all the revolutions were turned round, whose spindle and point were both of adamant, but its whirl commingled both with this and other things; and that the nature of the whirl was of such a kind, as to its figure, as is any one we see here.

But you must conceive it, from what he said, to be of such a kind as this: as if in some great hollow whirl, carved throughout, there was such another, but lesser, within it, adapted to it, like casks fitted one within another; and in the same manner a third, and a fourth, and four others, for that the whirls were eight in all, as circles one within another, having their lips appearing upwards, and forming round the spindle one united convexity of one whirl; that the spindle was driven through the middle of the eight; and that the first and outmost whirl had the widest circumference in the lip, that the sixth had the second wide, and that of the fourth the third wide, and the fourth that of the eighth, and the fifth that of the seventh, the sixth that of the fifth, and the seventh that of the third, and the eighth that of the second.

Likewise that the circle of the largest is variegated, that of the seventh is the brightest, and that of the eighth has its color from the shining of the seventh; those of the second and fifth resemble each other, but are more yellow than the rest.

But the third is bright white, the fourth reddish, the second in whiteness surpasses the sixth; and the distaff must turn round in a circle with the whole that it carries; and while the whole is turning round, the seven inner circles are gently turned round in a contrary motion to the whole;—again, that of these, the eighth moves the swiftest; and next to it, and equal to one another, the seventh, the sixth, and the fifth; and that the third went in a motion which as appeared to them completed its circle in the same way as the fourth.

The fourth in swiftness was the third, and the fifth was the second, and it was turned round on the knees of Necessity;—and that on each of its circles there was seated a Siren on the upper side, carried round, and uttering one voice variegated by diverse modulations; but that the whole of them, being eight, composed one harmony;—that there were other three sitting round at equal distance one from another, each on a throne, the daughters of Necessity, the Fates, clothed in white vestments, and having crowns on their heads; Lachesis, Clotho, and Atropos, singing to the harmony of the Sirens; Lachesis singing the past, Clotho the present, and Atropos the future.

And that Clotho, at certain intervals, with her right hand laid hold of the spindle, and along with her mother turned about the outer circle;—and Atropos, in like manner, turned the inner ones with her left hand,—and that Lachesis touched both of these, severally, with either hand.

After they arrive here, it is necessary for them to go directly to Lachesis.

That then a certain prophet first of all ranges them in order, and afterwards taking the lots, and the models of lives, from the knees of Lachesis, and ascending a lofty tribunal, he says:—The speech of the virgin Lachesis, the daughter of Necessity: Souls of a day! The beginning of another period of men of mortal race:—the demon shall not receive you as his lot, but you shall choose the demon: he who draws the first, let him first make choice of a life, to which he must of necessity adhere: Virtue is independent, of which every one shall partake, more or less, according as he honors or dishonors her: the cause is in him who makes the choice, and the Deity is blameless;—that when he had said these things, he threw the lots on all of them, and that each took up the one which fell beside him, except himself, for he was not permitted; and that when each had taken it, he knew what number he had drawn;—that after this he placed on the ground before them the models of lives, many more than those we see at present;—and that they were all various,—for there were lives of all sorts of animals, and human lives of every kind;—and that among these there were tyrannies also, some of them perpetual, and others destroyed in the midst of their greatness, and ending in poverty, banishment, and want.

That there were also lives of renowned men, some for their appearance as to beauty, strength, and agility; and others for their descent, and the virtues of their ancestors.

There were the lives of renowned women in the same manner.

But that there was no disposition of soul among these models, because of necessity, on choosing a different life, it becomes different itself.

As to other things, riches and poverty, sickness and health, they were mixed with one another, and some were in a middle station between these.

There then, as it seems, friend Glaucon, is the whole danger of man.

And hence this of all things is most to be attended to, how each of us, omitting other studies, is to become an inquirer and learner in this study, in order to be able to learn and find out who will make him expert and intelligent to discern a good life, and a bad; and to choose everywhere, and at all times the best of what is possible, considering all that we have mentioned, both compounded and separated from one another, what they are with respect to the virtue of life; and to understand what good or evil beauty produces when mixed with poverty, or riches, and with this or the other habit of soul; and what is effected by noble and ignoble descent, by privacy, and by public station, by strength and weakness, docility and indocility, and everything else of the kind which naturally pertains to the soul, and likewise of what is acquired, when blended one with another, so as to be able from all these things to compute, and, having an eye to the nature of the soul, to comprehend both the worse and the better life, pronouncing that to be the worse which shall lead the soul to become more unjust, and that to be the better life which shall lead it to become more just, and to dismiss every other consideration:—for we have seen, that in life, and in death, this is the best choice.

It is necessary, therefore, that a man should have this opinion firm as an adamant in him, when he departs to

Hades, that there also he may be unmoved by riches, or any such evils, and may not, falling into tyrannies, and other such practices, do many and incurable mischiefs, and himself suffer still greater: but may know how to choose always the middle life, as to these things, and to shun the extremes on either hand, both in this life as far as is possible, and in the whole future.

For thus man becomes happy.

At that time, therefore, the messenger from the other world further told how that the prophet spoke thus: Even to him who comes last, if he chooses with judgment, and lives consistently, there is prepared a desirable life; not bad.

Let neither him who is first be negligent in his choice, not let him who is last despair.

He said, that when the prophet had spoken these things, the first who drew a lot ran instantly and chose the greatest tyranny, but through folly and insatiableness had not sufficiently examined all things on making his choice, but was ignorant that in this life there was this destiny, the devouring of his own children, and other evils; and that afterwards, when he had considered it at leisure, he wailed and lamented his choice, not having observed the admonitions of the prophet above mentioned;—inasmuch as he did not accuse himself, as the author of his misfortunes, but fortune and the demons, and everything rather than himself.

He added, that he was one of those who came from heaven, who had in his former life lived in a regulated republic, and had been virtuous by custom without philosophy; and that, in short, among these there were not a few who came from heaven, as being unexercised in trials; but most of those who came from earth, as they had endured hardships themselves, and had seen others in hardships, did not precipitately make their choice.

And hence, and through the fortune of the lot, to most souls there was an exchange of good and evil things.

Since, if one should always, whenever he comes into this life, soundly philosophize, and the lot of election should not fall on him the very last, it would seem, from what has been told us from thence, that he shall be happy not only here, but when he goes hence, and his journey hither back again shall not be earthy, and rugged, but smooth and heavenly.

This spectacle, was worthy to behold, in what manner the several souls made choice of their lives; for it was pitiful and ridiculous and wonderful to behold, as each for the most part chose according to the habit of his former life; for he alleged, that he saw the soul which was formerly the soul of Orpheus making choice of the life of a swan, through hatred of womankind, being unwilling to be born of woman on account of the death he suffered from them.

He saw likewise the soul of Thamyris making choice of the life of a nightingale.

And he saw also a swan turning to the choice of human life; and other musical animals in a similar manner, as is likely;—and he saw also one soul, while making its choice, choosing the Life of a lion; and it was the soul of Telamonian Ajax, unwilling to become a man, because it recollected the judgment given with reference to the armor;—that he then saw the soul of Agamemnon, which, in hatred also of the human kind, through his misfortunes, exchanged it for the life of an eagle: and that the soul of Atalante, choosing her lot amidst the rest, and, having attentively observed the great honors paid to an athletic man, was unable to pass by this lot, but took it.

Next to this, he saw the soul of Epeus the Panopean going into the nature of a skilful workwoman; and that far off, among the last, he saw the soul of the buffoon Thersites assuming the ape.

And that by chance he saw the soul of Ulysses, who had drawn its lot last of all, going to make its choice: that in remembrance of its former toils, and tired of ambition, it went about a long time seeking the life of a private man of no business, and with difficulty found it lying somewhere, neglected by the rest.

And that on seeing this life, it said, that it would have made the same choice even if it had obtained the first lot,—and joyfully chose it.

That in like manner the souls of wild beasts went into men, and men again into beasts: the unjust changing into wild beasts, and the just into tame; and that they were blended by all sorts of mixtures.

After, therefore, all the souls had chosen their lives according as they drew their lots, they all went in order to Lachesis, and that she gave to every one the demon he chose, and sent him along with him to be the guardian of his life, and the accomplisher of what he had chosen.—That, first of all, he conducts the soul to Clotho, to ratify under her hand, and by the whirl of the vortex of her spindle, the destiny it had chosen by lot: and, after being with her, he leads it back again to the spinning of Atropos, who makes the destinies irreversible.

And that from hence they proceed directly under the throne of Necessity; and that, after he had passed by it, as all the others passed, they all of them marched into the plain of Lethe amidst dreadful heat and scorching, for he said that it is void of trees and everything that the earth produces;—that when night came on, they encamped beside the river Amelete, whose water no vessel contains.—Of this water all of them must necessarily drink a certain quantity, and such as are not kept by prudence drink more than they ought, and that he who from time to time drinks forgets everything.—And, after they were laid asleep, and midnight was approaching, there was thunder, and an earthquake, and they were thence on a sudden carried upwards, some one way, and some another, approaching to generation like stars.

And he himself was forbidden to drink of the water.

Where, however, and in what manner, he came into his body, he was entirely ignorant; but, suddenly looking up in the morning, he saw himself already laid on the funeral pile.

And this fable, Glaucon, has been preserved, and is not lost, and it will preserve us, too, if we be persuaded thereby, for thus we shall happily pass over the river Lethe, and shall not pollute our souls.

But if the company will be persuaded by me; considering the soul to be immortal, and able to bear all evil and good, we shall always persevere in the road which leads upwards, and shall by all means pursue justice in unison with prudence, that so we may be friends both to ourselves and the gods, both whilst we remain here, and when we afterwards receive its rewards, like victors assembled together; and so, both here, and in that journey of a thousand years, which we have described, we shall be happy.

The End of the Tenth and Last Book of the Republic.

# Republic

Translated by G.M.A. Grube, rev. C.D.C. Reeve.

Socrates, Cephalus, Glaucon, Thrasymachus,
Adeimantus, Cleitophon, Polemarchus, Boy

## Book 1

Socrates:: I went down to the Piraeus yesterday with Glaucon, the son of Ariston. I wanted to say a prayer to the goddess, and I was also curious to see how they would manage the festival, since they were holding it for the first time. I thought the procession of the local residents was a fine one and that the one conducted by the Thracians was no less outstanding. After we had said our prayer and seen the procession, we started back towards Athens. Polemarchus saw us from a distance as we were setting off for home and told his slave to run and ask us to wait for him. The slave caught hold of my cloak from behind:

Boy:: Polemarchus wants you to wait.

Socrates:: I turned around and asked where Polemarchus was.

Boy:: He's coming up behind you, please wait for him.

Glaucon:: All right, we will.

Socrates:: Just then Polemarchus caught up with us. Adeimantus, Glaucon's brother, was with him and so were Niceratus, the son of Nicias, and some others, all of whom were apparently on their way from the procession.

Polemarchus:: It looks to me, Socrates, as if you two are starting off for Athens.

Socrates:: It looks the way it is, then.

Polemarchus:: Do you see how many we are?

Socrates:: I do.

Polemarchus:: Well, you must either prove stronger than we are, or you will have to stay here.

Socrates:: Isn’t there another alternative, namely, that we persuade you to let us go?

Polemarchus:: But could you persuade us, if we won’t listen?

Glaucon:: Certainly not.

Polemarchus:: Well, we won’t listen; you'd better make up your mind to that.

Adeimantus:: Don’t you know, that there is to be a torch race on horseback for the goddess tonight?

Socrates:: On horseback? That’s something new. Are they going to race on horseback and hand the torches on in relays, or what?

Polemarchus:: In relays, and there will be an all-night festival that will be well worth seeing. After dinner, we’ll go out to look at it. We’ll be joined there by many of the young men, and we’ll talk. So don’t go; stay.

Glaucon:: It seems, that we’ll have to stay.

Socrates:: If you think so, then we must.

So we went to Polemarchus’ house, and there we found Lysias and Euthydemus, the brothers of Polemarchus, Thrasymachus of Chalcedon, Charmantides of Paeania, and Clitophon the son of Aristonymus. Polemarchus’ father, Cephalus, was also there, and I thought he looked quite old, as I hadn’t seen him for some time. He was sitting on a sort of cushioned chair with a wreath on his head, as he had been offering a sacrifice in the courtyard. There was a circle of chairs, and we sat down by him.

As soon as he saw me, Cephalus welcomed me and said:

Cephalus:: Socrates, you don’t come down to the Piraeus to see us as often as you should. If it were still easy for me to walk to town, you wouldn’t have to come here; we'd come to you. But, as it is, you ought to come here more often, for you should know that as the physical pleasures wither away, my desire for conversation and its pleasures grows. So do as I say: Stay with these young men now, but come regularly to see us, just as you would to friends or relatives.

Socrates:: Indeed, Cephalus, I enjoy talking with the very old, for we should ask them, as we might ask those who have travelled a road that we too will probably have to follow, what kind of road it is, whether rough and difficult or smooth and easy. And I'd gladly find out from you what you think about this, as you have reached the point in life the poets call “the threshold of old age.” Is it a difficult time? What is your report about it?

Cephalus:: By god, Socrates, I’ll tell you exactly what I think. A number of us, who are more or less the same age, often get together in accordance with the old saying. When we meet, the majority complain about the lost pleasures they remember from their youth, those of sex, drinking parties, feasts, and the other things that go along with them, and they get angry as if they had been deprived of important things and had lived well then but are now hardly living at all. Some others moan about the abuse heaped on old people by their relatives, and because of this they repeat over and over that old age is the cause of many evils. But I don’t think they blame the real cause, Socrates, for if old age were really the cause, I should have suffered in the same way and so should everyone else of my age. But as it is, I’ve met some who don’t feel like that in the least. Indeed, I was once present when someone asked the poet Sophocles: “How are you as far as sex goes, Sophocles? Can you still make love with a woman?” “Quiet, man,” the poet replied, “I am very glad to have escaped from all that, like a slave who has escaped from a savage and tyrannical master.” I thought at the time that he was right, and I still do, for old age brings peace and freedom from all such things. When the appetites relax and cease to importune us, everything Sophocles said comes to pass, and we escape from many mad masters. In these matters and in those concerning relatives, the real cause isn’t old age, Socrates, but the way people live. If they are moderate and contented, old age, too, is only moderately onerous; if they aren’t, both old age and youth are hard to bear.

Socrates:: I admired him for saying that and I wanted him to tell me more, so I urged him on: When you say things like that, Cephalus, I suppose that the majority of people don’t agree, they think that you bear old age more easily not because of the way you live but because you’re wealthy, for the wealthy, they say, have many consolations.

Cephalus:: That’s true; they don’t agree. And there is something in what they say, though not as much as they think. Themistocles’ retort is relevant here. When someone from Seriphus insulted him by saying that his high reputation was due to his city and not to himself, he replied that, had he been a Seriphian, he wouldn’t be famous, but neither would the other even if he had been an Athenian. The same applies to those who aren’t rich and find old age hard to bear: A good person wouldn’t easily bear old age if he were poor, but a bad one wouldn’t be at peace with himself even if he were wealthy.

Socrates:: Did you inherit most of your wealth, Cephalus, or did you make it for yourself?

Cephalus:: What did I make for myself, Socrates, you ask. As a money-maker I’m in a sort of mean between my grandfather and my father. My grandfather and namesake inherited about the same amount of wealth as I possess but multiplied it many times. My father, Lysanias, however, diminished that amount to even less than I have now. As for me, I'm satisfied to leave my sons here not less but a little more than I inherited.

Socrates:: The reason I asked is that you don't seem to love money too much. And those who haven't made their own money are usually like you. But those who have made it for themselves are twice as fond of it as those who haven't. Just as poets love their poems and fathers love their children, so those who have made their own money don't just care about it because it's useful, as other people do, but because it's something they've made themselves. This makes them poor company, for they haven't a good word to say about anything except money.

Cephalus:: That's true.

Socrates:: It certainly is. But tell me something else. What's the greatest good you've received from being very wealthy?

Cephalus:: What I have to say probably wouldn't persuade most people. But you know, Socrates, that when someone thinks his end is near, he becomes frightened and concerned about things he didn't fear before. It's then that the stories we're told about Hades, about how people who've been unjust here must pay the penalty there—stories he used to make fun of—twist his soul this way and that for fear they're true. And whether because of the weakness of old age or because he is now closer to what happens in Hades and has a clearer view of it, or whatever it is, he is filled with foreboding and fear, and he examines himself to see whether he has been unjust to anyone. If he finds many injustices in his life, he awakes from sleep in terror, as children do, and lives in anticipation of bad things to come. But someone who knows that he hasn’t been unjust has sweet good hope as his constant companion—a nurse to his old age, as Pindar says, for he puts it charmingly, Socrates, when he says that when someone lives a just and pious life;

> Sweet hope is in his heart,
> Nurse and companion to his age.
> Hope, captain of the ever-twisting
> Minds of mortal men.

How wonderfully well he puts that. It’s in this connection that wealth is most valuable, I'd say, not for every man but for a decent and orderly one. Wealth can do a lot to save us from having to cheat or deceive someone against our will and from having to depart for that other place in fear because we owe sacrifice to a god or money to a person. It has many other uses, but, benefit for benefit, I'd say that this is how it is most useful to a man of any understanding.

Socrates:: A fine sentiment, Cephalus, but, speaking of this very thing itself, namely, justice, are we to say unconditionally that it is speaking the truth and paying whatever debts one has incurred? Or is doing these things sometimes just, sometimes unjust? I mean this sort of thing, for example: Everyone would surely agree that if a sane man lends weapons to a friend and then asks for them back when he is out of his mind, the friend shouldn’t return them, and wouldn’t be acting justly if he did. Nor should anyone be willing to tell the whole truth to someone who is out of his mind.

Cephalus:: That’s true.

Socrates:: Then the definition of justice isn’t speaking the truth and repaying what one has borrowed.

Polemarchus:: It certainly is, Socrates, if indeed we're to trust Simonides at all.

Cephalus:: Well, then, I'll hand over the argument to you, as I have to look after the sacrifice.

Polemarchus:: So, am I then to be your heir in everything?

Cephalus:: You certainly are!

Socrates:: Cephalus said, laughing, and off he went to the sacrifice.

Then tell us, heir to the argument, just what Simonides stated about justice that you consider correct.

Polemarchus:: He stated that it is just to give to each what is owed to him. And it's a fine saying, in my view.

Socrates:: Well, now, it isn't easy to doubt Simonides, for he's a wise and godlike man. But what exactly does he mean? Perhaps you know, Polemarchus, but I don't understand him. Clearly, he doesn't mean what we said a moment ago, that it is just to give back whatever a person has lent to you, even if he's out of his mind when he asks for it. And yet what he has lent to you is surely something that's owed to him, isn't it?

Polemarchus:: Yes.

Socrates:: But it is absolutely not to be given to him when he's out of his mind?

Polemarchus:: That's true.

Socrates:: Then it seems that Simonides must have meant something different when he says that to return what is owed is just.

Polemarchus:: Something different indeed, by god. He means that friends owe it to their friends to do good for them, never harm.

Socrates:: I follow you. Someone doesn’t give a lender back what he’s owed by giving him gold, if doing so would be harmful, and both he and the lender are friends. Isn’t that what you think Simonides meant?

Polemarchus:: It is.

Socrates:: But what about this? Should one also give one’s enemies whatever is owed to them?

Polemarchus:: By all means, one should give them what is owed to them. And in my view what enemies owe to each other is appropriately and precisely— something bad.

Socrates:: It seems then that Simonides was speaking in riddles—just like a poet!— when he said what justice is, for he thought it just to give to each what is appropriate to him, and this is what he called giving him what is owed to him.

Polemarchus:: What else did you think he meant?

Socrates:: Then what do you think he'd answer if someone asked him: “Simonides, which of the things that are owed or that are appropriate for someone or something to have does the craft we call medicine give, and to whom or what does it give them?”

Polemarchus:: It’s clear that it gives medicines, food, and drink to bodies.

Socrates:: And what owed or appropriate things does the craft we call cooking give, and to whom or what does it give them?

Polemarchus:: It gives seasonings to food.

Socrates:: Good. Now, what does the craft we call justice give, and to whom or what does it give it?

Polemarchus:: If we are to follow the previous answers, Socrates, it gives benefits to friends and does harm to enemies.

Socrates:: Simonides means, then, that to treat friends well and enemies badly is justice?

Polemarchus:: I believe so.

Socrates:: And who is most capable of treating friends well and enemies badly in matters of disease and health?

Polemarchus:: A doctor.

Socrates:: And who can do so best in a storm at sea?

Polemarchus:: A ship's captain.

Socrates:: What about the just person? In what actions and what work is he most capable of benefiting friends and harming enemies?

Polemarchus:: In wars and alliances, I suppose.

Socrates:: All right. Now, when people aren't sick, Polemarchus, a doctor is useless to them?

Polemarchus:: True.

Socrates:: And so is a ship's captain to those who aren't sailing?

Polemarchus:: Yes.

Socrates:: And to people who aren't at war, a just man is useless?

Polemarchus:: No, I don't think that at all.

Socrates:: Justice is also useful in peacetime, then?

Polemarchus:: It is.

Socrates:: And so is farming, isn't it?

Polemarchus:: Yes.

Socrates:: For getting produce?

Polemarchus:: Yes.

Socrates:: And shoemaking as well?

Polemarchus:: Yes.

Socrates:: For getting shoes, I think you'd say?

Polemarchus:: Certainly.

Socrates:: Well, then, what is justice useful for getting and using in peacetime?

Polemarchus:: Contracts, Socrates.

Socrates:: And by contracts do you mean partnerships, or what?

Polemarchus:: I mean partnerships.

Socrates:: Is someone a good and useful partner in a game of checkers because he's just or because he's a checkers player?

Polemarchus:: Because he's a checkers player.

Socrates:: And in laying bricks and stones, is a just person a better and more useful partner than a builder?

Polemarchus:: Not at all.

Socrates:: In what kind of partnership, then, is a just person a better partner than a builder or a lyre-player, in the way that a lyre-player is better than a just person at hitting the right notes?

Polemarchus:: In money matters, I think.

Socrates:: Except perhaps, Polemarchus, in using money, for whenever one needs to buy a horse jointly, I think a horse breeder is a more useful partner, isn't he?

Polemarchus:: Apparently.

Socrates:: And when one needs to buy a boat, it's a boat-builder or a ship's captain?

Polemarchus:: Probably.

Socrates:: In what joint use of silver or gold, then, is a just person a more useful partner than the others?

Polemarchus:: When it must be deposited for safekeeping, Socrates.

Socrates:: You mean whenever there is no need to use them but only to keep them?

Polemarchus:: That's right.

Socrates:: Then it is when money isn't being used that justice is useful for it?

Polemarchus:: I'm afraid so.

Socrates:: And whenever one needs to keep a pruning knife safe, but not to use it, justice is useful both in partnerships and for the individual. When you need to use it, however, it is skill at vine pruning that's useful?

Polemarchus:: Apparently.

Socrates:: You'll agree, then, that when one needs to keep a shield or a lyre safe and not to use them, justice is a useful thing, but when you need to use them, it is soldiery or musicianship that's useful?

Polemarchus:: Necessarily.

Socrates:: And so, too, with everything else, justice is useless when they are in use but useful when they aren't?

Polemarchus:: It looks that way.

Socrates:: In that case, justice isn't worth much, since it is only useful for useless things. But let's look into the following point. Isn't the person most able to land a blow, whether in boxing or any other kind of fight, also most able to guard against it?

Polemarchus:: Certainly.

Socrates:: And the one who is most able to guard against disease is also most able to produce it unnoticed?

Polemarchus:: So it seems to me, anyway.

Socrates:: And the one who is the best guardian of an army is the very one who can steal the enemy's plans and dispositions?

Polemarchus:: Certainly.

Socrates:: Whenever someone is a clever guardian, then, he is also a clever thief.

Polemarchus:: Probably so.

Socrates:: If a just person is clever at guarding money, therefore, he must also be clever at stealing it.

Polemarchus:: According to our argument, at any rate.

Socrates:: A just person has turned out then, it seems, to be a kind of thief. Maybe you learned this from Homer, for he's fond of Autolycus, the maternal grandfather of Odysseus, whom he describes as better than everyone at lying and stealing. According to you, Homer, and Simonides, then, justice seems to be some sort of craft of stealing, one that benefits friends and harms enemies. Isn't that what you meant?

Polemarchus:: No, by god, it isn't. I don't know any more what I did mean, but I still believe that to benefit one's friends and harm one's enemies is justice.

Socrates:: Speaking of friends, do you mean those a person believes to be good and useful to him or those who actually are good and useful, even if he doesn't think they are, and similarly with enemies?

Polemarchus:: Probably, one loves those one considers good and useful and hates those one considers bad and harmful.

Socrates:: But surely people often make mistakes about this, believing many people to be good and useful when they aren't, and making the opposite mistake about enemies?

Polemarchus:: They do indeed.

Socrates:: And then good people are their enemies and bad ones their friends?

Polemarchus:: That's right.

Socrates:: And so it’s just to benefit bad people and harm good ones?

Polemarchus:: Apparently.

Socrates:: But good people are just and able to do no wrong?

Polemarchus:: True.

Socrates:: Then, according to your account, it’s just to do bad things to those who do no injustice.

Polemarchus:: No, that’s not just at all, Socrates; my account must be a bad one.

Socrates:: It’s just, then, is it, to harm unjust people and benefit just ones?

Polemarchus:: That’s obviously a more attractive view than the other one, anyway.

Socrates:: Then, it follows, Polemarchus, that it is just for the many, who are mistaken in their judgment, to harm their friends, who are bad, and benefit their enemies, who are good. And so we arrive at a conclusion opposite to what we said Simonides meant.

Polemarchus:: That certainly follows. But let’s change our definition, for it seems that we didn’t define friends and enemies correctly.

Socrates:: How did we define them, Polemarchus?

Polemarchus:: We said that a friend is someone who is believed to be useful.

Socrates:: And how are we to change that now?

Polemarchus:: Someone who is both believed to be useful and is useful is a friend; someone who is believed to be useful but isn’t, is believed to be a friend but isn’t. And the same for the enemy.

Socrates:: According to this account, then, a good person will be a friend and a bad one an enemy.

Polemarchus:: Yes.

Socrates:: So you want us to add something to what we said before about justice, when we said that it is just to treat friends well and enemies badly. You want us to add to this that it is just to treat well a friend who is good and to harm an enemy who is bad?

Polemarchus:: Right. That seems fine to me.

Socrates:: Is it, then, the role of a just man to harm anyone?

Polemarchus:: Certainly, he must harm those who are both bad and enemies.

Socrates:: Do horses become better or worse when they are harmed?

Polemarchus:: Worse.

Socrates:: With respect to the virtue that makes dogs good or the one that makes horses good?

Polemarchus:: The one that makes horses good.

Socrates:: And when dogs are harmed, they become worse in the virtue that makes dogs good, not horses?

Polemarchus:: Necessarily.

Socrates:: Then won't we say the same about human beings, too, that when they are harmed they become worse in human virtue?

Polemarchus:: Indeed.

Socrates:: But isn't justice human virtue?

Polemarchus:: Yes, certainly.

Socrates:: Then people who are harmed must become more unjust?

Polemarchus:: So it seems.

Socrates:: Can musicians make people unmusical through music?

Polemarchus:: They cannot.

Socrates:: Or horsemen make people unhorseman-like through horsemanship?

Polemarchus:: No.

Socrates:: Well, then, can those who are just make people unjust through justice? In a word, can those who are good make people bad through virtue?

Polemarchus:: They cannot.

Socrates:: It isn't the function of heat to cool things but of its opposite?

Polemarchus:: Yes.

Socrates:: Nor the function of dryness to make things wet but of its opposite?

Polemarchus:: Indeed.

Socrates:: Nor the function of goodness to harm but of its opposite?

Polemarchus:: Apparently.

Socrates:: And a just person is good?

Polemarchus:: Indeed.

Socrates:: Then, Polemarchus, it isn't the function of a just person to harm a friend or anyone else, rather it is the function of his opposite, an unjust person?

Polemarchus:: In my view that's completely true, Socrates.

Socrates:: If anyone tells us, then, that it is just to give to each what he's owed and understands by this that a just man should harm his enemies and benefit his friends, he isn't wise to say it, since what he says isn't true, for it has become clear to us that it is never just to harm anyone?

Polemarchus:: I agree.

Socrates:: You and I shall fight as partners, then, against anyone who tells us that Simonides, Bias, Pittacus, or any of our other wise and blessedly happy men said this.

Polemarchus:: I, at any rate, am willing to be your partner in the battle.

Socrates:: Do you know to whom I think the saying belongs that it is just to benefit friends and harm enemies?

Polemarchus:: Who?

Socrates:: I think it belongs to Periander, or Perdiccas, or Xerxes, or Ismenias of Corinth, or some other wealthy man who believed himself to have great power.

Polemarchus:: That's absolutely true.

Socrates:: All right, since it has become apparent that justice and the just aren't what such people say they are, what else could they be?

While we were speaking, Thrasymachus had tried many times to take over the discussion but was restrained by those sitting near him, who wanted to hear our argument to the end. When we paused after what I'd just said, however, he couldn't keep quiet any longer. He coiled himself up like a wild beast about to spring, and he hurled himself at us as if to tear us to pieces.

Polemarchus and I were frightened and flustered as he roared into our midst:

Thrasymachus:: What nonsense have you two been talking, Socrates? Why do you act like idiots by giving way to one another? If you truly want to know what justice is, don't just ask questions and then refute the answers simply to satisfy your competitiveness or love of honor. You know very well that it is easier to ask questions than answer them. Give an answer yourself, and tell us what you say the just is. And don't tell me that it's the right, the beneficial, the profitable, the gainful, or the advantageous, but tell me clearly and exactly what you mean; for I won’t accept such nonsense from you.

Socrates:: His words startled me, and, looking at him, I was afraid. And I think that if I hadn’t seen him before he stared at me, I'd have been dumbstruck. But as it was, I happened to look at him just as our discussion began to exasperate him, so I was able to answer, and, trembling a little, I said: Don’t be too hard on us, Thrasymachus, for if Polemarchus and I made an error in our investigation, you should know that we did so unwillingly. If we were searching for gold, we'd never willingly give way to each other, if by doing so we'd destroy our chance of finding it. So don’t think that in searching for justice, a thing more valuable than even a large quantity of gold, we'd mindlessly give way to one another or be less than completely serious about finding it. You surely mustn’t think that, but rather—as I do— that we’re incapable of finding it. Hence it’s surely far more appropriate for us to be pitied by you clever people than to be given rough treatment.

When he heard that, he gave a loud, sarcastic laugh.

Thrasymachus:: By Heracles, that’s just Socrates’ usual irony. I knew, and I said so to these people earlier, that you'd be unwilling to answer and that, if someone questioned you, you'd be ironical and do anything rather than give an answer.

Socrates:: That’s because you’re a clever fellow, Thrasymachus. You knew very well that if you ask someone how much twelve is, and, as you ask, you warn him by saying “Don’t tell me, man, that twelve is twice six, or three times four, or six times two, or four times three, for I won’t accept such nonsense,” then you’ll see clearly, I think, that no one could answer a question framed like that. And if he said to you: “What are you saying, Thrasymachus, am I not to give any of the answers you mention, not even if twelve happens to be one of those things? I'm amazed. Do you want me to say something other than the truth? Or do you mean something else?" What answer would you give him?

Thrasymachus:: Well, so you think the two cases are alike?

Socrates:: Why shouldn't they be alike? But even if they aren't alike, yet seem so to the person you asked, do you think him any less likely to give the answer that seems right to him, whether we forbid him to or not?

Thrasymachus:: Is that what you're going to do, give one of the forbidden answers?

Socrates:: I wouldn't be surprised—provided that it's the one that seems right to me after I've investigated the matter.

Thrasymachus:: What if I show you a different answer about justice than all these—and a better one? What would you deserve then?

Socrates:: What else than the appropriate penalty for one who doesn't know, namely, to learn from the one who does know? Therefore, that's what I deserve.

Thrasymachus:: You amuse me, but in addition to learning, you must pay a fine.

Socrates:: I will as soon as I have some money.

Glaucon:: He has some already. If it's a matter of money, speak, Thrasymachus, for we'll all contribute for Socrates.

Thrasymachus:: I know, so that Socrates can carry on as usual. He gives no answer himself, and then, when someone else does give one, he takes up the argument and refutes it.

Socrates:: How can someone give an answer, when he doesn't know it and doesn't claim to know it, and when an eminent man forbids him to express the opinion he has? It’s much more appropriate for you to answer, since you say you know and can tell us. So do it as a favor to me, and don’t begrudge your teaching to Glaucon and the others.

While I was saying this, Glaucon and the others begged him to speak. It was obvious that Thrasymachus thought he had a fine answer and that he wanted to earn their admiration by giving it, but he pretended that he wanted to indulge his love of victory by forcing me to answer. However, he agreed in the end, and then said:

Thrasymachus:: There you have Socrates’ wisdom; he himself isn’t willing to teach, but he goes around learning from others and isn’t even grateful to them.

Socrates:: When you say that I learn from others you are right, Thrasymachus, but when you say that I’m not grateful, that isn’t true. I show what gratitude I can, but since I have no money, I can give only praise. But just how enthusiastically I give it when someone seems to me to speak well, you’ll know as soon as you’ve answered, for I think that you will speak well.

Thrasymachus:: Listen, then. I say that justice is nothing other than the advantage of the stronger. Well, why don’t you praise me? But then you'd do anything to avoid having to do that.

Socrates:: I must first understand you, for I don’t yet know what you mean. The advantage of the stronger, you say, is just. What do you mean, Thrasymachus? Surely you don’t mean something like this: Polydamus, the pancratist, is stronger than we are; it is to his advantage to eat beef to build up his physical strength; therefore, this food is also advantageous and just for us who are weaker than he is?

Thrasymachus:: You disgust me, Socrates. Your trick is to take hold of the argument at the point where you can do it the most harm.

Socrates:: Not at all, but tell us more clearly what you mean.

Thrasymachus:: Don't you know that some cities are ruled by a tyranny, some by a democracy, and some by an aristocracy?

Socrates:: Of course.

Thrasymachus:: And in each city this element is stronger, namely, the ruler?

Socrates:: Certainly.

Thrasymachus:: And each makes laws to its own advantage. Democracy makes democratic laws, tyranny makes tyrannical laws, and so on with the others. And they declare what they have made—what is to their own advantage—to be just for their subjects, and they punish anyone who goes against this as lawless and unjust. This, then, is what I say justice is, the same in all cities, the advantage of the established rule. Since the established rule is surely stronger, anyone who reasons correctly will conclude that the just is the same everywhere, namely, the advantage of the stronger.

Socrates:: Now I see what you mean. Whether it's true or not, I'll try to find out. But you yourself have answered that the just is the advantageous, Thrasymachus, whereas you forbade that answer to me. True, you've added "of the stronger" to it.

Thrasymachus:: And I suppose you think that's an insignificant addition.

Socrates:: It isn't clear yet whether it's significant. But it is clear that we must investigate to see whether or not it's true. I agree that the just is some kind of advantage. But you add that it’s of the stronger. I don’t know about that. We’ll have to look into it.

Thrasymachus:: Go ahead and look.

Socrates:: We will. Tell me, don’t you also say that it is just to obey the rulers?

Thrasymachus:: I do.

Socrates:: And are the rulers in all cities infallible, or are they liable to error?

Thrasymachus:: No doubt they are liable to error.

Socrates:: When they undertake to make laws, therefore, they make some correctly, others incorrectly?

Thrasymachus:: I suppose so.

Socrates:: And a law is correct if it prescribes what is to the rulers’ own advantage and incorrect if it prescribes what is to their disadvantage? Is that what you mean?

Thrasymachus:: It is.

Socrates:: And whatever laws they make must be obeyed by their subjects, and this is justice?

Thrasymachus:: Of course.

Socrates:: Then, according to your account, it is just to do not only what is to the advantage of the stronger, but also the opposite, what is not to their advantage.

Thrasymachus:: What are you saying?

Socrates:: The same as you. But let’s examine it more fully. Haven’t we agreed that, in giving orders to their subjects, the rulers are sometimes in error as to what is best for themselves, and yet that it is just for their subjects to do whatever their rulers order? Haven’t we agreed to that much?

Thrasymachus:: I think so.

Socrates:: Then you must also think that you have agreed that it is just to do what is disadvantageous to the rulers and those who are stronger, whenever they unintentionally order what is bad for themselves. But you also say that it is just for the others to obey the orders they give. You're terribly clever, Thrasymachus, but doesn't it necessarily follow that it is just to do the opposite of what you said, since the weaker are then ordered to do what is disadvantageous to the stronger?

Polemarchus:: By god, Socrates, that's quite clear.

Clitophon:: If you are to be his witness anyway.

Polemarchus:: Who needs a witness? Thrasymachus himself agrees that the rulers sometimes order what is bad for themselves and that it is just for the others to do it.

Clitophon:: That, Polemarchus, is because Thrasymachus maintained that it is just to obey the orders of the rulers.

Polemarchus:: He also maintained, Clitophon, that the advantage of the stronger is just. And having maintained both principles he went on to agree that the stronger sometimes gives orders to those who are weaker than he is—in other words, to his subjects—that are disadvantageous to the stronger himself. From these agreements it follows that what is to the advantage of the stronger is no more just than what is not to his advantage.

Clitophon:: But, he said that the advantage of the stronger is what the stronger believes to be his advantage. This is what the weaker must do, and this is what he maintained the just to be.

Polemarchus:: That isn't what he said.

Socrates:: It makes no difference, Polemarchus. If Thrasymachus wants to put it that way now, let's accept it. Tell me, Thrasymachus, is this what you wanted to say the just is, namely, what the stronger believes to be to his advantage, whether it is in fact to his advantage or not? Is that what we are to say you mean?

Thrasymachus:: Not at all. Do you think I'd call someone who is in error stronger at the very moment he errs?

Socrates:: I did think that was what you meant when you agreed that the rulers aren’t infallible but are liable to error.

Thrasymachus:: That’s because you are a false witness in arguments, Socrates. When someone makes an error in the treatment of patients, do you call him a doctor in regard to that very error? Or when someone makes an error in accounting, do you call him an accountant in regard to that very error in calculation? I think that we express ourselves in words that, taken literally, do say that a doctor is in error, or an accountant, or a grammarian. But each of these, insofar as he is what we call him, never errs, so that, according to the precise account (and you are a stickler for precise accounts), no craftsman ever errs. It’s when his knowledge fails him that he makes an error, and in regard to that error he is no craftsman. No craftsman, expert, or ruler makes an error at the moment when he is ruling, even though everyone will say that a physician or a ruler makes errors. It’s in this loose way that you must also take the answer I gave earlier. But the most precise answer is this. A ruler, insofar as he is a ruler, never makes errors and unerringly decrees what is best for himself, and this his subject must do. Thus, as I said from the first, it is just to do what is to the advantage of the stronger.

Socrates:: All right, Thrasymachus, so you think I’m a false witness?

Thrasymachus:: You certainly are.

Socrates:: And you think that I asked the questions I did in order to harm you in the argument?

Thrasymachus:: I know it very well, but it won't do you any good. You'll never be able to trick me, so you can't harm me that way, and without trickery you'll never be able to overpower me in argument.

Socrates:: I wouldn't so much as try, Thrasymachus. But in order to prevent this sort of thing from happening again, define clearly whether it is the ruler and stronger in the ordinary sense or in the precise sense whose advantage you said it is just for the weaker to promote as the advantage of the stronger.

Thrasymachus:: I mean the ruler in the most precise sense. Now practice your harm-doing and false witnessing on that if you can—I ask no concessions from you—but you certainly won't be able to.

Socrates:: Do you think that I'm crazy enough to try to shave a lion or to bear false witness against Thrasymachus?

Thrasymachus:: You certainly tried just now, though you were a loser at that too.

Socrates:: Enough of this. Tell me: Is a doctor in the precise sense, whom you mentioned before, a money-maker or someone who treats the sick? Tell me about the one who is really a doctor.

Thrasymachus:: He's the one who treats the sick.

Socrates:: What about a ship's captain? Is a captain in the precise sense a ruler of sailors or a sailor?

Thrasymachus:: A ruler of sailors.

Socrates:: We shouldn't, I think, take into account the fact that he sails in a ship, and he shouldn't be called a sailor for that reason, for it isn't because of his sailing that he is called a ship’s captain, but because of his craft and his rule over sailors?

Thrasymachus:: That’s true.

Socrates:: And is there something advantageous to each of these, that is, to bodies and to sailors?

Thrasymachus:: Certainly.

Socrates:: And aren’t the respective crafts by nature set over them to seek and provide what is to their advantage?

Thrasymachus:: They are.

Socrates:: And is there any advantage for each of the crafts themselves except to be as complete or perfect as possible?

Thrasymachus:: What are you asking?

Socrates:: This: If you asked me whether our bodies are sufficient in themselves, or whether they need something else, I'd answer: “They certainly have needs. And because of this, because our bodies are deficient rather than self-sufficient, the craft of medicine has now been discovered. The craft of medicine was developed to provide what is advantageous for a body.” Do you think that I’m right in saying this or not?

Thrasymachus:: You are right.

Socrates:: Now, is medicine deficient? Does a craft need some further virtue, as the eyes are in need of sight, and the ears of hearing, so that another craft is needed to seek and provide what is advantageous to them? Does a craft itself have some similar deficiency, so that each craft needs another, to seek out what is to its advantage? And does the craft that does the seeking need still another, and so on without end? Or does each seek out what is to its own advantage by itself? Or does it need neither itself nor another craft to seek out what is advantageous to it, because of its own deficiencies? Or is it that there is no deficiency or error in any craft? That it isn’t appropriate for any craft to seek what is to the advantage of anything except that of which it is the craft? And that, since it is itself correct, it is without either fault or impurity, as long as it is wholly and precisely the craft that it is? Consider this with the preciseness of language you mentioned. Is it so or not?

Thrasymachus:: It appears to be so.

Socrates:: Medicine doesn’t seek its own advantage, then, but that of the body?

Thrasymachus:: Yes.

Socrates:: And horse-breeding doesn’t seek its own advantage, but that of horses? Indeed, no other craft seeks its own advantage—for it has no further needs—but the advantage of that of which it is the craft?

Thrasymachus:: Apparently so.

Socrates:: Now, surely, Thrasymachus, the crafts rule over and are stronger than the things of which they are the crafts?

Very reluctantly, he conceded this as well.

Socrates:: No kind of knowledge seeks or orders what is advantageous to itself, then, but what is advantageous to the weaker, which is subject to it.

He tried to fight this conclusion, but he conceded it in the end. And after he had, I said: Surely, then, no doctor, insofar as he is a doctor, seeks or orders what is advantageous to himself, but what is advantageous to his patient? We agreed that a doctor in the precise sense is a ruler of bodies, not a money-maker. Wasn’t that agreed?

Thrasymachus:: Yes.

Socrates:: So a ship's captain in the precise sense is a ruler of sailors, not a sailor?

Thrasymachus:: That's what we agreed.

Socrates:: Doesn't it follow that a ship's captain or ruler won't seek and order what is advantageous to himself, but what is advantageous to a sailor?

He reluctantly agreed.

Socrates:: So, then, Thrasymachus, no one in any position of rule, insofar as he is a ruler, seeks or orders what is advantageous to himself, but what is advantageous to his subjects; the ones of whom he is himself the craftsman. It is to his subjects and what is advantageous and proper to them that he looks, and everything he says and does he says and does for them.

When we reached this point in the argument, and it was clear to all that his account of justice had turned into its opposite, instead of answering, Thrasymachus said:

Thrasymachus:: Tell me, Socrates, do you still have a wet nurse?

Socrates:: What's this? Hadn't you better answer my questions rather than asking me such things?

Thrasymachus:: Because she's letting you run around with a snotty nose, and doesn't wipe it when she needs to! Why, for all she cares, you don't even know about sheep and shepherds.

Socrates:: Just what is it I don't know?

Thrasymachus:: You think that shepherds and cowherds seek the good of their sheep and cattle, and fatten them and take care of them, looking to something other than their master's good and their own. Moreover, you believe that rulers in cities—true rulers, that is—think about their subjects differently than one does about sheep, and that night and day they think of something besides their own advantage. You are so far from understanding about justice and what's just, about injustice and what's unjust, that you don't realize that justice is really the good of another, the advantage of the stronger and the ruler, and harmful to the one who obeys and serves. Injustice is the opposite, it rules the truly simple and just, and those it rules do what is to the advantage of the other and stronger, and they make the one they serve happy, but themselves not at all. You must look at it as follows, my most simple Socrates: A just man always gets less than an unjust one. First, in their contracts with one another, you'll never find, when the partnership ends, that a just partner has got more than an unjust one, but less. Second, in matters relating to the city, when taxes are to be paid, a just man pays more on the same property, an unjust one less, but when the city is giving out refunds, a just man gets nothing, while an unjust one makes a large profit. Finally, when each of them holds a ruling position in some public office, a just person, even if he isn't penalized in other ways, finds that his private affairs deteriorate because he has to neglect them, that he gains no advantage from the public purse because of his justice, and that he's hated by his relatives and acquaintances when he's unwilling to do them an unjust favor. The opposite is true of an unjust man in every respect. Therefore, I repeat what I said before: A person of great power outdoes everyone else. Consider him if you want to figure out how much more advantageous it is for the individual to be just rather than unjust. You'll understand this most easily if you turn your thoughts to the most complete injustice, the one that makes the doer of injustice happiest and the sufferers of it, who are unwilling to do injustice, most wretched. This is tyranny, which through stealth or force appropriates the property of others, whether sacred or profane, public or private, not little by little, but all at once. If someone commits only one part of injustice and is caught, he’s punished and greatly reproached—such partly unjust people are called temple-robbers, kidnappers, housebreakers, robbers, and thieves when they commit these crimes. But when someone, in addition to appropriating their possessions, kidnaps and enslaves the citizens as well, instead of these shameful names he is called happy and blessed, not only by the citizens themselves, but by all who learn that he has done the whole of injustice. Those who reproach injustice do so because they are afraid not of doing it but of suffering it. So, Socrates, injustice, if it is on a large enough scale, is stronger, freer, and more masterly than justice. And, as I said from the first, justice is what is advantageous to the stronger, while injustice is to one’s own profit and advantage.

Socrates:: Having emptied this great flood of words into our ears all at once like a bath attendant, Thrasymachus intended to leave. But those present didn’t let him and made him stay to give an account of what he had said. I too begged him to stay, and I said to him: After hurling such a speech at us, Thrasymachus, do you intend to leave before adequately instructing us or finding out whether you are right or not? Or do you think it a small matter to determine which whole way of life would make living most worthwhile for each of us?

Thrasymachus:: Is that what I seem to you to think?

Socrates:: Either that, or else you care nothing for us and aren’t worried about whether we’ll live better or worse lives because of our ignorance of what you say you know. So show some willingness to teach it to us. It wouldn’t be a bad investment for you to be the benefactor of a group as large as ours. For my own part, I’ll tell you that I am not persuaded. I don't believe that injustice is more profitable than justice, not even if you give it full scope and put no obstacles in its way. Suppose that there is an unjust person, and suppose he does have the power to do injustice, whether by trickery or open warfare; nonetheless, he doesn't persuade me that injustice is more profitable than justice. Perhaps someone here, besides myself, feels the same as I do. So come now, and persuade us that we are wrong to esteem justice more highly than injustice in planning our lives.

Thrasymachus:: And how am I to persuade you, if you aren't persuaded by what I said just now? What more can I do? Am I to take my argument and pour it into your very soul?

Socrates:: God forbid! Don't do that! But, first, stick to what you've said, and then, if you change your position, do it openly and don't deceive us. You see, Thrasymachus, that having defined the true doctor—to continue examining the things you said before—you didn't consider it necessary later to keep a precise guard on the true shepherd. You think that, insofar as he's a shepherd, he fattens sheep, not looking to what is best for the sheep but to a banquet, like a guest about to be entertained at a feast, or to a future sale, like a money-maker rather than a shepherd. Shepherding is concerned only to provide what is best for the things it is set over, and it is itself adequately provided with all it needs to be at its best when it doesn't fall short in any way of being the craft of shepherding. That's why I thought it necessary for us to agree before that every kind of rule, insofar as it rules, doesn't seek anything other than what is best for the things it rules and cares for, and this is true both of public and private kinds of rule. But do you think that those who rule cities, the true rulers, rule willingly?

Thrasymachus:: I don’t think it, by god, I know it.

Socrates:: But, Thrasymachus, don’t you realize that in other kinds of rule no one wants to rule for its own sake, but they ask for pay, thinking that their ruling will benefit not themselves but their subjects? Tell me, doesn’t every craft differ from every other in having a different function? Please don’t answer contrary to what you believe, so that we can come to some definite conclusion.

Thrasymachus:: Yes, that’s what differentiates them.

Socrates:: And each craft benefits us in its own peculiar way, different from the others. For example, medicine gives us health, navigation gives us safety while sailing, and so on with the others?

Thrasymachus:: Certainly.

Socrates:: And wage-earning gives us wages, for this is its function? Or would you call medicine the same as navigation? Indeed, if you want to define matters precisely, as you proposed, even if someone who is a ship’s captain becomes healthy because sailing is advantageous to his health, you wouldn’t for that reason call his craft medicine?

Thrasymachus:: Certainly not.

Socrates:: Nor would you call wage-earning medicine, even if someone becomes healthy while earning wages?

Thrasymachus:: Certainly not.

Socrates:: Nor would you call medicine wage-earning, even if someone earns pay while healing?

Thrasymachus:: No.

Socrates:: We are agreed, then, that each craft brings its own peculiar benefit?

Thrasymachus:: It does.

Socrates:: Then whatever benefit all craftsmen receive in common must clearly result from their joint practice of some additional craft that benefits each of them?

Thrasymachus:: So it seems.

Socrates:: And we say that the additional craft in question, which benefits the craftsmen by earning them wages, is the craft of wage-earning?

He reluctantly agreed.

Then this benefit, receiving wages, doesn’t result from their own craft, but rather, if we’re to examine this precisely, medicine provides health, and wage-earning provides wages; house-building provides a house, and wage-earning, which accompanies it, provides a wage; and so on with the other crafts. Each of them does its own work and benefits the things it is set over. So, if wages aren’t added, is there any benefit that the craftsman gets from his craft?

Thrasymachus:: Apparently none.

Socrates:: But he still provides a benefit when he works for nothing?

Thrasymachus:: Yes, I think he does.

Socrates:: Then, it is clear now, Thrasymachus, that no craft or rule provides for its own advantage, but, as we’ve been saying for some time, it provides and orders for its subject and aims at its advantage, that of the weaker, not of the stronger. That’s why I said just now, Thrasymachus, that no one willingly chooses to rule and to take other people’s troubles in hand and straighten them out, but each asks for wages; for anyone who intends to practice his craft well never does or orders what is best for himself— at least not when he orders as his craft prescribes—but what is best for his subject. It is because of this, it seems, that wages must be provided to a person if he’s to be willing to rule, whether in the form of money or honor or a penalty if he refuses.

Glaucon:: What do you mean, Socrates? I know the first two kinds of wages, but I don't understand what penalty you mean or how you can call it a wage.

Socrates:: Then you don't understand the best people's kind of wages, the kind that moves the most decent to rule, when they are willing to rule at all. Don't you know that the love of honor and the love of money are despised, and rightly so?

Glaucon:: I do.

Socrates:: Therefore good people won't be willing to rule for the sake of either money or honor. They don't want to be paid wages openly for ruling and get called hired hands, nor to take them in secret from their rule and be called thieves. And they won't rule for the sake of honor, because they aren't ambitious honor-lovers. So, if they're to be willing to rule, some compulsion or punishment must be brought to bear on them—perhaps that's why it is thought shameful to seek to rule before one is compelled to. Now, the greatest punishment, if one isn't willing to rule, is to be ruled by someone worse than oneself. And I think that it's fear of this that makes decent people rule when they do. They approach ruling not as something good or something to be enjoyed, but as something necessary, since it can't be entrusted to anyone better than—or even as good as—themselves. In a city of good men, if it came into being, the citizens would fight in order not to rule, just as they do now in order to rule. There it would be quite clear that anyone who is really a true ruler doesn't by nature seek his own advantage but that of his subjects. And everyone, knowing this, would rather be benefited by others than take the trouble to benefit them. So I can't at all agree with

Thrasymachus that justice is the advantage of the stronger—but we'll look further into that another time. What Thrasymachus is now saying—that the life of an unjust person is better than that of a just one—seems to be of far greater importance. Which life would you choose, Glaucon? And which of our views do you consider truer?

Glaucon:: I certainly think that the life of a just person is more profitable.

Socrates:: Did you hear all of the good things Thrasymachus listed a moment ago for the unjust life?

Glaucon:: I heard, but I wasn't persuaded.

Socrates:: Then, do you want us to persuade him, if we're able to find a way, that what he says isn't true?

Glaucon:: Of course I do.

Socrates:: If we oppose him with a parallel speech about the blessings of the just life, and then he replies, and then we do, we'd have to count and measure the good things mentioned on each side, and we'd need a jury to decide the case. But if, on the other hand, we investigate the question, as we've been doing, by seeking agreement with each other, we ourselves can be both jury and advocates at once.

Glaucon:: Certainly.

Socrates:: Which approach do you prefer?

Glaucon:: The second.

Socrates:: Come, then, Thrasymachus, answer us from the beginning. You say that complete injustice is more profitable than complete justice?

Thrasymachus:: I certainly do say that, and I've told you why.

Socrates:: Well, then, what do you say about this? Do you call one of the two a virtue and the other a vice?

Thrasymachus:: Of course.

Socrates:: That is to say, you call justice a virtue and injustice a vice?

Thrasymachus:: That's hardly likely, since I say that injustice is profitable and justice isn't.

Socrates:: Then, what exactly do you say?

Thrasymachus:: The opposite.

Socrates:: That justice is a vice?

Thrasymachus:: No, just very high-minded simplicity.

Socrates:: Then do you call being unjust being low-minded?

Thrasymachus:: No, I call it good judgment.

Socrates:: You consider unjust people, then, Thrasymachus, to be clever and good?

Thrasymachus:: Yes, those who are completely unjust, who can bring cities and whole communities under their power. Perhaps, you think I meant pickpockets? Not that such crimes aren't also profitable, if they're not found out, but they aren't worth mentioning by comparison to what I'm talking about.

Socrates:: I'm not unaware of what you want to say. But I wonder about this: Do you really include injustice with virtue and wisdom, and justice with their opposites?

Thrasymachus:: I certainly do.

Socrates:: That's harder, and it isn't easy now to know what to say. If you had declared that injustice is more profitable, but agreed that it is a vice or shameful, as some others do, we could have discussed the matter on the basis of conventional beliefs. But now, obviously, you'll say that injustice is fine and strong and apply to it all the attributes we used to apply to justice, since you dare to include it with virtue and wisdom.

Thrasymachus:: You've divined my views exactly.

Socrates:: Nonetheless, we mustn’t shrink from pursuing the argument and looking into this, just as long as I take you to be saying what you really think. And I believe that you aren’t joking now, Thrasymachus, but are saying what you believe to be the truth.

Thrasymachus:: What difference does it make to you, whether I believe it or not? It’s my account you’re supposed to be refuting.

Socrates:: It makes no difference. But try to answer this further question: Do you think that a just person wants to outdo someone else who’s just?

Thrasymachus:: Not at all, for he wouldn’t then be as polite and innocent as he is.

Socrates:: Or to outdo someone who does a just action?

Thrasymachus:: No, he doesn’t even want to do that.

Socrates:: And does he claim that he deserves to outdo an unjust person and believe that it is just for him to do so, or doesn’t he believe that?

Thrasymachus:: He'd want to outdo him, and he'd claim to deserve to do so, but he wouldn’t be able.

Socrates:: That’s not what I asked, but whether a just person wants to outdo an unjust person but not a just one, thinking that this is what he deserves?

Thrasymachus:: He does.

Socrates:: What about an unjust person? Does he claim that he deserves to outdo a just person or someone who does a just action?

Thrasymachus:: Of course he does; he thinks he deserves to outdo everyone.

Socrates:: Then will an unjust person also outdo an unjust person or someone who does an unjust action, and will he strive to get the most he can for himself from everyone?

Thrasymachus:: He will.

Socrates:: Then, let's put it this way: A just person doesn't outdo someone like himself but someone unlike himself, whereas an unjust person outdoes both like and unlike.

Thrasymachus:: Very well put.

Socrates:: An unjust person is clever and good, and a just one is neither?

Thrasymachus:: That's well put, too.

Socrates:: It follows, then, that an unjust person is like clever and good people, while the other isn't?

Thrasymachus:: Of course that's so. How could he fail to be like them when he has their qualities, while the other isn't like them?

Socrates:: Fine. Then each of them has the qualities of the people he's like?

Thrasymachus:: Of course.

Socrates:: All right, Thrasymachus. Do you call one person musical and another nonmusical?

Thrasymachus:: I do.

Socrates:: Which of them is clever in music, and which isn't?

Thrasymachus:: The musical one is clever, of course, and the other isn't.

Socrates:: And the things he's clever in, he's good in, and the things he isn't clever in, he's bad in?

Thrasymachus:: Yes.

Socrates:: Isn't the same true of a doctor?

Thrasymachus:: It is.

Socrates:: Do you think that a musician, in tuning his lyre and in tightening and loosening the strings, wants to outdo another musician, claiming that this is what he deserves?

Thrasymachus:: I do not.

Socrates:: But he does want to outdo a nonmusician?

Thrasymachus:: Necessarily.

Socrates:: What about a doctor? Does he, when prescribing food and drink, want to outdo another doctor or someone who does the action that medicine prescribes?

Thrasymachus:: Certainly not.

Socrates:: But he does want to outdo a nondoctor?

Thrasymachus:: Yes.

Socrates:: In any branch of knowledge or ignorance, do you think that a knowledgeable person would intentionally try to outdo other knowledgeable people or say something better or different than they do, rather than doing or saying the very same thing as those like him?

Thrasymachus:: Well, perhaps it must be as you say.

Socrates:: And what about an ignorant person? Doesn’t he want to outdo both a knowledgeable person and an ignorant one?

Thrasymachus:: Probably.

Socrates:: A knowledgeable person is clever?

Thrasymachus:: I agree.

Socrates:: And a clever one is good?

Thrasymachus:: I agree.

Socrates:: Therefore, a good and clever person doesn’t want to outdo those like himself but those who are unlike him and his opposite.

Thrasymachus:: So it seems.

Socrates:: But a bad and ignorant person wants to outdo both his like and his opposite.

Thrasymachus:: Apparently.

Socrates:: Now, Thrasymachus, we found that an unjust person tries to outdo those like him and those unlike him? Didn’t you say that?

Thrasymachus:: I did.

Socrates:: And that a just person won’t outdo his like but his unlike?

Thrasymachus:: Yes.

Socrates:: Then, a just person is like a clever and good one, and an unjust is like an ignorant and bad one.

Thrasymachus:: It looks that way.

Socrates:: Moreover, we agreed that each has the qualities of the one he resembles.

Thrasymachus:: Yes, we did.

Socrates:: Then, a just person has turned out to be good and clever, and an unjust one ignorant and bad.

Thrasymachus agreed to all this, not easily as I’m telling it, but reluctantly, with toil, trouble, and—since it was summer—a quantity of sweat that was a wonder to behold. And then I saw something I'd never seen before—Thrasymachus blushing. But, in any case, after we'd agreed that justice is virtue and wisdom and that injustice is vice and ignorance, I said: All right, let’s take that as established. But we also said that injustice is powerful, or don’t you remember that, Thrasymachus?

Thrasymachus:: I remember, but I’m not satisfied with what you’re now saying. I could make a speech about it, but, if I did, I know that you'd accuse me of engaging in oratory. So either allow me to speak, or, if you want to ask questions, go ahead, and I'll say, "All right," and nod yes and no, as one does to old wives' tales.

Socrates:: Don't do that, contrary to your own opinion.

Thrasymachus:: I'll answer so as to please you, since you won't let me make a speech. What else do you want?

Socrates:: Nothing, by god. But if that's what you're going to do, go ahead and do it. I'll ask my questions.

Thrasymachus:: Ask ahead.

Socrates:: I'll ask what I asked before, so that we may proceed with our argument about justice and injustice in an orderly fashion, for surely it was claimed that injustice is stronger and more powerful than justice. But, now, if justice is indeed wisdom and virtue, it will easily be shown to be stronger than injustice, since injustice is ignorance (no one could now be ignorant of that). However, I don't want to state the matter so unconditionally, Thrasymachus, but to look into it in some such way as this. Would you say that it is unjust for a city to try to enslave other cities unjustly and to hold them in subjection when it has enslaved many of them?

Thrasymachus:: Of course, that's what the best city will especially do, the one that is most completely unjust.

Socrates:: I understand that's your position, but the point I want to examine is this: Will the city that becomes stronger than another achieve this power without justice, or will it need the help of justice?

Thrasymachus:: If what you said a moment ago stands, and justice is cleverness or wisdom, it will need the help of justice, but if things are as I stated, it will need the help of injustice.

Socrates:: I'm impressed, Thrasymachus, that you don't merely nod yes or no but give very fine answers.

Thrasymachus:: That's because I'm trying to please you.

Socrates:: You're doing well at it, too. So please me some more by answering this question: Do you think that a city, an army, a band of robbers or thieves, or any other tribe with a common unjust purpose would be able to achieve it if they were unjust to each other?

Thrasymachus:: No, indeed.

Socrates:: What if they weren't unjust to one another? Would they achieve more?

Thrasymachus:: Certainly.

Socrates:: Injustice, Thrasymachus, causes civil war, hatred, and fighting among themselves, while justice brings friendship and a sense of common purpose. Isn't that so?

Thrasymachus:: Let it be so, in order not to disagree with you.

Socrates:: You're still doing well on that front. So tell me this: If the effect of injustice is to produce hatred wherever it occurs, then, whenever it arises, whether among free men or slaves, won't it cause them to hate one another, engage in civil war, and prevent them from achieving any common purpose?

Thrasymachus:: Certainly.

Socrates:: What if it arises between two people? Won't they be at odds, hate each other, and be enemies to one another and to just people?

Thrasymachus:: They will.

Socrates:: Does injustice lose its power to cause dissension when it arises within a single individual, or will it preserve it intact?

Thrasymachus:: Let it preserve it intact.

Socrates:: Apparently, then, injustice has the power, first, to make whatever it arises in—whether it is a city, a family, an army, or anything else—incapable of achieving anything as a unit, because of the civil wars and differences it creates, and, second, it makes that unit an enemy to itself and to what is in every way its opposite, namely, justice. Isn’t that so?

Thrasymachus:: Certainly.

Socrates:: And even in a single individual, it has by its nature the very same effect. First, it makes him incapable of achieving anything, because he is in a state of civil war and not of one mind; second, it makes him his own enemy, as well as the enemy of just people. Hasn’t it that effect?

Thrasymachus:: Yes.

Socrates:: And the gods too are just?

Thrasymachus:: Let it be so.

Socrates:: So an unjust person is also an enemy of the gods, Thrasymachus, while a just person is their friend?

Thrasymachus:: Enjoy your banquet of words! Have no fear, I won’t oppose you. That would make these people hate me.

Socrates:: Come, then, complete the banquet for me by continuing to answer as you’ve been doing. We have shown that just people are cleverer and more capable of doing things, while unjust ones aren’t even able to act together, for when we speak of a powerful achievement by unjust men acting together, what we say isn’t altogether true. They would never have been able to keep their hands off each other if they were completely unjust. But clearly there must have been some sort of justice in them that at least prevented them from doing injustice among themselves at the same time as they were doing it to others. And it was this that enabled them to achieve what they did. When they started doing unjust things, they were only halfway corrupted by their injustice (for those who are all bad and completely unjust are completely incapable of accomplishing anything). These are the things I understand to hold, not the ones you first maintained. We must now examine, as we proposed before, whether just people also live better and are happier than unjust ones. I think it’s clear already that this is so, but we must look into it further, since the argument concerns no ordinary topic but the way we ought to live.

Thrasymachus:: Go ahead and look.

Socrates:: I will. Tell me, do you think there is such a thing as the function of a horse?

Thrasymachus:: I do.

Socrates:: And would you define the function of a horse or of anything else as that which one can do only with it or best with it?

Thrasymachus:: I don’t understand.

Socrates:: Let me put it this way: Is it possible to see with anything other than eyes?

Thrasymachus:: Certainly not.

Socrates:: Or to hear with anything other than ears?

Thrasymachus:: No.

Socrates:: Then, we are right to say that seeing and hearing are the functions of eyes and ears?

Thrasymachus:: Of course.

Socrates:: What about this? Could you use a dagger or a carving knife or lots of other things in pruning a vine?

Thrasymachus:: Of course.

Socrates:: But wouldn’t you do a finer job with a pruning knife designed for the purpose than with anything else?

Thrasymachus:: You would.

Socrates:: Then shall we take pruning to be its function?

Thrasymachus:: Yes.

Socrates:: Now, I think you'll understand what I was asking earlier when I asked whether the function of each thing is what it alone can do or what it does better than anything else.

Thrasymachus:: I understand, and I think that this is the function of each.

Socrates:: All right. Does each thing to which a particular function is assigned also have a virtue? Let's go over the same ground again. We say that eyes have some function?

Thrasymachus:: They do.

Socrates:: So there is also a virtue of eyes?

Thrasymachus:: There is.

Socrates:: And ears have a function?

Thrasymachus:: Yes.

Socrates:: So there is also a virtue of ears?

Thrasymachus:: There is.

Socrates:: And all other things are the same, aren't they?

Thrasymachus:: They are.

Socrates:: And could eyes perform their function well if they lacked their peculiar virtue and had the vice instead?

Thrasymachus:: How could they, for don't you mean if they had blindness instead of sight?

Socrates:: Whatever their virtue is, for I'm not now asking about that but about whether anything that has a function performs it well by means of its own peculiar virtue and badly by means of its vice?

Thrasymachus:: That's true, it does.

Socrates:: So ears, too, deprived of their own virtue, perform their function badly?

Thrasymachus:: That’s right.

Socrates:: And the same could be said about everything else?

Thrasymachus:: So it seems.

Socrates:: Come, then, and let’s consider this: Is there some function of a soul that you couldn’t perform with anything else, for example, taking care of things, ruling, deliberating, and the like? Is there anything other than a soul to which you could rightly assign these, and say that they are its peculiar function?

Thrasymachus:: No, none of them.

Socrates:: What of living? Isn’t that a function of a soul?

Thrasymachus:: It certainly is.

Socrates:: And don’t we also say that there is a virtue of a soul?

Thrasymachus:: We do.

Socrates:: Then, will a soul ever perform its function well, Thrasymachus, if it is deprived of its own peculiar virtue, or is that impossible?

Thrasymachus:: It’s impossible.

Socrates:: Doesn’t it follow, then, that a bad soul rules and takes care of things badly and that a good soul does all these things well?

Thrasymachus:: It does.

Socrates:: Now, we agreed that justice is a soul’s virtue, and injustice its vice?

Thrasymachus:: We did.

Socrates:: Then, it follows that a just soul and a just man will live well, and an unjust one badly.

Thrasymachus:: Apparently so, according to your argument.

Socrates:: And surely anyone who lives well is blessed and happy, and anyone who doesn't is the opposite.

Thrasymachus:: Of course.

Socrates:: Therefore, a just person is happy, and an unjust one wretched.

Thrasymachus:: So be it.

Socrates:: It profits no one to be wretched but to be happy.

Thrasymachus:: Of course.

Socrates:: And so, Thrasymachus, injustice is never more profitable than justice.

Thrasymachus:: Let that be your banquet, Socrates, at the feast of Bendis.

Socrates:: Given by you, Thrasymachus, after you became gentle and ceased to give me rough treatment. Yet I haven't had a fine banquet. But that's my fault not yours. I seem to have behaved like a glutton, snatching at every dish that passes and tasting it before properly savoring its predecessor. Before finding the answer to our first inquiry about what justice is, I let that go and turned to investigate whether it is a kind of vice and ignorance or a kind of wisdom and virtue. Then an argument came up about injustice being more profitable than justice, and I couldn't refrain from abandoning the previous one and following up on that. Hence the result of the discussion, as far as I'm concerned, is that I know nothing, for when I don't know what justice is, I'll hardly know whether it is a kind of virtue or not, or whether a person who has it is happy or unhappy.

## Book 2

Socrates:: When I said this, I thought I had done with the discussion, but it turned out to have been only a prelude. Glaucon showed his characteristic courage on this occasion too and refused to accept Thrasymachus' abandonment of the argument.

Glaucon:: Socrates, do you want to seem to have persuaded us that it is better in every way to be just than unjust, or do you want truly to convince us of this?

Socrates:: I want truly to convince you, if I can.

Glaucon:: Well, then, you certainly aren't doing what you want. Tell me, do you think there is a kind of good we welcome, not because we desire what comes from it, but because we welcome it for its own sake—joy, for example, and all the harmless pleasures that have no results beyond the joy of having them?

Socrates:: Certainly, I think there are such things.

Glaucon:: And is there a kind of good we like for its own sake and also for the sake of what comes from it—knowing, for example, and seeing and being healthy? We welcome such things, I suppose, on both counts.

Socrates:: Yes.

Glaucon:: And do you also see a third kind of good, such as physical training, medical treatment when sick, medicine itself, and the other ways of making money? We'd say that these are onerous but beneficial to us, and we wouldn't choose them for their own sakes, but for the sake of the rewards and other things that come from them.

Socrates:: There is also this third kind. But what of it?

Glaucon:: Where do you put justice?

Socrates:: I myself put it among the finest goods, as something to be valued by anyone who is going to be blessed with happiness, both because of itself and because of what comes from it.

Glaucon:: That isn’t most people’s opinion. They’ say that justice belongs to the onerous kind, and is to be practiced for the sake of the rewards and popularity that come from a reputation for justice, but is to be avoided because of itself as something burdensome.

Socrates:: I know that’s the general opinion. Thrasymachus faulted justice on these grounds a moment ago and praised injustice, but it seems that I’m a slow learner.

Glaucon:: Come, then, and listen to me as well, and see whether you still have that problem, for I think that Thrasymachus gave up before he had to, charmed by you as if he were a snake. But I’m not yet satisfied by the argument on either side. I want to know what justice and injustice are and what power each itself has when it’s by itself in the soul. I want to leave out of account their rewards and what comes from each of them. So, if you agree, I’ll renew the argument of Thrasymachus. First, I’ll state what kind of thing people consider justice to be and what its origins are. Second, I’ll argue that all who practice it do so unwillingly, as something necessary, not as something good. Third, I’ll argue that they have good reason to act as they do, for the life of an unjust person is, they say, much better than that of a just one.

It isn’t, Socrates, that I believe any of that myself. I’m perplexed, indeed, and my ears are deafened listening to Thrasymachus and countless others. But I’ve yet to hear anyone defend justice in the way I want, proving that it is better than injustice. I want to hear it praised by itself, and

I think that I'm most likely to hear this from you. Therefore, I'm going to speak at length in praise of the unjust life, and in doing so I'll show you the way I want to hear you praising justice and denouncing injustice. But see whether you want me to do that or not.

Socrates:: I want that most of all. Indeed, what subject could someone with any understanding enjoy discussing more often?

Glaucon:: Excellent. Then let's discuss the first subject I mentioned—what justice is and what its origins are.

They say that to do injustice is naturally good and to suffer injustice bad, but that the badness of suffering it so far exceeds the goodness of doing it that those who have done and suffered injustice and tasted both, but who lack the power to do it and avoid suffering it, decide that it is profitable to come to an agreement with each other neither to do injustice nor to suffer it. As a result, they begin to make laws and covenants, and what the law commands they call lawful and just. This, they say, is the origin and essence of justice. It is intermediate between the best and the worst. The best is to do injustice without paying the penalty; the worst is to suffer it without being able to take revenge. Justice is a mean between these two extremes. People value it not as a good but because they are too weak to do injustice with impunity. Someone who has the power to do this, however, and is a true man wouldn't make an agreement with anyone not to do injustice in order not to suffer it. For him that would be madness. This is the nature of justice, according to the argument, Socrates, and these are its natural origins.

We can see most clearly that those who practice justice do it unwillingly and because they lack the power to do injustice, if in our thoughts we grant to a just and an unjust person the freedom to do whatever they like. We can then follow both of them and see where their desires would lead. And we'll catch the just person red-handed travelling the same road as the unjust. The reason for this is the desire to outdo others and get more and more. This is what anyone's nature naturally pursues as good, but nature is forced by law into the perversion of treating fairness with respect.

The freedom I mentioned would be most easily realized if both people had the power they say the ancestor of Gyges of Lydia possessed. The story goes that he was a shepherd in the service of the ruler of Lydia. There was a violent thunderstorm, and an earthquake broke open the ground and created a chasm at the place where he was tending his sheep. Seeing this, he was filled with amazement and went down into it. And there, in addition to many other wonders of which we're told, he saw a hollow bronze horse. There were window-like openings in it, and, peeping in, he saw a corpse, which seemed to be of more than human size, wearing nothing but a gold ring on its finger. He took the ring and came out of the chasm. He wore the ring at the usual monthly meeting that reported to the king on the state of the flocks. And as he was sitting among the others, he happened to turn the setting of the ring towards himself to the inside of his hand. When he did this, he became invisible to those sitting near him, and they went on talking as if he had gone. He wondered at this, and, fingering the ring, he turned the setting outwards again and became visible. So he experimented with the ring to test whether it indeed had this power—and it did. If he turned the setting inward, he became invisible; if he turned it outward, he became visible again. When he realized this, he at once arranged to become one of the messengers sent to report to the king. And when he arrived there, he seduced the king's wife, attacked the king with her help, killed him, and took over the kingdom.

Let's suppose, then, that there were two such rings, one worn by a just and the other by an unjust person. Now, no one, it seems, would be so incorruptible that he would stay on the path of justice or stay away from other people's property, when he could take whatever he wanted from the marketplace with impunity, go into people's houses and have sex with anyone he wished, kill or release from prison anyone he wished, and do all the other things that would make him like a god among humans. Rather his actions would be in no way different from those of an unjust person, and both would follow the same path. This, some would say, is a great proof that one is never just willingly but only when compelled to be. No one believes justice to be a good when it is kept private, since, wherever either person thinks he can do injustice with impunity, he does it. Indeed, every man believes that injustice is far more profitable to himself than justice. And any exponent of this argument will say he's right, for someone who didn't want to do injustice, given this sort of opportunity, and who didn't touch other people's property would be thought wretched and stupid by everyone aware of the situation, though, of course, they' praise him in public, deceiving each other for fear of suffering injustice. So much for my second topic.

As for the choice between the lives we're discussing, we'll be able to make a correct judgment about that only if we separate the most just and the most unjust. Otherwise we won't be able to do it. Here's the separation I have in mind. We'll subtract nothing from the injustice of an unjust person and nothing from the justice of a just one, but we'll take each to be complete in his own way of life. First, therefore, we must suppose that an unjust person will act as clever craftsmen do: A first-rate captain or doctor, for example, knows the difference between what his craft can and can’t do. He attempts the first but lets the second go by, and if he happens to slip, he can put things right. In the same way, an unjust person’s successful attempts at injustice must remain undetected, if he is to be fully unjust. Anyone who is caught should be thought inept, for the extreme of injustice is to be believed to be just without being just. And our completely unjust person must be given complete injustice; nothing may be subtracted from it. We must allow that, while doing the greatest injustice, he has nonetheless provided himself with the greatest reputation for justice. If he happens to make a slip, he must be able to put it right. If any of his unjust activities should be discovered, he must be able to speak persuasively or to use force. And if force is needed, he must have the help of courage and strength and of the substantial wealth and friends with which he has provided himself.

Having hypothesized such a person, let’s now in our argument put beside him a just man, who is simple and noble and who, as Aeschylus says, doesn’t want to be believed to be good but to be so. We must take away his reputation, for a reputation for justice would bring him honor and rewards, so that it wouldn’t be clear whether he is just for the sake of justice itself or for the sake of those honors and rewards. We must strip him of everything except justice and make his situation the opposite of an unjust person’s. Though he does no injustice, he must have the greatest reputation for it, so that his justice may be tested full-strength and not diluted by wrongdoing and what comes from it. Let him stay like that unchanged until he dies—just, but all his life believed to be unjust. In this way, both will reach the extremes, the one of justice and the other of injustice, and we'll be able to judge which of them is happier.

Socrates:: Whew! Glaucon, how vigorously you've scoured each of the men for our competition, just as you would a pair of statues for an art competition.

Glaucon:: I do the best I can. Since the two are as I've described, in any case, it shouldn't be difficult to complete the account of the kind of life that awaits each of them, but it must be done. And if what I say sounds crude, Socrates, remember that it isn't I who speak but those who praise injustice at the expense of justice. They'll say that a just person in such circumstances will be whipped, stretched on a rack, chained, blinded with fire, and, at the end, when he has suffered every kind of evil, he'll be impaled, and will realize then that one shouldn't want to be just but to be believed to be just. Indeed, Aeschylus' words are far more correctly applied to unjust people than to just ones, for the supporters of injustice will say that a really unjust person, having a way of life based on the truth about things and not living in accordance with opinion, doesn't want simply to be believed to be unjust but actually to be so—

Harvesting a deep furrow in his mind,
Where wise counsels propagate.

He rules his city because of his reputation for justice; he marries into any family he wishes; he gives his children in marriage to anyone he wishes; he has contracts and partnerships with anyone he wants; and besides benefiting himself in all these ways, he profits because he has no scruples about doing injustice. In any contest, public or private, he's the winner and outdoes his enemies. And by outdoing them, he becomes wealthy, benefiting his friends and harming his enemies. He makes adequate sacrifices to the gods and sets up magnificent offerings to them. He takes better care of the gods, therefore, (and, indeed, of the human beings he's fond of) than a just person does. Hence it's likely that the gods, in turn, will take better care of him than of a just person. That's what they say, Socrates, that gods and humans provide a better life for unjust people than for just ones.

Socrates:: When Glaucon had said this, I had it in mind to respond, but his brother Adeimantus intervened:

Adeimantus:: You surely don't think that the position has been adequately stated?

Socrates:: Why not?

Adeimantus:: The most important thing to say hasn't been said yet.

Socrates:: Well, then, a man's brother must stand by him, as the saying goes. If Glaucon has omitted something, you must help him. Yet what he has said is enough to throw me to the canvas and make me unable to come to the aid of justice.

Adeimantus:: Nonsense. Hear what more I have to say, for we should also fully explore the arguments that are opposed to the ones Glaucon gave, the ones that praise justice and find fault with injustice, so that what I take to be his intention may be clearer.

When fathers speak to their sons, they say that one must be just, as do all the others who have charge of anyone. But they don't praise justice itself, only the high reputations it leads to and the consequences of being thought to be just, such as the public offices, marriages, and other things Glaucon listed. But they elaborate even further on the consequences of reputation. By bringing in the esteem of the gods, they are able to talk about the abundant good things that they themselves and the noble Hesiod and Homer say that the gods give to the pious, for Hesiod says that the gods make the oak trees

> Bear acorns at the top and bees in the middle
> And make fleecy sheep heavy laden with wool

for the just, and tells of many other good things akin to these. And Homer is similar:

> When a good king, in his piety,
> Upholds justice, the black earth bears
> Wheat and barley for him, and his trees are heavy with fruit.
> His sheep bear lambs unfailingly, and the sea yields up its fish.

Musaeus and his son make the gods give the just more headstrong goods than these. In their stories, they lead the just to Hades, seat them on couches, provide them with a symposium of pious people, crown them with wreaths, and make them spend all their time drinking—as if they thought drunkenness was the finest wage of virtue. Others stretch even further the wages that virtue receives from the gods, for they say that someone who is pious and keeps his promises leaves his children's children and a whole race behind him. In these and other similar ways, they praise justice. They bury the impious and unjust in mud in Hades; force them to carry water in a sieve; bring them into bad repute while they're still alive, and all those penalties that Glaucon gave to the just person they give to the unjust. But they have nothing else to say. This, then, is the way people praise justice and find fault with injustice.

Besides this, Socrates, consider another form of argument about justice and injustice employed both by private individuals and by poets. All go on repeating with one voice that justice and moderation are fine things, but hard and onerous, while licentiousness and injustice are sweet and easy to acquire and are shameful only in opinion and law. They add that unjust deeds are for the most part more profitable than just ones, and, whether in public or private, they willingly honor vicious people who have wealth and other types of power and declare them to be happy. But they dishonor and disregard the weak and the poor, even though they agree that they are better than the others.

But the most wonderful of all these arguments concerns what they have to say about the gods and virtue. They say that the gods, too, assign misfortune and a bad life to many good people, and the opposite fate to their opposites. Begging priests and prophets frequent the doors of the rich and persuade them that they possess a god-given power founded on sacrifices and incantations. If the rich person or any of his ancestors has committed an injustice, they can fix it with pleasant rituals. Moreover, if he wishes to injure some enemy, then, at little expense, he'll be able to harm just and unjust alike, for by means of spells and enchantments they can persuade the gods to serve them. And the poets are brought forward as witnesses to all these accounts. Some harp on the ease of vice, as follows:

> Vice in abundance is easy to get;
> The road is smooth and begins beside you,
> But the gods have put sweat between us and virtue.

and a road that is long, rough, and steep. Others quote Homer to bear witness that the gods can be influenced by humans, since he said:

> The gods themselves can be swayed by prayer,
> And with sacrifices and soothing promises,
> Incense and libations, human beings turn them from their purpose
> When someone has transgressed and sinned.

And they present a noisy throng of books by Musaeus and Orpheus, offspring as they say of Selene and the Muses, in accordance with which they perform their rituals. And they persuade not only individuals but whole cities that the unjust deeds of the living or the dead can be absolved or purified through ritual sacrifices and pleasant games. These initiations, as they call them, free people from punishment hereafter, while a terrible fate awaits those who have not performed the rituals.

When all such sayings about the attitudes of gods and humans to virtue and vice are so often repeated, Socrates, what effect do you suppose they have on the souls of young people? I mean those who are clever and are able to flit from one of these sayings to another, so to speak, and gather from them an impression of what sort of person he should be and of how best to travel the road of life. He would surely ask himself Pindar's question, "Should I by justice or by crooked deceit scale this high wall and live my life guarded and secure?" And he'll answer: "The various sayings suggest that there is no advantage in my being just if I'm not also thought just, while the troubles and penalties of being just are apparent. But they tell me that an unjust person, who has secured for himself a reputation for justice, lives the life of a god. Since, then, 'opinion forcibly overcomes truth' and 'controls happiness,' as the wise men say, I must surely turn entirely to it. I should create a facade of illusory virtue around me to deceive those who come near, but keep behind it the greedy and crafty fox of the wise Archilochus."

"But surely," someone will object, "it isn't easy for vice to remain always hidden." We'll reply that nothing great is easy. And, in any case, if we're to be happy, we must follow the path indicated in these accounts. To remain undiscovered we'll form secret societies and political clubs. And there are teachers of persuasion to make us clever in dealing with assemblies and law courts. Therefore, using persuasion in one place and force in another, we'll outdo others without paying a penalty.

"What about the gods? Surely, we can't hide from them or use violent force against them!" Well, if the gods don't exist or don't concern themselves with human affairs, why should we worry at all about hiding from them? If they do exist and do concern themselves with us, we've learned all we know about them from the laws and the poets who give their genealogies—nowhere else. But these are the very people who tell us that the gods can be persuaded and influenced by sacrifices, gentle prayers, and offerings. Hence, we should believe them on both matters or neither. If we believe them, we should be unjust and offer sacrifices from the fruits of our injustice. If we are just, our only gain is not to be punished by the gods, since we lose the profits of injustice. But if we are unjust, we get the profits of our crimes and transgressions and afterwards persuade the gods by prayer and escape without punishment.

"But in Hades won't we pay the penalty for crimes committed here, either ourselves or our children's children?" "My friend," the young man will say as he does his calculation, "mystery rites have great power and the gods have great power of absolution. The greatest cities tell us this, as do those children of the gods who have become poets and prophets."

Why, then, should we still choose justice over the greatest injustice? Many eminent authorities agree that, if we practice such injustice with a false facade, we'll do well at the hands of gods and humans, living and dying as we've a mind to. So, given all that has been said, Socrates, how is it possible for anyone of any power—whether of mind, wealth, body, or birth—to be willing to honor justice and not laugh aloud when he hears it praised? Indeed, if anyone can show that what we've said is false and has adequate knowledge that justice is best, he'll surely be full not of anger but of forgiveness for the unjust. He knows that, apart from someone of godlike character who is disgusted by injustice or one who has gained knowledge and avoids injustice for that reason, no one is just willingly. Through cowardice or old age or some other weakness, people do indeed object to injustice. But it’s obvious that they do so only because they lack the power to do injustice, for the first of them to acquire it is the first to do as much injustice as he can.

And all of this has no other cause than the one that led Glaucon and me to say to you: “Socrates, of all of you who claim to praise justice, from the original heroes of old whose words survive, to the men of the present day, not one has ever blamed injustice or praised justice except by mentioning the reputations, honors, and rewards that are their consequences. No one has ever adequately described what each itself does of its own power by its presence in the soul of the person who possesses it, even if it remains hidden from gods and humans. No one, whether in poetry or in private conversations, has adequately argued that injustice is the worst thing a soul can have in it and that justice is the greatest good. If you had treated the subject in this way and persuaded us from youth, we wouldn’t now be guarding against one another’s injustices, but each would be his own best guardian, afraid that by doing injustice he'd be living with the worst thing possible.”

Thrasymachus:: or anyone else might say what we’ve said, Socrates, or maybe even more, in discussing justice and injustice—crudely inverting their powers, in my opinion. And, frankly, it’s because I want to hear the opposite from you that I speak with all the force I can muster. So don’t merely give us a theoretical argument that justice is stronger than injustice, but tell us what each itself does, because of its own powers, to someone who possesses it, that makes injustice bad and justice good.

Follow Glaucon’s advice, and don’t take reputations into account, for if you don’t deprive justice and injustice of their true reputations and attach false ones to them, we’ll say that you are not praising them but their reputations and that you’re encouraging us to be unjust in secret. In that case, we’ll say that you agree with Thrasymachus that justice is the good of another, the advantage of the stronger, while injustice is one’s own advantage and profit, though not the advantage of the weaker.

You agree that justice is one of the greatest goods, the ones that are worth getting for the sake of what comes from them, but much more so for their own sake, such as seeing, hearing, knowing, being healthy, and all other goods that are fruitful by their own nature and not simply because of reputation. Therefore, praise justice as a good of that kind, explaining how—because of its very self—it benefits its possessors and how injustice harms them. Leave wages and reputations for others to praise.

Others would satisfy me if they praised justice and blamed injustice in that way, extolling the wages of one and denigrating those of the other. But you, unless you order me to be satisfied, wouldn’t, for you’ve spent your whole life investigating this and nothing else. Don’t, then, give us only a theoretical argument that justice is stronger than injustice, but show what effect each has because of itself on the person who has it—the one for good and the other for bad—whether it remains hidden from gods and human beings or not.

Socrates:: While I'd always admired the natures of Glaucon and Adeimantus, I was especially pleased on this occasion, and I said: You are the sons of a great man, and Glaucon’s lover began his elegy well when he wrote, celebrating your achievements at the battle of Megara;

Sons of Ariston, godlike offspring of a famous man.

That's well said in my opinion, for you must indeed be affected by the divine if you're not convinced that injustice is better than justice and yet can speak on its behalf as you have done. And I believe that you really are unconvinced by your own words. I infer this from the way you live, for if I had only your words to go on, I wouldn't trust you. The more I trust you, however, the more I'm at a loss as to what to do. I don't see how I can be of help. Indeed, I believe I'm incapable of it. And here's my evidence. I thought what I said to Thrasymachus showed that justice is better than injustice, but you won't accept it from me. On the other hand, I don't see how I can refuse my help, for I fear that it may even be impious to have breath in one's body and the ability to speak and yet to stand idly by and not defend justice when it is being prosecuted. So the best course is to give justice any assistance I can.

Glaucon and the others begged me not to abandon the argument but to help in every way to track down what justice and injustice are and what the truth about their benefits is. So I told them what I had in mind: The investigation we're undertaking is not an easy one but requires keen eyesight. Therefore, since we aren't clever people, we should adopt the method of investigation that we'd use if, lacking keen eyesight, we were told to read small letters from a distance and then noticed that the same letters existed elsewhere in a larger size and on a larger surface. We'd consider it a godsend, I think, to be allowed to read the larger ones first and then to examine the smaller ones, to see whether they really are the same.

Adeimantus:: That's certainly true, but how is this case similar to our investigation of justice?

Socrates:: I'll tell you. We say, don't we, that there is the justice of a single man and also the justice of a whole city?

Adeimantus:: Certainly.

Socrates:: And a city is larger than a single man?

Adeimantus:: It is larger.

Socrates:: Perhaps, then, there is more justice in the larger thing, and it will be easier to learn what it is. So, if you're willing, let's first find out what sort of thing justice is in a city and afterwards look for it in the individual, observing the ways in which the smaller is similar to the larger.

Adeimantus:: That seems fine to me.

Socrates:: If we could watch a city coming to be in theory, wouldn't we also see its justice coming to be, and its injustice as well?

Adeimantus:: Probably so.

Socrates:: And when that process is completed, we can hope to find what we are looking for more easily?

Glaucon:: Of course.

Socrates:: Do you think we should try to carry it out, then? It's no small task, in my view. So think it over.

Adeimantus:: We have already. Don't even consider doing anything else.

Socrates:: I think a city comes to be because none of us is self-sufficient, but we all need many things. Do you think that a city is founded on any other principle?

Adeimantus:: No.

Socrates:: And because people need many things, and because one person calls on a second out of one need and on a third out of a different need, many people gather in a single place to live together as partners and helpers. And such a settlement is called a city. Isn't that so?

Adeimantus:: It is.

Socrates:: And if they share things with one another, giving and taking, they do so because each believes that this is better for himself?

Adeimantus:: That's right.

Socrates:: Come, then, let's create a city in theory from its beginnings. And it's our needs, it seems, that will create it.

Adeimantus:: It is, indeed.

Socrates:: Surely our first and greatest need is to provide food to sustain life.

Adeimantus:: Certainly.

Socrates:: Our second is for shelter, and our third for clothes and such.

Adeimantus:: That's right.

Socrates:: How, then, will a city be able to provide all this? Won't one person have to be a farmer, another a builder, and another a weaver? And shouldn't we add a cobbler and someone else to provide medical care?

Adeimantus:: All right.

Socrates:: So the essential minimum for a city is four or five men?

Adeimantus:: Apparently.

Socrates:: And what about this? Must each of them contribute his own work for the common use of all? For example, will a farmer provide food for everyone, spending quadruple the time and labor to provide food to be shared by them all? Or will he not bother about that, producing one quarter the food in one quarter the time, and spending the other three quarters, one in building a house, one in the production of clothes, and one in making shoes, not troubling to associate with the others, but minding his own business on his own?

Adeimantus:: Perhaps, Socrates, the way you suggested first would be easier than the other.

Socrates:: That certainly wouldn't be surprising, for, even as you were speaking it occurred to me that, in the first place, we aren't all born alike, but each of us differs somewhat in nature from the others, one being suited to one task, another to another. Or don't you think so?

Adeimantus:: I do.

Socrates:: Second, does one person do a better job if he practices many crafts or— since he's one person himself—if he practices one?

Adeimantus:: If he practices one.

Socrates:: It's clear, at any rate, I think, that if one misses the right moment in anything, the work is spoiled.

Adeimantus:: It is.

Socrates:: That's because the thing to be done won't wait on the leisure of the doer, but the doer must of necessity pay close attention to his work rather than treating it as a secondary occupation.

Adeimantus:: Yes, he must.

Socrates:: The result, then, is that more plentiful and better-quality goods are more easily produced if each person does one thing for which he is naturally suited, does it at the right time, and is released from having to do any of the others.

Adeimantus:: Absolutely.

Socrates:: Then, Adeimantus, we're going to need more than four citizens to provide the things we've mentioned, for a farmer won't make his own plough, not if it's to be a good one, nor his hoe, nor any of his other farming tools.

Neither will a builder—and he, too, needs lots of things. And the same is true of a weaver and a cobbler, isn't it?

Adeimantus:: It is.

Socrates:: Hence, carpenters, metal workers, and many other craftsmen of that sort will share our little city and make it bigger.

Adeimantus:: That's right.

Socrates:: Yet it won't be a huge settlement even if we add cowherds, shepherds, and other herdsmen in order that the farmers have cows to do their ploughing, the builders have oxen to share with the farmers in hauling their materials, and the weavers and cobblers have hides and fleeces to use.

Adeimantus:: It won't be a small one either, if it has to hold all those.

Socrates:: Moreover, it's almost impossible to establish a city in a place where nothing has to be imported.

Adeimantus:: Indeed it is.

Socrates:: So we'll need yet further people to import from other cities whatever is needed.

Adeimantus:: Yes.

Socrates:: And if an importer goes empty-handed to another city, without a cargo of the things needed by the city from which he's to bring back what his own city needs, he'll come away empty-handed, won't he?

Adeimantus:: So it seems.

Socrates:: Therefore our citizens must not only produce enough for themselves at home but also goods of the right quality and quantity to satisfy the requirements of others.

Adeimantus:: They must.

Socrates:: So we'll need more farmers and other craftsmen in our city.

Adeimantus:: Yes.

Socrates:: And others to take care of imports and exports. And they’re called merchants, aren’t they?

Adeimantus:: Yes.

Socrates:: So we’ll need merchants, too.

Adeimantus:: Certainly.

Socrates:: And if the trade is by sea, we’ll need a good many others who know how to sail.

Adeimantus:: A good many, indeed.

Socrates:: And how will those in the city itself share the things that each produces? It was for the sake of this that we made their partnership and founded their city.

Adeimantus:: Clearly, they must do it by buying and selling.

Socrates:: Then we’ll need a marketplace and a currency for such exchange.

Adeimantus:: Certainly.

Socrates:: If a farmer or any other craftsman brings some of his products to market, and he doesn’t arrive at the same time as those who want to exchange things with him, is he to sit idly in the marketplace, away from his own work?

Adeimantus:: Not at all. There’ll be people who’ll notice this and provide the requisite service—in well-organized cities they’ll usually be those whose bodies are weakest and who aren’t fit to do any other work. They’ll stay around the market exchanging money for the goods of those who have something to sell and then exchanging those goods for the money of those who want them.

Socrates:: Then, to fill this need there will have to be retailers in our city, for aren’t those who establish themselves in the marketplace to provide this service of buying and selling called retailers, while those who travel between cities are called merchants?

Adeimantus:: That’s right.

Socrates:: There are other servants, I think, whose minds alone wouldn’t qualify them for membership in our society but whose bodies are strong enough for labor. These sell the use of their strength for a price called a wage and hence are themselves called wage-earners. Isn’t that so?

Adeimantus:: Certainly.

Socrates:: So wage-earners complete our city?

Adeimantus:: I think so.

Socrates:: Well, Adeimantus, has our city grown to completeness, then?

Adeimantus:: Perhaps it has.

Socrates:: Then where are justice and injustice to be found in it? With which of the things we examined did they come in?

Adeimantus:: I’ve no idea, Socrates, unless it was somewhere in some need that these people have of one another.

Socrates:: You may be right, but we must look into it and not grow weary. First, then, let’s see what sort of life our citizens will lead when they’ve been provided for in the way we have been describing. They’ll produce bread, wine, clothes, and shoes, won’t they? They’ll build houses, work naked and barefoot in the summer, and wear adequate clothing and shoes in the winter. For food, they’ll knead and cook the flour and meal they’ve made from wheat and barley. They’ll put their honest cakes and loaves on reeds or clean leaves, and, reclining on beds strewn with yew and myrtle, they’ll feast with their children, drink their wine, and, crowned with wreaths, hymn the gods. They'll enjoy sex with one another but bear no more children than their resources allow, lest they fall into either poverty or war.

Glaucon:: It seems that you make your people feast without any delicacies.

Socrates:: True enough, I was forgetting that they'll obviously need salt, olives, cheese, boiled roots, and vegetables of the sort they cook in the country. We'll give them desserts, too, of course, consisting of figs, chickpeas, and beans, and they'll roast myrtle and acorns before the fire, drinking moderately. And so they'll live in peace and good health, and when they die at a ripe old age, they'll bequeath a similar life to their children.

Glaucon:: If you were founding a city for pigs, Socrates, wouldn't you fatten them on the same diet?

Socrates:: Then how should I feed these people, Glaucon?

Glaucon:: In the conventional way. If they aren't to suffer hardship, they should recline on proper couches, dine at a table, and have the delicacies and desserts that people have nowadays.

Socrates:: All right, I understand. It isn't merely the origin of a city that we're considering, it seems, but the origin of a luxurious city. And that may not be a bad idea, for by examining it, we might very well see how justice and injustice grow up in cities. Yet the true city, in my opinion, is the one we've described, the healthy one, as it were. But let's study a city with a fever, if that's what you want. There's nothing to stop us. The things I mentioned earlier and the way of life I described won't satisfy some people, it seems, but couches, tables, and other furniture will have to be added, and, of course, all sorts of delicacies, perfumed oils, incense, prostitutes, and pastries. We mustn't provide them only with the necessities we mentioned at first, such as houses, clothes, and shoes, but painting and embroidery must be begun, and gold, ivory, and the like acquired. Isn't that so?

Glaucon:: Yes.

Socrates:: Then we must enlarge our city, for the healthy one is no longer adequate. We must increase it in size and fill it with a multitude of things that go beyond what is necessary for a city—hunters, for example, and artists or imitators, many of whom work with shapes and colors, many with music. And there'll be poets and their assistants, actors, choral dancers, contractors, and makers of all kinds of devices, including, among other things, those needed for the adornment of women. And so we'll need more servants, too. Or don't you think that we'll need tutors, wet nurses, nannies, beauticians, barbers, chefs, cooks, and swineherds? We didn't need any of these in our earlier city, but we'll need them in this one. And we'll also need many more cattle, won't we, if the people are going to eat meat?

Glaucon:: Of course.

Socrates:: And if we live like that, we'll have a far greater need for doctors than we did before?

Glaucon:: Much greater.

Socrates:: And the land, I suppose, that used to be adequate to feed the population we had then, will cease to be adequate and become too small. What do you think?

Glaucon:: The same.

Socrates:: Then we'll have to seize some of our neighbors' land if we're to have enough pasture and ploughland. And won't our neighbors want to seize part of ours as well, if they too have surrendered themselves to the endless acquisition of money and have overstepped the limit of their necessities?

Glaucon:: That's completely inevitable, Socrates.

Socrates:: Then our next step will be war, Glaucon, won't it?

Glaucon:: It will.

Socrates:: We won't say yet whether the effects of war are good or bad but only that we've now found the origins of war. It comes from those same desires that are most of all responsible for the bad things that happen to cities and the individuals in them.

Glaucon:: That's right.

Socrates:: Then the city must be further enlarged, and not just by a small number, either, but by a whole army, which will do battle with the invaders in defense of the city's substantial wealth and all the other things we mentioned.

Glaucon:: Why aren't the citizens themselves adequate for that purpose?

Socrates:: They won't be, if the agreement you and the rest of us made when we were founding the city was a good one, for surely we agreed, if you remember, that it's impossible for a single person to practice many crafts or professions well.

Glaucon:: That's true.

Socrates:: Well, then, don't you think that warfare is a profession?

Glaucon:: Of course.

Socrates:: Then should we be more concerned about cobbling than about warfare?

Glaucon:: Not at all.

Socrates:: But we prevented a cobbler from trying to be a farmer, weaver, or builder at the same time and said that he must remain a cobbler in order to produce fine work. And each of the others, too, was to work all his life at a single trade for which he had a natural aptitude and keep away from all the others, so as not to miss the right moment to practice his own work well. Now, isn't it of the greatest importance that warfare be practiced well? And is fighting a war so easy that a farmer or a cobbler or any other craftsman can be a soldier at the same time? Though no one can become so much as a good player of checkers or dice if he considers it only as a sideline and doesn't practice it from childhood. Or can someone pick up a shield or any other weapon or tool of war and immediately perform adequately in an infantry battle or any other kind? No other tool makes anyone who picks it up a craftsman or champion unless he has acquired the requisite knowledge and has had sufficient practice.

Glaucon:: If tools could make anyone who picked them up an expert, they' be valuable indeed.

Socrates:: Then to the degree that the work of the guardians is most important, it requires most freedom from other things and the greatest skill and devotion.

Glaucon:: I should think so.

Socrates:: And doesn't it also require a person whose nature is suited to that way of life?

Glaucon:: Certainly.

Socrates:: Then our job, it seems, is to select, if we can, the kind of nature suited to guard the city.

Glaucon:: It is.

Socrates:: By god, it's no trivial task that we've taken on. But insofar as we are able, we mustn't shrink from it.

Glaucon:: No, we mustn't.

Socrates:: Do you think that, when it comes to guarding, there is any difference between the nature of a pedigree young dog and that of a well-born youth?

Glaucon:: What do you mean?

Socrates:: Well, each needs keen senses, speed to catch what it sees, and strength in case it has to fight it out with what it captures.

Glaucon:: They both need all these things.

Socrates:: And each must be courageous if indeed he's to fight well.

Glaucon:: Of course.

Socrates:: And will a horse, a dog, or any other animal be courageous, if he isn't spirited? Or haven't you noticed just how invincible and unbeatable spirit is, so that its presence makes the whole soul fearless and unconquerable?

Glaucon:: I have noticed that.

Socrates:: The physical qualities of the guardians are clear, then.

Glaucon:: Yes.

Socrates:: And as far as their souls are concerned, they must be spirited.

Glaucon:: That too.

Socrates:: But if they have natures like that, Glaucon, won't they be savage to each other and to the rest of the citizens?

Glaucon:: By god, it will be hard for them to be anything else.

Socrates:: Yet surely they must be gentle to their own people and harsh to the enemy. If they aren't, they won't wait around for others to destroy the city but will do it themselves first.

Glaucon:: That's true.

Socrates:: What are we to do, then? Where are we to find a character that is both gentle and high-spirited at the same time? After all, a gentle nature is the opposite of a spirited one.

Glaucon:: Apparently.

Socrates:: If someone lacks either gentleness or spirit, he can't be a good guardian. Yet it seems impossible to combine them. It follows that a good guardian cannot exist.

Glaucon:: It looks like it.

Socrates:: I couldn't see a way out, but on reexamining what had gone before, I said: We deserve to be stuck, for we've lost sight of the analogy we put forward.

Glaucon:: How do you mean?

Socrates:: We overlooked the fact that there are natures of the sort we thought impossible, natures in which these opposites are indeed combined.

Glaucon:: Where?

Socrates:: You can see them in other animals, too, but especially in the one to which we compared the guardian, for you know, of course, that a pedigree dog naturally has a character of this sort—he is gentle as can be to those he's used to and knows, but the opposite to those he doesn't know.

Glaucon:: I do know that.

Socrates:: So the combination we want is possible after all, and our search for the good guardian is not contrary to nature.

Glaucon:: Apparently not.

Socrates:: Then do you think that our future guardian, besides being spirited, must also be by nature philosophical?

Glaucon:: How do you mean? I don’t understand.

Socrates:: It’s something else you see in dogs, and it makes you wonder at the animal.

Glaucon:: What?

Socrates:: When a dog sees someone it doesn’t know, it gets angry before anything bad happens to it. But when it knows someone, it welcomes him, even if it has never received anything good from him. Haven’t you ever wondered at that?

Glaucon:: I’ve never paid any attention to it, but obviously that is the way a dog behaves.

Socrates:: Surely this is a refined quality in its nature and one that is truly philosophical.

Glaucon:: In what way philosophical?

Socrates:: Because it judges anything it sees to be either a friend or an enemy, on no other basis than that it knows the one and doesn’t know the other. And how could it be anything besides a lover of learning, if it defines what is its own and what is alien to it in terms of knowledge and ignorance?

Glaucon:: It couldn’t.

Socrates:: But surely the love of learning is the same thing as philosophy or the love of wisdom?

Glaucon:: It is.

Socrates:: Then, may we confidently assume in the case of a human being, too, that if he is to be gentle toward his own and those he knows, he must be a lover of learning and wisdom?

Glaucon:: We may.

Socrates:: Philosophy, spirit, speed, and strength must all, then, be combined in the nature of anyone who is to be a fine and good guardian of our city.

Glaucon:: Absolutely.

Socrates:: Then those are the traits a potential guardian would need at the outset. But how are we to bring him up and educate him? Will inquiry into that topic bring us any closer to the goal of our inquiry, which is to discover the origins of justice and injustice in a city? We want our account to be adequate, but we don't want it to be any longer than necessary.

Adeimantus:: I certainly expect, that such inquiry will further our goal.

Socrates:: Then, by god, Adeimantus, we mustn't leave it out, even if it turns out to be a somewhat lengthy affair.

Adeimantus:: No, we mustn't.

Socrates:: Come, then, and just as if we had the leisure to make up stories, let's describe in theory how to educate our men.

Adeimantus:: All right.

Socrates:: What will their education be? Or is it hard to find anything better than that which has developed over a long period—physical training for bodies and music and poetry for the soul?

Adeimantus:: Yes, it would be hard.

Socrates:: Now, we start education in music and poetry before physical training, don't we?

Adeimantus:: Of course.

Socrates:: Do you include stories under music and poetry?

Adeimantus:: I do.

Socrates:: Aren't there two kinds of story, one true and the other false?

Adeimantus:: Yes.

Socrates:: And mustn't our men be educated in both, but first in false ones?

Adeimantus:: I don't understand what you mean.

Socrates:: Don't you understand that we first tell stories to children? These are false, on the whole, though they have some truth in them. And we tell them to small children before physical training begins.

Adeimantus:: That's true.

Socrates:: And that's what I meant by saying that we must deal with music and poetry before physical training.

Adeimantus:: All right.

Socrates:: You know, don't you, that the beginning of any process is most important, especially for anything young and tender? It's at that time that it is most malleable and takes on any pattern one wishes to impress on it.

Adeimantus:: Exactly.

Socrates:: Then shall we carelessly allow the children to hear any old stories, told by just anyone, and to take beliefs into their souls that are for the most part opposite to the ones we think they should hold when they are grown up?

Adeimantus:: We certainly won't.

Socrates:: Then we must first of all, it seems, supervise the storytellers. We'll select their stories whenever they are fine or beautiful and reject them when they aren't. And we'll persuade nurses and mothers to tell their children the ones we have selected, since they will shape their children's souls with stories much more than they shape their bodies by handling them. Many of the stories they tell now, however, must be thrown out.

Adeimantus:: Which ones do you mean?

Socrates:: We'll first look at the major stories, and by seeing how to deal with them, we'll see how to deal with the minor ones as well, for they exhibit the same pattern and have the same effects whether they're famous or not. Don't you think so?

Adeimantus:: I do, but I don't know which ones you're calling major.

Socrates:: Those that Homer, Hesiod, and other poets tell us, for surely they composed false stories, told them to people, and are still telling them.

Adeimantus:: Which stories do you mean, and what fault do you find in them?

Socrates:: The fault one ought to find first and foremost, especially if the falsehood isn't well told.

Adeimantus:: For example?

Socrates:: When a story gives a bad image of what the gods and heroes are like, the way a painter does whose picture is not at all like the things he's trying to paint.

Adeimantus:: You're right to object to that. But what sort of thing in particular do you have in mind?

Socrates:: First, telling the greatest falsehood about the most important things doesn't make a fine story—I mean Hesiod telling us about how Uranus behaved, how Cronus punished him for it, and how he was in turn punished by his own son. But even if it were true, it should be passed over in silence, not told to foolish young people. And if, for some reason, it has to be told, only a very few people—pledged to secrecy and after sacrificing not just a pig but something great and scarce—should hear it, so that their number is kept as small as possible.

Adeimantus:: Yes, such stories are hard to deal with.

Socrates:: And they shouldn’t be told in our city, Adeimantus. Nor should a young person hear it said that in committing the worst crimes he’s doing nothing out of the ordinary, or that if he inflicts every kind of punishment on an unjust father, he’s only doing the same as the first and greatest of the gods.

Adeimantus:: No, by god, I don’t think myself that these stories are fit to be told.

Socrates:: Indeed, if we want the guardians of our city to think that it’s shameful to be easily provoked into hating one another, we mustn’t allow any stories about gods warring, fighting, or plotting against one another, for they aren’t true. The battles of gods and giants, and all the various stories of the gods hating their families or friends, should neither be told nor even woven in embroideries. If we’re to persuade our people that no citizen has ever hated another and that it’s impious to do so, then that’s what should be told to children from the beginning by old men and women; and as these children grow older, poets should be compelled to tell them the same sort of thing. We won’t admit stories into our city—whether allegorical or not—about Hera being chained by her son, nor about Hephaestus being hurled from heaven by his father when he tried to help his mother, who was being beaten, nor about the battle of the gods in Homer. The young can’t distinguish what is allegorical from what isn’t, and the opinions they absorb at that age are hard to erase and apt to become unalterable. For these reasons, then, we should probably take the utmost care to insure that the first stories they hear about virtue are the best ones for them to hear.

Adeimantus:: That’s reasonable. But if someone asked us what stories these are, what should we say?

Socrates:: You and I, Adeimantus, aren’t poets, but we are founding a city. And it’s appropriate for the founders to know the patterns on which poets must base their stories and from which they mustn’t deviate. But we aren’t actually going to compose their poems for them.

Adeimantus:: All right. But what precisely are the patterns for theology or stories about the gods?

Socrates:: Something like this: Whether in epic, lyric, or tragedy, a god must always be represented as he is.

Adeimantus:: Indeed, he must.

Socrates:: Now, a god is really good, isn’t he, and must be described as such?

Adeimantus:: What else?

Socrates:: And surely nothing good is harmful, is it?

Adeimantus:: I suppose not.

Socrates:: And can what isn’t harmful do harm?

Adeimantus:: Never.

Socrates:: Or can what does no harm do anything bad?

Adeimantus:: No.

Socrates:: And can what does nothing bad be the cause of anything bad?

Adeimantus:: How could it?

Socrates:: Moreover, the good is beneficial?

Adeimantus:: Yes.

Socrates:: It is the cause of doing well?

Adeimantus:: Yes.

Socrates:: The good isn’t the cause of all things, then, but only of good ones; it isn’t the cause of bad ones.

Adeimantus:: I agree entirely.

Socrates:: Therefore, since a god is good, he is not—as most people claim—the cause of everything that happens to human beings but of only a few things, for good things are fewer than bad ones in our lives. He alone is responsible for the good things, but we must find some other cause for the bad ones, not a god.

Adeimantus:: That's very true, and I believe it.

Socrates:: Then we won't accept from anyone the foolish mistake Homer makes about the gods when he says:

> There are two urns at the threshold of Zeus,
> One filled with good fates, the other with bad ones....

and the person to whom he gives a mixture of these

> Sometimes meets with a bad fate, sometimes with good.

but the one who receives his fate entirely from the second urn;

> Evil famine drives him over the divine earth.

We won't grant either that Zeus is for us;

> The distributor of both good and bad.

And as to the breaking of the promised truce by Pandarus, if anyone tells us that it was brought about by Athena and Zeus or that Themis and Zeus were responsible for strife and contention among the gods, we will not praise him. Nor will we allow the young to hear the words of Aeschylus:

> A god makes mortals guilty
> When he wants utterly to destroy a house.

And if anyone composes a poem about the sufferings of Niobe, such as the one in which these lines occur, or about the house of Pelops, or the tale of Troy, or anything else of that kind, we must require him to say that these things are not the work of a god. Or, if they are, then poets must look for the kind of account of them that we are now seeking, and say that the actions of the gods are good and just, and that those they punish are benefited thereby. We won't allow poets to say that the punished are made wretched and that it was a god who made them so. But we will allow them to say that bad people are wretched because they are in need of punishment and that, in paying the penalty, they are benefited by the gods. And, as for saying that a god, who is himself good, is the cause of bad things, we'll fight that in every way, and we won't allow anyone to say it in his own city, if it's to be well governed, or anyone to hear it either—whether young or old, whether in verse or prose. These stories are not pious, not advantageous to us, and not consistent with one another.

Adeimantus:: I like your law, and I'll vote for it.

Socrates:: This, then, is one of the laws or patterns concerning the gods to which speakers and poets must conform, namely, that a god isn't the cause of all things but only of good ones.

Adeimantus:: And it's a fully satisfactory law.

Socrates:: What about this second law? Do you think that a god is a sorcerer, able to appear in different forms at different times, sometimes changing himself from his own form into many shapes, sometimes deceiving us by making us think that he has done it? Or do you think he's simple and least of all likely to step out of his own form?

Adeimantus:: I can't say offhand.

Socrates:: Well, what about this? If he steps out of his own form, mustn't he either change himself or be changed by something else?

Adeimantus:: He must.

Socrates:: But the best things are least liable to alteration or change, aren't they? For example, isn't the healthiest and strongest body least changed by food, drink, and labor, or the healthiest and strongest plant by sun, wind, and the like?

Adeimantus:: Of course.

Socrates:: And the most courageous and most rational soul is least disturbed or altered by any outside affection?

Adeimantus:: Yes.

Socrates:: And the same account is true of all artifacts, furniture, houses, and clothes. The ones that are good and well made are least altered by time or anything else that happens to them.

Adeimantus:: That's right.

Socrates:: Whatever is in good condition, then, whether by nature or craft or both, admits least of being changed by anything else.

Adeimantus:: So it seems.

Socrates:: Now, surely a god and what belongs to him are in every way in the best condition.

Adeimantus:: How could they fail to be?

Socrates:: Then a god would be least likely to have many shapes.

Adeimantus:: Indeed.

Socrates:: Then does he change or alter himself?

Adeimantus:: Clearly he does, if indeed he is altered at all.

Socrates:: Would he change himself into something better and more beautiful than himself or something worse and uglier?

Adeimantus:: It would have to be into something worse, if he's changed at all, for surely we won't say that a god is deficient in either beauty or virtue.

Socrates:: Absolutely right. And do you think, Adeimantus, that anyone, whether god or human, would deliberately make himself worse in any way?

Adeimantus:: No, that's impossible.

Socrates:: Is it impossible, then, for gods to want to alter themselves? Since they are the most beautiful and best possible, it seems that each always and unconditionally retains his own shape.

Adeimantus:: That seems entirely necessary to me.

Socrates:: Then let no poet tell us about Proteus or Thetis, or say that;

> The gods, in the likeness of strangers from foreign lands,
> Adopt every sort of shape and visit our cities.

Nor must they present Hera, in their tragedies or other poems, as a priestess collecting alms for;

> the life-giving sons of the Argive river Inachus.

or tell us other stories of that sort. Nor must mothers, believing bad stories about the gods wandering at night in the shapes of strangers from foreign lands, terrify their children with them. Such stories blaspheme the gods and, at the same time, make children more cowardly.

Adeimantus:: They mustn't be told.

Socrates:: But though the gods are unable to change, do they nonetheless make us believe that they appear in all sorts of ways, deceiving us through sorcery?

Adeimantus:: Perhaps.

Socrates:: What? Would a god be willing to be false, either in word or deed, by presenting an illusion?

Adeimantus:: I don't know.

Socrates:: Don't you know that a true falsehood, if one may call it that, is hated by all gods and humans?

Adeimantus:: What do you mean?

Socrates:: I mean that no one is willing to tell falsehoods to the most important part of himself about the most important things, but of all places he is most afraid to have falsehood there.

Adeimantus:: I still don't understand.

Socrates:: That's because you think I'm saying something deep. I simply mean that to be false to one's soul about the things that are, to be ignorant and to have and hold falsehood there, is what everyone would least of all accept, for everyone hates a falsehood in that place most of all.

Adeimantus:: That's right.

Socrates:: Surely, as I said just now, this would be most correctly called true falsehood—ignorance in the soul of someone who has been told a falsehood. Falsehood in words is a kind of imitation of this affection in the soul, an image of it that comes into being after it and is not a pure falsehood. Isn't that so?

Adeimantus:: Certainly.

Socrates:: And the thing that is really a falsehood is hated not only by the gods but by human beings as well.

Adeimantus:: It seems so to me.

Socrates:: What about falsehood in words? When and to whom is it useful and so not deserving of hatred? Isn't it useful against one's enemies? And when any of our so-called friends are attempting, through madness or ignorance, to do something bad, isn't it a useful drug for preventing them? It is also useful in the case of those stories we were just talking about, the ones we tell because we don't know the truth about those ancient events involving the gods. By making a falsehood as much like the truth as we can, don't we also make it useful?

Adeimantus:: We certainly do.

Socrates:: Then in which of these ways could a falsehood be useful to a god? Would he make false likenesses of ancient events because of his ignorance of them?

Adeimantus:: It would be ridiculous to think that.

Socrates:: Then there is nothing of the false poet in a god?

Adeimantus:: Not in my view.

Socrates:: Would he be false, then, through fear of his enemies?

Adeimantus:: Far from it.

Socrates:: Because of the ignorance or madness of his family or friends, then?

Adeimantus:: No one who is ignorant or mad is a friend of the gods.

Socrates:: Then there's no reason for a god to speak falsely?

Adeimantus:: None.

Socrates:: Therefore the daemonic and the divine are in every way free from falsehood.

Adeimantus:: Completely.

Socrates:: A god, then, is simple and true in word and deed. He doesn't change himself or deceive others by images, words, or signs, whether in visions or in dreams.

Adeimantus:: That's what I thought as soon as I heard you say it.

Socrates:: You agree, then, that this is our second pattern for speaking or composing poems about the gods: They are not sorcerers who change themselves, nor do they mislead us by falsehoods in words or deeds.

Adeimantus:: I agree.

Socrates:: So, even though we praise many things in Homer, we won't approve of the dream Zeus sent to Agamemnon, nor of Aeschylus when he makes Thetis say that Apollo sang in prophecy at her wedding:

> About the good fortune my children would have,
> Free of disease throughout their long lives,
> And of all the blessings that the friendship of the gods would bring me,
> I hoped that Phoebus' divine mouth would be free of falsehood,
> Endowed as it is with the craft of prophecy.
> But the very god who sang, the one at the feast,
> The one who said all this, he himself it is
> Who killed my son.

Whenever anyone says such things about a god, we'll be angry with him, refuse him a chorus, and not allow his poetry to be used in the education of the young, so that our guardians will be as god-fearing and godlike as human beings can be.

Adeimantus:: I completely endorse these patterns, and I would enact them as laws.

## Book 3

Socrates:: Such, then, are the kinds of stories that I think future guardians should and should not hear about the gods from childhood on, if they are to honor the gods and their parents and not take their friendship with one another lightly.

Adeimantus:: I'm sure we're right about that, at any rate.

Socrates:: What if they are to be courageous as well? Shouldn't they be told stories that will make them least afraid of death? Or do you think that anyone ever becomes courageous if he's possessed by this fear?

Adeimantus:: No, I certainly don't.

Socrates:: And can someone be unafraid of death, preferring it to defeat in battle or slavery, if he believes in a Hades full of terrors?

Adeimantus:: Not at all.

Socrates:: Then we must supervise such stories and those who tell them, and ask them not to disparage the life in Hades in this unconditional way, but rather to praise it, since what they now say is neither true nor beneficial to future warriors.

Adeimantus:: We must.

Socrates:: Then we'll expunge all that sort of disparagement, beginning with the following lines:

> I would rather labor on earth in service to another,
> To a man who is landless, with little to live on,
> Than be king over all the dead.

and also these:

> He feared that his home should appear to gods and men
> Dreadful, dank, and hated even by the gods.

and;

> Alas, there survives in the Halls of Hades
> A soul, a mere phantasm, with its wits completely gone.

and this:

> And he alone could think; the others are flitting shadows.

and;

> The soul, leaving his limbs, made its way to Hades,
> Lamenting its fate, leaving manhood and youth behind.

and these:

> His soul went below the earth like smoke,
> Screeching as it went…

and;

> As when bats in an awful cave
> Fly around screeching if one of them falls
> From the cluster on the ceiling, all clinging to one another,
> So their souls went screeching…

We'll ask Homer and the other poets not to be angry if we delete these passages and all similar ones. It isn't that they aren't poetic and pleasing to the majority of hearers but that, the more poetic they are, the less they should be heard by children or by men who are supposed to be free and to fear slavery more than death.

Adeimantus:: Most certainly.

Socrates:: And the frightening and dreadful names for the underworld must be struck out, for example, "Cocytus" and "Styx," and also the names for the dead, for example, "those below" and "the sapless ones," and all those names of things in the underworld that make everyone who hears them shudder. They may be all well and good for other purposes, but we are afraid that our guardians will be made softer and more malleable by such shudders.

Adeimantus:: And our fear is justified.

Socrates:: Then such passages are to be struck out?

Adeimantus:: Yes.

Socrates:: And poets must follow the opposite pattern in speaking and writing?

Adeimantus:: Clearly.

Socrates:: Must we also delete the lamentations and pitiful speeches of famous men?

Adeimantus:: We must, if indeed what we said before is compelling.

Socrates:: Consider though whether we are right to delete them or not. We surely say that a decent man doesn't think that death is a terrible thing for someone decent to suffer—even for someone who happens to be his friend.

Adeimantus:: We do say that.

Socrates:: Then he won't mourn for him as for someone who has suffered a terrible fate.

Adeimantus:: Certainly not.

Socrates:: We also say that a decent person is most self-sufficient in living well and, above all others, has the least need of anyone else.

Adeimantus:: That's true.

Socrates:: Then it's less dreadful for him than for anyone else to be deprived of his son, brother, possessions, or any other such things.

Adeimantus:: Much less.

Socrates:: Then he'll least give way to lamentations and bear misfortune most quietly when it strikes.

Adeimantus:: Certainly.

Socrates:: We'd be right, then, to delete the lamentations of famous men, leaving them to women (and not even to good women, either) and to cowardly men, so that those we say we are training to guard our city will disdain to act like that.

Adeimantus:: That’s right.

Socrates:: Again, then, we’ll ask Homer and the other poets not to represent Achilles, the son of a goddess, as

> Lying now on his side, now on his back, now again
> On his belly; then standing up to wander distracted
> This way and that on the shore of the unharvested sea.

Nor to make him pick up ashes in both hands and pour them over his head, weeping and lamenting in the ways he does in Homer. Nor to represent Priam, a close descendant of the gods, as entreating his men and;

> Rolling around in dung,
> Calling upon each man by name.

And we’ll ask them even more earnestly not to make the gods lament and say:

> Alas, unfortunate that I am, wretched mother of a great son.

But, if they do make the gods do such things, at least they mustn’t dare to represent the greatest of the gods as behaving in so unlikely a fashion as to say:

> Alas, with my own eyes I see a man who is most dear to me
> Chased around the city, and my heart laments.

or;

> Woe is me, that Sarpedon, who is most dear to me, should be
> Fated to be killed by Patroclus, the son of Menoetius…

If our young people, Adeimantus, listen to these stories without ridiculing them as not worth hearing, it’s hardly likely that they'll consider the things described in them to be unworthy of mere human beings like themselves or that they'll rebuke themselves for doing or saying similar things when misfortune strikes. Instead, they'll feel neither shame nor restraint but groan and lament at even insignificant misfortunes.

Adeimantus:: What you say is completely true.

Socrates:: Then, as the argument has demonstrated—and we must remain persuaded by it until someone shows us a better one—they mustn't behave like that.

Adeimantus:: No, they mustn't.

Socrates:: Moreover, they mustn't be lovers of laughter either, for whenever anyone indulges in violent laughter, a violent change of mood is likely to follow.

Adeimantus:: So I believe.

Socrates:: Then, if someone represents worthwhile people as overcome by laughter, we won't approve, and we'll approve even less if they represent gods that way.

Adeimantus:: Much less.

Socrates:: Then we won't approve of Homer saying things like this about the gods:

> And unquenchable laughter arose among the blessed gods
> As they saw Hephaestus limping through the hall.

Adeimantus:: According to your argument, such things must be rejected.

Socrates:: If you want to call it mine, but they must be rejected in any case.

Moreover, we have to be concerned about truth as well, for if what we said just now is correct, and falsehood, though of no use to the gods, is useful to people as a form of drug, clearly we must allow only doctors to use it, not private citizens.

Adeimantus:: Clearly.

Socrates:: Then if it is appropriate for anyone to use falsehoods for the good of the city, because of the actions of either enemies or citizens, it is the rulers. But everyone else must keep away from them, because for a private citizen to lie to a ruler is just as bad a mistake as for a sick person or athlete not to tell the truth to his doctor or trainer about his physical condition or for a sailor not to tell the captain the facts about his own condition or that of the ship and the rest of its crew—indeed it is a worse mistake than either of these.

Adeimantus:: That’s completely true.

Socrates:: And if the ruler catches someone else telling falsehoods in the city—

> Any one of the craftsmen,
> Whether a prophet, a doctor who heals the sick, or a maker of spears

—he’ll punish him for introducing something as subversive and destructive to a city as it would be to a ship.

Adeimantus:: He will, if practice is to follow theory.

Socrates:: What about moderation? Won’t our young people also need that?

Adeimantus:: Of course.

Socrates:: And aren’t these the most important aspects of moderation for the majority of people, namely, to obey the rulers and to rule the pleasures of drink, sex, and food for themselves?

Adeimantus:: That’s my opinion at any rate.

Socrates:: Then we’ll say that the words of Homer’s Diomedes are well put:

> Sit down in silence, my friend, and be persuaded by me.

and so is what follows:

> The Achaeans, breathing eagerness for battle,
> Marched in silence, fearing their commanders.

and all other such things.

Those are well put.

But what about this?

> Wine-bibber, with the eyes of a dog and the heart of a deer.

and the rest, is it—or any other headstrong words spoken in prose or poetry by private citizens against their rulers—well put?

Adeimantus:: No, they aren't.

Socrates:: I don't think they are suitable for young people to hear—not, in any case, with a view to making them moderate. Though it isn't surprising that they are pleasing enough in other ways. What do you think?

Adeimantus:: The same as you.

Socrates:: What about making the cleverest man say that the finest thing of all is when The tables are well laden With bread and meat, and the wine-bearer

> Draws wine from the mixing bowl and pours it in the cups.

or

> Death by starvation is the most pitiful fate.

Do you think that such things make for self-control in young people? Or what about having Zeus, when all the other gods are asleep and he alone is awake, easily forget all his plans because of sexual desire and be so overcome by the sight of Hera that he doesn't even want to go inside but wants to possess her there on the ground, saying that his desire for her is even greater than it was when—without their parents' knowledge— they were first lovers? Or what about the chaining together of Ares and Aphrodite by Hephaestus—also the result of sexual passion?

Adeimantus:: No, by god, none of that seems suitable to me.

Socrates:: But if, on the other hand, there are words or deeds of famous men, who are exhibiting endurance in the face of everything, surely they must be seen or heard. For example;

> He struck his chest and spoke to his heart:
> "Endure, my heart, you've suffered more shameful
> things than this."

Adeimantus:: They certainly must.

Socrates:: Now, we mustn't allow our men to be money-lovers or to be bribable with gifts.

Adeimantus:: Certainly not.

Socrates:: Then the poets mustn't sing to them:

> Gifts persuade gods, and gifts persuade revered kings.

Nor must Phoenix, the tutor of Achilles, be praised as speaking with moderation when he advises him to take the gifts and defend the Achaeans, but not to give up his anger without gifts. Nor should we think such things to be worthy of Achilles himself. Nor should we agree that he was such a money-lover that he would accept the gifts of Agamemnon or release the corpse of Hector for a ransom but not otherwise.

Adeimantus:: It certainly isn't right to praise such things.

Socrates:: It is only out of respect for Homer, indeed, that I hesitate to say that it is positively impious to accuse Achilles of such things or to believe others who say them. Or to make him address Apollo in these words:

> You’ve injured me, Far shooter, most deadly of the gods;
> And I'd punish you, if I had the power.

Or to say that he disobeyed the river—a god—and was ready to fight it, or that he consecrated hair to the dead Patroclus, which was already consecrated to a different river, Spercheius. It isn’t to be believed that he did any of these. Nor is it true that he dragged the dead Hector around the tomb of Patroclus or massacred the captives on his pyre. So we’ll deny that. Nor will we allow our people to believe that Achilles, who was the son of a goddess and of Peleus (the most moderate of men and the grandson of Zeus) and who was brought up by the most wise Chiron, was so full of inner turmoil as to have two diseases in his soul—slavishness accompanied by the love of money, on the one hand, and arrogance towards gods and humans, on the other.

Adeimantus:: That’s right.

Socrates:: We certainly won’t believe such things, nor will we allow it to be said that Theseus, the son of Posidon, and Pirithous, the son of Zeus, engaged in terrible kidnappings, or that any other hero and son of a god dared to do any of the terrible and impious deeds that they are now falsely said to have done. We’ll compel the poets either to deny that the heroes did such things or else to deny that they were children of the gods. They mustn’t say both or attempt to persuade our young people that the gods bring about evil or that heroes are no better than humans. As we said earlier, these things are both impious and untrue, for we demonstrated that it is impossible for the gods to produce bad things.

Adeimantus:: Of course.

Socrates:: Moreover, these stories are harmful to people who hear them, for everyone will be ready to excuse himself when he's bad, if he is persuaded that similar things both are being done now and have been done in the past by;

> Close descendants of the gods,
> Those near to Zeus, to whom belongs
> The ancestral altar high up on Mount Ida,
> In whom the blood of daemons has not weakened.

For that reason, we must put a stop to such stories, lest they produce in the youth a strong inclination to do bad things.

Adeimantus:: Absolutely.

Socrates:: Now, isn't there a kind of story whose content we haven't yet discussed? So far we've said how one should speak about gods, heroes, daemons, and things in Hades.

Adeimantus:: We have.

Socrates:: Then what's left is how to deal with stories about human beings, isn't it?

Adeimantus:: Obviously.

Socrates:: But we can't settle that matter at present.

Adeimantus:: Why not?

Socrates:: Because I think we'll say that what poets and prose-writers tell us about the most important matters concerning human beings is bad. They say that many unjust people are happy and many just ones wretched, that injustice is profitable if it escapes detection, and that justice is another's good but one's own loss. I think we'll prohibit these stories and order the poets to compose the opposite kind of poetry and tell the opposite kind of tales. Don't you think so?

Adeimantus:: I know so.

Socrates:: But if you agree that what I said is correct, couldn’t I reply that you’ve agreed to the very point that is in question in our whole discussion?

Adeimantus:: And you'd be right to make that reply.

Socrates:: Then we’ll agree about what stories should be told about human beings only when we’ve discovered what sort of thing justice is and how by nature it profits the one who has it, whether he is believed to be just or not.

Adeimantus:: That’s very true.

Socrates:: This concludes our discussion of the content of stories. We should now, I think, investigate their style, for we’ll then have fully investigated both what should be said and how it should be said.

Adeimantus:: I don’t understand what you mean.

Socrates:: But you must. Maybe you’ll understand it better if I put it this way. Isn’t everything said by poets and storytellers a narrative about past, present, or future events?

Adeimantus:: What else could it be?

Socrates:: And aren’t these narratives either narrative alone, or narrative through imitation, or both?

Adeimantus:: I need a clearer understanding of that as well.

Socrates:: I seem to be a ridiculously unclear teacher. So, like those who are incompetent at speaking, I won’t try to deal with the matter as a whole, but I’ll take up a part and use it as an example to make plain what I want to say. Tell me, do you know the beginning of the Iliad, where the poet tells us that Chryses begs Agamemnon to release his daughter, that Agamemnon harshly rejects him, and that, having failed, Chryses prays to the god against the Achaeans?

Adeimantus:: I do.

Socrates:: You know, then, that up to the lines:

> And he begged all the Achaeans,
> But especially the two sons of Atreus, the commanders of the army.

the poet himself is speaking and doesn't attempt to get us to think that the speaker is someone other than himself. After this, however, he speaks as if he were Chryses and tries as far as possible to make us think that the speaker isn't Homer but the priest himself—an old man. And he composes pretty well all the rest of his narrative about events in Troy, Ithaca, and the whole Odyssey in this way.

Adeimantus:: That's right.

Socrates:: Now, the speeches he makes and the parts between them are both narrative?

Adeimantus:: Of course.

Socrates:: But when he makes a speech as if he were someone else, won't we say that he makes his own style as much like that of the indicated speaker as possible?

Adeimantus:: We certainly will.

Socrates:: Now, to make oneself like someone else in voice or appearance is to imitate the person one makes oneself like.

Adeimantus:: Certainly.

Socrates:: In these passages, then, it seems that he and the other poets effect their narrative through imitation.

Adeimantus:: That's right.

Socrates:: If the poet never hid himself, the whole of his poem would be narrative without imitation. In order to prevent you from saying again that you don't understand, I'll show you what this would be like. If Homer said that Chryses came with a ransom for his daughter to supplicate the Achaeans, especially the kings, and after that didn’t speak as if he had become Chryses, but still as Homer, there would be no imitation but rather simple narrative. It would have gone something like this—I’ll speak without meter since I’m no poet: “And the priest came and prayed that the gods would allow them to capture Troy and be safe afterwards, that they’ accept the ransom and free his daughter, and thus show reverence for the god. When he'd said this, the others showed their respect for the priest and consented. But Agamemnon was angry and ordered him to leave and never to return, lest his priestly wand and the wreaths of the god should fail to protect him. He said that, before freeing the daughter, he'd grow old in Argos by her side. He told Chryses to go away and not to make him angry, if he wanted to get home safely. When the old man heard this, he was frightened and went off in silence. But when he'd left the camp he prayed at length to Apollo, calling him by his various titles and reminding him of his own services to him. If any of those services had been found pleasing, whether it was the building of temples or the sacrifice of victims, he asked in return that the arrows of the god should make the Achaeans pay for his tears.” That is the way we get simple narrative without imitation.

Adeimantus:: I understand.

Socrates:: Then also understand that the opposite occurs when one omits the words between the speeches and leaves the speeches by themselves.

Adeimantus:: I understand that too. Tragedies are like that.

Socrates:: That’s absolutely right. And now I think that I can make clear to you what I couldn’t before. One kind of poetry and story-telling employs only imitation—tragedy and comedy, as you say. Another kind employs only narration by the poet himself—you find this most of all in dithyrambs. A third kind uses both—as in epic poetry and many other places, if you follow me.

Adeimantus:: Now I understand what you were trying to say.

Socrates:: Remember, too, that before all that we said that we had dealt with what must be said in stories, but that we had yet to investigate how it must be said.

Adeimantus:: Yes, I remember.

Socrates:: Well, this, more precisely, is what I meant: We need to come to an agreement about whether we'll allow poets to narrate through imitation, and, if so, whether they are to imitate some things but not others—and what things these are, or whether they are not to imitate at all.

Adeimantus:: I divine that you're looking into the question of whether or not we'll allow tragedy and comedy into our city.

Socrates:: Perhaps, and perhaps even more than that, for I myself really don't know yet, but whatever direction the argument blows us, that's where we must go.

Adeimantus:: Fine.

Socrates:: Then, consider, Adeimantus, whether our guardians should be imitators or not. Or does this also follow from our earlier statement that each individual would do a fine job of one occupation, not of many, and that if he tried the latter and dabbled in many things, he'd surely fail to achieve distinction in any of them?

Adeimantus:: He would indeed.

Socrates:: Then, doesn't the same argument also hold for imitation—a single individual can't imitate many things as well as he can imitate one?

Adeimantus:: No, he can't.

Socrates:: Then, he'll hardly be able to pursue any worthwhile way of life while at the same time imitating many things and being an imitator. Even in the case of two kinds of imitation that are thought to be closely akin, such as tragedy and comedy, the same people aren't able to do both of them well. Did you not just say that these were both imitations?

Adeimantus:: I did, and you're quite right that the same people can't do both.

Socrates:: Nor can they be both rhapsodes and actors.

Adeimantus:: True.

Socrates:: Indeed, not even the same actors are used for tragedy and comedy. Yet all these are imitations, aren't they?

Adeimantus:: They are.

Socrates:: And human nature, Adeimantus, seems to me to be minted in even smaller coins than these, so that it can neither imitate many things well nor do the actions themselves, of which those imitations are likenesses.

Adeimantus:: That's absolutely true.

Socrates:: Then, if we're to preserve our first argument, that our guardians must be kept away from all other crafts so as to be the craftsmen of the city's freedom, and be exclusively that, and do nothing at all except what contributes to it, they must neither do nor imitate anything else. If they do imitate, they must imitate from childhood what is appropriate for them, namely, people who are courageous, self-controlled, pious, and free, and their actions. They mustn't be clever at doing or imitating slavish or shameful actions, lest from enjoying the imitation, they come to enjoy the reality. Or haven't you noticed that imitations practiced from youth become part of nature and settle into habits of gesture, voice, and thought?

Adeimantus:: I have indeed.

Socrates:: Then we won’t allow those for whom we profess to care, and who must grow into good men, to imitate either a young woman or an older one, or one abusing her husband, quarreling with the gods, or bragging because she thinks herself happy, or one suffering misfortune and possessed by sorrows and lamentations, and even less one who is ill, in love, or in labor.

Adeimantus:: That’s absolutely right.

Socrates:: Nor must they imitate either male or female slaves doing slavish things.

Adeimantus:: No, they mustn’t.

Socrates:: Nor bad men, it seems, who are cowards and are doing the opposite of what we described earlier, namely, libeling and ridiculing each other, using shameful language while drunk or sober, or wronging themselves and others, whether in word or deed, in the various other ways that are typical of such people. They mustn’t become accustomed to making themselves like madmen in either word or deed, for, though they must know about mad and vicious men and women, they must neither do nor imitate anything they do.

Adeimantus:: That’s absolutely true.

Socrates:: Should they imitate metal workers or other craftsmen, or those who row in triremes, or their time-keepers, or anything else connected with ships?

Adeimantus:: How could they, since they aren’t to concern themselves with any of those occupations?

Socrates:: And what about this? Will they imitate neighing horses, bellowing bulls, roaring rivers, the crashing sea, thunder, or anything of that sort?

Adeimantus:: They are forbidden to be mad or to imitate mad people.

Socrates:: If I understand what you mean, there is one kind of style and narrative that someone who is really a gentleman would use whenever he wanted to narrate something, and another kind, unlike this one, which his opposite by nature and education would favor, and in which he would narrate.

Adeimantus:: Which styles are those?

Socrates:: Well, I think that when a moderate man comes upon the words or actions of a good man in his narrative, he'll be willing to report them as if he were that man himself, and he won't be ashamed of that kind of imitation. He'll imitate this good man most when he's acting in a faultless and intelligent manner, but he'll do so less, and with more reluctance, when the good man is upset by disease, sexual passion, drunkenness, or some other misfortune. When he comes upon a character unworthy of himself, however, he'll be unwilling to make himself seriously resemble that inferior character—except perhaps for a brief period in which he's doing something good. Rather he'll be ashamed to do something like that, both because he's unpracticed in the imitation of such people and because he can't stand to shape and mold himself according to a worse pattern. He despises this in his mind, unless it's just done in play.

Adeimantus:: That seems likely.

Socrates:: He'll therefore use the kind of narrative we described in dealing with the Homeric epics a moment ago. His style will participate both in imitation and in the other kind of narrative, but there'll be only a little bit of imitation in a long story? Or is there nothing in what I say?

Adeimantus:: That's precisely how the pattern for such a speaker must be.

Socrates:: As for someone who is not of this sort, the more inferior he is, the more willing he'll be to narrate anything and to consider nothing unworthy of himself. As a result, he'll undertake to imitate seriously and before a large audience all the things we just mentioned—thunder, the sounds of wind, hail, axles, pulleys, trumpets, flutes, pipes, and all the other instruments, even the cries of dogs, sheep, and birds. And this man's style will consist entirely of imitation in voice and gesture, or else include only a small bit of plain narrative.

Adeimantus:: That too is certain.

Socrates:: These, then, are the two kinds of style I was talking about.

Adeimantus:: There are these two.

Socrates:: The first of these styles involves little variation, so that if someone provides a musical mode and rhythm appropriate to it, won't the one who speaks correctly remain—with a few minor changes—pretty well within that mode and rhythm throughout?

Adeimantus:: That's precisely what he'll do.

Socrates:: What about the other kind of style? Doesn't it require the opposite if it is to speak appropriately, namely, all kinds of musical modes and all kinds of rhythms, because it contains every type of variation?

Adeimantus:: That's exactly right.

Socrates:: Do all poets and speakers adopt one or other of these patterns of style or a mixture of both?

Adeimantus:: Necessarily.

Socrates:: What are we to do, then? Shall we admit all these into our city, only one of the pure kinds, or the mixed one?

Adeimantus:: If my opinion is to prevail, we'll admit only the pure imitator of a decent person.

Socrates:: And yet, Adeimantus, the mixed style is pleasant. Indeed, it is by far the most pleasing to children, their tutors, and the vast majority of people.

Adeimantus:: Yes, it is the most pleasing.

Socrates:: But perhaps you don't think that it harmonizes with our constitution, because no one in our city is two or more people simultaneously, since each does only one job.

Adeimantus:: Indeed, it doesn't harmonize.

Socrates:: And isn't it because of this that it's only in our city that we'll find a cobbler who is a cobbler and not also a captain along with his cobbling, and a farmer who is a farmer and not also a juror along with his farming, and a soldier who is a soldier and not a money-maker in addition to his soldiering, and so with them all?

Adeimantus:: That's true.

Socrates:: It seems, then, that if a man, who through clever training can become anything and imitate anything, should arrive in our city, wanting to give a performance of his poems, we should bow down before him as someone holy, wonderful, and pleasing, but we should tell him that there is no one like him in our city and that it isn't lawful for there to be. We should pour myrrh on his head, crown him with wreaths, and send him away to another city. But, for our own good, we ourselves should employ a more austere and less pleasure-giving poet and storyteller, one who would imitate the speech of a decent person and who would tell his stories in accordance with the patterns we laid down when we first undertook the education of our soldiers.

Adeimantus:: That is certainly what we'd do if it were up to us.

Socrates:: It’s likely, then, that we have now completed our discussion of the part of music and poetry that concerns speech and stories, for we’ve spoken both of what is to be said and of how it is to be said.

Adeimantus:: I agree.

Socrates:: Doesn’t it remain, then, to discuss lyric odes and songs?

Adeimantus:: Clearly.

Socrates:: And couldn’t anyone discover what we would say about them, given that it has to be in tune with what we’ve already said?

Glaucon laughed and said:

Glaucon:: I’m afraid, Socrates, that I’m not to be included under “anyone,” for I don’t have a good enough idea at the moment of what we’re to say. Of course, I have my suspicions.

Socrates:: Nonetheless, you know that, in the first place, a song consists of three elements—words, harmonic mode, and rhythm.

Glaucon:: Yes, I do know that.

Socrates:: As far as words are concerned, they are no different in songs than they are when not set to music, so mustn’t they conform in the same way to the patterns we established just now?

Glaucon:: They must.

Socrates:: Further, the mode and rhythm must fit the words.

Glaucon:: Of course.

Socrates:: And we said that we no longer needed dirges and lamentations among our words.

Glaucon:: We did, indeed.

Socrates:: What are the lamenting modes, then? You tell me, since you’re musical.

Glaucon:: The mixo-Lydian, the syntono-Lydian, and some others of that sort.

Socrates:: Aren’t they to be excluded, then? They’re useless even to decent women, let alone to men.

Glaucon:: Certainly.

Socrates:: Drunkenness, softness, and idleness are also most inappropriate for our guardians.

Glaucon:: How could they not be?

Socrates:: What, then, are the soft modes suitable for drinking-parties?

Glaucon:: The Ionian and those Lydian modes that are said to be relaxed.

Socrates:: Could you ever use these to make people warriors?

Glaucon:: Never. And now all you have left is the Dorian and Phrygian modes.

Socrates:: I don’t know all the musical modes. Just leave me the mode that would suitably imitate the tone and rhythm of a courageous person who is active in battle or doing other violent deeds, or who is failing and facing wounds, death, or some other misfortune, and who, in all these circumstances, is fighting off his fate steadily and with self-control. Leave me also another mode, that of someone engaged in a peaceful, unforced, voluntary action, persuading someone or asking a favor of a god in prayer or of a human being through teaching and exhortation, or, on the other hand, of someone submitting to the supplications of another who is teaching him and trying to get him to change his mind, and who, in all these circumstances, is acting with moderation and self-control, not with arrogance but with understanding, and is content with the outcome. Leave me, then, these two modes, which will best imitate the violent or voluntary tones of voice of those who are moderate and courageous, whether in good fortune or in bad.

Glaucon:: The modes you're asking for are the very ones I mentioned.

Socrates:: Well, then, we'll have no need for polyharmonic or multi-stringed instruments to accompany our odes and songs.

Glaucon:: It doesn't seem so to me at least.

Socrates:: Then we won't need the craftsmen who make triangular lutes, harps, and all other such multi-stringed and polyharmonic instruments.

Glaucon:: Apparently not.

Socrates:: What about flute-makers and flute-players? Will you allow them into the city? Or isn't the flute the most "many-stringed" of all? And aren't the panharmonic instruments all imitations of it?

Glaucon:: Clearly.

Socrates:: The lyre and the cithara are left, then, as useful in the city, while in the country, there' be some sort of pipe for the shepherds to play.

Glaucon:: That is what our argument shows, at least.

Socrates:: Well, we certainly aren't doing anything new in preferring Apollo and his instruments to Marsyas and his.

Glaucon:: By god, it doesn't seem as though we are.

Socrates:: And, by the dog, without being aware of it, we've been purifying the city we recently said was luxurious.

Glaucon:: That's because we're being moderate.

Socrates:: Then let's purify the rest. The next topic after musical modes is the regulation of meter. We shouldn't strive to have either subtlety or great variety in meter. Rather, we should try to discover what are the rhythms of someone who leads an ordered and courageous life and then adapt the meter and the tune to his words, not his words to them. What these rhythms actually are is for you to say, just as in the case of the modes.

Glaucon:: I really don't know what to say. I can tell you from observation that there are three basic kinds of metrical feet out of which the others are constructed, just as there are four in the case of modes. But I can't tell you which sort imitates which sort of life.

Socrates:: Then we'll consult with Damon as to which metrical feet are suited to slavishness, insolence, madness, and the other vices and which are suited to their opposites. I think I've heard him talking about an enoplion, which is a composite metrical phrase (although I'm not clear on this), and also about dactylic or heroic meter, which he arranged, I don't know how, to be equal up and down in the interchange of long and short. I think he called one foot an iambus, another a trochee, assigning a long and a short to both of them. In the case of some of these, I think he approved or disapproved of the tempo of the foot as much as of the rhythm itself, or of some combination of the two—I can't tell you which. But, as I said, we'll leave these things to Damon, since to mark off the different kinds would require a long argument. Or do you think we should try it?

Glaucon:: No, I certainly don't.

Socrates:: But you can discern, can’t you, that grace and gracelessness follow good and bad rhythm respectively?

Glaucon:: Of course.

Socrates:: Further, if, as we said just now, rhythm and mode must conform to the words and not vice versa, then good rhythm follows fine words and is similar to them, while bad rhythm follows the opposite kind of words, and the same for harmony and disharmony.

Glaucon:: To be sure, these things must conform to the words.

Socrates:: What about the style and content of the words themselves? Don’t they conform to the character of the speaker’s soul?

Glaucon:: Of course.

Socrates:: And the rest conform to the words?

Glaucon:: Yes.

Socrates:: Then fine words, harmony, grace, and rhythm follow simplicity of character—and I do not mean this in the sense in which we use “simplicity” as a euphemism for “simple-mindedness”—but I mean the sort of fine and good character that has developed in accordance with an intelligent plan.

Glaucon:: That’s absolutely certain.

Socrates:: And must not our young people everywhere aim at these, if they are to do their own work?

Glaucon:: They must, indeed.

Socrates:: Now, surely painting is full of these qualities, as are all the crafts similar to it; weaving is full of them, and so are embroidery, architecture, and the crafts that produce all the other furnishings. Our bodily nature is full of them, as are the natures of all growing things, for in all of these there is grace and gracelessness. And gracelessness, bad rhythm, and disharmony are akin to bad words and bad character, while their opposites are akin to and are imitations of the opposite, a moderate and good character.

Glaucon:: Absolutely.

Socrates:: Is it, then, only poets we have to supervise, compelling them to make an image of a good character in their poems or else not to compose them among us? Or are we also to give orders to other craftsmen, forbidding them to represent—whether in pictures, buildings, or any other works— a character that is vicious, unrestrained, slavish, and graceless? Are we to allow someone who cannot follow these instructions to work among us, so that our guardians will be brought up on images of evil, as if in a meadow of bad grass, where they crop and graze in many different places every day until, little by little, they unwittingly accumulate a large evil in their souls? Or must we rather seek out craftsmen who are by nature able to pursue what is fine and graceful in their work, so that our young people will live in a healthy place and be benefited on all sides, and so that something of those fine works will strike their eyes and ears like a breeze that brings health from a good place, leading them unwittingly, from childhood on, to resemblance, friendship, and harmony with the beauty of reason?

Glaucon:: The latter would be by far the best education for them.

Socrates:: Aren’t these the reasons, Glaucon, that education in music and poetry is most important? First, because rhythm and harmony permeate the inner part of the soul more than anything else, affecting it most strongly and bringing it grace, so that if someone is properly educated in music and poetry, it makes him graceful, but if not, then the opposite. Second, because anyone who has been properly educated in music and poetry will sense it acutely when something has been omitted from a thing and when it hasn't been finely crafted or finely made by nature. And since he has the right distastes, he'll praise fine things, be pleased by them, receive them into his soul, and, being nurtured by them, become fine and good. He'll rightly object to what is shameful, hating it while he's still young and unable to grasp the reason, but, having been educated in this way, he will welcome the reason when it comes and recognize it easily because of its kinship with himself.

Glaucon:: Yes, I agree that those are the reasons to provide education in music and poetry.

Socrates:: It's just the way it was with learning how to read. Our ability wasn't adequate until we realized that there are only a few letters that occur in all sorts of different combinations, and that—whether written large or small—they were worthy of our attention, so that we picked them out eagerly wherever they occurred, knowing that we wouldn't be competent readers until we knew our letters.

Glaucon:: True.

Socrates:: And isn't it also true that if there are images of letters reflected in mirrors or water, we won't know them until we know the letters themselves, for both abilities are parts of the same craft and discipline?

Glaucon:: Absolutely.

Socrates:: Then, by the gods, am I not right in saying that neither we, nor the guardians we are raising, will be educated in music and poetry until we know the different forms of moderation, courage, frankness, high-mindedness, and all their kindred, and their opposites too, which are moving around everywhere, and see them in the things in which they are, both themselves and their images, and do not disregard them, whether they are written on small things or large, but accept that the knowledge of both large and small letters is part of the same craft and discipline?

Glaucon:: That’s absolutely essential.

Socrates:: Therefore, if someone’s soul has a fine and beautiful character and his body matches it in beauty and is thus in harmony with it, so that both share in the same pattern, wouldn’t that be the most beautiful sight for anyone who has eyes to see?

Glaucon:: It certainly would.

Socrates:: And isn’t what is most beautiful also most loveable?

Glaucon:: Of course.

Socrates:: And a musical person would love such people most of all, but he wouldn’t love anyone who lacked harmony?

Glaucon:: No, he wouldn’t, at least not if the defect was in the soul, but if it was only in the body, he'd put up with it and be willing to embrace the boy who had it.

Socrates:: I gather that you love or have loved such a boy yourself, and I agree with you. Tell me this, however: Is excessive pleasure compatible with moderation?

Glaucon:: How can it be, since it drives one mad just as much as pain does?

Socrates:: What about with the rest of virtue?

Glaucon:: No.

Socrates:: Well, then, is it compatible with violence and licentiousness?

Glaucon:: Very much so.

Socrates:: Can you think of a greater or keener pleasure than sexual pleasure?

Glaucon:: I can’t—or a madder one either.

Socrates:: But the right kind of love is by nature the love of order and beauty that has been moderated by education in music and poetry?

Glaucon:: That's right.

Socrates:: Therefore, the right kind of love has nothing mad or licentious about it?

Glaucon:: No, it hasn't.

Socrates:: Then sexual pleasure mustn't come into it, and the lover and the boy he loves must have no share in it, if they are to love and be loved in the right way?

Glaucon:: By god, no, Socrates, it mustn't come into it.

Socrates:: It seems, then, that you'll lay it down as a law in the city we're establishing that if a lover can persuade a boy to let him, then he may kiss him, be with him, and touch him, as a father would a son, for the sake of what is fine and beautiful, but—turning to the other things—his association with the one he cares about must never seem to go any further than this, otherwise he will be reproached as untrained in music and poetry and lacking in appreciation for what is fine and beautiful.

Glaucon:: That's right.

Socrates:: Does it seem to you that we've now completed our account of education in music and poetry? Anyway, it has ended where it ought to end, for it ought to end in the love of the fine and beautiful.

Glaucon:: I agree.

Socrates:: After music and poetry, our young people must be given physical training.

Glaucon:: Of course.

Socrates:: In this, too, they must have careful education from childhood throughout life. The matter stands, I believe, something like this—but you, too, should look into it. It seems to me that a fit body doesn’t by its own virtue make the soul good, but instead that the opposite is true—a good soul by its own virtue makes the body as good as possible. How does it seem to you?

Glaucon:: The same.

Socrates:: Then, if we have devoted sufficient care to the mind, wouldn’t we be right, in order to avoid having to do too much talking, to entrust it with the detailed supervision of the body, while we indicate only the general patterns to be followed?

Glaucon:: Certainly.

Socrates:: We said that our prospective guardians must avoid drunkenness, for it is less appropriate for a guardian to be drunk and not to know where on earth he is than it is for anyone else.

Glaucon:: It would be absurd for a guardian to need a guardian.

Socrates:: What about food? Aren’t these men athletes in the greatest contest?

Glaucon:: They are.

Socrates:: Then would the regimen currently prescribed for athletes in training be suitable for them?

Glaucon:: Perhaps it would.

Socrates:: Yet it seems to result in sluggishness and to be of doubtful value for health. Or haven’t you noticed that these athletes sleep their lives away and that, if they deviate even a little from their orderly regimen, they become seriously and violently ill?

Glaucon:: I have noticed that.

Socrates:: Then our warrior athletes need a more sophisticated kind of training. They must be like sleepless hounds, able to see and hear as keenly as possible and to endure frequent changes of water and food, as well as summer and winter weather on their campaigns, without faltering in health.

Glaucon:: That's how it seems to me, too.

Socrates:: Now, isn't the best physical training akin to the simple music and poetry we were describing a moment ago?

Glaucon:: How do you mean?

Socrates:: I mean a simple and decent physical training, particularly the kind involved in training for war.

Glaucon:: What would it be like?

Socrates:: You might learn about such things from Homer. You know that, when his heroes are campaigning, he doesn't give them fish to banquet on, even though they are by the sea in the Hellespont, nor boiled meat either. Instead, he gives them only roasted meat, which is the kind most easily available to soldiers, for it's easier nearly everywhere to use fire alone than to carry pots and pans.

Glaucon:: That's right.

Socrates:: Nor, I believe, does Homer mention sweet desserts anywhere. Indeed, aren't even the other athletes aware that, if one's body is to be sound, one must keep away from all such things?

Glaucon:: They're right to be aware of it, at any rate, and to avoid such things.

Socrates:: If you think that, then it seems that you don't approve of Syracusan cuisine or of Sicilian-style dishes.

Glaucon:: I do not.

Socrates:: Then you also object to Corinthian girlfriends for men who are to be in good physical condition.

Glaucon:: Absolutely.

Socrates:: What about the reputed delights of Attic pastries?

Glaucon:: I certainly object to them, too.

Socrates:: I believe that we'd be right to compare this diet and this entire life-style to the kinds of lyric odes and songs that are composed in all sorts of modes and rhythms.

Glaucon:: Certainly.

Socrates:: Just as embellishment in the one gives rise to licentiousness, doesn't it give rise to illness in the other? But simplicity in music and poetry makes for moderation in the soul, and in physical training it makes for bodily health?

Glaucon:: That's absolutely true.

Socrates:: And as licentiousness and disease breed in the city, aren't many law courts and hospitals opened? And don't medicine and law give themselves solemn airs when even large numbers of free men take them very seriously?

Glaucon:: How could it be otherwise?

Socrates:: Yet could you find a greater sign of bad and shameful education in a city than that the need for skilled doctors and lawyers is felt not only by inferior people and craftsmen but by those who claim to have been brought up in the manner of free men? Don't you think it's shameful and a great sign of vulgarity to be forced to make use of a justice imposed by others, as masters and judges, because you are unable to deal with the situation yourself?

Glaucon:: I think that's the most shameful thing of all.

Socrates:: Yet isn't it even more shameful when someone not only spends a good part of his life in court defending himself or prosecuting someone else but, through inexperience of what is fine, is persuaded to take pride in being clever at doing injustice and then exploiting every loophole and trick to escape conviction—and all for the sake of little worthless things and because he's ignorant of how much better and finer it is to arrange one's own life so as to have no need of finding a sleepy or inattentive judge?

Glaucon:: This case is even more shameful than the other.

Socrates:: And doesn't it seem shameful to you to need medical help, not for wounds or because of some seasonal illness, but because, through idleness and the life-style we've described, one is full of gas and phlegm like a stagnant swamp, so that sophisticated Asclepiad doctors are forced to come up with names like "flatulence" and "catarrh" to describe one's diseases?

Glaucon:: It does. And those certainly are strange new names for diseases.

Socrates:: Indeed, I don't suppose that they even existed in the time of Asclepius himself. I take it as a proof of this that his sons at Troy didn't criticize either the woman who treated Eurypylus when he was wounded, or Patroclus who prescribed the treatment, which consisted of Pramnian wine with barley meal and grated cheese sprinkled on it, though such treatment is now thought to cause inflammation.

Glaucon:: Yet it's a strange drink to give someone in that condition.

Socrates:: Not if you recall that they say that the kind of modern medicine that plays nursemaid to the disease wasn't used by the Asclepiads before Herodicus. He was a physical trainer who became ill, so he mixed physical training with medicine and wore out first himself and then many others as well.

Glaucon:: How did he do that?

Socrates:: By making his dying a lengthy process. Always tending his mortal illness, he was nonetheless, it seems, unable to cure it, so he lived out his life under medical treatment, with no leisure for anything else whatever. If he departed even a little from his accustomed regimen, he became completely worn out, but because his skill made dying difficult, he lived into old age.

Glaucon:: That’s a fine prize for his skill.

Socrates:: One that’s appropriate for someone who didn’t know that it wasn’t because he was ignorant or inexperienced that Asclepius failed to teach this type of medicine to his sons, but because he knew that everyone in a well-regulated city has his own work to do and that no one has the leisure to be ill and under treatment all his life. It’s absurd that we recognize this to be true of craftsmen while failing to recognize that it’s equally true of those who are wealthy and supposedly happy.

Glaucon:: How is that?

Socrates:: When a carpenter is ill, he expects to receive an emetic or a purge from his doctor or to get rid of his disease through surgery or cautery. If anyone prescribed a lengthy regimen to him, telling him that he should rest with his head bandaged and so on, he'd soon reply that he had no leisure to be ill and that life is no use to him if he has to neglect his work and always be concerned with his illness. After that he'd bid good-bye to his doctor, resume his usual way of life, and either recover his health or, if his body couldn’t withstand the illness, he'd die and escape his troubles.

Glaucon:: It is believed to be appropriate for someone like that to use medicine in this way.

Socrates:: Is that because his life is of no profit to him if he doesn’t do his work?

Glaucon:: Obviously.

Socrates:: But the rich person, we say, has no work that would make his life unlivable if he couldn't do it.

Glaucon:: That's what people say, at least.

Socrates:: That's because you haven't heard the saying of Phocylides that, once you have the means of life, you must practice virtue.

Glaucon:: I think he must also practice virtue before that.

Socrates:: We won't quarrel with Phocylides about this. But let's try to find out whether the rich person must indeed practice virtue and whether his life is not worth living if he doesn't or whether tending an illness, while it is an obstacle to applying oneself to carpentry and the other crafts, is no obstacle whatever to taking Phocylides' advice.

Glaucon:: But excessive care of the body, over and above physical training, is pretty well the biggest obstacle of all. It's troublesome in managing a household, in military service, and even in a sedentary public office.

Socrates:: Yet the most important of all, surely, is that it makes any kind of learning, thought, or private meditation difficult, for it's always imagining some headaches or dizziness and accusing philosophy of causing them. Hence, wherever this kind of virtue is practiced and examined, excessive care of the body hinders it, for it makes a person think he's ill and be all the time concerned about his body.

Glaucon:: It probably does.

Socrates:: Therefore, won't we say that Asclepius knew this, and that he taught medicine for those whose bodies are healthy in their natures and habits but have some specific disease? His medicine is for these people with these habits. He cured them of their disease with drugs or surgery and then ordered them to live their usual life so as not to harm their city’s affairs. But for those whose bodies were riddled with disease, he didn’t attempt to prescribe a regimen, drawing off a little here and pouring in a little there, in order to make their life a prolonged misery and enable them to produce offspring in all probability like themselves. He didn’t think that he should treat someone who couldn’t live a normal life, since such a person would be of no profit either to himself or to the city.

Glaucon:: The Asclepius you’re talking about was quite a statesman.

Socrates:: Clearly. And don’t you see that because he was a statesman his sons turned out to be good men at Troy, practicing medicine as I say they did? Don’t you remember that they “sucked out the blood and applied gentle potions” to the wound Pandarus inflicted on Menelaus, but without prescribing what he should eat or drink after that, any more than they did for Eurypylus? They considered their drugs to be sufficient to cure men who were healthy and living an orderly life before being wounded, even if they happened to drink wine mixed with barley and cheese right after receiving their wounds. But they didn’t consider the lives of those who were by nature sick and licentious to be profitable either to themselves or to anyone else. Medicine isn’t intended for such people and they shouldn’t be treated, not even if they’re richer than Midas.

Glaucon:: The sons of Asclepius you’re talking about were indeed very sophisticated.

Socrates:: Appropriately so. But Pindar and the tragedians don’t agree with us. They say that Asclepius was the son of Apollo, that he was bribed with gold to heal a rich man, who was already dying, and that he was killed by lightning for doing so. But, in view of what we said before, we won't believe this. We'll say that if Asclepius was the son of a god, he was not a money-grubber, and that if he was a money-grubber, he was not the son of a god.

Glaucon:: That's right. But what do you say about the following, Socrates? Don't we need to have good doctors in our city? And the best will surely be those who have handled the greatest number of sick and of healthy people. In the same way, the best judges will be those who have associated with people whose natures are of every kind.

Socrates:: I agree that the doctors and judges must be good. But do you know the kind I consider to be so?

Glaucon:: If you'll tell me.

Socrates:: I'll try. But you ask about things that aren't alike in the same question.

Glaucon:: In what way?

Socrates:: The cleverest doctors are those who, in addition to learning their craft, have had contact with the greatest number of very sick bodies from childhood on, have themselves experienced every illness, and aren't very healthy by nature, for they don't treat bodies with their bodies, I suppose—if they did, we wouldn't allow their bodies to be or become bad. Rather they treat the body with their souls, and it isn't possible for the soul to treat anything well, if it is or has been bad itself.

Glaucon:: That's right.

Socrates:: As for the judge, he does rule other souls with his own soul. And it isn't possible for a soul to be nurtured among vicious souls from childhood, to associate with them, to indulge in every kind of injustice, and come through it able to judge other people's injustices from its own case, as it can diseases of the body. Rather, if it's to be fine and good, and a sound judge of just things, it must itself remain pure and have no experience of bad character while it’s young. That’s the reason, indeed, that decent people appear simple and easily deceived by unjust ones when they are young. It’s because they have no models in themselves of the evil experiences of the vicious to guide their judgments.

Glaucon:: That’s certainly so.

Socrates:: Therefore, a good judge must not be a young person but an old one, who has learned late in life what injustice is like and who has become aware of it not as something at home in his own soul, but as something alien and present in others, someone who, after a long time, has recognized that injustice is bad by nature, not from his own experience of it, but through knowledge.

Glaucon:: Such a judge would be the most noble one of all.

Socrates:: And he'd be good, too, which was what you asked, for someone who has a good soul is good. The clever and suspicious person, on the other hand, who has committed many injustices himself and thinks himself a wise villain, appears clever in the company of those like himself, because he’s on his guard and is guided by the models within himself. But when he meets with good older people, he’s seen to be stupid, distrustful at the wrong time, and ignorant of what a sound character is, since he has no model of this within himself. But since he meets vicious people more often than good ones, he seems to be clever rather than unlearned, both to himself and to others.

Glaucon:: That’s completely true.

Socrates:: Then we mustn’t look for the good judge among people like that but among the sort we described earlier. A vicious person would never know either himself or a virtuous one, whereas a naturally virtuous person, when educated, will in time acquire knowledge of both virtue and vice. And it is someone like that who becomes wise, in my view, and not the bad person.

Glaucon:: I agree with you.

Socrates:: Then won't you legislate in our city for the kind of medicine we mentioned and for this kind of judging, so that together they'll look after those who are naturally well endowed in body and soul? But as for the ones whose bodies are naturally unhealthy or whose souls are incurably evil, won't they let the former die of their own accord and put the latter to death?

Glaucon:: That seems to be best both for the ones who suffer such treatment and for the city.

Socrates:: However, our young people, since they practice that simple sort of music and poetry that we said produces moderation, will plainly be wary of coming to need a judge.

Glaucon:: That's right.

Socrates:: And won't a person who's educated in music and poetry pursue physical training in the same way, and choose to make no use of medicine except when unavoidable?

Glaucon:: I believe so.

Socrates:: He'll work at physical exercises in order to arouse the spirited part of his nature, rather than to acquire the physical strength for which other athletes diet and labor.

Glaucon:: That's absolutely right.

Socrates:: Then, Glaucon, did those who established education in music and poetry and in physical training do so with the aim that people attribute to them, which is to take care of the body with the latter and the soul with the former, or with some other aim?

Glaucon:: What other aim do you mean?

Socrates:: It looks as though they established both chiefly for the sake of the soul.

Glaucon:: How so?

Socrates:: Haven’t you noticed the effect that lifelong physical training, unaccompanied by any training in music and poetry, has on the mind, or the effect of the opposite, music and poetry without physical training?

Glaucon:: What effects are you talking about?

Socrates:: Savagery and toughness in the one case and softness and over cultivation in the other.

Glaucon:: I get the point. You mean that those who devote themselves exclusively to physical training turn out to be more savage than they should, while those who devote themselves to music and poetry turn out to be softer than is good for them?

Socrates:: Moreover, the source of the savageness is the spirited part of one’s nature. Rightly nurtured, it becomes courageous, but if it’s overstrained, it’s likely to become hard and harsh.

Glaucon:: So it seems.

Socrates:: And isn’t it the philosophic part of one’s nature that provides the cultivation? If it is relaxed too far, it becomes softer than it should, but if properly nurtured, it is cultivated and orderly.

Glaucon:: So it is.

Socrates:: Now, we say that our guardians must have both these natures.

Glaucon:: They must indeed.

Socrates:: And mustn’t the two be harmonized with each other?

Glaucon:: Of course.

Socrates:: And if this harmony is achieved, the soul is both moderate and courageous?

Glaucon:: Certainly.

Socrates:: But if it is inharmonious, it is cowardly and savage?

Glaucon:: Yes, indeed.

Socrates:: Therefore, when someone gives music an opportunity to charm his soul with the flute and to pour those sweet, soft, and plaintive tunes we mentioned through his ear, as through a funnel, when he spends his whole life humming them and delighting in them, then, at first, whatever spirit he has is softened, just as iron is tempered, and from being hard and useless, it is made useful. But if he keeps at it unrelentingly and is beguiled by the music, after a time his spirit is melted and dissolved until it vanishes, and the very sinews of his soul are cut out and he becomes “a feeble warrior.”

Glaucon:: That’s right.

Socrates:: And if he had a spiritless nature from the first, this process is soon completed. But if he had a spirited nature, his spirit becomes weak and unstable, flaring up at trifles and extinguished as easily. The result is that such people become quick-tempered, prone to anger, and filled with discontent, rather than spirited.

Glaucon:: That’s certainly true.

Socrates:: What about someone who works hard at physical training and eats well but never touches music or philosophy? Isn’t he in good physical condition at first, full of resolution and spirit? And doesn’t he become more courageous than he was before?

Glaucon:: Certainly.

Socrates:: But what happens if he does nothing else and never associates with the Muse? Doesn't whatever love of learning he might have had in his soul soon become enfeebled, deaf, and blind, because he never tastes any learning or investigation or partakes of any discussion or any of the rest of music and poetry, to nurture or arouse it?

Glaucon:: It does seem to be that way.

Socrates:: I believe that someone like that becomes a hater of reason and of music. He no longer makes any use of persuasion but bulls his way through every situation by force and savagery like a wild animal, living in ignorance and stupidity without either rhythm or grace.

Glaucon:: That's most certainly how he'll live.

Socrates:: It seems, then, that a god has given music and physical training to human beings not, except incidentally, for the body and the soul but for the spirited and wisdom-loving parts of the soul itself, in order that these might be in harmony with one another, each being stretched and relaxed to the appropriate degree.

Glaucon:: It seems so.

Socrates:: Then the person who achieves the finest blend of music and physical training and impresses it on his soul in the most measured way is the one we'd most correctly call completely harmonious and trained in music, much more so than the one who merely harmonizes the strings of his instrument.

Glaucon:: That's certainly so, Socrates.

Socrates:: Then, won't we always need this sort of person as an overseer in our city, Glaucon, if indeed its constitution is to be preserved?

Glaucon:: It seems that we'll need someone like that most of all.

Socrates:: These, then, are the patterns for education and upbringing. Should we enumerate the dances of these people, or their hunts, chases with hounds, athletic contests, and horse races? Surely, they're no longer hard to discover, since it's pretty clear that they must follow the patterns we've already established.

Glaucon:: Perhaps so.

Socrates:: All right, then what's the next thing we have to determine? Isn't it which of these same people will rule and which be ruled?

Glaucon:: Of course.

Socrates:: Now, isn't it obvious that the rulers must be older and the ruled younger?

Glaucon:: Yes, it is.

Socrates:: And mustn't the rulers also be the best of them?

Glaucon:: That, too.

Socrates:: And aren't the best farmers the ones who are best at farming?

Glaucon:: Yes.

Socrates:: Then, as the rulers must be the best of the guardians, mustn't they be the ones who are best at guarding the city?

Glaucon:: Yes.

Socrates:: Then, in the first place, mustn't they be knowledgeable and capable, and mustn't they care for the city?

Glaucon:: That's right.

Socrates:: Now, one cares most for what one loves.

Glaucon:: Necessarily.

Socrates:: And someone loves something most of all when he believes that the same things are advantageous to it as to himself and supposes that if it does well, he'll do well, and that if it does badly, then he'll do badly too.

Glaucon:: That's right.

Socrates:: Then we must choose from among our guardians those men who, upon examination, seem most of all to believe throughout their lives that they must eagerly pursue what is advantageous to the city and be wholly unwilling to do the opposite.

Glaucon:: Such people would be suitable for the job at any rate.

Socrates:: I think we must observe them at all ages to see whether they are guardians of this conviction and make sure that neither compulsion nor magic spells will get them to discard or forget their belief that they must do what is best for the city.

Glaucon:: What do you mean by discarding?

Socrates:: I'll tell you. I think the discarding of a belief is either voluntary or involuntary—voluntary when one learns that the belief is false, involuntary in the case of all true beliefs.

Glaucon:: I understand voluntary discarding but not involuntary.

Socrates:: What's that? Don't you know that people are voluntarily deprived of bad things, but involuntarily deprived of good ones? And isn't being deceived about the truth a bad thing, while possessing the truth is good? Or don't you think that to believe the things that are is to possess the truth?

Glaucon:: That's right, and I do think that people are involuntarily deprived of true opinions.

Socrates:: But can’t they also be so deprived by theft, magic spells, and compulsion?

Glaucon:: Now, I don’t understand again.

Socrates:: I’m afraid I must be talking like a tragic poet! By “the victims of theft” I mean those who are persuaded to change their minds or those who forget, because time, in the latter case, and argument, in the former, takes away their opinions without their realizing it. Do you understand now?

Glaucon:: Yes.

Socrates:: By “the compelled” I mean those whom pain or suffering causes to change their mind.

Glaucon:: I understand that, and you’re right.

Socrates:: The “victims of magic,” I think you'd agree, are those who change their mind because they are under the spell of pleasure or fear.

Glaucon:: It seems to me that everything that deceives does so by casting a spell.

Socrates:: Then, as I said just now, we must find out who are the best guardians of their conviction that they must always do what they believe to be best for the city. We must keep them under observation from childhood and set them tasks that are most likely to make them forget such a conviction or be deceived out of it, and we must select whoever keeps on remembering it and isn’t easily deceived, and reject the others. Do you agree?

Glaucon:: Yes.

Socrates:: And we must subject them to labors, pains, and contests in which we can watch for these traits.

Glaucon:: That’s right.

Socrates:: Then we must also set up a competition for the third way in which people are deprived of their convictions, namely, magic. Like those who lead colts into noise and tumult to see if they're afraid, we must expose our young people to fears and pleasures, testing them more thoroughly than gold is tested by fire. If someone is hard to put under a spell, is apparently gracious in everything, is a good guardian of himself and the music and poetry he has learned, and if he always shows himself to be rhythmical and harmonious, then he is the best person both for himself and for the city. Anyone who is tested in this way as a child, youth, and adult, and always comes out of it untainted, is to be made a ruler as well as a guardian; he is to be honored in life and to receive after his death the most prized tombs and memorials. But anyone who fails to prove himself in this way is to be rejected. It seems to me, Glaucon, that rulers and guardians must be selected and appointed in some such way as this, though we've provided only a general pattern and not the exact details.

Glaucon:: It also seems to me that they must be selected in this sort of way.

Socrates:: Then, isn't it truly most correct to call these people complete guardians, since they will guard against external enemies and internal friends, so that the one will lack the power and the other the desire to harm the city? The young people we've hitherto called guardians we'll now call auxiliaries and supporters of the guardians' convictions.

Glaucon:: I agree.

Socrates:: How, then, could we devise one of those useful falsehoods we were talking about a while ago, one noble falsehood that would, in the best case, persuade even the rulers, but if that's not possible, then the others in the city?

Glaucon:: What sort of falsehood?

Socrates:: Nothing new, but a Phoenician story which describes something that has happened in many places. At least, that's what the poets say, and they've persuaded many people to believe it too. It hasn't happened among us, and I don't even know if it could. It would certainly take a lot of persuasion to get people to believe it.

Glaucon:: You seem hesitant to tell the story.

Socrates:: When you hear it, you'll realize that I have every reason to hesitate.

Glaucon:: Speak, and don't be afraid.

Socrates:: I'll tell it, then, though I don't know where I'll get the audacity or even what words I'll use. I'll first try to persuade the rulers and the soldiers and then the rest of the city that the upbringing and the education we gave them, and the experiences that went with them, were a sort of dream, that in fact they themselves, their weapons, and the other craftsmen's tools were at that time really being fashioned and nurtured inside the earth, and that when the work was completed, the earth, who is their mother, delivered all of them up into the world. Therefore, if anyone attacks the land in which they live, they must plan on its behalf and defend it as their mother and nurse and think of the other citizens as their earthborn brothers.

Glaucon:: It isn't for nothing that you were so shy about telling your falsehood.

Socrates:: Appropriately so. Nevertheless, listen to the rest of the story. "All of you in the city are brothers," we'll say to them in telling our story, "but the god who made you mixed some gold into those who are adequately equipped to rule, because they are most valuable. He put silver in those who are auxiliaries and iron and bronze in the farmers and other craftsmen. For the most part you will produce children like yourselves, but, because you are all related, a silver child will occasionally be born from a golden parent, and vice versa, and all the others from each other. So the first and most important command from the god to the rulers is that there is nothing that they must guard better or watch more carefully than the mixture of metals in the souls of the next generation. If an offspring of theirs should be found to have a mixture of iron or bronze, they must not pity him in any way, but give him the rank appropriate to his nature and drive him out to join the craftsmen and farmers. But if an offspring of these people is found to have a mixture of gold or silver, they will honor him and take him up to join the guardians or the auxiliaries, for there is an oracle which says that the city will be ruined if it ever has an iron or a bronze guardian." So, do you have any device that will make our citizens believe this story?

Glaucon:: I can't see any way to make them believe it themselves, but perhaps there is one in the case of their sons and later generations and all the other people who come after them.

Socrates:: I understand pretty much what you mean, but even that would help to make them care more for the city and each other. However, let's leave this matter wherever tradition takes it. And let's now arm our earthborn and lead them forth with their rulers in charge. And as they march, let them look for the best place in the city to have their camp, a site from which they can most easily control those within, if anyone is unwilling to obey the laws, or repel any outside enemy who comes like a wolf upon the flock. And when they have established their camp and made the requisite sacrifices, they must see to their sleeping quarters. What do you say?

Glaucon:: I agree.

Socrates:: And won't these quarters protect them adequately both in winter and summer?

Glaucon:: Of course, for it seems to me that you mean their housing.

Socrates:: Yes, but housing for soldiers, not for money-makers.

Glaucon:: How do you mean to distinguish these from one another?

Socrates:: I'll try to tell you. The most terrible and most shameful thing of all is for a shepherd to rear dogs as auxiliaries to help him with his flocks in such a way that, through licentiousness, hunger, or some other bad trait of character, they do evil to the sheep and become like wolves instead of dogs.

Glaucon:: That's certainly a terrible thing.

Socrates:: Isn't it necessary, therefore, to guard in every way against our auxiliaries doing anything like that to the citizens because they are stronger, thereby becoming savage masters instead of kindly allies?

Glaucon:: It is necessary.

Socrates:: And wouldn't a really good education endow them with the greatest caution in this regard?

Glaucon:: But surely they have had an education like that.

Socrates:: Perhaps we shouldn't assert this dogmatically, Glaucon. What we can assert is what we were saying, just now, that they must have the right education, whatever it is, if they are to have what will most make them gentle to each other and to those they are guarding.

Glaucon:: That's right.

Socrates:: Now, someone with some understanding might say that, besides this education, they must also have the kind of housing and other property that will neither prevent them from being the best guardians nor encourage them to do evil to the other citizens.

Glaucon:: That’s true.

Socrates:: Consider, then, whether or not they should live in some such way as this, if they’re to be the kind of men we described. First, none of them should possess any private property beyond what is wholly necessary. Second, none of them should have a house or storeroom that isn’t open for all to enter at will. Third, whatever sustenance moderate and courageous warrior-athletes require in order to have neither shortfall nor surplus in a given year they’ll receive by taxation on the other citizens as a salary for their guardianship. Fourth, they’ll have common messes and live together like soldiers in a camp. We’ll tell them that they always have gold and silver of a divine sort in their souls as a gift from the gods and so have no further need of human gold. Indeed, we’ll tell them that it’s impious for them to defile this divine possession by any admixture of such gold, because many impious deeds have been done that involve the currency used by ordinary people, while their own is pure. Hence, for them alone among the city’s population, it is unlawful to touch or handle gold or silver. They mustn’t be under the same roof as it, wear it as jewelry, or drink from gold or silver goblets. In this way they’ save both themselves and the city. But if they acquire private land, houses, and currency themselves, they’ll be household managers and farmers instead of guardians— hostile masters of the other citizens instead of their allies. They’ll spend their whole lives hating and being hated, plotting and being plotted against, more afraid of internal than of external enemies, and they’ll hasten both themselves and the whole city to almost immediate ruin. For all these reasons, let’s say that the guardians must be provided with housing and the rest in this way, and establish this as a law. Or don't you agree?

Glaucon:: I certainly do.

## Book 4

Socrates:: And Adeimantus interrupted:

Adeimantus:: How would you defend yourself, Socrates, if someone told you that you aren't making these men very happy and that it's their own fault? The city really belongs to them, yet they derive no good from it. Others own land, build fine big houses, acquire furnishings to go along with them, make their own private sacrifices to the gods, entertain guests, and also, of course, possess what you were talking about just now, gold and silver and all the things that are thought to belong to people who are blessedly happy. But one might well say that your guardians are simply settled in the city like mercenaries and that all they do is watch over it.

Socrates:: Yes, and what's more, they work simply for their keep and get no extra wages as the others do. Hence, if they want to take a private trip away from the city, they won't be able to; they'll have nothing to give to their mistresses, nothing to spend in whatever other ways they wish, as people do who are considered happy. You've omitted these and a host of other, similar facts from your charge.

Adeimantus:: Well, let them be added to the charge as well.

Socrates:: Then, are you asking how we should defend ourselves?

Adeimantus:: Yes.

Socrates:: I think we'll discover what to say if we follow the same path as before. We'll say that it wouldn't be surprising if these people were happiest just as they are, but that, in establishing our city, we aren't aiming to make any one group outstandingly happy but to make the whole city so, as far as possible. We thought that we'd find justice most easily in such a city and injustice, by contrast, in the one that is governed worst and that, by observing both cities, we'd be able to judge the question we’ve been inquiring into for so long. We take ourselves, then, to be fashioning the happy city, not picking out a few happy people and putting them in it, but making the whole city happy. (We’ll look at the opposite city soon.)

Suppose, then, that someone came up to us while we were painting a statue and objected that, because we had painted the eyes (which are the most beautiful part) black rather than purple, we had not applied the most beautiful colors to the most beautiful parts of the statue. We'd think it reasonable to offer the following defense: “You mustn’t expect us to paint the eyes so beautifully that they no longer appear to be eyes at all, and the same with the other parts. Rather you must look to see whether by dealing with each part appropriately, we are making the whole statue beautiful.” Similarly, you mustn’t force us to give our guardians the kind of happiness that would make them something other than guardians. We know how to clothe the farmers in purple robes, festoon them with gold jewelry, and tell them to work the land whenever they please. We know how to settle our potters on couches by the fire, feasting and passing the wine around, with their wheel beside them for whenever they want to make pots. And we can make all the others happy in the same way, so that the whole city is happy. Don’t urge us to do this, however, for if we do, a farmer wouldn’t be a farmer, nor a potter a potter, and none of the others would keep to the patterns of work that give rise to a city. Now, if cobblers become inferior and corrupt and claim to be what they are not, that won’t do much harm to the city. Hence, as far as they and the others like them are concerned, our argument carries less weight. But if the guardians of our laws and city are merely believed to be guardians but are not, you surely see that they'll destroy the city utterly, just as they alone have the opportunity to govern it well and make it happy.

If we are making true guardians, then, who are least likely to do evil to the city, and if the one who brought the charge is talking about farmers and banqueters who are happy as they would be at a festival rather than in a city, then he isn't talking about a city at all, but about something else.

With this in mind, we should consider whether in setting up our guardians we are aiming to give them the greatest happiness, or whether—since our aim is to see that the city as a whole has the greatest happiness—we must compel and persuade the auxiliaries and guardians to follow our other policy and be the best possible craftsmen at their own work, and the same with all the others. In this way, with the whole city developing and being governed well, we must leave it to nature to provide each group with its share of happiness.

Adeimantus:: I think you put that very well.

Socrates:: Will you also think that I'm putting things well when I make the next point, which is closely akin to this one?

Adeimantus:: Which one exactly?

Socrates:: Consider whether or not the following things corrupt the other workers, so that they become bad.

Adeimantus:: What things?

Socrates:: Wealth and poverty.

Adeimantus:: How do they corrupt the other workers?

Socrates:: Like this. Do you think that a potter who has become wealthy will still be willing to pay attention to his craft?

Adeimantus:: Not at all.

Socrates:: Won't he become more idle and careless than he was?

Adeimantus:: Much more.

Socrates:: Then won't he become a worse potter?

Adeimantus:: Far worse.

Socrates:: And surely if poverty prevents him from having tools or any of the other things he needs for his craft, he'll produce poorer work and will teach his sons, or anyone else he teaches, to be worse craftsmen.

Adeimantus:: Of course.

Socrates:: So poverty and wealth make a craftsman and his products worse.

Adeimantus:: Apparently.

Socrates:: It seems, then, that we've found other things that our guardians must guard against in every way, to prevent them from slipping into the city unnoticed.

Adeimantus:: What are they?

Socrates:: Both wealth and poverty. The former makes for luxury, idleness, and revolution; the latter for slavishness, bad work, and revolution as well.

Adeimantus:: That's certainly true. But consider this, Socrates: If our city hasn't got any money, how will it be able to fight a war, especially if it has to fight against a great and wealthy city?

Socrates:: Obviously, it will be harder to fight one such city and easier to fight two.

Adeimantus:: How do you mean?

Socrates:: First of all, if our city has to fight a city of the sort you mention, won't it be a case of warrior-athletes fighting against rich men?

Adeimantus:: Yes, as far as that goes.

Socrates:: Well, then, Adeimantus, don't you think that one boxer who has had the best possible training could easily fight two rich and fat nonboxers?

Adeimantus:: Maybe not at the same time.

Socrates:: Not even by escaping from them and then turning and hitting the one who caught up with him first, and doing this repeatedly in stifling heat and sun? Wouldn't he, in his condition, be able to handle even more than two such people?

Adeimantus:: That certainly wouldn't be surprising.

Socrates:: And don't you think that the rich have more knowledge and experience of boxing than of how to fight a war?

Adeimantus:: I do.

Socrates:: Then in all likelihood our athletes will easily be able to fight twice or three times their own numbers in a war.

Adeimantus:: I agree, for I think what you say is right.

Socrates:: What if they sent envoys to another city and told them the following truth: "We have no use for gold or silver, and it isn't lawful for us to possess them, so join us in this war, and you can take the property of those who oppose us for yourselves." Do you think that anyone hearing this would choose to fight hard, lean dogs, rather than to join them in fighting fat and tender sheep?

Adeimantus:: No, I don't. But if the wealth of all the cities came to be gathered in a single one, watch out that it doesn't endanger your nonwealthy city.

Socrates:: You're happily innocent if you think that anything other than the kind of city we are founding deserves to be called a city.

Adeimantus:: What do you mean?

Socrates:: We'll have to find a greater title for the others because each of them is a great many cities, not a city, as they say in the game. At any rate, each of them consists of two cities at war with one another, that of the poor and that of the rich, and each of these contains a great many. If you approach them as one city, you'll be making a big mistake. But if you approach them as many and offer to give to the one city the money, power, and indeed the very inhabitants of the other, you'll always find many allies and few enemies. And as long as your own city is moderately governed in the way that we've just arranged, it will, even if it has only a thousand men to fight for it, be the greatest. Not in reputation; I don't mean that, but the greatest in fact. Indeed, you won't find a city as great as this one among either Greeks or barbarians, although many that are many times its size may seem to be as great. Do you disagree?

Adeimantus:: No, I certainly don't.

Socrates:: Then this would also be the best limit for our guardians to put on the size of the city. And they should mark off enough land for a city that size and let the rest go.

Adeimantus:: What limit is that?

Socrates:: I suppose the following one. As long as it is willing to remain one city, it may continue to grow, but it cannot grow beyond that point.

Adeimantus:: That is a good limit.

Socrates:: Then, we'll give our guardians this further order, namely, to guard in every way against the city's being either small or great in reputation instead of being sufficient in size and one in number.

Adeimantus:: At any rate, that order will be fairly easy for them to follow.

Socrates:: And the one we mentioned earlier is even easier, when we said that, if an offspring of the guardians is inferior, he must be sent off to join the other citizens and that, if the others have an able offspring, he must join the guardians. This was meant to make clear that each of the other citizens is to be directed to what he is naturally suited for, so that, doing the one work that is his own, he will become not many but one, and the whole city will itself be naturally one not many.

Adeimantus:: That is easier than the other.

Socrates:: These orders we give them, Adeimantus, are neither as numerous nor as important as one might think. Indeed, they are all insignificant, provided, as the saying goes, that they guard the one great thing, though I'd rather call it sufficient than great.

Adeimantus:: What’s that?

Socrates:: Their education and upbringing, for if by being well educated they become reasonable men, they will easily see these things for themselves, as well as all the other things we are omitting, for example, that marriage, the having of wives, and the procreation of children must be governed as far as possible by the old proverb: Friends possess everything in common.

Adeimantus:: That would be best.

Socrates:: And surely, once our city gets a good start, it will go on growing in a cycle. Good education and upbringing, when they are preserved, produce good natures, and useful natures, who are in turn well educated, grow up even better than their predecessors, both in their offspring and in other respects, just like other animals.

Adeimantus:: That’s likely.

Socrates:: To put it briefly, those in charge must cling to education and see that it isn’t corrupted without their noticing it, guarding it against everything. Above all, they must guard as carefully as they can against any innovation in music and poetry or in physical training that is counter to the established order. And they should dread to hear anyone say:

People care most for the song
That is newest from the singer’s lips.

Someone might praise such a saying, thinking that the poet meant not new songs but new ways of singing. Such a thing shouldn’t be praised, and the poet shouldn’t be taken to have meant it, for the guardians must beware of changing to a new form of music, since it threatens the whole system. As Damon says, and I am convinced, the musical modes are never changed without change in the most important of a city’s laws.

Adeimantus:: You can count me among the convinced as well.

Socrates:: Then it seems, that it is in music and poetry that our guardians must build their bulwark.

Adeimantus:: At any rate, lawlessness easily creeps in there unnoticed.

Socrates:: Yes, as if music and poetry were only play and did no harm at all.

Adeimantus:: It is harmless—except, of course, that when lawlessness has established itself there, it flows over little by little into characters and ways of life. Then, greatly increased, it steps out into private contracts, and from private contracts, Socrates, it makes its insolent way into the laws and government, until in the end it overthrows everything, public and private.

Socrates:: Well, is that the way it goes?

Adeimantus:: I think so.

Socrates:: Then, as we said at first, our children's games must from the very beginning be more law-abiding, for if their games become lawless, and the children follow suit, isn't it impossible for them to grow up into good and law-abiding men?

Adeimantus:: It certainly is.

Socrates:: But when children play the right games from the beginning and absorb lawfulness from music and poetry, it follows them in everything and fosters their growth, correcting anything in the city that may have gone wrong before—in other words, the very opposite of what happens where the games are lawless.

Adeimantus:: That's true.

Socrates:: These people will also discover the seemingly insignificant conventions their predecessors have destroyed.

Adeimantus:: Which ones?

Socrates:: Things like this: When it is proper for the young to be silent in front of their elders, when they should make way for them or stand up in their presence, the care of parents, hair styles, the clothes and shoes to wear, deportment, and everything else of that sort. Don't you agree?

Adeimantus:: I do.

Socrates:: I think it's foolish to legislate about such things. Verbal or written decrees will never make them come about or last.

Adeimantus:: How could they?

Socrates:: At any rate, Adeimantus, it looks as though the start of someone's education determines what follows. Doesn't like always encourage like?

Adeimantus:: It does.

Socrates:: And the final outcome of education, I suppose we'd say, is a single newly finished person, who is either good or the opposite.

Adeimantus:: Of course.

Socrates:: That's why I wouldn't go on to try to legislate about such things.

Adeimantus:: And with good reason.

Socrates:: Then, by the gods, what about market business, such as the private contracts people make with one another in the marketplace, for example, or contracts with manual laborers, cases of insult or injury, the bringing of lawsuits, the establishing of juries, the payment and assessment of whatever dues are necessary in markets and harbors, the regulation of market, city, harbor, and the rest—should we bring ourselves to legislate about any of these?

Adeimantus:: It isn't appropriate to dictate to men who are fine and good. They'll easily find out for themselves whatever needs to be legislated about such things.

Socrates:: Yes, provided that a god grants that the laws we have already described are preserved.

Adeimantus:: If not, they'll spend their lives enacting a lot of other laws and then amending them, believing that in this way they'll attain the best.

Socrates:: You mean they'll live like those sick people who, through licentiousness, aren't willing to abandon their harmful way of life?

Adeimantus:: That's right.

Socrates:: And such people carry on in an altogether amusing fashion, don't they? Their medical treatment achieves nothing, except that their illness becomes worse and more complicated, and they're always hoping that someone will recommend some new medicine to cure them.

Adeimantus:: That's exactly what happens to people like that.

Socrates:: And isn't it also amusing that they consider their worst enemy to be the person who tells them the truth, namely, that until they give up drunkenness, overeating, lechery, and idleness, no medicine, cautery, or surgery, no charms, amulets, or anything else of that kind will do them any good?

Adeimantus:: It isn't amusing at all, for it isn't amusing to treat someone harshly when he's telling the truth.

Socrates:: You don't seem to approve of such men.

Adeimantus:: I certainly don't, by god.

Socrates:: Then, you won't approve either if a whole city behaves in that way, as we said. Don't you think that cities that are badly governed behave exactly like this when they warn their citizens not to disturb the city's whole political establishment on pain of death? The person who is honored and considered clever and wise in important matters by such badly governed cities is the one who serves them most pleasantly, indulges them, flatters them, anticipates their wishes, and is clever at fulfilling them.

Adeimantus:: Cities certainly do seem to behave in that way, and I don't approve of it at all.

Socrates:: What about those who are willing and eager to serve such cities? Don't you admire their courage and readiness?

Adeimantus:: I do, except for those who are deceived by majority approval into believing that they are true statesmen.

Socrates:: What do you mean? Have you no sympathy for such men? Or do you think it's possible for someone who is ignorant of measurement not to believe it himself when many others who are similarly ignorant tell him that he is six feet tall?

Adeimantus:: No, I don't think that.

Socrates:: Then don't be too hard on them, for such people are surely the most amusing of all. They pass laws on the subjects we've just been enumerating and then amend them, and they always think they'll find a way to put a stop to cheating on contracts and the other things I mentioned, not realizing that they're really just cutting off a Hydra's head.

Adeimantus:: Yet that's all they're doing.

Socrates:: I'd have thought, then, that the true lawgiver oughtn't to bother with that form of law or constitution, either in a badly governed city or in a well-governed one—in the former, because it's useless and accomplishes nothing; in the latter, because anyone could discover some of these things, while the others follow automatically from the ways of life we established.

Adeimantus:: What is now left for us to deal with under the heading of legislation?

Socrates:: For us nothing, but for the Delphic Apollo it remains to enact the greatest, finest, and first of laws.

Adeimantus:: What laws are those?

Socrates:: Those having to do with the establishing of temples, sacrifices, and other forms of service to gods, daemons, and heroes, the burial of the dead, and the services that ensure their favor. We have no knowledge of these things, and in establishing our city, if we have any understanding, we won't be persuaded to trust them to anyone other than the ancestral guide. And this god, sitting upon the rock at the center of the earth, is without a doubt the ancestral guide on these matters for all people.

Adeimantus:: Nicely put. And that's what we must do.

Socrates:: Well, son of Ariston, your city might now be said to be established. The next step is to get an adequate light somewhere and to call upon your brother as well as Polemarchus and the others, so as to look inside it and see where the justice and the injustice might be in it, what the difference between them is, and which of the two the person who is to be happy should possess, whether its possession is unnoticed by all the gods and human beings or not.

Glaucon:: You're talking nonsense. You promised to look for them yourself because you said it was impious for you not to come to the rescue of justice in every way you could.

Socrates:: That's true, and I must do what I promised, but you'll have to help.

Glaucon:: We will.

Socrates:: I hope to find it in this way. I think our city, if indeed it has been correctly founded, is completely good.

Glaucon:: Necessarily so.

Socrates:: Clearly, then, it is wise, courageous, moderate, and just.

Glaucon:: Clearly.

Socrates:: Then, if we find any of these in it, what's left over will be the ones we haven't found?

Glaucon:: Of course.

Socrates:: Therefore, as with any other four things, if we were looking for any one of them in something and recognized it first, that would be enough for us, but if we recognized the other three first, this itself would be sufficient to enable us to recognize what we are looking for. Clearly it couldn't be anything other than what's left over.

Glaucon:: That's right.

Socrates:: Therefore, since there are four virtues, mustn't we look for them in the same way?

Glaucon:: Clearly.

Socrates:: Now, the first thing I think I can see clearly in the city is wisdom, and there seems to be something odd about it.

Glaucon:: What's that?

Socrates:: I think that the city we described is really wise. And that's because it has good judgment, isn't it?

Glaucon:: Yes.

Socrates:: Now, this very thing, good judgment, is clearly some kind of knowledge, for it's through knowledge, not ignorance, that people judge well.

Glaucon:: Clearly.

Socrates:: But there are many kinds of knowledge in the city.

Glaucon:: Of course.

Socrates:: Is it because of the knowledge possessed by its carpenters, then, that the city is to be called wise and sound in judgment?

Glaucon:: Not at all. It's called skilled in carpentry because of that.

Socrates:: Then it isn't to be called wise because of the knowledge by which it arranges to have the best wooden implements.

Glaucon:: No, indeed.

Socrates:: What about the knowledge of bronze items or the like?

Glaucon:: It isn’t because of any knowledge of that sort.

Socrates:: Nor because of the knowledge of how to raise a harvest from the earth, for it’s called skilled in farming because of that.

Glaucon:: I should think so.

Socrates:: Then, is there some knowledge possessed by some of the citizens in the city we just founded that doesn’t judge about any particular matter but about the city as a whole and the maintenance of good relations, both internally and with other cities?

Glaucon:: There is indeed.

Socrates:: What is this knowledge, and who has it?

Glaucon:: It is guardianship, and it is possessed by those rulers we just now called complete guardians.

Socrates:: Then, what does this knowledge entitle you to say about the city?

Glaucon:: That it has good judgment and is really wise.

Socrates:: Who do you think that there will be more of in our city, metal-workers or these true guardians?

Glaucon:: There will be far more metal-workers.

Socrates:: Indeed, of all those who are called by a certain name because they have some kind of knowledge, aren’t the guardians the least numerous?

Glaucon:: By far.

Socrates:: Then, a whole city established according to nature would be wise because of the smallest class and part in it, namely, the governing or ruling one. And to this class, which seems to be by nature the smallest, belongs a share of the knowledge that alone among all the other kinds of knowledge is to be called wisdom.

Glaucon:: That's completely true.

Socrates:: Then we've found one of the four virtues, as well as its place in the city, though I don't know how we found it.

Glaucon:: Our way of finding it seems good enough to me.

Socrates:: And surely courage and the part of the city it's in, the part on account of which the city is called courageous, aren't difficult to see.

Glaucon:: How is that?

Socrates:: Who, in calling the city cowardly or courageous, would look anywhere other than to the part of it that fights and does battle on its behalf?

Glaucon:: No one would look anywhere else.

Socrates:: At any rate, I don't think that the courage or cowardice of its other citizens would cause the city itself to be called either courageous or cowardly.

Glaucon:: No, it wouldn't.

Socrates:: The city is courageous, then, because of a part of itself that has the power to preserve through everything its belief about what things are to be feared, namely, that they are the things and kinds of things that the lawgiver declared to be such in the course of educating it. Or don't you call that courage?

Glaucon:: I don't completely understand what you mean. Please, say it again.

Socrates:: I mean that courage is a kind of preservation.

Glaucon:: What sort of preservation?

Socrates:: That preservation of the belief that has been inculcated by the law through education about what things and sorts of things are to be feared. And by preserving this belief "through everything," I mean preserving it and not abandoning it because of pains, pleasures, desires, or fears. If you like, I’ll compare it to something I think it resembles.

Glaucon:: I'd like that.

Socrates:: You know that dyers, who want to dye wool purple, first pick out from the many colors of wool the one that is naturally white, then they carefully prepare this in various ways, so that it will absorb the color as well as possible, and only at that point do they apply the purple dye. When something is dyed in this way, the color is fast—no amount of washing, whether with soap or without it, can remove it. But you also know what happens to material if it hasn’t been dyed in this way, but instead is dyed purple or some other color without careful preparation.

Glaucon:: I know that it looks washed out and ridiculous.

Socrates:: Then, you should understand that, as far as we could, we were doing something similar when we selected our soldiers and educated them in music and physical training. What we were contriving was nothing other than this: That because they had the proper nature and upbringing, they would absorb the laws in the finest possible way, just like a dye, so that their belief about what they should fear and all the rest would become so fast that even such extremely effective detergents as pleasure, pain, fear, and desire wouldn’t wash it out—and pleasure is much more potent than any powder, washing soda, or soap. This power to preserve through everything the correct and law-inculcated belief about what is to be feared and what isn’t is what I call courage, unless, of course, you say otherwise.

Glaucon:: I have nothing different to say, for I assume that you don’t consider the correct belief about these same things, which you find in animals and slaves, and which is not the result of education, to be inculcated by law, and that you don't call it courage but something else.

Socrates:: That's absolutely true.

Glaucon:: Then I accept your account of courage.

Socrates:: Accept it instead as my account of civic courage, and you will be right. We'll discuss courage more fully some other time, if you like. At present, our inquiry concerns not it but justice. And what we've said is sufficient for that purpose.

Glaucon:: You're quite right.

Socrates:: There are now two things left for us to find in the city, namely, moderation and—the goal of our entire inquiry—justice.

Glaucon:: That's right.

Socrates:: Is there a way we could find justice so as not to have to bother with moderation any further?

Glaucon:: I don't know any, and I wouldn't want justice to appear first if that means that we won't investigate moderation. So if you want to please me, look for the latter first.

Socrates:: I'm certainly willing. It would be wrong not to be.

Glaucon:: Look, then.

Socrates:: We will. Seen from here, it is more like a kind of consonance and harmony than the previous ones.

Glaucon:: In what way?

Socrates:: Moderation is surely a kind of order, the mastery of certain kinds of pleasures and desires. People indicate as much when they use the phrase "self-control" and other similar phrases. I don't know just what they mean by them, but they are, so to speak, like tracks or clues that moderation has left behind in language. Isn't that so?

Glaucon:: Absolutely.

Socrates:: Yet isn't the expression "self-control" ridiculous? The stronger self that does the controlling is the same as the weaker self that gets controlled, so that only one person is referred to in all such expressions.

Glaucon:: Of course.

Socrates:: Nonetheless, the expression is apparently trying to indicate that, in the soul of that very person, there is a better part and a worse one and that, whenever the naturally better part is in control of the worse, this is expressed by saying that the person is self-controlled or master of himself. At any rate, one praises someone by calling him self-controlled. But when, on the other hand, the smaller and better part is overpowered by the larger, because of bad upbringing or bad company, this is called being self-defeated or licentious and is a reproach.

Glaucon:: Appropriately so.

Socrates:: Take a look at our new city, and you'll find one of these in it. You'll say that it is rightly called self-controlled, if indeed something in which the better rules the worse is properly called moderate and self-controlled.

Glaucon:: I am looking, and what you say is true.

Socrates:: Now, one finds all kinds of diverse desires, pleasures, and pains, mostly in children, women, household slaves, and in those of the inferior majority who are called free.

Glaucon:: That's right.

Socrates:: But you meet with the desires that are simple, measured, and directed by calculation in accordance with understanding and correct belief only in the few people who are born with the best natures and receive the best education.

Glaucon:: That’s true.

Socrates:: Then, don’t you see that in your city, too, the desires of the inferior many are controlled by the wisdom and desires of the superior few?

Glaucon:: I do.

Socrates:: Therefore, if any city is said to be in control of itself and of its pleasures and desires, it is this one.

Glaucon:: Absolutely.

Socrates:: And isn’t it, therefore, also moderate because of all this?

Glaucon:: It is.

Socrates:: And, further, if indeed the ruler and the ruled in any city share the same belief about who should rule, it is in this one. Or don’t you agree?

Glaucon:: I agree entirely.

Socrates:: And when the citizens agree in this way, in which of them do you say moderation is located? In the ruler or the ruled?

Glaucon:: I suppose in both.

Socrates:: Then, you see how right we were to divine that moderation resembles a kind of harmony?

Glaucon:: How so?

Socrates:: Because, unlike courage and wisdom, each of which resides in one part, making the city brave and wise respectively, moderation spreads throughout the whole. It makes the weakest, the strongest, and those in between—whether in regard to reason, physical strength, numbers, wealth, or anything else—all sing the same song together. And this unanimity, this agreement between the naturally worse and the naturally better as to which of the two is to rule both in the city and in each one, is rightly called moderation.

Glaucon:: I agree completely.

Socrates:: All right. We've now found, at least from the point of view of our present beliefs, three out of the four virtues in our city. So what kind of virtue is left, then, that makes the city share even further in virtue? Surely, it's clear that it is justice.

Glaucon:: That is clear.

Socrates:: Then, Glaucon, we must station ourselves like hunters surrounding a wood and focus our understanding, so that justice doesn't escape us and vanish into obscurity, for obviously it's around here somewhere. So look and try eagerly to catch sight of it, and if you happen to see it before I do, you can tell me about it.

Glaucon:: I wish I could, but you'll make better use of me if you take me to be a follower who can see things when you point them out to him.

Socrates:: Follow, then, and join me in a prayer.

Glaucon:: I'll do that, just so long as you lead.

Socrates:: I certainly will, though the place seems to be impenetrable and full of shadows. It is certainly dark and hard to search though. But all the same, we must go on.

Glaucon:: Indeed we must.

Socrates:: And then I caught sight of something. Ah ha! Glaucon, it looks as though there's a track here, so it seems that our quarry won't altogether escape us.

Glaucon:: That's good news.

Socrates:: Either that, or we've just been stupid.

Glaucon:: In what way?

Socrates:: Because what we are looking for seems to have been rolling around at our feet from the very beginning, and we didn't see it, which was ridiculous of us. Just as people sometimes search for the very thing they are holding in their hands, so we didn't look in the right direction but gazed off into the distance, and that's probably why we didn't notice it.

Glaucon:: What do you mean?

Socrates:: I mean that, though we've been talking and hearing about it for a long time, I think we didn't understand what we were saying or that, in a way, we were talking about justice.

Glaucon:: That's a long prelude for someone who wants to hear the answer.

Socrates:: Then listen and see whether there's anything in what I say. Justice, I think, is exactly what we said must be established throughout the city when we were founding it—either that or some form of it. We stated, and often repeated, if you remember, that everyone must practice one of the occupations in the city for which he is naturally best suited.

Glaucon:: Yes, we did keep saying that.

Socrates:: Moreover, we've heard many people say and have often said ourselves that justice is doing one's own work and not meddling with what isn't one's own.

Glaucon:: Yes, we have.

Socrates:: Then, it turns out that this doing one's own work—provided that it comes to be in a certain way—is justice. And do you know what I take as evidence of this?

Glaucon:: No, tell me.

Socrates:: I think that this is what was left over in the city when moderation, courage, and wisdom have been found. It is the power that makes it possible for them to grow in the city and that preserves them when they've grown for as long as it remains there itself. And of course we said that justice would be what was left over when we had found the other three.

Glaucon:: Yes, that must be so.

Socrates:: And surely, if we had to decide which of the four will make the city good by its presence, it would be a hard decision. Is it the agreement in belief between the rulers and the ruled? Or the preservation among the soldiers of the law-inspired belief about what is to be feared and what isn't? Or the wisdom and guardianship of the rulers? Or is it, above all, the fact that every child, woman, slave, freeman, craftsman, ruler, and ruled each does his own work and doesn't meddle with what is other people's?

Glaucon:: How could this fail to be a hard decision?

Socrates:: It seems, then, that the power that consists in everyone's doing his own work rivals wisdom, moderation, and courage in its contribution to the virtue of the city.

Glaucon:: It certainly does.

Socrates:: And wouldn't you call this rival to the others in its contribution to the city's virtue justice?

Glaucon:: Absolutely.

Socrates:: Look at it this way if you want to be convinced. Won't you order your rulers to act as judges in the city's courts?

Glaucon:: Of course.

Socrates:: And won't their sole aim in delivering judgments be that no citizen should have what belongs to another or be deprived of what is his own?

Glaucon:: They'll have no aim but that.

Socrates:: Because that is just?

Glaucon:: Yes.

Socrates:: Therefore, from this point of view also, the having and doing of one's own would be accepted as justice.

Glaucon:: That's right.

Socrates:: Consider, then, and see whether you agree with me about this. If a carpenter attempts to do the work of a cobbler, or a cobbler that of a carpenter, or they exchange their tools or honors with one another, or if the same person tries to do both jobs, and all other such exchanges are made, do you think that does any great harm to the city?

Glaucon:: Not much.

Socrates:: But I suppose that when someone, who is by nature a craftsman or some other kind of money-maker, is puffed up by wealth, or by having a majority of votes, or by his own strength, or by some other such thing, and attempts to enter the class of soldiers, or one of the unworthy soldiers tries to enter that of the judges and guardians, and these exchange their tools and honors, or when the same person tries to do all these things at once, then I think you'll agree that these exchanges and this sort of meddling bring the city to ruin.

Glaucon:: Absolutely.

Socrates:: Meddling and exchange between these three classes, then, is the greatest harm that can happen to the city and would rightly be called the worst thing someone could do to it.

Glaucon:: Exactly.

Socrates:: And wouldn't you say that the worst thing that someone could do to his city is injustice?

Glaucon:: Of course.

Socrates:: Then, that exchange and meddling is injustice. Or to put it the other way around: For the money-making, auxiliary, and guardian classes each to do its own work in the city, is the opposite. That's justice, isn't it, and makes the city just?

Glaucon:: I agree. Justice is that and nothing else.

Socrates:: Let's not take that as secure just yet, but if we find that the same form, when it comes to be in each individual person, is accepted as justice there as well, we can assent to it. What else can we say? But if that isn't what we find, we must look for something else to be justice. For the moment, however, let's complete the present inquiry. We thought that, if we first tried to observe justice in some larger thing that possessed it, this would make it easier to observe in a single individual. We agreed that this larger thing is a city, and so we established the best city we could, knowing well that justice would be in one that was good. So, let's apply what has come to light in the city to an individual, and if it is accepted there, all will be well. But if something different is found in the individual, then we must go back and test that on the city. And if we do this, and compare them side by side, we might well make justice light up as if we were rubbing fire-sticks together. And, when it has come to light, we can get a secure grip on it for ourselves.

Glaucon:: You're following the road we set, and we must do as you say.

Socrates:: Well, then, are things called by the same name, whether they are bigger or smaller than one another, like or unlike with respect to that to which that name applies?

Glaucon:: Alike.

Socrates:: Then a just man won't differ at all from a just city in respect to the form of justice; rather he'll be like the city.

Glaucon:: He will.

Socrates:: But a city was thought to be just when each of the three natural classes within it did its own work, and it was thought to be moderate, courageous, and wise because of certain other conditions and states of theirs.

Glaucon:: That's true.

Socrates:: Then, if an individual has these same three parts in his soul, we will expect him to be correctly called by the same names as the city if he has the same conditions in them.

Glaucon:: Necessarily so.

Socrates:: Then once again we've come upon an easy question, namely, does the soul have these three parts in it or not?

Glaucon:: It doesn't look easy to me. Perhaps, Socrates, there's some truth in the old saying that everything fine is difficult.

Socrates:: Apparently so. But you should know, Glaucon, that, in my opinion, we will never get a precise answer using our present methods of argument— although there is another longer and fuller road that does lead to such an answer. But perhaps we can get an answer that's up to the standard of our previous statements and inquiries.

Glaucon:: Isn't that satisfactory? It would be enough for me at present.

Socrates:: In that case, it will be fully enough for me too.

Glaucon:: Then don't weary, but go on with the inquiry.

Socrates:: Well, then, we are surely compelled to agree that each of us has within himself the same parts and characteristics as the city? Where else would they come from? It would be ridiculous for anyone to think that spiritedness didn't come to be in cities from such individuals as the Thracians, Scythians, and others who live to the north of us who are held to possess spirit, or that the same isn't true of the love of learning, which is mostly associated with our part of the world, or of the love of money, which one might say is conspicuously displayed by the Phoenicians and Egyptians.

Glaucon:: It would.

Socrates:: That's the way it is, anyway, and it isn't hard to understand.

Glaucon:: Certainly not.

Socrates:: But this is hard. Do we do these things with the same part of ourselves, or do we do them with three different parts? Do we learn with one part, get angry with another, and with some third part desire the pleasures of food, drink, sex, and the others that are closely akin to them? Or, when we set out after something, do we act with the whole of our soul, in each case? This is what's hard to determine in a way that's up to the standards of our argument.

Glaucon:: I think so too.

Socrates:: Well, then, let's try to determine in that way whether these parts are the same or different.

Glaucon:: How?

Socrates:: It is obvious that the same thing will not be willing to do or undergo opposites in the same part of itself, in relation to the same thing, at the same time. So, if we ever find this happening in the soul, we'll know that we aren't dealing with one thing but many.

Glaucon:: All right.

Socrates:: Then consider what I’m about to say.

Glaucon:: Say on.

Socrates:: Is it possible for the same thing to stand still and move at the same time in the same part of itself?

Glaucon:: Not at all.

Socrates:: Let’s make our agreement more precise in order to avoid disputes later on. If someone said that a person who is standing still but moving his hands and head is moving and standing still at the same time, we wouldn’t consider, I think, that he ought to put it like that. What he ought to say is that one part of the person is standing still and another part is moving. Isn’t that so?

Glaucon:: It is.

Socrates:: And if our interlocutor became even more amusing and was sophisticated enough to say that whole spinning tops stand still and move at the same time when the peg is fixed in the same place and they revolve, and that the same is true of anything else moving in a circular motion on the same spot, we wouldn’t agree, because it isn’t with respect to the same parts of themselves that such things both stand still and move. We'd say that they have an axis and a circumference and that with respect to the axis they stand still, since they don’t wobble to either side, while with respect to the circumference they move in a circle. But if they do wobble to the left or right, front or back, while they are spinning, we'd say that they aren’t standing still in any way.

Glaucon:: And we'd be right.

Socrates:: No such statement will disturb us, then, or make us believe that the same thing can be, do, or undergo opposites, at the same time, in the same respect, and in relation to the same thing.

Glaucon:: They won’t make me believe it, at least.

Socrates:: Nevertheless, in order to avoid going through all these objections one by one and taking a long time to prove them all untrue, let’s hypothesize that this is correct and carry on. But we agree that if it should ever be shown to be incorrect, all the consequences we’ve drawn from it will also be lost.

Glaucon:: We should agree to that.

Socrates:: Then wouldn’t you consider all the following, whether they are doings or under-goings, as pairs of opposites: Assent and dissent, wanting to have something and rejecting it, taking something and pushing it away?

Glaucon:: Yes, they are opposites.

Socrates:: What about these? Wouldn’t you include thirst, hunger, the appetites as a whole, and wishing and willing somewhere in the class we mentioned? Wouldn’t you say that the soul of someone who has an appetite for a thing wants what he has an appetite for and takes to himself what it is his will to have, and that insofar as he wishes something to be given to him, his soul, since it desires this to come about, nods assent to it as if in answer to a question?

Glaucon:: I would.

Socrates:: What about not willing, not wishing, and not having an appetite? Aren’t these among the very opposites—cases in which the soul pushes and drives things away?

Glaucon:: Of course.

Socrates:: Then won’t we say that there is a class of things called appetites and that the clearest examples are hunger and thirst?

Glaucon:: We will.

Socrates:: One of these is for food and the other for drink?

Glaucon:: Yes.

Socrates:: Now, insofar as it is thirst, is it an appetite in the soul for more than that for which we say that it is the appetite? For example, is thirst thirst for hot drink or cold, or much drink or little, or, in a word, for drink of a certain sort? Or isn’t it rather that, where heat is present as well as thirst, it causes the appetite to be for something cold as well, and where cold for something hot, and where there is much thirst because of the presence of muchness, it will cause the desire to be for much, and where little for little? But thirst itself will never be for anything other than what it is in its nature to be for, namely, drink itself, and hunger for food.

Glaucon:: That’s the way it is, each appetite itself is only for its natural object, while the appetite for something of a certain sort depends on additions.

Socrates:: Therefore, let no one catch us unprepared or disturb us by claiming that no one has an appetite for drink but rather good drink, nor food but good food, on the grounds that everyone after all has appetite for good things, so that if thirst is an appetite, it will be an appetite for good drink or whatever, and similarly with the others.

Glaucon:: All the same, the person who says that has a point.

Socrates:: But it seems to me that, in the case of all things that are related to something, those that are of a particular sort are related to a particular sort of thing, while those that are merely themselves are related to a thing that is merely itself.

Glaucon:: I don’t understand.

Socrates:: Don’t you understand that the greater is such as to be greater than something?

Glaucon:: Of course.

Socrates:: Than the less?

Glaucon:: Yes.

Socrates:: And the much greater than the much less, isn’t that so?

Glaucon:: Yes.

Socrates:: And the once greater to the once less? And the going-to-be greater than the going-to-be less?

Glaucon:: Certainly.

Socrates:: And isn’t the same true of the more and the fewer, the double and the half, heavier and lighter, faster and slower, the hot and the cold, and all other such things?

Glaucon:: Of course.

Socrates:: And what about the various kinds of knowledge? Doesn’t the same apply? Knowledge itself is knowledge of what can be learned itself (or whatever it is that knowledge is of), while a particular sort of knowledge is of a particular sort of thing. For example, when knowledge of building houses came to be, didn’t it differ from the other kinds of knowledge, and so was called knowledge of building?

Glaucon:: Of course.

Socrates:: And wasn’t that because it was a different sort of knowledge from all the others?

Glaucon:: Yes.

Socrates:: And wasn’t it because it was of a particular sort of thing that it itself became a particular sort of knowledge? And isn’t this true of all crafts and kinds of knowledge?

Glaucon:: It is.

Socrates:: Well, then, this is what I was trying to say—if you understand it now— when I said that of all things that are related to something, those that are merely themselves are related to things that are merely themselves, while those that are of a particular sort are related to things of a particular sort. However, I don't mean that the sorts in question have to be the same for them both. For example, knowledge of health or disease isn't healthy or diseased, and knowledge of good and bad doesn't itself become good or bad. I mean that, when knowledge became, not knowledge of the thing itself that knowledge is of, but knowledge of something of a particular sort, the result was that it itself became a particular sort of knowledge, and this caused it to be no longer called knowledge without qualification, but—with the addition of the relevant sort—medical knowledge or whatever.

Glaucon:: I understand, and I think that that's the way it is.

Socrates:: Then as for thirst, wouldn't you include it among things that are related to something? Surely thirst is related to…

Glaucon:: I know it's related to drink.

Socrates:: Therefore a particular sort of thirst is for a particular sort of drink. But thirst itself isn't for much or little, good or bad, or, in a word, for drink of a particular sort. Rather, thirst itself is in its nature only for drink itself.

Glaucon:: Absolutely.

Socrates:: Hence the soul of the thirsty person, insofar as he's thirsty, doesn't wish anything else but to drink, and it wants this and is impelled towards it.

Glaucon:: Clearly.

Socrates:: Therefore, if something draws it back when it is thirsting, wouldn't that be something different in it from whatever thirsts and drives it like a beast to drink? It can't be, we say, that the same thing, with the same part of itself, in relation to the same, at the same time, does opposite things.

Glaucon:: No, it can't.

Socrates:: In the same way, I suppose, it's wrong to say of the archer that his hands at the same time push the bow away and draw it towards him. We ought to say that one hand pushes it away and the other draws it towards him.

Glaucon:: Absolutely.

Socrates:: Now, would we assert that sometimes there are thirsty people who don't wish to drink?

Glaucon:: Certainly, it happens often to many different people.

Socrates:: What, then, should one say about them? Isn't it that there is something in their soul, bidding them to drink, and something different, forbidding them to do so, that overrules the thing that bids?

Glaucon:: I think so.

Socrates:: Doesn't that which forbids in such cases come into play—if it comes into play at all—as a result of rational calculation, while what drives and drags them to drink is a result of feelings and diseases?

Glaucon:: Apparently.

Socrates:: Hence it isn't unreasonable for us to claim that they are two, and different from one another. We'll call the part of the soul with which it calculates the rational part and the part with which it lusts, hungers, thirsts, and gets excited by other appetites the irrational appetitive part, companion of certain indulgences and pleasures.

Glaucon:: Yes. Indeed, that’s a reasonable thing to think.

Socrates:: Then, let these two parts be distinguished in the soul. Now, is the spirited part by which we get angry a third part or is it of the same nature as either of the other two?

Glaucon:: Perhaps it’s like the appetitive part.

Socrates:: But I’ve heard something relevant to this, and I believe it. Leontius, the son of Aglaion, was going up from the Piraeus along the outside of the North Wall when he saw some corpses lying at the executioner’s feet. He had an appetite to look at them but at the same time he was disgusted and turned away. For a time he struggled with himself and covered his face, but, finally, overpowered by the appetite, he pushed his eyes wide open and rushed towards the corpses, saying, “Look for yourselves, you evil wretches, take your fill of the beautiful sight!”

Glaucon:: I’ve heard that story myself.

Socrates:: It certainly proves that anger sometimes makes war against the appetites, as one thing against another. Besides, don’t we often notice in other cases that when appetite forces someone contrary to rational calculation, he reproaches himself and gets angry with that in him that’s doing the forcing, so that of the two factions that are fighting a civil war, so to speak, spirit allies itself with reason? But I don’t think you can say that you’ve ever seen spirit, either in yourself or anyone else, ally itself with an appetite to do what reason has decided must not be done.

Glaucon:: No, by god, I haven’t.

Socrates:: What happens when a person thinks that he has done something unjust? Isn’t it true that the nobler he is, the less he resents it if he suffers hunger, cold, or the like at the hands of someone whom he believes to be inflicting this on him justly, and won't his spirit, as I say, refuse to be aroused?

Glaucon:: That's true.

Socrates:: But what happens if, instead, he believes that someone has been unjust to him? Isn't the spirit within him boiling and angry, fighting for what he believes to be just? Won't it endure hunger, cold, and the like and keep on till it is victorious, not ceasing from noble actions until it either wins, dies, or calms down, called to heel by the reason within him, like a dog by a shepherd?

Glaucon:: Spirit is certainly like that. And, of course, we made the auxiliaries in our city like dogs obedient to the rulers, who are themselves like shepherds of a city.

Socrates:: You well understand what I'm trying to say. But also reflect on this further point.

Glaucon:: What?

Socrates:: The position of the spirited part seems to be the opposite of what we thought before. Then we thought of it as something appetitive, but now we say that it is far from being that, for in the civil war in the soul it aligns itself far more with the rational part.

Glaucon:: Absolutely.

Socrates:: Then is it also different from the rational part, or is it some form of it, so that there are two parts in the soul—the rational and the appetitive— instead of three? Or rather, just as there were three classes in the city that held it together, the money-making, the auxiliary, and the deliberative, is the spirited part a third thing in the soul that is by nature the helper of the rational part, provided that it hasn't been corrupted by a bad upbringing?

Glaucon:: It must be a third.

Socrates:: Yes, provided that we can show it is different from the rational part, as we saw earlier it was from the appetitive one.

Glaucon:: It isn't difficult to show that it is different. Even in small children, one can see that they are full of spirit right from birth, while as far as rational calculation is concerned, some never seem to get a share of it, while the majority do so quite late.

Socrates:: That's really well put. And in animals too one can see that what you say is true. Besides, our earlier quotation from Homer bears it out, where he says;

> He struck his chest and spoke to his heart.

For here Homer clearly represents the part that has calculated about better and worse as different from the part that is angry without calculation.

Glaucon:: That's exactly right.

Socrates:: Well, then, we've now made our difficult way through a sea of argument. We are pretty much agreed that the same number and the same kinds of classes as are in the city are also in the soul of each individual.

Glaucon:: That's true.

Socrates:: Therefore, it necessarily follows that the individual is wise in the same way and in the same part of himself as the city.

Glaucon:: That's right.

Socrates:: And isn't the individual courageous in the same way and in the same part of himself as the city? And isn't everything else that has to do with virtue the same in both?

Glaucon:: Necessarily.

Socrates:: Moreover, Glaucon, I suppose we'll say that a man is just in the same way as a city.

Glaucon:: That too is entirely necessary.

Socrates:: And we surely haven't forgotten that the city was just because each of the three classes in it was doing its own work.

Glaucon:: I don't think we could forget that.

Socrates:: Then we must also remember that each one of us in whom each part is doing its own work will himself be just and do his own.

Glaucon:: Of course, we must.

Socrates:: Therefore, isn't it appropriate for the rational part to rule, since it is really wise and exercises foresight on behalf of the whole soul, and for the spirited part to obey it and be its ally?

Glaucon:: It certainly is.

Socrates:: And isn't it, as we were saying, a mixture of music and poetry, on the one hand, and physical training, on the other, that makes the two parts harmonious, stretching and nurturing the rational part with fine words and learning, relaxing the other part through soothing stories, and making it gentle by means of harmony and rhythm?

Glaucon:: That's precisely it.

Socrates:: And these two, having been nurtured in this way, and having truly learned their own roles and been educated in them, will govern the appetitive part, which is the largest part in each person's soul and is by nature most insatiable for money. They'll watch over it to see that it isn't filled with the so-called pleasures of the body and that it doesn't become so big and strong that it no longer does its own work but attempts to enslave and rule over the classes it isn't fitted to rule, thereby overturning everyone's whole life.

Glaucon:: That's right.

Socrates:: Then, wouldn't these two parts also do the finest job of guarding the whole soul and body against external enemies—reason by planning, spirit by fighting, following its leader, and carrying out the leader's decisions through its courage?

Glaucon:: Yes, that's true.

Socrates:: And it is because of the spirited part, I suppose, that we call a single individual courageous, namely, when it preserves through pains and pleasures the declarations of reason about what is to be feared and what isn't.

Glaucon:: That's right.

Socrates:: And we'll call him wise because of that small part of himself that rules in him and makes those declarations and has within it the knowledge of what is advantageous for each part and for the whole soul, which is the community of all three parts.

Glaucon:: Absolutely.

Socrates:: And isn't he moderate because of the friendly and harmonious relations between these same parts, namely, when the ruler and the ruled believe in common that the rational part should rule and don't engage in civil war against it?

Glaucon:: Moderation is surely nothing other than that, both in the city and in the individual.

Socrates:: And, of course, a person will be just because of what we've so often mentioned, and in that way.

Glaucon:: Necessarily.

Socrates:: Well, then, is the justice in us at all indistinct? Does it seem to be something different from what we found in the city?

Glaucon:: It doesn’t seem so to me.

Socrates:: If there are still any doubts in our soul about this, we could dispel them altogether by appealing to ordinary cases.

Glaucon:: Which ones?

Socrates:: For example, if we had to come to an agreement about whether someone similar in nature and training to our city had embezzled a deposit of gold or silver that he had accepted, who do you think would consider him to have done it rather than someone who isn’t like him?

Glaucon:: No one.

Socrates:: And would he have anything to do with temple robberies, thefts, betrayals of friends in private life or of cities in public life?

Glaucon:: No, nothing.

Socrates:: And he'd be in no way untrustworthy in keeping an oath or other agreement.

Glaucon:: How could he be?

Socrates:: And adultery, disrespect for parents, and neglect of the gods would be more in keeping with every other kind of character than his.

Glaucon:: With every one.

Socrates:: And isn’t the cause of all this that every part within him does its own work, whether it’s ruling or being ruled?

Glaucon:: Yes, that and nothing else.

Socrates:: Then, are you still looking for justice to be something other than this power, the one that produces men and cities of the sort we’ve described?

Glaucon:: No, I certainly am not.

Socrates:: Then the dream we had has been completely fulfilled—our suspicion that, with the help of some god, we had hit upon the origin and pattern of justice right at the beginning in founding our city.

Glaucon:: Absolutely.

Socrates:: Indeed, Glaucon, the principle that it is right for someone who is by nature a cobbler to practice cobblery and nothing else, for the carpenter to practice carpentry, and the same for the others is a sort of image of justice—that's why it's beneficial.

Glaucon:: Apparently.

Socrates:: And in truth justice is, it seems, something of this sort. However, it isn't concerned with someone's doing his own externally, but with what is inside him, with what is truly himself and his own. One who is just does not allow any part of himself to do the work of another part or allow the various classes within him to meddle with each other. He regulates well what is really his own and rules himself. He puts himself in order, is his own friend, and harmonizes the three parts of himself like three limiting notes in a musical scale—high, low, and middle. He binds together those parts and any others there may be in between, and from having been many things he becomes entirely one, moderate and harmonious. Only then does he act. And when he does anything, whether acquiring wealth, taking care of his body, engaging in politics, or in private contracts—in all of these, he believes that the action is just and fine that preserves this inner harmony and helps achieve it, and calls it so, and regards as wisdom the knowledge that oversees such actions. And he believes that the action that destroys this harmony is unjust, and calls it so, and regards the belief that oversees it as ignorance.

Glaucon:: That's absolutely true, Socrates.

Socrates:: Well, then, if we claim to have found the just man, the just city, and what the justice is that is in them, I don't suppose that we'll seem to be telling a complete falsehood.

Glaucon:: No, we certainly won't.

Socrates:: Shall we claim it, then?

Glaucon:: We shall.

Socrates:: So be it. Now, I suppose we must look for injustice.

Glaucon:: Clearly.

Socrates:: Surely, it must be a kind of civil war between the three parts, a meddling and doing of another's work, a rebellion by some part against the whole soul in order to rule it inappropriately. The rebellious part is by nature suited to be a slave, while the other part is not a slave but belongs to the ruling class. We'll say something like that, I suppose, and that the turmoil and straying of these parts are injustice, licentiousness, cowardice, ignorance, and, in a word, the whole of vice.

Glaucon:: That's what they are.

Socrates:: So, if justice and injustice are really clear enough to us, then acting justly, acting unjustly, and doing injustice are also clear.

Glaucon:: How so?

Socrates:: Because just and unjust actions are no different for the soul than healthy and unhealthy things are for the body.

Glaucon:: In what way?

Socrates:: Healthy things produce health, unhealthy ones disease.

Glaucon:: Yes.

Socrates:: And don't just actions produce justice in the soul and unjust ones injustice?

Glaucon:: Necessarily.

Socrates:: To produce health is to establish the components of the body in a natural relation of control and being controlled, one by another, while to produce disease is to establish a relation of ruling and being ruled contrary to nature.

Glaucon:: That's right.

Socrates:: Then, isn't to produce justice to establish the parts of the soul in a natural relation of control, one by another, while to produce injustice is to establish a relation of ruling and being ruled contrary to nature?

Glaucon:: Precisely.

Socrates:: Virtue seems, then, to be a kind of health, fine condition, and well-being of the soul, while vice is disease, shameful condition, and weakness.

Glaucon:: That's true.

Socrates:: And don't fine ways of living lead one to the possession of virtue, shameful ones to vice?

Glaucon:: Necessarily.

Socrates:: So it now remains, it seems, to inquire whether it is more profitable to act justly, live in a fine way, and be just, whether one is known to be so or not, or to act unjustly and be unjust, provided that one doesn't pay the penalty and become better as a result of punishment.

Glaucon:: But, Socrates, this inquiry looks ridiculous to me now that justice and injustice have been shown to be as we have described. Even if one has every kind of food and drink, lots of money, and every sort of power to rule, life is thought to be not worth living when the body's nature is ruined. So even if someone can do whatever he wishes, except what will free him from vice and injustice and make him acquire justice and virtue, how can it be worth living when his soul—the very thing by which he lives—is ruined and in turmoil?

Socrates:: Yes, it is ridiculous. Nevertheless, now that we've come far enough to be able to see most clearly that this is so, we mustn't give up.

Glaucon:: That's absolutely the last thing we must do.

Socrates:: Then come here, so that you can see how many forms of vice there are, anyhow that I consider worthy of examination.

Glaucon:: I'm following you, just tell me.

Socrates:: Well, from the vantage point we've reached in our argument, it seems to me that there is one form of virtue and an unlimited number of forms of vice, four of which are worth mentioning.

Glaucon:: How do you mean?

Socrates:: It seems likely that there are as many types of soul as there are specific types of political constitution.

Glaucon:: How many is that?

Socrates:: Five forms of constitution and five of souls.

Glaucon:: What are they?

Socrates:: One is the constitution we've been describing. And it has two names. If one outstanding man emerges among the rulers, it's called a kingship; if more than one, it's called an aristocracy.

Glaucon:: That's true.

Socrates:: Therefore, I say that this is one form of constitution. Whether one man emerges or many, none of the significant laws of the city would be changed, if they followed the upbringing and education we described.

Glaucon:: Probably not.

## Book 5

Socrates:: This is the kind of city and constitution, then, that I call good and correct, and so too is this kind of man. And if indeed this is the correct kind, all the others—whether as city governments or as organizations of the individual soul—are bad and mistaken. Their badness is of four kinds.

Glaucon:: What are they?

Socrates:: I was going to enumerate them and explain how I thought they developed out of one another, but Polemarchus, who was sitting a little further away than Adeimantus, extended his hand and took hold of the latter's cloak by the shoulder from above. He drew Adeimantus towards him, while he himself leaned forward and said something to him. We overheard nothing of what he said except the words "Shall we let it go, or what?" Adeimantus, now, speaking aloud said;

Adeimantus:: We certainly won't let it go.

Socrates:: And I asked: What is it that you won't let go?

Adeimantus:: You.

Socrates:: For what reason in particular?

Adeimantus:: We think that you're slacking off and that you've cheated us out of a whole important section of the discussion in order to avoid having to deal with it. You thought we wouldn't notice when you said—as though it were something trivial—that, as regards wives and children, anyone could see that the possessions of friends should be held in common.

Socrates:: But isn't that right, Adeimantus?

Adeimantus:: Yes it is. But this "right," like the other things we've discussed, requires an explanation—in this case, an explanation of the manner in which they are to be held in common, for there may be many ways of doing this. So don't omit telling us about the particular one you mean. We've been waiting for some time, indeed, for you to tell us about the production of children—how they'll be produced and, once born, how they'll be brought up—and about the whole subject of having wives and children in common. We think that this makes a considerable difference—indeed all the difference—to whether a constitution is correct or not. So now, since you are beginning to describe another constitution before having adequately discussed these things, we are resolved, as you overheard, not to let you off until you explain all this as fully as the rest.

Glaucon:: Include me, as a partner in this resolution.

Thrasymachus:: In fact, Socrates, you can take this as the resolution of all of us.

Socrates:: What a thing you've done, in stopping me! What an argument you've started up again from the very beginning, as it were, about the constitution! I was delighted to think that it had already been described and was content to have these things accepted as they were stated before. You don't realize what a swarm of arguments you've stirred up by calling me to account now. I saw the swarm and passed the topic by in order to save us a lot of trouble.

Thrasymachus:: Well, are we here to search for gold or to listen to an argument?

Socrates:: The latter, but within reason.

Glaucon:: It's within reason, Socrates, for people with any understanding to listen to an argument of this kind their whole life long. So don't mind about us, and don't get tired yourself. Rather, tell us at length what your thoughts are on the topic we inquired about, namely, what the common possession of wives and children will amount to for the guardians and how the children will be brought up while they're still small, for the time between birth and the beginning of education seems to be the most difficult period of all. So try to tell us what the manner of this upbringing must be.

Socrates:: It isn't an easy subject to explain, for it raises even more incredulity than the topics we've discussed so far. People may not believe that what we say is possible or that, even if it could be brought about, it would be for the best. It's for this reason that I hesitated to bring it up, namely, that our argument might seem to be no more than wishful thinking.

Glaucon:: Then don't hesitate, for your audience isn't inconsiderate, incredulous, or hostile.

Socrates:: Are you trying to encourage me by saying that?

Glaucon:: I am.

Socrates:: Well, you're doing the opposite. Your encouragement would be fine, if I could be sure I was speaking with knowledge, for one can feel both secure and confident when one knows the truth about the dearest and most important things and speaks about them among those who are themselves wise and dear friends. But to speak, as I'm doing, at a time when one is unsure of oneself and searching for the truth, is a frightening and insecure thing to do. I'm not afraid of being laughed at—that would be childish indeed. But I am afraid that, if I slip from the truth, just where it's most important not to, I'll not only fall myself but drag my friends down as well. So I bow to Adrastea for what I'm going to say, for I suspect that it's a lesser crime to kill someone involuntarily than to mislead people about fine, good, and just institutions.

Since it’s better to run this risk among enemies than among friends, you’ve well and truly encouraged me!

Glaucon laughed and said:

Glaucon:: Well, Socrates, if we suffer from any false note you strike in the argument, we’ll release you and absolve you of any guilt as in a homicide case: your hands are clean, and you have not deceived us. So take courage and speak.

Socrates:: I will, for the law says that someone who kills involuntarily is free of guilt when he’s absolved by the injured party. So it’s surely reasonable to think the same is true in my case as well.

Glaucon:: With that as your defense, speak.

Socrates:: Then I’ll have to go back to what should perhaps have been said in sequence, although it may be that this way of doing things is in fact right and that after the completion of the male drama, so to speak, we should then go through the female one—especially as you insist on it so urgently.

For men born and educated as we’ve described there is, in my opinion, no right way to acquire and use women and children other than by following the road on which we started them. We attempted, in the argument, to set up the men as guardians of the herd.

Glaucon:: Yes.

Socrates:: Then let’s give them a birth and rearing consistent with that and see whether it suits us or not.

Glaucon:: How?

Socrates:: As follows: Do we think that the wives of our guardian watchdogs should guard what the males guard, hunt with them, and do everything else in common with them? Or should we keep the women at home, as incapable of doing this, since they must bear and rear the puppies, while the males work and have the entire care of the flock?

Glaucon:: Everything should be in common, except that the females are weaker and the males stronger.

Socrates:: And is it possible to use any animals for the same things if you don't give them the same upbringing and education?

Glaucon:: No, it isn't.

Socrates:: Therefore, if we use the women for the same things as the men, they must also be taught the same things.

Glaucon:: Yes.

Socrates:: Now, we gave the men music and poetry and physical training.

Glaucon:: Yes.

Socrates:: Then we must give these two crafts, as well as those having to do with warfare, to the women also to use in the same way as the men use them.

Glaucon:: That seems to follow from what you say.

Socrates:: But perhaps much of what we are saying, since it is contrary to custom, would incite ridicule if it were carried out in practice as we've described.

Glaucon:: It certainly would.

Socrates:: What is the most ridiculous thing that you see in it? Isn't it obviously the women exercising naked in the palestras with the men? And not just the young women, but the older ones too—like old men in gymnasiums who, even though their bodies are wrinkled and not pleasant to look at, still love to do physical training.

Glaucon:: Yes, that would look really ridiculous as things stand at present.

Socrates:: But surely, now that we’ve started to speak about this, we mustn’t fear the various jokes that wits will make about this kind of change in music and poetry, physical training, and—last but not least—in bearing arms and riding horses.

Glaucon:: You’re right.

Socrates:: And now that we’ve begun to speak about this, we must move on to the tougher part of the law, begging these people not to be silly (though that is their own work!) but to take the matter seriously. They should remember that it wasn’t very long ago that the Greeks themselves thought it shameful and ridiculous (as the majority of the barbarians still do) for even men to be seen naked and that when the Cretans and then the Lacedaemonians began the gymnasiums, the wits of those times could also have ridiculed it all. Or don’t you think so?

Glaucon:: I do.

Socrates:: But I think that, after it was found in practice to be better to strip than to cover up all those parts, then what was ridiculous to the eyes faded away in the face of what argument showed to be the best. This makes it clear that it’s foolish to think that anything besides the bad is ridiculous or to try to raise a laugh at the sight of anything besides what’s stupid or bad or (putting it the other way around) it’s foolish to take seriously any standard of what is fine and beautiful other than the good.

Glaucon:: That’s absolutely certain.

Socrates:: However, mustn’t we first agree about whether our proposals are possible or not? And mustn’t we give to anyone who wishes the opportunity to question us—whether in jest or in earnest—about whether female human nature can share all the tasks of that of the male, or none of them, or some but not others, and to ask in which class the waging of war belongs? Wouldn't this, as the best beginning, also be likely to result in the best conclusion?

Glaucon:: Of course.

Socrates:: Shall we give the argument against ourselves, then, on behalf of those who share these reservations, so that their side of the question doesn't fall by default?

Glaucon:: There's no reason not to.

Socrates:: Then let's say this on their behalf: "Socrates and Glaucon, there's no need for others to argue with you, for you yourselves, when you began to found your city, agreed that each must do his own work in accordance with his nature."

Glaucon:: And I think we certainly did agree to that.

Socrates:: "Can you deny that a woman is by nature very different from a man?"

Glaucon:: Of course not.

Socrates:: "And isn't it appropriate to assign different work to each in accordance with its nature?"

Glaucon:: Certainly.

Socrates:: "How is it, then, that you aren't mistaken and contradicting yourselves when you say that men and women must do the same things, when their natures are so completely separate and distinct?"

Glaucon:: Do you have any defense against that attack?

Socrates:: It isn't easy to think of one on the spur of the moment, so I'll ask you to explain the argument on our side as well, whatever it is.

This and many other such things, Glaucon, which I foresaw earlier, were what I was afraid of, so that I hesitated to tackle the law concerning the possession and upbringing of women and children.

Glaucon:: By god, it doesn't seem to be an easy topic.

Socrates:: It isn't. But the fact is that whether someone falls into a small diving pool or into the middle of the biggest ocean, he must swim all the same.

Glaucon:: He certainly must.

Socrates:: Then we must swim too, and try to save ourselves from the sea of argument, hoping that a dolphin will pick us up or that we'll be rescued by some other desperate means.

Glaucon:: It seems so.

Socrates:: Come, then. Let's see if we can find a way out. We've agreed that different natures must follow different ways of life and that the natures of men and women are different. But now we say that those different natures must follow the same way of life. Isn't that the accusation brought against us?

Glaucon:: That's it exactly.

Socrates:: Ah! Glaucon, great is the power of the craft of disputation.

Glaucon:: Why is that?

Socrates:: Because many fall into it against their wills. They think they are having not a quarrel but a conversation, because they are unable to examine what has been said by dividing it up according to forms. Hence, they pursue mere verbal contradictions of what has been said and have a quarrel rather than a conversation.

Glaucon:: That does happen to lots of people, but it isn't happening to us at the moment, is it?

Socrates:: It most certainly is, for it looks to me, at any rate, as though we are falling into disputation against our will.

Glaucon:: How?

Socrates:: We're bravely, but in a quarrelsome and merely verbal fashion, pursuing the principle that natures that aren't the same must follow different ways of life. But when we assigned different ways of life to different natures and the same ones to the same, we didn't at all examine the form of natural difference and sameness we had in mind or in what regard we were distinguishing them.

Glaucon:: No, we didn't look into that.

Socrates:: Therefore, we might just as well, it seems, ask ourselves whether the natures of bald and long-haired men are the same or opposite. And, when we agree that they are opposite, then, if the bald ones are cobblers, we ought to forbid the long-haired ones to be cobblers, and if the long-haired ones are cobblers, we ought to forbid this to the bald ones.

Glaucon:: That would indeed be ridiculous.

Socrates:: And aren't we in this ridiculous position because at that time we did not introduce every form of difference and sameness in nature, but focused on the one form of sameness and difference that was relevant to the particular ways of life themselves? We meant, for example, that a male and female doctor have souls of the same nature. Or don't you think so?

Glaucon:: I do.

Socrates:: But a doctor and a carpenter have different ones?

Glaucon:: Completely different, surely.

Socrates:: Therefore, if the male sex is seen to be different from the female with regard to a particular craft or way of life, we'll say that the relevant one must be assigned to it. But if it's apparent that they differ only in this respect, that the females bear children while the males beget them, we'll say that there has been no kind of proof that women are different from men with respect to what we're talking about, and we'll continue to believe that our guardians and their wives must have the same way of life.

Glaucon:: And rightly so.

Socrates:: Next, we'll tell anyone who holds the opposite view to instruct us in this: With regard to what craft or way of life involved in the constitution of the city are the natures of men and women not the same but different?

Glaucon:: That's a fair question, at any rate.

Socrates:: And perhaps he'd say, just as you did a moment ago, that it isn't easy to give an immediate answer, but with enough consideration it should not be difficult.

Glaucon:: Yes, he might say that.

Socrates:: Shall we ask the one who raises this objection to follow us and see whether we can show him that no way of life concerned with the management of the city is peculiar to women?

Glaucon:: Of course.

Socrates:: "Come, now," we'll say to him, "give us an answer: Is this what you meant by one person being naturally well suited for something and another being naturally unsuited? That the one learned it easily, the other with difficulty; that the one, after only a brief period of instruction, was able to find out things for himself, while the other, after much instruction, couldn't even remember what he'd learned; that the body of the one adequately served his thought, while the body of the other opposed his. Are there any other things besides these by which you distinguished those who are naturally well suited for anything from those who are not?”

Glaucon:: No one will claim that there are any others.

Socrates:: Do you know of anything practiced by human beings in which the male sex isn’t superior to the female in all these ways? Or must we make a long story of it by mentioning weaving, baking cakes, and cooking vegetables, in which the female sex is believed to excel and in which it is most ridiculous of all for it to be inferior?

Glaucon:: It’s true that one sex is much superior to the other in pretty well everything, although many women are better than many men in many things. But on the whole it is as you say.

Socrates:: Then there is no way of life concerned with the management of the city that belongs to a woman because she’s a woman or to a man because he’s a man, but the various natures are distributed in the same way in both creatures. Women share by nature in every way of life just as men do, but in all of them women are weaker than men.

Glaucon:: Certainly.

Socrates:: Then shall we assign all of them to men and none to women?

Glaucon:: How can we?

Socrates:: We’ll say, I suppose, that one woman is a doctor, another not, and that one is musical by nature, another not.

Glaucon:: Of course.

Socrates:: And, therefore, won’t one be athletic or warlike, while another is unwarlike and no lover of physical training?

Glaucon:: I suppose so.

Socrates:: Further, isn't one woman philosophical or a lover of wisdom, while another hates wisdom? And isn't one spirited and another spiritless?

Glaucon:: That too.

Socrates:: So one woman may have a guardian nature and another not, for wasn't it qualities of this sort that we looked for in the natures of the men we selected as guardians?

Glaucon:: Certainly.

Socrates:: Therefore, men and women are by nature the same with respect to guarding the city, except to the extent that one is weaker and the other stronger.

Glaucon:: Apparently.

Socrates:: Then women of this sort must be chosen along with men of the same sort to live with them and share their guardianship, seeing that they are adequate for the task and akin to the men in nature.

Glaucon:: Certainly.

Socrates:: And mustn't we assign the same way of life to the same natures?

Glaucon:: We must.

Socrates:: We've come round, then, to what we said before and have agreed that it isn't against nature to assign an education in music, poetry, and physical training to the wives of the guardians.

Glaucon:: Absolutely.

Socrates:: Then we're not legislating impossibilities or indulging in mere wishful thinking, since the law we established is in accord with nature. It's rather the way things are at present that seems to be against nature.

Glaucon:: So it seems.

Socrates:: Now, weren’t we trying to determine whether our proposals were both possible and optimal?

Glaucon:: Yes, we were.

Socrates:: And haven’t we now agreed that they’re possible?

Glaucon:: Yes.

Socrates:: Then mustn’t we next reach agreement about whether or not they’re optimal?

Glaucon:: Clearly.

Socrates:: Should we have one kind of education to produce women guardians, then, and another to produce men, especially as they have the same natures to begin with?

Glaucon:: No.

Socrates:: Then, what do you think about this?

Glaucon:: What?

Socrates:: About one man being better and another worse. Or do you think they’re all alike?

Glaucon:: Certainly not.

Socrates:: In the city we’re establishing, who do you think will prove to be better men, the guardians, who receive the education we’ve described, or the cobblers, who are educated in cobblery?

Glaucon:: Your question is ridiculous.

Socrates:: I understand. Indeed, aren’t the guardians the best of the citizens?

Glaucon:: By far.

Socrates:: And what about the female guardians? Aren’t they the best of the women?

Glaucon:: They’re by far the best.

Socrates:: Is there anything better for a city than having the best possible men and women as its citizens?

Glaucon:: There isn't.

Socrates:: And isn't it music and poetry and physical training, lending their support in the way we described, that bring this about?

Glaucon:: Of course.

Socrates:: Then the law we've established isn't only possible; it is also optimal for a city?

Glaucon:: Yes.

Socrates:: Then the guardian women must strip for physical training, since they'll wear virtue or excellence instead of clothes. They must share in war and the other guardians' duties in the city and do nothing else. But the lighter parts must be assigned to them because of the weakness of their sex. And the man who laughs at naked women doing physical training for the sake of what is best is "plucking the unripe fruit" of laughter and doesn't know, it seems, what he's laughing at or what he's doing, for it is and always will be the finest saying that the beneficial is beautiful, while the harmful is ugly.

Glaucon:: Absolutely.

Socrates:: Can we say, then, that we've escaped one wave of criticism in our discussion of the law about women, that we haven't been altogether swept away by laying it down that male and female guardians must share their entire way of life, and that our argument is consistent when it states that this is both possible and beneficial?

Glaucon:: And it's certainly no small wave that you've escaped.

Socrates:: You won't think that it's so big when you get a look at the next one.

Glaucon:: Tell me about it, and I’ll decide.

Socrates:: I suppose that the following law goes along with the last one and the others that preceded it.

Glaucon:: Which one?

Socrates:: That all these women are to belong in common to all the men, that none are to live privately with any man, and that the children, too, are to be possessed in common, so that no parent will know his own offspring or any child his parent.

Glaucon:: This wave is far bigger than the other, for there’s doubt both about its possibility and about whether or not it’s beneficial.

Socrates:: I don’t think that its being beneficial would be disputed or that it would be denied that the common possession of women and children would be the greatest good, if indeed it is possible. But I think that there would be a lot of disagreement about whether or not it is possible.

Glaucon:: There could very well be dispute about both.

Socrates:: You mean that I’ll have to face a coalition of arguments. I thought I'd escape one of them, if you believed that the proposal was beneficial, and that I'd have only the one about whether or not it’s possible left to deal with.

Glaucon:: But you didn’t escape unobserved, so you have to give an argument for both.

Socrates:: Well, then, I’ll have to accept my punishment. But do me this favor. Let me, as if on a holiday, do what lazy people do who feast on their own thoughts when out for a solitary walk. Instead of finding out how something they desire might actually come about, these people pass that over, so as to avoid tiring deliberations about what’s possible and what isn’t. They assume that what they desire is available and proceed to arrange the rest, taking pleasure in thinking through everything they’ll do when they have what they want, thereby making their lazy souls even lazier. I’m getting soft myself at the moment, so I want to delay consideration of the feasibility of our proposal until later. With your permission, I’ll assume that it’s feasible and examine how the rulers will arrange these matters when they come to pass. And I’ll try to show that nothing could be more beneficial to the city and its guardians than those arrangements. These are the things I’ll examine with you first, and I’ll deal with the other question later, but only if you’ll permit me to do it this way.

Glaucon:: You have my permission, so carry on with your examination.

Socrates:: I suppose that our rulers and auxiliaries—if indeed they’re worthy of the names—will be willing to command and to obey respectively. In some cases, the rulers will themselves be obeying our laws, and in others, namely, the ones we leave to their discretion, they’ll give directions that are in the spirit of our laws.

Glaucon:: Probably so.

Socrates:: Then you, as their lawgiver, will select women just as you did men, with natures as similar to theirs as possible, and hand them over to the men. And since they have common dwellings and meals, rather than private ones, and live together and mix together both in physical training and in the rest of their upbringing, they will, I suppose, be driven by innate necessity to have sex with one another. Or don’t you think we’re talking about necessities here?

Glaucon:: The necessities aren’t geometrical but erotic, and they’re probably better than the others at persuading and compelling the majority of people.

Socrates:: That’s right. But the next point, Glaucon, is that promiscuity is impious in a city of happy people, and the rulers won’t allow it.

Glaucon:: No, for it isn’t right.

Socrates:: Then it’s clear that our next task must be to make marriage as sacred as possible. And the sacred marriages will be those that are most beneficial.

Glaucon:: Absolutely.

Socrates:: How, then, will they be most beneficial? Tell me this, Glaucon: I see that you have hunting dogs and quite a flock of noble fighting birds at home. Have you noticed anything about their mating and breeding?

Glaucon:: Like what?

Socrates:: In the first place, although they’re all noble, aren’t there some that are the best and prove themselves to be so?

Glaucon:: There are.

Socrates:: Do you breed them all alike, or do you try to breed from the best as much as possible?

Glaucon:: I try to breed from the best.

Socrates:: And do you breed from the youngest or the oldest or from those in their prime?

Glaucon:: From those in their prime.

Socrates:: And do you think that if they weren’t bred in this way, your stock of birds and dogs would get much worse?

Glaucon:: I do.

Socrates:: What about horses and other animals? Are things any different with them?

Glaucon:: It would be strange if they were.

Socrates:: Dear me! If this also holds true of human beings, our need for excellent rulers is indeed extreme.

Glaucon:: It does hold of them. But what of it?

Socrates:: Because our rulers will then have to use a lot of drugs. And while an inferior doctor is adequate for people who are willing to follow a regimen and don't need drugs, when drugs are needed, we know that a bolder doctor is required.

Glaucon:: That's true. But what exactly do you have in mind?

Socrates:: I mean that it looks as though our rulers will have to make considerable use of falsehood and deception for the benefit of those they rule. And we said that all such falsehoods are useful as a form of drug.

Glaucon:: And we were right.

Socrates:: Well, it seems we were right, especially where marriages and the producing of children are concerned.

Glaucon:: How so?

Socrates:: It follows from our previous agreements, first, that the best men must have sex with the best women as frequently as possible, while the opposite is true of the most inferior men and women, and, second, that if our herd is to be of the highest possible quality, the former's offspring must be reared but not the latter's. And this must all be brought about without being noticed by anyone except the rulers, so that our herd of guardians remains as free from dissension as possible.

Glaucon:: That's absolutely right.

Socrates:: Therefore certain festivals and sacrifices will be established by law at which we'll bring the brides and grooms together, and we'll direct our poets to compose appropriate hymns for the marriages that take place. We'll leave the number of marriages for the rulers to decide, but their aim will be to keep the number of males as stable as they can, taking into account war, disease, and similar factors, so that the city will, as far as possible, become neither too big nor too small.

Glaucon:: That's right.

Socrates:: Then there'll have to be some sophisticated lotteries introduced, so that at each marriage the inferior people we mentioned will blame luck rather than the rulers when they aren't chosen.

Glaucon:: There will.

Socrates:: And among other prizes and rewards the young men who are good in war or other things must be given permission to have sex with the women more often, since this will also be a good pretext for having them father as many of the children as possible.

Glaucon:: That's right.

Socrates:: And then, as the children are born, they'll be taken over by the officials appointed for the purpose, who may be either men or women or both, since our offices are open to both sexes.

Glaucon:: Yes.

Socrates:: I think they'll take the children of good parents to the nurses in charge of the rearing pen situated in a separate part of the city, but the children of inferior parents, or any child of the others that is born defective, they'll hide in a secret and unknown place, as is appropriate.

Glaucon:: It is, if indeed the guardian breed is to remain pure.

Socrates:: And won't the nurses also see to it that the mothers are brought to the rearing pen when their breasts have milk, taking every precaution to insure that no mother knows her own child and providing wet nurses if the mother's milk is insufficient? And won't they take care that the mothers suckle the children for only a reasonable amount of time and that the care of sleepless children and all other such troublesome duties are taken over by the wet nurses and other attendants?

Glaucon:: You're making it very easy for the wives of the guardians to have children.

Socrates:: And that's only proper. So let's take up the next thing we proposed. We said that the children's parents should be in their prime.

Glaucon:: True.

Socrates:: Do you share the view that a woman's prime lasts about twenty years and a man's about thirty?

Glaucon:: Which years are those?

Socrates:: A woman is to bear children for the city from the age of twenty to the age of forty, a man from the time that he passes his peak as a runner until he reaches fifty-five.

Glaucon:: At any rate, that's the physical and mental prime for both.

Socrates:: Then, if a man who is younger or older than that engages in reproduction for the community, we'll say that his offense is neither pious nor just, for the child he begets for the city, if it remains hidden, will be born in darkness, through a dangerous weakness of will, and without the benefit of the sacrifices and prayers offered at every marriage festival, in which the priests and priestesses, together with the entire city, ask that the children of good and beneficial parents may always prove themselves still better and more beneficial.

Glaucon:: That's right.

Socrates:: The same law will apply if a man still of begetting years has a child with a woman of child-bearing age without the sanction of the rulers. We'll say that he brings to the city an illegitimate, unauthorized, and unhallowed child.

Glaucon:: That's absolutely right.

Socrates:: However, I think that when women and men have passed the age of having children, we'll leave them free to have sex with whomever they wish, with these exceptions: For a man—his daughter, his mother, his daughter's children, and his mother's ancestors; for a woman—her son and his descendants, her father and his ancestors. Having received these instructions, they should be very careful not to let a single fetus see the light of day, but if one is conceived and forces its way to the light, they must deal with it in the knowledge that no nurture is available for it.

Glaucon:: That's certainly sensible. But how will they recognize their fathers and daughters and the others you mentioned?

Socrates:: They have no way of knowing. But a man will call all the children born in the tenth or seventh month after he became a bridegroom his sons, if they're male, and his daughters, if they're female, and they'll call him father. He'll call their children his grandchildren, and they'll call the group to which he belongs grandfathers and grandmothers. And those who were born at the same time as their mothers and fathers were having children they'll call their brothers and sisters. Thus, as we were saying, the relevant groups will avoid sexual relations with each other. But the law will allow brothers and sisters to have sex with one another if the lottery works out that way and the Pythia approves.

Glaucon:: That’s absolutely right.

Socrates:: This, then, Glaucon, is how the guardians of your city have their wives and children in common. We must now confirm that this arrangement is both consistent with the rest of the constitution and by far the best. Or how else are we to proceed?

Glaucon:: In just that way.

Socrates:: Then isn’t the first step towards agreement to ask ourselves what we say is the greatest good in designing the city—the good at which the legislator aims in making the laws—and what is the greatest evil? And isn’t the next step to examine whether the system we’ve just described fits into the tracks of the good and not into those of the bad?

Glaucon:: Absolutely.

Socrates:: Is there any greater evil we can mention for a city than that which tears it apart and makes it many instead of one? Or any greater good than that which binds it together and makes it one?

Glaucon:: There isn’t.

Socrates:: And when, as far as possible, all the citizens rejoice and are pained by the same successes and failures, doesn’t this sharing of pleasures and pains bind the city together?

Glaucon:: It most certainly does.

Socrates:: But when some suffer greatly, while others rejoice greatly, at the same things happening to the city or its people, doesn’t this privatization of pleasures and pains dissolve the city?

Glaucon:: Of course.

Socrates:: And isn't that what happens whenever such words as "mine" and "not mine" aren't used in unison? And similarly with "someone else's"?

Glaucon:: Precisely.

Socrates:: Then, is the best-governed city the one in which most people say "mine" and "not mine" about the same things in the same way?

Glaucon:: It is indeed.

Socrates:: What about the city that is most like a single person? For example, when one of us hurts his finger, the entire organism that binds body and soul together into a single system under the ruling part within it is aware of this, and the whole feels the pain together with the part that suffers. That's why we say that the man has a pain in his finger. And the same can be said about any part of a man, with regard either to the pain it suffers or to the pleasure it experiences when it finds relief.

Glaucon:: Certainly. And, as for your question, the city with the best government is most like such a person.

Socrates:: Then, whenever anything good or bad happens to a single one of its citizens, such a city above all others will say that the affected part is its own and will share in the pleasure or pain as a whole.

Glaucon:: If it has good laws, that must be so.

Socrates:: It's time now to return to our own city, to look there for the features we've agreed on, and to determine whether it or some other city possesses them to the greatest degree.

Glaucon:: Then that's what we must do.

Socrates:: What about those other cities? Aren't there rulers and people in them, as well as in ours?

Glaucon:: There are.

Socrates:: Besides fellow citizens, what do the people call the rulers in those other cities?

Glaucon:: In many they call them despots, but in democracies they are called just this—rulers.

Socrates:: What about the people in our city? Besides fellow citizens, what do they call their rulers?

Glaucon:: Preservers and auxiliaries.

Socrates:: And what do they in turn call the people?

Glaucon:: Providers of upkeep and wages.

Socrates:: What do the rulers call the people in other cities?

Glaucon:: Slaves.

Socrates:: And what do the rulers call each other?

Glaucon:: Co-rulers.

Socrates:: And ours?

Glaucon:: Co-guardians.

Socrates:: Can you tell me whether a ruler in those other cities could address some of his co-rulers as his kinsmen and others as outsiders?

Glaucon:: Yes, many could.

Socrates:: And doesn't he consider his kinsman to be his own, and doesn't he address him as such, while he considers the outsider not to be his own?

Glaucon:: He does.

Socrates:: What about your guardians? Could any of them consider a co-guardian as an outsider or address him as such?

Glaucon:: There's no way he could, for when he meets any one of them, he'll hold that he's meeting a brother or sister, a father or mother, a son or daughter, or some ancestor or descendant of theirs.

Socrates:: You put that very well. But tell me this: Will your laws require them simply to use these kinship names or also to do all the things that go along with the names? Must they show to their "fathers" the respect, solicitude, and obedience we show to our parents by law? Won't they fare worse at the hands of gods and humans, as people whose actions are neither pious nor just, if they do otherwise? Will these be the oracular sayings they hear from all the citizens from their childhood on, or will they hear something else about their fathers—or the ones they're told are their fathers—and other relatives?

Glaucon:: The former. It would be absurd if they only mouthed kinship names without doing the things that go along with them.

Socrates:: Therefore, in our city more than in any other, they'll speak in unison the words we mentioned a moment ago. When any one of them is doing well or badly, they'll say that "mine" is doing well or that "mine" is doing badly.

Glaucon:: That's absolutely true.

Socrates:: Now, didn't we say that the having and expressing of this conviction is closely followed by the having of pleasures and pains in common?

Glaucon:: Yes, and we were right.

Socrates:: Then won't our citizens, more than any others, have the same thing in common, the one they call "mine"? And, having that in common, won't they, more than any others, have common pleasures and pains?

Glaucon:: Of course.

Socrates:: And, in addition to the other institutions, the cause of this is the having of wives and children in common by the guardians?

Glaucon:: That more than anything else is the cause.

Socrates:: But we agreed that the having of pains and pleasures in common is the greatest good for a city, and we characterized a well-governed city in terms of the body's reaction to pain or pleasure in any one of its parts.

Glaucon:: And we were right to agree.

Socrates:: Then, the cause of the greatest good for our city has been shown to be the having of wives and children in common by the auxiliaries.

Glaucon:: It has.

Socrates:: And, of course, this is consistent with what we said before, for we said somewhere that, if they're going to be guardians, they mustn't have private houses, property, or possessions, but must receive their upkeep from the other citizens as a wage for their guardianship and enjoy it in common.

Glaucon:: That's right.

Socrates:: Then isn't it true, just as I claimed, that what we are saying now, taken together with what we said before, makes even better guardians out of them and prevents them from tearing the city apart by not calling the same thing "mine"? If different people apply the term to different things, one would drag into his own house whatever he could separate from the others, and another would drag things into a different house to a different wife and children, and this would make for private pleasures and pains at private things. But our people, on the other hand, will think of the same things as their own, aim at the same goal, and, as far as possible, feel pleasure and pain in unison.

Glaucon:: Precisely.

Socrates:: And what about lawsuits and mutual accusations? Won't they pretty well disappear from among them, because they have everything in common except their own bodies? Hence they'll be spared all the dissension that arises between people because of the possession of money, children, and families.

Glaucon:: They'll necessarily be spared it.

Socrates:: Nor could any lawsuits for insult or injury justly occur among them, for we'll declare that it's a fine and just thing for people to defend themselves against others of the same age, since this will compel them to stay in good physical shape.

Glaucon:: That's right.

Socrates:: This law is also correct for another reason: If a spirited person vents his anger in this way, it will be less likely to lead him into more serious disputes.

Glaucon:: Certainly.

Socrates:: But an older person will be authorized to rule and punish all the younger ones.

Glaucon:: Clearly.

Socrates:: And surely it's also obvious that a younger person won't strike or do any sort of violence to an older one or fail to show him respect in other ways, unless the rulers command it, for there are two guardians sufficient to prevent him from doing such things—shame and fear. Shame will prevent him from laying a hand on his parents, and so will the fear that the others would come to the aid of the victim, some as his sons, some as his brothers, and some as his fathers.

Glaucon:: That's the effect they'll have.

Socrates:: Then, in all cases, won't the laws induce men to live at peace with one another?

Glaucon:: Very much so.

Socrates:: And if there's no discord among the guardians, there's no danger that the rest of the city will break into civil war, either with them or among themselves.

Glaucon:: Certainly not.

Socrates:: I hesitate to mention, since they're so unseemly, the pettiest of the evils the guardians would therefore escape: The poor man's flattery of the rich, the perplexities and sufferings involved in bringing up children and in making the money necessary to feed the household, getting into debt, paying it off, and in some way or other providing enough money to hand over to their wives and household slaves to manage. All of the various troubles men endure in these matters are obvious, ignoble, and not worth discussing.

Glaucon:: They're obvious even to the blind.

Socrates:: They'll be free of all these, and they'll live a life more blessedly happy than that of the victors in the Olympian games.

Glaucon:: How?

Socrates:: The Olympian victors are considered happy on account of only a small part of what is available to our guardians, for the guardians' victory is even greater, and their upkeep from public funds more complete. The victory they gain is the preservation of the whole city, and the crown of victory that they and their children receive is their upkeep and all the necessities of life. They receive rewards from their own city while they live, and at their death they're given a worthy burial.

Glaucon:: Those are very good things.

Socrates:: Do you remember that, earlier in our discussion, someone—I forget who—shocked us by saying that we hadn't made our guardians happy, that it was possible for them to have everything that belongs to the citizens, yet they had nothing? We said, I think, that if this happened to come up at some point, we'd look into it then, but that our concern at the time was to make our guardians true guardians and the city the happiest we could, rather than looking to any one group within it and molding it for happiness.

Glaucon:: I remember.

Socrates:: Well, then, if the life of our auxiliaries is apparently much finer and better than that of Olympian victors, is there any need to compare it to the lives of cobblers, farmers, or other craftsmen?

Glaucon:: Not in my opinion.

Socrates:: Then it's surely right to repeat here what I said then: If a guardian seeks happiness in such a way that he's no longer a guardian and isn't satisfied with a life that's moderate, stable, and—as we say—best, but a silly, adolescent idea of happiness seizes him and incites him to use his power to take everything in the city for himself, he'll come to know the true wisdom of Hesiod's saying that somehow "the half is worth more than the whole."

Glaucon:: If he takes my advice, he'll keep to his own life-style.

Socrates:: You agree, then, that the women and men should associate with one another in education, in things having to do with children, and in guarding the other citizens in the way we've described; that both when they remain in the city and when they go to war, they must guard together and hunt together like dogs and share in everything as far as possible; and that by doing so they'll be doing what's best and not something contrary either to woman's nature as compared with man's or to the natural association of men and women with one another.

Glaucon:: I agree.

Socrates:: Then doesn't it remain for us to determine whether it's possible to bring about this association among human beings, as it is among animals, and to say just how it might be done?

Glaucon:: You took the words right out of my mouth.

Socrates:: As far as war is concerned, I think it's clear how they will wage it.

Glaucon:: How so?

Socrates:: Men and women will campaign together. They'll take the sturdy children with them, so that, like the children of other craftsmen, they can see what they'll have to do when they grow up. But in addition to observing, they can serve and assist in everything to do with the war and help their mothers and fathers. Haven't you noticed in the other crafts how the children of potters, for example, assist and observe for a long time before actually making any pots?

Glaucon:: I have indeed.

Socrates:: And should these craftsmen take more care in training their children by appropriate experience and observation than the guardians?

Glaucon:: Of course not; that would be completely ridiculous.

Socrates:: Besides, every animal fights better in the presence of its young.

Glaucon:: That's so. But, Socrates, there's a considerable danger that in a defeat— and such things are likely to happen in a war—they'll lose their children's lives as well as their own, making it impossible for the rest of the city to recover.

Socrates:: What you say is true. But do you think that the first thing we should provide for is the avoidance of all danger?

Glaucon:: Not at all.

Socrates:: Well, then, if people will probably have to face some danger, shouldn't it be the sort that will make them better if they come through it successfully?

Glaucon:: Obviously.

Socrates:: And do you think that whether or not men who are going to be warriors observe warfare when they're still boys makes such a small difference that it isn't worth the danger of having them do it?

Glaucon:: No, it does make a difference to what you're talking about.

Socrates:: On the assumption, then, that the children are to be observers of war, if we can contrive some way to keep them secure, everything will be fine, won't it?

Glaucon:: Yes.

Socrates:: Well, then, in the first place, their fathers won't be ignorant, will they, about which campaigns are dangerous and which are not, but rather as knowledgeable about this as any human beings can be?

Glaucon:: Probably so.

Socrates:: Then they'll take the children to some campaigns and not to others?

Glaucon:: Correct.

Socrates:: And they'll put officers in charge of them whose age and experience qualifies them to be leaders and tutors?

Glaucon:: Appropriately so.

Socrates:: But, as we say, the unexpected often occurs.

Glaucon:: Indeed.

Socrates:: With this in mind, we must provide the children with wings when they're small, so that they can fly away and escape.

Glaucon:: What do you mean?

Socrates:: We must mount them on horses as early as possible—not on spirited or aggressive horses, but on very fast and manageable ones—and when they've learned to ride, they must be taken to observe a war. In this way, they'll get the best look at their own work and, if the need arises, make the securest possible escape to safety, following their older guides.

Glaucon:: I think you're right.

Socrates:: What about warfare itself? What attitude should your soldiers have to each other and to the enemy? Are my views about this right or not?

Glaucon:: First, tell me what they are.

Socrates:: If one of them leaves his post or throws away his shield or does anything else of that sort through cowardice, shouldn't he be reduced to being a craftsman or farmer?

Glaucon:: Certainly.

Socrates:: And shouldn't anyone who is captured alive be left to his captors as a gift to do with as they wish?

Glaucon:: Absolutely.

Socrates:: But don't you think that anyone who distinguishes himself and earns high esteem should, while still on the campaign, first be crowned with wreaths by each of the adolescents and children who accompany the expedition?

Glaucon:: I do.

Socrates:: And what about shaken by the right hand?

Glaucon:: That too.

Socrates:: But I suppose that you wouldn't go this far?

Glaucon:: Namely?

Socrates:: That he should kiss and be kissed by each of them.

Glaucon:: That most of all. And I'd add this to the law: As long as the campaign lasts, no one he wants to kiss shall be allowed to refuse, for then, if one of them happens to be in love with another, whether male or female, he'll be all the more eager to win the rewards of valor.

Socrates:: Excellent. And we've already stated that, since he's a good person, more marriages will be available to him, and he'll be selected for such things more frequently than the others, so that he'll beget as many children as possible.

Glaucon:: Yes, we did say that.

Socrates:: Indeed, according to Homer too, it is just to honor in such ways those young people who are good, for he says that Ajax, when he distinguished himself in battle, "was rewarded with the long cut off the backbone." And that's an appropriate honor for a courageous young man, since it will both honor him and increase his strength.

Glaucon:: That's absolutely right.

Socrates:: Then we'll follow Homer in these matters at least. And insofar as good people have shown themselves to be good, we'll honor them at sacrifices and all such occasions with hymns, "seats of honor, meats, and well-filled cups of wine," and in all the other ways we mentioned, so that, in addition to honoring good men and women, we'll continue to train them.

Glaucon:: That's excellent.

Socrates:: All right. And as for those who died on the campaign, won't we say, first of all, that, if their deaths were distinguished, they belong to the golden race?

Glaucon:: That above all.

Socrates:: And won't we believe with Hesiod that, whenever any of that race die, they become;

> Sacred daemons living upon the earth,
> Noble spirits, protectors against evil, guardians of articulate mortals?

Glaucon:: We'll certainly believe that.

Socrates:: Then we'll inquire from the god what kind of distinguished funeral we should give to daemonic and godlike people, and we'll follow his instructions.

Glaucon:: Of course.

Socrates:: And for the remainder of time, we'll care for their graves and worship at them as we would at those of daemons. And we'll follow the same rites for anyone whom we judge to have lived an outstandingly good life, whether he died of old age or in some other way.

Glaucon:: That is only just.

Socrates:: Now, what about enemies? How will our soldiers deal with them?

Glaucon:: In what respect?

Socrates:: First, enslavement. Do you think it is just for Greeks to enslave Greek cities, or, as far as they can, should they not even allow other cities to do so, and make a habit of sparing the Greek race, as a precaution against being enslaved by the barbarians?

Glaucon:: It's altogether and in every way best to spare the Greek race.

Socrates:: Then isn't it also best for the guardians not to acquire a Greek slave and to advise the other Greeks not to do so either?

Glaucon:: Absolutely. In that way they' be more likely to turn against the barbarians and keep their hands off one another.

Socrates:: What about despoiling the dead? Is it a good thing to strip the dead of anything besides their armor after a victory? Or don't cowards make this an excuse for not facing the enemy—as if they were doing something of vital importance in bending over a corpse? And haven't many armies been lost because of such plundering?

Glaucon:: Indeed, they have.

Socrates:: Don't you think it's slavish and money-loving to strip a corpse? Isn't it small-minded and womanish to regard the body as your enemy, when the enemy himself has flitted away, leaving behind only the instrument with which he fought? Or do you think such behavior any different from that of dogs who get angry with the stone that hits them and leave the thrower alone?

Glaucon:: It's no different at all.

Socrates:: Then may our soldiers strip corpses or refuse the enemy permission to pick up their dead?

Glaucon:: No, by god, they certainly may not.

Socrates:: Moreover, we won't take enemy arms to the temples as offerings, and if we care about the goodwill of other Greeks, we especially won't do this with their arms. Rather we'd be afraid of polluting the temples if we brought them such things from our own people, unless, of course, the god tells us otherwise.

Glaucon:: That's absolutely right.

Socrates:: What about ravaging the land of the Greeks and burning their houses? Will your soldiers do things of this sort to their enemies?

Glaucon:: I'd like to hear your opinion about that.

Socrates:: Well, I think they should do neither of these things but destroy the year's harvest only. Do you want me to tell you why?

Glaucon:: Of course.

Socrates:: It seems to me that as we have two names, "war" and "civil war," so there are two things and the names apply to two kinds of disagreements arising in them. The two things I'm referring to are what is one's own and akin, on the one hand, and what's foreign and strange, on the other. The name "civil war" applies to hostilities with one's own, while "war" applies to hostilities with strangers.

Glaucon:: That's certainly to the point.

Socrates:: Then see whether this is also to the point: I say that the Greek race is its own and akin, but is strange and foreign to barbarians.

Glaucon:: That's right.

Socrates:: Then when Greeks do battle with barbarians or barbarians with Greeks, we'll say that they're natural enemies and that such hostilities are to be called war. But when Greeks fight with Greeks, we'll say that they are natural friends and that in such circumstances Greece is sick and divided into factions and that such hostilities are to be called civil war.

Glaucon:: I, at any rate, agree to think of it that way.

Socrates:: Now, notice that, wherever something of the sort that's currently called civil war occurs and a city is divided, if either party ravages the land of the others and burns their houses, it's thought that this is abominable and that neither party loves their city, since otherwise they' never have ravaged their very nurse and mother. However, it is thought appropriate for the victors to carry off the harvest of the vanquished. Nonetheless, their attitude of mind should be that of people who'll one day be reconciled and who won't always be at war.

Glaucon:: This way of thinking is far more civilized than the other.

Socrates:: What about the city you're founding? It is Greek, isn't it?

Glaucon:: It has to be.

Socrates:: Then, won't your citizens be good and civilized?

Glaucon:: Indeed they will.

Socrates:: Then, won't they love Greece? Won't they consider Greece as their own and share the religion of the other Greeks?

Glaucon:: Yes, indeed.

Socrates:: Then won't they consider their differences with Greeks—people who are their own—not as war but as civil war?

Glaucon:: Of course.

Socrates:: And won't they quarrel like people who know that one day they'll be reconciled?

Glaucon:: Certainly.

Socrates:: Then they'll moderate their foes in a friendly spirit, not punish them with enslavement and destruction, for they're moderators, not enemies.

Glaucon:: That's right.

Socrates:: And being Greeks, they won't ravage Greece or burn her houses, nor will they agree that in any of her cities all the inhabitants—men, women, and children—are their enemies, but that whatever differences arise are caused by the few enemies that any city inevitably contains. Because of this, because the majority are friendly, they won't ravage the country or destroy the houses, and they'll continue their quarrel only to the point at which those who caused it are forced to pay the penalty by those who were its innocent victims.

Glaucon:: I agree that this is the way our citizens must treat their enemies, and they must treat barbarians the way Greeks currently treat each other.

Socrates:: Then shall we also impose this law on the guardians: Neither ravage the country nor burn the houses?

Glaucon:: Consider it imposed. And let's also assume that this law and its predecessors are all fine. But I think, Socrates, that if we let you go on speaking about this subject, you'll never remember the one you set aside in order to say all this, namely, whether it's possible for this constitution to come into being and in what way it could be brought about. I agree that, if it existed, all the things we've mentioned would be good for the city in which they occurred. And I'll add some that you've left out. The guardians would be excellent fighters against an enemy because they' be least likely to desert each other, since they know each other as brothers, fathers, and sons, and call each other by those names. Moreover, if their women joined their campaigns, either in the same ranks or positioned in the rear to frighten the enemy and in case their help should ever be needed, I know that this would make them quite unbeatable. And I also see all the good things that they' have at home that you've omitted. Take it that I agree that all these things would happen, as well as innumerable others, if this kind of constitution came into being, and say no more on that subject. But rather let's now try to convince ourselves that it is possible and how it is possible, and let the rest go.

Socrates:: This is a sudden attack that you’ve made on my argument, and you show no sympathy for my delay. Perhaps you don’t realize that, just as I’ve barely escaped from the first two waves of objections, you’re bringing the third—the biggest and most difficult one—down upon me. When you see and hear it, you’ll surely be completely sympathetic, and recognize that it was, after all, appropriate for me to hesitate and be afraid to state and look into so paradoxical a view.

Glaucon:: The more you speak like that, the less we’ll let you off from telling us how it’s possible for this constitution to come into being. So speak instead of wasting time.

Socrates:: Well, then, we must first remember that we got to this point while trying to discover what justice and injustice are like.

Glaucon:: We must. But what of it?

Socrates:: Nothing. But if we discover what justice is like, will we also maintain that the just man is in no way different from the just itself, so that he is like justice in every respect? Or will we be satisfied if he comes as close to it as possible and participates in it far more than anyone else?

Glaucon:: We’ll be satisfied with that.

Socrates:: Then it was in order to have a model that we were trying to discover what justice itself is like and what the completely just man would be like, if he came into being, and what kind of man he'd be if he did, and likewise with regard to injustice and the most unjust man. We thought that, by looking at how their relationship to happiness and its opposite seemed to us, we'd also be compelled to agree about ourselves as well, that the one who was most like them would have a portion of happiness most like theirs. But we weren’t trying to discover these things in order to prove that it’s possible for them to come into being.

Glaucon:: That’s true.

Socrates:: Do you think that someone is a worse painter if, having painted a model of what the finest and most beautiful human being would be like and having rendered every detail of his picture adequately, he could not prove that such a man could come into being?

Glaucon:: No, by god, I don’t.

Socrates:: Then what about our own case? Didn’t we say that we were making a theoretical model of a good city?

Glaucon:: Certainly.

Socrates:: So do you think that our discussion will be any less reasonable if we can’t prove that it’s possible to found a city that’s the same as the one in our theory?

Glaucon:: Not at all.

Socrates:: Then that’s the truth of the matter. But if, in order to please you, I must also be willing to show how and under what conditions it would most be possible to found such a city, then you should agree to make the same concessions to me, in turn, for the purposes of this demonstration.

Glaucon:: Which ones?

Socrates:: Is it possible to do anything in practice the same as in theory? Or is it in the nature of practice to grasp truth less well than theory does, even if some people don’t think so? Will you first agree to this or not?

Glaucon:: I agree.

Socrates:: Then don’t compel me to show that what we’ve described in theory can come into being exactly as we’ve described it. Rather, if we’re able to discover how a city could come to be governed in a way that most closely approximates our description, let’s say that we’ve shown what you ordered us to show, namely, that it’s possible for our city to come to be. Or wouldn’t you be satisfied with that? I would be satisfied with it.

Glaucon:: So would I.

Socrates:: Then next, it seems, we should try to discover and point out what’s now badly done in cities that keeps them from being governed in that way and what’s the smallest change that would enable our city to reach our sort of constitution—one change, if possible, or if not one, two, and if not two, then the fewest in number and the least extensive.

Glaucon:: That’s absolutely right.

Socrates:: There is one change we could point to that, in my opinion, would accomplish this. It’s certainly neither small nor easy, but it is possible.

Glaucon:: What is it?

Socrates:: Well, I’ve now come to what we likened to the greatest wave. But I shall say what I have to say, even if the wave is a wave of laughter that will simply drown me in ridicule and contempt. So listen to what I’m going to say.

Glaucon:: Say on.

Socrates:: Until philosophers rule as kings or those who are now called kings and leading men genuinely and adequately philosophize, that is, until political power and philosophy entirely coincide, while the many natures who at present pursue either one exclusively are forcibly prevented from doing so, cities will have no rest from evils, Glaucon, nor, I think, will the human race. And, until this happens, the constitution we’ve been describing in theory will never be born to the fullest extent possible or see the light of the sun. It’s because I saw how very paradoxical this statement would be that I hesitated to make it for so long, for it’s hard to face up to the fact that there can be no happiness, either public or private, in any other city.

Glaucon:: Socrates, after hurling a speech and statement like that at us, you must expect that a great many people (and not undistinguished ones either) will cast off their cloaks and, stripped for action, snatch any available weapon, and make a determined rush at you, ready to do terrible things. So, unless you can hold them off by argument and escape, you really will pay the penalty of general derision.

Socrates:: Well, you are the one that brought this on me.

Glaucon:: And I was right to do it. However, I won’t betray you, but rather defend you in any way I can—by goodwill, by urging you on, and perhaps by being able to give you more appropriate answers than someone else. So, with the promise of this assistance, try to show the unbelievers that things are as you say they are.

Socrates:: I must try it, then, especially since you agree to be so great an ally. If we’re to escape from the people you mention, I think we need to define for them who the philosophers are that we dare to say must rule. And once that’s clear, we should be able to defend ourselves by showing that the people we mean are fitted by nature both to engage in philosophy and to rule in a city, while the rest are naturally fitted to leave philosophy alone and follow their leader.

Glaucon:: This would be a good time to give that definition.

Socrates:: Come, then, follow me, and we’ll see whether or not there’s some way to set it out adequately.

Glaucon:: Lead on.

Socrates:: Do you need to be reminded or do you remember that, if it’s rightly said that someone loves something, then he mustn’t love one part of it and not another, but he must love all of it?

Glaucon:: I think you’ll have to remind me, for I don’t understand it at all.

Socrates:: That would be an appropriate response, Glaucon, for somebody else to make. But it isn’t appropriate for an erotically inclined man to forget that all boys in the bloom of youth pique the interest of a lover of boys and arouse him and that all seem worthy of his care and pleasure. Or isn’t that the way you people behave to fine and beautiful boys? You praise a snub-nosed one as cute, a hook-nosed one you say is regal, one in between is well proportioned, dark ones look manly, and pale ones are children of the gods. And as for a honey-colored boy, do you think that this very term is anything but the euphemistic coinage of a lover who found it easy to tolerate sallowness, provided it was accompanied by the bloom of youth? In a word, you find all kinds of terms and excuses so as not to reject anyone whose flower is in bloom.

Glaucon:: If you insist on taking me as your example of what erotically inclined men do, then, for the sake of the argument, I agree.

Socrates:: Further, don’t you see wine-lovers behave in the same way? Don’t they love every kind of wine and find any excuse to enjoy it?

Glaucon:: Certainly.

Socrates:: And I think you see honor-lovers, if they can’t be generals, be captains, and, if they can’t be honored by people of importance and dignity, they put up with being honored by insignificant and inferior ones, for they desire the whole of honor.

Glaucon:: Exactly.

Socrates:: Then do you agree to this or not? When we say that someone desires something, do we mean that he desires everything of that kind or that he desires one part of it but not another?

Glaucon:: We mean he desires everything.

Socrates:: Then won’t we also say that the philosopher doesn’t desire one part of wisdom rather than another, but desires the whole thing?

Glaucon:: Yes, that’s true.

Socrates:: And as for the one who’s choosy about what he learns, especially if he’s young and can’t yet give an account of what is useful and what isn’t, we won’t say that he is a lover of learning or a philosopher, for we wouldn’t say that someone who’s choosy about his food is hungry or has an appetite for food or is a lover of food—instead, we'd say that he is a bad eater.

Glaucon:: And we'd be right to say it.

Socrates:: But the one who readily and willingly tries all kinds of learning, who turns gladly to learning and is insatiable for it, is rightly called a philosopher, isn’t he?

Glaucon:: Then many strange people will be philosophers, for the lovers of sights seem to be included, since they take pleasure in learning things. And the lovers of sounds are very strange people to include as philosophers, for they would never willingly attend a serious discussion or spend their time that way, yet they run around to all the Dionysiac festivals, omitting none, whether in cities or villages, as if their ears were under contract to listen to every chorus. Are we to say that these people—and those who learn similar things or petty crafts—are philosophers?

Socrates:: No, but they are like philosophers.

Glaucon:: And who are the true philosophers?

Socrates:: Those who love the sight of truth.

Glaucon:: That’s right, but what exactly do you mean by it?

Socrates:: It would not be easy to explain to someone else, but I think that you will agree to this.

Glaucon:: To what?

Socrates:: Since the beautiful is the opposite of the ugly, they are two.

Glaucon:: Of course.

Socrates:: And since they are two, each is one?

Glaucon:: I grant that also.

Socrates:: And the same account is true of the just and the unjust, the good and the bad, and all the forms. Each of them is itself one, but because they manifest themselves everywhere in association with actions, bodies, and one another, each of them appears to be many.

Glaucon:: That’s right.

Socrates:: So, I draw this distinction: On one side are those you just now called lovers of sights, lovers of crafts, and practical people; on the other side are those we are arguing about and whom one would alone call philosophers.

Glaucon:: How do you mean?

Socrates:: The lovers of sights and sounds like beautiful sounds, colors, shapes, and everything fashioned out of them, but their thought is unable to see and embrace the nature of the beautiful itself.

Glaucon:: That’s for sure.

Socrates:: In fact, there are very few people who would be able to reach the beautiful itself and see it by itself. Isn’t that so?

Glaucon:: Certainly.

What about someone who believes in beautiful things, but doesn’t believe in the beautiful itself and isn’t able to follow anyone who could lead him to the knowledge of it? Don’t you think he is living in a dream rather than a wakened state? Isn’t this dreaming: whether asleep or awake, to think that a likeness is not a likeness but rather the thing itself that it is like?

Glaucon:: I certainly think that someone who does that is dreaming.

Socrates:: But someone who, to take the opposite case, believes in the beautiful itself, can see both it and the things that participate in it and doesn’t believe that the participants are it or that it itself is the participants—is he living in a dream or is he awake?

Glaucon:: He’s very much awake.

Socrates:: So we'd be right to call his thought knowledge, since he knows, but we should call the other person’s thought opinion, since he opines?

Glaucon:: Right.

Socrates:: What if the person who has opinion but not knowledge is angry with us and disputes the truth of what we are saying? Is there some way to console him and persuade him gently, while hiding from him that he isn’t in his right mind?

Glaucon:: There must be.

Socrates:: Consider, then, what we’ll say to him. Won’t we question him like this? First, we’ll tell him that nobody begrudges him any knowledge he may have and that we'd be delighted to discover that he knows something. Then we’ll say: “Tell us, does the person who knows know something or nothing?” You answer for him.

Glaucon:: He knows something.

Socrates:: Something that is or something that is not?

Glaucon:: Something that is, for how could something that is not be known?

Socrates:: Then we have an adequate grasp of this: No matter how many ways we examine it, what is completely is completely knowable and what is in no way is in every way unknowable?

Glaucon:: A most adequate one.

Socrates:: Good. Now, if anything is such as to be and also not to be, won’t it be intermediate between what purely is and what in no way is?

Glaucon:: Yes, it’s intermediate.

Socrates:: Then, as knowledge is set over what is, while ignorance is of necessity set over what is not, mustn’t we find an intermediate between knowledge and ignorance to be set over what is intermediate between what is and what is not, if there is such a thing?

Glaucon:: Certainly.

Socrates:: Do we say that opinion is something?

Glaucon:: Of course.

Socrates:: A different power from knowledge or the same?

Glaucon:: A different one.

Socrates:: Opinion, then, is set over one thing, and knowledge over another, according to the power of each.

Glaucon:: Right.

Socrates:: Now, isn’t knowledge by its nature set over what is, to know it as it is? But first maybe we'd better be a bit more explicit.

Glaucon:: How so?

Socrates:: Powers are a class of the things that are that enable us—or anything else for that matter—to do whatever we are capable of doing. Sight, for example, and hearing are among the powers, if you understand the kind of thing I'm referring to.

Glaucon:: I do.

Socrates:: Here's what I think about them. A power has neither color nor shape nor any feature of the sort that many other things have and that I use to distinguish those things from one another. In the case of a power, I use only what it is set over and what it does, and by reference to these I call each the power it is: What is set over the same things and does the same I call the same power; what is set over something different and does something different I call a different one. Do you agree?

Glaucon:: I do.

Socrates:: Then let's back up. Is knowledge a power, or what class would you put it in?

Glaucon:: It's a power, the strongest of them all.

Socrates:: And what about opinion, is it a power or some other kind of thing?

Glaucon:: It's a power as well, for it is what enables us to opine.

Socrates:: A moment ago you agreed that knowledge and opinion aren't the same.

Glaucon:: How could a person with any understanding think that a fallible power is the same as an infallible one?

Socrates:: Right. Then we agree that opinion is clearly different from knowledge.

Glaucon:: It is different.

Socrates:: Hence each of them is by nature set over something different and does something different?

Glaucon:: Necessarily.

Socrates:: Knowledge is set over what is, to know it as it is?

Glaucon:: Yes.

Socrates:: And opinion opines?

Glaucon:: Yes.

Socrates:: Does it opine the very thing that knowledge knows, so that the knowable and the opinable are the same, or is this impossible?

Glaucon:: It's impossible, given what we agreed, for if a different power is set over something different, and opinion and knowledge are different powers, then the knowable and the opinable cannot be the same.

Socrates:: Then, if what is is knowable, the opinable must be something other than what is?

Glaucon:: It must.

Socrates:: Do we, then, opine what is not? Or is it impossible to opine what is not? Think about this. Doesn't someone who opines set his opinion over something? Or is it possible to opine, yet to opine nothing?

Glaucon:: It's impossible.

Socrates:: But someone who opines opines some one thing?

Glaucon:: Yes.

Socrates:: Surely the most accurate word for that which is not isn't "one thing" but "nothing"?

Glaucon:: Certainly.

Socrates:: But we had to set ignorance over what is not and knowledge over what is?

Glaucon:: That's right.

Socrates:: So someone opines neither what is nor what is not?

Glaucon:: How could it be otherwise?

Socrates:: Then opinion is neither ignorance nor knowledge?

Glaucon:: So it seems.

Socrates:: Then does it go beyond either of these? Is it clearer than knowledge or darker than ignorance?

Glaucon:: No, neither.

Socrates:: Is opinion, then, darker than knowledge but clearer than ignorance?

Glaucon:: It is.

Socrates:: Then it lies between them?

Glaucon:: Yes.

Socrates:: So opinion is intermediate between those two?

Glaucon:: Absolutely.

Socrates:: Now, we said that, if something could be shown, as it were, to be and not to be at the same time, it would be intermediate between what purely is and what in every way is not, and that neither knowledge nor ignorance would be set over it, but something intermediate between ignorance and knowledge?

Glaucon:: Correct.

Socrates:: And now the thing we call opinion has emerged as being intermediate between them?

Glaucon:: It has.

Socrates:: Apparently, then, it only remains for us to find what participates in both being and not being and cannot correctly be called purely one or the other, in order that, if there is such a thing, we can rightly call it the opinable, thereby setting the extremes over the extremes and the intermediate over the intermediate. Isn’t that so?

Glaucon:: It is.

Socrates:: Now that these points have been established, I want to address a question to our friend who doesn’t believe in the beautiful itself or any form of the beautiful itself that remains always the same in all respects but who does believe in the many beautiful things—the lover of sights who wouldn’t allow anyone to say that the beautiful itself is one or that the just is one or any of the rest: “My dear fellow,” we’ll say, “of all the many beautiful things, is there one that will not also appear ugly? Or is there one of those just things that will not also appear unjust? Or one of those pious things that will not also appear impious?”

Glaucon:: There isn’t one, for it is necessary that they appear to be beautiful in a way and also to be ugly in a way, and the same with the other things you asked about.

Socrates:: What about the many doubles? Do they appear any the less halves than doubles?

Glaucon:: Not one.

Socrates:: So, with the many bigs and smalls and lights and heavies, is any one of them any more the thing someone says it is than its opposite?

Glaucon:: No, each of them always participates in both opposites.

Socrates:: Is any one of the manys what someone says it is, then, any more than it is not what he says it is?

Glaucon:: No, they are like the ambiguities one is entertained with at dinner parties or like the children’s riddle about the eunuch who threw something at a bat—the one about what he threw at it and what it was in, for they are ambiguous, and one cannot understand them as fixedly being or fixedly not being or as both or as neither.

Socrates:: Then do you know how to deal with them? Or can you find a more appropriate place to put them than intermediate between being and not being? Surely, they can't be more than what is or not be more than what is not, for apparently nothing is darker than what is not or clearer than what is.

Glaucon:: Very true.

Socrates:: We've now discovered, it seems, that according to the many conventions of the majority of people about beauty and the others, they are rolling around as intermediates between what is not and what purely is.

Glaucon:: We have.

Socrates:: And we agreed earlier that anything of that kind would have to be called the opinable, not the knowable—the wandering intermediate grasped by the intermediate power.

Glaucon:: We did.

Socrates:: As for those who study the many beautiful things but do not see the beautiful itself and are incapable of following another who leads them to it, who see many just things but not the just itself, and so with everything—these people, we shall say, opine everything but have no knowledge of anything they opine.

Glaucon:: Necessarily.

Socrates:: What about the ones who in each case study the things themselves that are always the same in every respect? Won't we say that they know and don't opine?

Glaucon:: That's necessary too.

Socrates:: Shall we say, then, that these people love and embrace the things that knowledge is set over, as the others do the things that opinion is set over? Remember we said that the latter saw and loved beautiful sounds and colors and the like but wouldn’t allow the beautiful itself to be anything?

Glaucon:: We remember, all right.

Socrates:: We won’t be in error, then, if we call such people lovers of opinion rather than philosophers or lovers of wisdom and knowledge? Will they be angry with us if we call them that?

Glaucon:: Not if they take my advice, for it isn’t right to be angry with those who speak the truth.

Socrates:: As for those who in each case embrace the thing itself, we must call them philosophers, not lovers of opinion?

Glaucon:: Most definitely.

## Book 6

Socrates:: And so, Glaucon, after a somewhat lengthy and difficult discussion, both the philosophers and the non-philosophers have revealed who they are.

Glaucon:: It probably wouldn't have been easy, to have them do it in a shorter one.

Socrates:: Apparently not. But for my part, I think that the matter would have been better illuminated if we had only it to discuss and not all the other things that remain to be treated in order to discover the difference between the just life and the unjust one.

Glaucon:: What's our next topic?

Socrates:: What else but the one that's next in order? Since those who are able to grasp what is always the same in all respects are philosophers, while those who are not able to do so and who wander among the many things that vary in every sort of way are not philosophers, which of the two should be the leaders in a city?

Glaucon:: What would be a sensible answer to that?

Socrates:: We should establish as guardians those who are clearly capable of guarding the laws and the ways of life of the city.

Glaucon:: That's right.

Socrates:: And isn't it clear that the guardian who is to keep watch over everything should be keen-sighted rather than blind?

Glaucon:: Of course it's clear.

Socrates:: Do you think, then, that there's any difference between the blind and those who are really deprived of the knowledge of each thing that is? The latter have no clear model in their souls, and so they cannot—in the manner of painters—look to what is most true, make constant reference to it, and study it as exactly as possible. Hence they cannot establish here on earth conventions about what is fine or just or good, when they need to be established, or guard and preserve them, once they have been established.

Glaucon:: No, by god, there isn't much difference between them.

Socrates:: Should we, then, make these blind people our guardians or rather those who know each thing that is and who are not inferior to the others, either in experience or in any other part of virtue?

Glaucon:: It would be absurd to choose anyone but philosophers, if indeed they're not inferior in these ways, for the respect in which they are superior is pretty well the most important one.

Socrates:: Then shouldn't we explain how it is possible for someone to have both these sorts of qualities?

Glaucon:: Certainly.

Socrates:: Then, as we said at the beginning of this discussion, it is necessary to understand the nature of philosophers first, for I think that, if we can reach adequate agreement about that, we'll also agree that the same people can have both qualities and that no one but they should be leaders in cities.

Glaucon:: How so?

Socrates:: Let's agree that philosophic natures always love the sort of learning that makes clear to them some feature of the being that always is and does not wander around between coming to be and decaying.

And further, let's agree that, like the honor-lovers and erotically inclined men we described before, they love all such learning and are not willing to give up any part of it, whether large or small, more valuable or less so.

Glaucon:: That’s right.

Socrates:: Consider next whether the people we’re describing must also have this in their nature.

Glaucon:: What?

Socrates:: They must be without falsehood—they must refuse to accept what is false, hate it, and have a love for the truth.

Glaucon:: That’s a reasonable addition, at any rate.

Socrates:: It’s not only reasonable, it’s entirely necessary, for it’s necessary for a man who is erotically inclined by nature to love everything akin to or belonging to the boy he loves.

Glaucon:: That’s right.

Socrates:: And could you find anything that belongs more to wisdom than truth does?

Glaucon:: Of course not.

Socrates:: Then is it possible for the same nature to be a philosopher—a lover of wisdom—and a lover of falsehood?

Glaucon:: Not at all.

Socrates:: Then someone who loves learning must above all strive for every kind of truth from childhood on.

Glaucon:: Absolutely.

Socrates:: Now, we surely know that, when someone’s desires incline strongly for one thing, they are thereby weakened for others, just like a stream that has been partly diverted into another channel.

Glaucon:: Of course.

Socrates:: Then, when someone’s desires flow towards learning and everything of that sort, he'd be concerned, I suppose, with the pleasures of the soul itself by itself, and he'd abandon those pleasures that come through the body— if indeed he is a true philosopher and not merely a counterfeit one.

Glaucon:: That’s completely necessary.

Socrates:: Then surely such a person is moderate and not at all a money-lover. It’s appropriate for others to take seriously the things for which money and large expenditures are needed, but not for him.

Glaucon:: That’s right.

Socrates:: And of course there’s also this to consider when you are judging whether a nature is philosophic or not.

Glaucon:: What’s that?

Socrates:: If it is at all slavish, you should not overlook that fact, for pettiness is altogether incompatible with a soul that is always reaching out to grasp everything both divine and human as a whole.

Glaucon:: That’s completely true.

Socrates:: And will a thinker high-minded enough to study all time and all being consider human life to be something important?

Glaucon:: He couldn’t possibly.

Socrates:: Then will he consider death to be a terrible thing?

Glaucon:: He least of all.

Socrates:: Then it seems a cowardly and slavish nature will take no part in true philosophy.

Glaucon:: Not in my opinion.

Socrates:: And is there any way that an orderly person, who isn’t money-loving, slavish, a boaster, or a coward, could become unreliable or unjust?

Glaucon:: There isn’t.

Socrates:: Moreover, when you are looking to see whether a soul is philosophic or not, you’ll look to see whether it is just and gentle, from youth on, or savage and hard to associate with.

Glaucon:: Certainly.

Socrates:: And here’s something I think you won’t leave out.

Glaucon:: What?

Socrates:: Whether he’s a slow learner or a fast one. Or do you ever expect anyone to love something when it pains him to do it and when much effort brings only small return?

Glaucon:: No, it couldn’t happen.

Socrates:: And what if he could retain nothing of what he learned, because he was full of forgetfulness? Could he fail to be empty of knowledge?

Glaucon:: How could he?

Socrates:: Then don’t you think that, if he’s laboring in vain, he'd inevitably come to hate both himself and that activity in the end?

Glaucon:: Of course.

Socrates:: Then let’s never include a forgetful soul among those who are sufficiently philosophical for our purposes, but look for one with a good memory.

Glaucon:: Absolutely.

Socrates:: Now, we'd certainly say that the unmusical and graceless element in a person’s nature draws him to lack of due measure.

Glaucon:: Of course.

Socrates:: And do you think that truth is akin to what lacks due measure or to what is measured?

Glaucon:: To what is measured.

Socrates:: Then, in addition to those other things, let's look for someone whose thought is by nature measured and graceful and is easily led to the form of each thing that is.

Glaucon:: Of course.

Socrates:: Well, then, don't you think the properties we've enumerated are compatible with one another and that each is necessary to a soul that is to have an adequate and complete grasp of that which is?

Glaucon:: They're all completely necessary.

Socrates:: Is there any objection you can find, then, to a way of life that no one can adequately follow unless he's by nature good at remembering, quick to learn, high-minded, graceful, and a friend and relative of truth, justice, courage, and moderation?

Glaucon:: Not even Momus could find one.

Socrates:: When such people have reached maturity in age and education, wouldn't you entrust the city to them and to them alone?

And Adeimantus replied:

Adeimantus:: No one would be able to contradict the things you've said, Socrates, but on each occasion that you say them, your hearers are affected in some such way as this. They think that, because they're inexperienced in asking and answering questions, they're led astray a little bit by the argument at every question and that, when these little bits are added together at the end of the discussion, great is their fall, as the opposite of what they said at the outset comes to light. Just as inexperienced checkers players are trapped by the experts in the end and can't make a move, so they too are trapped in the end and have nothing to say in this different kind of checkers, which is played not with disks but with words. Yet the truth isn’t affected by this outcome. I say this with a view to the present case, for someone might well say now that he’s unable to oppose you as you ask each of your questions, yet he sees that of all those who take up philosophy—not those who merely dabble in it while still young in order to complete their upbringing and then drop it, but those who continue in it for a longer time—the greatest number become cranks, not to say completely vicious, while those who seem completely decent are rendered useless to the city because of the studies you recommend.

Socrates:: When I'd heard him out, I said: Do you think that what these people say is false?

Adeimantus:: I don’t know, but I'd be glad to hear what you think.

Socrates:: You’ hear that they seem to me to speak the truth.

Adeimantus:: How, then, can it be true to say that there will be no end to evils in our cities until philosophers—people we agree to be useless—rule in them?

Socrates:: The question you ask needs to be answered by means of an image or simile.

Adeimantus:: And you, of course, aren’t used to speaking in similes!

Socrates:: So! Are you making fun of me now that you’ve landed me with a claim that’s so hard to establish? In any case, listen to my simile, and you’ll appreciate all the more how greedy for images I am. What the most decent people experience in relation to their city is so hard to bear that there’s no other single experience like it. Hence to find an image of it and a defense for them, I must construct it from many sources, just as painters paint goat-stags by combining the features of different things. Imagine, then, that something like the following happens on a ship or on many ships. The ship-owner is bigger and stronger than everyone else on board, but he's hard of hearing, a bit short-sighted, and his knowledge of seafaring is equally deficient. The sailors are quarreling with one another about steering the ship, each of them thinking that he should be the captain, even though he's never learned the art of navigation, cannot point to anyone who taught it to him, or to a time when he learned it. Indeed, they claim that it isn't teachable and are ready to cut to pieces anyone who says that it is. They're always crowding around the ship-owner, begging him and doing everything possible to get him to turn the rudder over to them. And sometimes, if they don't succeed in persuading him, they execute the ones who do succeed or throw them overboard, and then, having stupefied their noble ship-owner with drugs, wine, or in some other way, they rule the ship, using up what's in it and sailing in the way that people like that are prone to do. Moreover, they call the person who is clever at persuading or forcing the ship-owner to let them rule a "navigator," a "captain," and "one who knows ships," and dismiss anyone else as useless. They don't understand that a true captain must pay attention to the seasons of the year, the sky, the stars, the winds, and all that pertains to his craft, if he's really to be the ruler of a ship. And they don't believe there is any craft that would enable him to determine how he should steer the ship, whether the others want him to or not, or any possibility of mastering this alleged craft or of practicing it at the same time as the craft of navigation. Don't you think that the true captain will be called a real stargazer, a babbler, and a good-for-nothing by those who sail in ships governed in that way, in which such things happen?

Adeimantus:: I certainly do.

Socrates:: I don't think that you need to examine the simile in detail to see that the ships resemble cities and their attitude to the true philosophers, but you already understand what I mean.

Adeimantus:: Indeed, I do.

Socrates:: Then first tell this simile to anyone who wonders why philosophers aren't honored in the cities, and try to persuade him that there would be far more cause for wonder if they were honored.

Adeimantus:: I will tell him.

Socrates:: Next tell him that what he says is true, that the best among the philosophers are useless to the majority. Tell him not to blame those decent people for this but the ones who don't make use of them. It isn't natural for the captain to beg the sailors to be ruled by him nor for the wise to knock at the doors of the rich—the man who came up with that wisecrack made a mistake. The natural thing is for the sick person, rich or poor, to knock at the doctor's door, and for anyone who needs to be ruled to knock at the door of the one who can rule him. It isn't for the ruler, if he's truly any use, to beg the others to accept his rule. Tell him that he'll make no mistake in likening those who rule in our cities at present to the sailors we mentioned just now, and those who are called useless stargazers to the true captains.

Adeimantus:: That's absolutely right.

Socrates:: Therefore, it isn't easy for the best ways of life to be highly esteemed by people who, as in these circumstances, follow the opposite ways. By far the greatest and most serious slander on philosophy, however, results from those who profess to follow the philosophic way of life. I mean those of whom the prosecutor of philosophy declared that the greatest number are completely vicious and the most decent useless. And I admitted that what he said was true, didn’t I?

Adeimantus:: Yes.

Socrates:: And haven’t we explained why the decent ones are useless?

Adeimantus:: Yes, indeed.

Socrates:: Then, do you next want us to discuss why it’s inevitable that the greater number are vicious and to try to show, if we can, that philosophy isn’t responsible for this either?

Adeimantus:: Certainly.

Socrates:: Then, let’s begin our dialogue by reminding ourselves of the point at which we began to discuss the nature that someone must have if he is to become a fine and good person. First of all, if you remember, he had to be guided by the truth and always pursue it in every way, or else he'd really be a boaster, with no share at all in true philosophy.

Adeimantus:: That’s what was said.

Socrates:: And isn’t this view completely contrary to the opinions currently held about him?

Adeimantus:: It certainly is.

Socrates:: Then, won’t it be reasonable for us to plead in his defense that it is the nature of the real lover of learning to struggle toward what is, not to remain with any of the many things that are believed to be, that, as he moves on, he neither loses nor lessens his erotic love until he grasps the being of each nature itself with the part of his soul that is fitted to grasp it, because of its kinship with it, and that, once getting near what really is and having intercourse with it and having begotten understanding and truth, he knows, truly lives, is nourished, and—at that point, but not before—is relieved from the pains of giving birth?

Adeimantus:: That is the most reasonable defense possible.

Socrates:: Well, then, will such a person have any part in the love of falsehood, or will he entirely hate it?

Adeimantus:: He'll hate it.

Socrates:: And if truth led the way, we'd never say, I suppose, that a chorus of evils could ever follow in its train.

Adeimantus:: How could it?

Socrates:: But rather a healthy and just character, with moderation following it.

Adeimantus:: That's right.

Socrates:: What need is there, then, to marshal all over again from the beginning the members of the philosophic nature's chorus in their inevitable array? Remember that courage, high-mindedness, ease in learning, and a good memory all belong to it. Then you objected, saying that anyone would be compelled to agree with what we said, but that, if he abandoned the argument and looked at the very people the argument is about, he'd say that some of them were useless, while the majority had every kind of vice. So we examined the reason for this slander and have now arrived at the point of explaining why the majority of them are bad. And it's for this reason that we've again taken up the nature of the true philosophers and defined what it necessarily has to be.

Adeimantus:: That's true.

Socrates:: We must now look at the ways in which this nature is corrupted, how it's destroyed in many people, while a small number (the ones that are called useless rather than bad) escape. After that, we must look in turn at the natures of the souls that imitate the philosophic nature and establish themselves in its way of life, so as to see what the people are like who thereby arrive at a way of life they are unworthy of and that is beyond them and who, because they often strike false notes, bring upon philosophy the reputation that you said it has with everyone everywhere.

Adeimantus:: In what ways are they corrupted?

Socrates:: I'll try to enumerate them for you if I can. I suppose that everyone would agree that only a few natures possess all the qualities that we just now said were essential to becoming a complete philosopher and that seldom occur naturally among human beings. Or don't you think so?

Adeimantus:: I certainly do.

Socrates:: Consider, then, the many important ways in which these few can be corrupted.

Adeimantus:: What are they?

Socrates:: What will surprise you most, when you hear it, is that each of the things we praised in that nature tends to corrupt the soul that has it and to drag it away from philosophy. I mean courage, moderation, and the other things we mentioned.

Adeimantus:: That does sound strange.

Socrates:: Furthermore, all the things that are said to be good also corrupt it and drag it away—beauty, wealth, physical strength, relatives who are powerful in the city, and all that goes with these. You understand what I have in mind?

Adeimantus:: I do, and I'd be glad to learn even more about it.

Socrates:: If you correctly grasp the general point I’m after, it will be clear to you, and what I’ve said before won’t seem so strange.

Adeimantus:: What do you want me to do?

Socrates:: We know that the more vigorous any seed, developing plant, or animal is, the more it is deficient in the things that are appropriate for it to have when it is deprived of suitable food, season, or location. For the bad is more opposed to the good than is the merely not good.

Adeimantus:: Of course.

Socrates:: Then it’s reasonable to say that the best nature fares worse, when unsuitably nurtured, than an ordinary one.

Adeimantus:: It is.

Socrates:: Then won’t we say the same thing about souls too, Adeimantus, that those with the best natures become outstandingly bad when they receive a bad upbringing? Or do you think that great injustices and pure wickedness originate in an ordinary nature rather than in a vigorous one that has been corrupted by its upbringing? Or that a weak nature is ever the cause of either great good or great evil?

Adeimantus:: No, you’re right.

Socrates:: Now, I think that the philosophic nature as we defined it will inevitably grow to possess every virtue if it happens to receive appropriate instruction, but if it is sown, planted, and grown in an inappropriate environment, it will develop in quite the opposite way, unless some god happens to come to its rescue. Or do you agree with the general opinion that certain young people are actually corrupted by sophists—that there are certain sophists with significant influence on the young who corrupt them through private teaching? Isn’t it rather the very people who say this who are the greatest sophists of all, since they educate most completely, turning young and old, men and women, into precisely the kind of people they want them to be?

Adeimantus:: When do they do that?

Socrates:: When many of them are sitting together in assemblies, courts, theaters, army camps, or in some other public gathering of the crowd, they object very loudly and excessively to some of the things that are said or done and approve others in the same way, shouting and clapping, so that the very rocks and surroundings echo the din of their praise or blame and double it. In circumstances like that, what is the effect, as they say, on a young person's heart? What private training can hold out and not be swept away by that kind of praise or blame and be carried by the flood wherever it goes, so that he'll say that the same things are beautiful or ugly as the crowd does, follow the same way of life as they do, and be the same sort of person as they are?

Adeimantus:: He will be under great compulsion to do so, Socrates.

Socrates:: And yet we haven't mentioned the greatest compulsion of all.

Adeimantus:: What's that?

Socrates:: It's what these educators and sophists impose by their actions if their words fail to persuade. Or don't you know that they punish anyone who isn't persuaded, with disenfranchisement, fines, or death?

Adeimantus:: They most certainly do.

Socrates:: What other sophist, then, or what private conversations do you think will prevail in opposition to these?

Adeimantus:: I don't suppose that any will.

Socrates:: No, indeed, it would be very foolish even to try to oppose them, for there isn't now, hasn't been in the past, nor ever will be in the future anyone with a character so unusual that he has been educated to virtue in spite of the contrary education he received from the mob—I mean, a human character; the divine, as the saying goes, is an exception to the rule. You should realize that if anyone is saved and becomes what he ought to be under our present constitutions, he has been saved—you might rightly say—by a divine dispensation.

Adeimantus:: I agree.

Socrates:: Well, then, you should also agree to this.

Adeimantus:: What?

Socrates:: Not one of those paid private teachers, whom the people call sophists and consider to be their rivals in craft, teaches anything other than the convictions that the majority express when they are gathered together. Indeed, these are precisely what the sophists call wisdom. It's as if someone were learning the moods and appetites of a huge, strong beast that he's rearing—how to approach and handle it, when it is most difficult to deal with or most gentle and what makes it so, what sounds it utters in either condition, and what sounds soothe or anger it. Having learned all this through tending the beast over a period of time, he calls this knack wisdom, gathers his information together as if it were a craft, and starts to teach it. In truth, he knows nothing about which of these convictions is fine or shameful, good or bad, just or unjust, but he applies all these names in accordance with how the beast reacts—calling what it enjoys good and what angers it bad. He has no other account to give of these terms. And he calls what he is compelled to do just and fine, for he hasn't seen and cannot show anyone else how much compulsion and goodness really differ. Don’t you think, by god, that someone like that is a strange educator?

Adeimantus:: I do indeed.

Socrates:: Then does this person seem any different from the one who believes that it is wisdom to understand the moods and pleasures of a majority gathered from all quarters, whether they concern painting, music, or, for that matter, politics? If anyone approaches the majority to exhibit his poetry or some other piece of craftsmanship or his service to the city and gives them mastery over him to any degree beyond what’s unavoidable, he’ll be under Diomedean compulsion, as it’s called, to do the sort of thing of which they approve. But have you ever heard anyone presenting an argument that such things are truly good and beautiful that wasn’t absolutely ridiculous?

Adeimantus:: No, and I don’t expect ever to hear one.

Socrates:: Keeping all this in mind, recall the following question: Can the majority in any way tolerate or accept the reality of the beautiful itself, as opposed to the many beautiful things, or the reality of each thing itself, as opposed to the corresponding many?

Adeimantus:: Not in any way.

Socrates:: Then the majority cannot be philosophic.

Adeimantus:: They cannot.

Socrates:: Hence they inevitably disapprove of those who practice philosophy?

Adeimantus:: Inevitably.

Socrates:: And so do all those private individuals who associate with the majority and try to please them.

Adeimantus:: Clearly.

Socrates:: Then, because of all that, do you see any salvation for someone who is by nature a philosopher, to insure that he'll practice philosophy correctly to the end? Think about what we've said before. We agreed that ease in learning, a good memory, courage, and high-mindedness belong to the philosophic nature.

Adeimantus:: Yes.

Socrates:: And won't someone with a nature like that be first among the children in everything, especially if his body has a nature that matches that of his soul?

Adeimantus:: How could he not be?

Socrates:: Then I suppose that, as he gets older, his family and fellow citizens will want to make use of him in connection with their own affairs.

Adeimantus:: Of course.

Socrates:: Therefore they'll pay court to him with their requests and honors, trying by their flattery to secure for themselves ahead of time the power that is going to be his.

Adeimantus:: That's what usually happens, at any rate.

Socrates:: What do you think someone like that will do in such circumstances, especially if he happens to be from a great city, in which he's rich, well-born, good-looking, and tall? Won't he be filled with impractical expectations and think himself capable of managing the affairs, not only of the Greeks, but of the barbarians as well? And as a result, won't he exalt himself to great heights and be brimming with pretension and pride that is empty and lacks understanding?

Adeimantus:: He certainly will.

Socrates:: And if someone approaches a young man in that condition and gently tells him the truth, namely, that that there's no understanding in him, that he needs it, and that it can't be acquired unless he works like a slave to attain it, do you think that it will be easy for him to listen when he’s in the midst of so many evils?

Adeimantus:: Far from it.

Socrates:: And even if a young man of that sort somehow sees the point and is guided and drawn to philosophy because of his noble nature and his kinship with reason, what do you think those people will do, if they believe that they’re losing their use of him and his companionship? Is there anything they won’t do or say to him to prevent him from being persuaded? Or anything they won’t do or say about his persuader— whether plotting against him in private or publicly bringing him into court—to prevent him from such persuasion?

Adeimantus:: There certainly isn’t.

Socrates:: Then, is there any chance that such a person will practice philosophy?

Adeimantus:: None at all.

Socrates:: Do you see, then, that we weren’t wrong to say that, when someone with a philosophic nature is badly brought up, the very components of his nature—together with the other so-called goods, such as wealth and other similar advantages—are themselves in a way the cause of his falling away from the philosophic way of life?

Adeimantus:: I do, and what we said was right.

Socrates:: These, then, are the many ways in which the best nature—which is already rare enough, as we said—is destroyed and corrupted, so that it cannot follow the best way of life. And it is among these men that we find the ones who do the greatest evils to cities and individuals and also—if they happen to be swept that way by the current—the greatest good, for a petty nature will never do anything great, either to an individual or a city.

Adeimantus:: That’s very true.

Socrates:: When these men, for whom philosophy is most appropriate, fall away from her, they leave her desolate and unwed, and they themselves lead lives that are inappropriate and untrue. Then others, who are unworthy of her, come to her as to an orphan deprived of the protection of kinsmen and disgrace her. These are the ones who are responsible for the reproaches that you say are cast upon philosophy by those who revile her, namely, that some of those who consort with her are useless, while the majority deserve to suffer many bad things.

Adeimantus:: Yes, that is indeed what is said.

Socrates:: And it's a reasonable thing to say, for other little men—the ones who are most sophisticated at their own little crafts—seeing that this position, which is full of fine names and adornments, is vacated, leap gladly from those little crafts to philosophy, like prisoners escaping from jail who take refuge in a temple. Despite her present poor state, philosophy is still more high-minded than these other crafts, so that many people with defective natures desire to possess her, even though their souls are cramped and spoiled by the mechanical nature of their work, in just the way that their bodies are mutilated by their crafts and labors. Isn't that inevitable?

Adeimantus:: It certainly is.

Socrates:: Don't you think that a man of this sort looks exactly like a little bald-headed tinker who has come into some money and, having been just released from jail, has taken a bath, put on a new cloak, got himself up as a bridegroom, and is about to marry the boss's daughter because she is poor and abandoned?

Adeimantus:: They're exactly the same.

Socrates:: And what kind of children will that marriage produce? Won't they be illegitimate and inferior?

Adeimantus:: They have to be.

Socrates:: What about when men who are unworthy of education approach philosophy and consort with her unworthily? What kinds of thoughts and opinions are we to say they beget? Won't they truly be what are properly called sophisms, things that have nothing genuine about them or worthy of being called true wisdom?

Adeimantus:: That's absolutely right.

Socrates:: Then there remains, Adeimantus, only a very small group who consort with philosophy in a way that's worthy of her: A noble and well brought-up character, for example, kept down by exile, who remains with philosophy according to his nature because there is no one to corrupt him, or a great soul living in a small city, who disdains the city's affairs and looks beyond them. A very few might be drawn to philosophy from other crafts that they rightly despise because they have good natures. And some might be held back by the bridle that restrains our friend Theages—for he's in every way qualified to be tempted away from philosophy, but his physical illness restrains him by keeping him out of politics. Finally, my own case is hardly worth mentioning—my daemonic sign—because it has happened to no one before me, or to only a very few. Now, the members of this small group have tasted how sweet and blessed a possession philosophy is, and at the same time they've also seen the madness of the majority and realized, in a word, that hardly anyone acts sanely in public affairs and that there is no ally with whom they might go to the aid of justice and survive, that instead they' perish before they could profit either their city or their friends and be useless both to themselves and to others, just like a man who has fallen among wild animals and is neither willing to join them in doing injustice nor sufficiently strong to oppose the general savagery alone.

Taking all this into account, they lead a quiet life and do their own work. Thus, like someone who takes refuge under a little wall from a storm of dust or hail driven by the wind, the philosopher—seeing others filled with lawlessness—is satisfied if he can somehow lead his present life free from injustice and impious acts and depart from it with good hope, blameless and content.

Adeimantus:: Well, that's no small thing for him to have accomplished before departing.

Socrates:: But it isn't the greatest either, since he didn't chance upon a constitution that suits him. Under a suitable one, his own growth will be fuller, and he'll save the community as well as himself. It seems to me that we've now sensibly discussed the reasons why philosophy is slandered and why the slanderer is unjust—unless, of course, you have something to add.

Adeimantus:: I have nothing to add on that point. But which of our present constitutions do you think is suitable for philosophers?

Socrates:: None of them. That's exactly my complaint: None of our present constitutions is worthy of the philosophic nature, and, as a result, this nature is perverted and altered, for, just as a foreign seed, sown in alien ground, is likely to be overcome by the native species and to fade away among them, so the philosophic nature fails to develop its full power and declines into a different character. But if it were to find the best constitution, as it is itself the best, it would be clear that it is really divine and that other natures and ways of life are merely human. Obviously you're going to ask next what the best constitution is.

Adeimantus:: You're wrong there; I wasn't going to ask that, but whether it was the constitution we described when we were founding our city or some other one.

Socrates:: In the other respects, it is that one. But we said even then that there must always be some people in the city who have a theory of the constitution, the same one that guided you, the lawgiver, when you made the laws.

Adeimantus:: We did say that.

Socrates:: Yes, but we didn't emphasize it sufficiently, for fear of what your objections have made plain, namely, that its proof would be long and difficult. And indeed what remains is by no means easy to go through.

Adeimantus:: What's that?

Socrates:: How a city can engage in philosophy without being destroyed, for all great things are prone to fall, and, as the saying goes, fine things are really hard to achieve.

Adeimantus:: Nevertheless, to complete our discussion, we'll have to get clear about this.

Socrates:: If anything prevents us from doing it, it won't be lack of willingness but lack of ability. At least you'll see how willing I am, for notice again how enthusiastically and recklessly I say that the manner in which a city ought to take up the philosophic way of life is the opposite of what it does at present.

Adeimantus:: How?

Socrates:: At present, those who study philosophy do so as young men who have just left childhood behind and have yet to take up household management and money-making. But just when they reach the hardest part—I mean the part that has to do with giving a rational account—they abandon it and are regarded as fully trained in philosophy. In later life, they think they're doing well if they are willing to be in an invited audience when others are doing philosophy, for they think they should do this only as a sideline. And, with a few exceptions, by the time they reach old age, their eagerness for philosophy is quenched more thoroughly than the sun of Heraclitus, which is never rekindled.

Adeimantus:: What should they do?

Socrates:: Entirely the opposite. As youths and children, they should put their minds to youthful education and philosophy and take care of their bodies at a time when they are growing into manhood, so as to acquire a helper for philosophy. As they grow older and their souls begin to reach maturity, they should increase their mental exercises. Then, when their strength begins to fail and they have retired from politics and military service, they should graze freely in the pastures of philosophy and do nothing else—I mean the ones who are to live happily and, in death, add a fitting destiny in that other place to the life they have lived.

Adeimantus:: You seem to be speaking with true enthusiasm, Socrates. But I'm sure that most of your hearers, beginning with Thrasymachus, will oppose you with even greater enthusiasm and not be at all convinced.

Socrates:: Don't slander Thrasymachus and me just as we've become friends—not that we were enemies before. We won't relax our efforts until we either convince him and the others or, at any rate, do something that may benefit them in a later incarnation, when, reborn, they happen upon these arguments again.

Adeimantus:: That's a short time you're talking about!

Socrates:: It's nothing compared to the whole of time. All the same, it's no wonder that the majority of people aren't convinced by our arguments, for they've never seen a man that fits our plan (and the rhymes of this sort they have heard are usually intended and not, like this one, the product of mere chance). That is to say, they've never seen a man or a number of men who themselves rhymed with virtue, were assimilated to it as far as possible, and ruled in a city of the same type. Or do you think they have?

Adeimantus:: I don't think so at all.

Socrates:: Nor have they listened sufficiently to fine and free arguments that search out the truth in every way for the sake of knowledge but that keep away from the sophistications and eristic quibbles that, both in public trials and in private gatherings, aim at nothing except reputation and disputation.

Adeimantus:: No, they haven't.

Socrates:: It was because of this, because we foresaw these difficulties, that we were afraid. Nonetheless, we were compelled by the truth to say that no city, constitution, or individual man will ever become perfect until either some chance event compels those few philosophers who aren't vicious (the ones who are now called useless) to take charge of a city, whether they want to or not, and compels the city to obey them, or until a god inspires the present rulers and kings or their offspring with a true erotic love for true philosophy. Now, it cannot be reasonably maintained, in my view, that either of these things is impossible, but if it could, we'd be justly ridiculed for indulging in wishful thinking. Isn't that so?

Adeimantus:: It is.

Socrates:: Then, if in the limitless past, those who were foremost in philosophy were forced to take charge of a city or if this is happening now in some foreign place far beyond our ken or if it will happen in the future, we are prepared to maintain our argument that, at whatever time the muse of philosophy controls a city, the constitution we've described will also exist at that time, whether it is past, present, or future. Since it is not impossible for this to happen, we are not speaking of impossibilities. That it is difficult for it to happen, however, we agree ourselves.

Adeimantus:: That's my opinion, anyway.

Socrates:: But the majority don't share your opinion—is that what you are going to say?

Adeimantus:: They probably don't.

Socrates:: You should not make such wholesale charges against the majority, for they'll no doubt come to a different opinion, if instead of indulging your love of victory at their expense, you soothe them and try to remove their slanderous prejudice against the love of learning, by pointing out what you mean by a philosopher and by defining the philosophic nature and way of life, as we did just now, so that they'll realize that you don't mean the same people as they do. And if they once see it your way, even you will say that they'll have a different opinion from the one you just attributed to them and will answer differently. Or do you think that anyone who is gentle and without malice is harsh with someone who is neither irritable nor malicious? I'll anticipate your answer and say that a few people may have such a harsh character, but not the majority.

Adeimantus:: And, of course, I agree.

Socrates:: Then don't you also agree that the harshness the majority exhibit towards philosophy is caused by those outsiders who don't belong and who've burst in like a band of revelers, always abusing one another, indulging their love of quarrels, and arguing about human beings in a way that is wholly inappropriate to philosophy?

Adeimantus:: I do indeed.

Socrates:: No one whose thoughts are truly directed towards the things that are, Adeimantus, has the leisure to look down at human affairs or to be filled with envy and hatred by competing with people. Instead, as he looks at and studies things that are organized and always the same, that neither do injustice to one another nor suffer it, being all in a rational order, he imitates them and tries to become as like them as he can. Or do you think that someone can consort with things he admires without imitating them?

Adeimantus:: I do not. It's impossible.

Socrates:: Then the philosopher, by consorting with what is ordered and divine and despite all the slanders around that say otherwise, himself becomes as divine and ordered as a human being can.

Adeimantus:: That's absolutely true.

Socrates:: And if he should come to be compelled to put what he sees there into people's characters, whether into a single person or into a populace, instead of shaping only his own, do you think that he will be a poor craftsman of moderation, justice, and the whole of popular virtue?

Adeimantus:: He least of all.

Socrates:: And when the majority realize that what we are saying about the philosopher is true, will they be harsh with him or mistrust us when we say that the city will never find happiness until its outline is sketched by painters who use the divine model?

Adeimantus:: They won't be harsh, if indeed they realize this. But what sort of sketch do you mean?

Socrates:: They' take the city and the characters of human beings as their sketching slate, but first they' wipe it clean—which isn't at all an easy thing to do. And you should know that this is the plain difference between them and others, namely, that they refuse to take either an individual or a city in hand or to write laws, unless they receive a clean slate or are allowed to clean it themselves.

Adeimantus:: And they’ be right to refuse.

Socrates:: Then don’t you think they’ next sketch the outline of the constitution?

Adeimantus:: Of course.

Socrates:: And I suppose that, as they work, they’ look often in each direction, towards the natures of justice, beauty, moderation, and the like, on the one hand, and towards those they’re trying to put into human beings, on the other. And in this way they’ mix and blend the various ways of life in the city until they produced a human image based on what Homer too called “the divine form and image” when it occurred among human beings.

Adeimantus:: That’s right.

Socrates:: They’ erase one thing, I suppose, and draw in another until they’ made characters for human beings that the gods would love as much as possible.

Adeimantus:: At any rate, that would certainly result in the finest sketch.

Socrates:: Then is this at all persuasive to those you said were straining to attack us—that the person we were praising is really a painter of constitutions? They were angry because we entrusted the city to him: Are they any calmer, now that they’ve heard what we had to say?

Adeimantus:: They’ll be much calmer, if they have any moderation.

Socrates:: Indeed, how could they possibly dispute it? Will they deny that philosophers are lovers of what is or of the truth?

Adeimantus:: That would be absurd.

Socrates:: Or that their nature as we've described it is close to the best?

Adeimantus:: They can't deny that either.

Socrates:: Or that such a nature, if it follows its own way of life, isn't as completely good and philosophic as any other? Or that the people we excluded are more so?

Adeimantus:: Certainly not.

Socrates:: Then will they still be angry when we say that, until philosophers take control of a city, there'll be no respite from evil for either city or citizens, and the constitution we've been describing in theory will never be completed in practice?

Adeimantus:: They'll probably be less angry.

Socrates:: Then if it's all right with you, let's not say that they'll simply be less angry but that they'll become altogether gentle and persuaded, so that they'll be shamed into agreeing with us, if nothing else.

Adeimantus:: It's all right with me.

Socrates:: Let's assume, therefore, that they've been convinced on this point. Will anyone dispute our view that the offspring of kings or rulers could be born with philosophic natures?

Adeimantus:: No one would do that.

Socrates:: Could anyone claim that, if such offspring are born, they'll inevitably be corrupted? We agree ourselves that it's hard for them to be saved from corruption, but could anyone claim that in the whole of time not one of them could be saved?

Adeimantus:: How could he?

Socrates:: But surely one such individual would be sufficient to bring to completion all the things that now seem so incredible, provided that his city obeys him.

Adeimantus:: One would be sufficient.

Socrates:: If a ruler established the laws and ways of life we've described, it is surely not impossible that the citizens would be willing to carry them out.

Adeimantus:: Not at all.

Socrates:: And would it be either astonishing or impossible that others should think as we do?

Adeimantus:: I don't suppose it would.

Socrates:: But I think our earlier discussion was sufficient to show that these arrangements are best, if only they are possible.

Adeimantus:: Indeed it was.

Socrates:: Then we can now conclude that this legislation is best, if only it is possible, and that, while it is hard for it to come about, it is not impossible.

Adeimantus:: We can.

Socrates:: Now that this difficulty has been disposed of, we must deal with what remains, namely, how the saviors of our constitution will come to be in the city, what subjects and ways of life will cause them to come into being, and at what ages they'll take each of them up.

Adeimantus:: Indeed we must.

Socrates:: It wasn't very clever of me to omit from our earlier discussion the troublesome topics of acquiring wives, begetting children, and appointing rulers, just because I knew that the whole truth would provoke resentment and would be hard to bring about in practice, for as it turned out, I had to go through these matters anyway. The subject of women and children has been adequately dealt with, but that of the rulers has to be taken up again from the beginning. We said, if you remember, that they must show themselves to be lovers of their city when tested by pleasure and pain and that they must hold on to their resolve through labors, fears, and all other adversities. Anyone who was incapable of doing so was to be rejected, while anyone who came through unchanged—like gold tested in a fire— was to be made ruler and receive prizes both while he lived and after his death. These were the sort of things we were saying while our argument, afraid of stirring up the very problems that now confront us, veiled its face and slipped by.

Adeimantus:: That's very true; I do remember it.

Socrates:: We hesitated to say the things we've now dared to say anyway. So let's now also dare to say that those who are to be made our guardians in the most exact sense of the term must be philosophers.

Adeimantus:: Let's do it.

Socrates:: Then you should understand that there will probably be only a few of them, for they have to have the nature we described, and its parts mostly grow in separation and are rarely found in the same person.

Adeimantus:: What do you mean?

Socrates:: You know that ease of learning, good memory, quick wits, smartness, youthful passion, high-mindedness, and all the other things that go along with these are rarely willing to grow together in a mind that will choose an orderly life that is quiet and completely stable, for the people who possess the former traits are carried by their quick wits wherever chance leads them and have no stability at all.

Adeimantus:: That's true.

Socrates:: On the other hand, people with stable characters, who don't change easily, who aren't easily frightened in battle, and whom one would employ because of their greater reliability, exhibit similar traits when it comes to learning: They are as hard to move and teach as people whose brains have become numb, and they are filled with sleep and yawning whenever they have to learn anything.

Adeimantus:: That’s so.

Socrates:: Yet we say that someone must have a fine and goodly share of both characters, or he won’t receive the truest education, honors, or rule.

Adeimantus:: That’s right.

Socrates:: Then, don’t you think that such people will be rare?

Adeimantus:: Of course.

Socrates:: Therefore they must be tested in the labors, fears, and pleasures we mentioned previously. But they must also be exercised in many other subjects—which we didn’t mention but are adding now—to see whether they can tolerate the most important subjects or will shrink from them like the cowards who shrink from other tests.

Adeimantus:: It’s appropriate to examine them like that. But what do you mean by the most important subjects?

Socrates:: Do you remember when we distinguished three parts in the soul, in order to help bring out what justice, moderation, courage, and wisdom each is?

Adeimantus:: If I didn’t remember that, it wouldn’t be just for me to hear the rest.

Socrates:: What about what preceded it?

Adeimantus:: What was that?

Socrates:: We said, I believe, that, in order to get the finest possible view of these matters, we would need to take a longer road that would make them plain to anyone who took it but that it was possible to give demonstrations of what they are that would be up to the standard of the previous argument. And you said that that would be satisfactory. So it seems to me that our discussion at that time fell short of exactness, but whether or not it satisfied you is for you to say.

Adeimantus:: I thought you gave us good measure and so, apparently, did the others.

Socrates:: Any measure of such things that falls short in any way of that which is is not good measure, for nothing incomplete is the measure of anything, although people are sometimes of the opinion that an incomplete treatment is nonetheless adequate and makes further investigation unnecessary.

Adeimantus:: Indeed, laziness causes many people to think that.

Socrates:: It is a thought that a guardian of a city and its laws can well do without.

Adeimantus:: Probably so.

Socrates:: Well, then, he must take the longer road and put as much effort into learning as into physical training, for otherwise, as we were just saying, he will never reach the goal of the most important subject and the most appropriate one for him to learn.

Adeimantus:: Aren't these virtues, then, the most important things? Is there anything even more important than justice and the other virtues we discussed?

Socrates:: There is something more important. However, even for the virtues themselves, it isn't enough to look at a mere sketch, as we did before, while neglecting the most complete account. It's ridiculous, isn't it, to strain every nerve to attain the utmost exactness and clarity about other things of little value and not to consider the most important things worthy of the greatest exactness?

Adeimantus:: It certainly is. But do you think that anyone is going to let you off without asking you what this most important subject is and what it concerns?

Socrates:: No, indeed, and you can ask me too. You've certainly heard the answer often enough, but now either you aren't thinking or you intend to make trouble for me again by interrupting. And I suspect the latter, for you've often heard it said that the form of the good is the most important thing to learn about and that it's by their relation to it that just things and the others become useful and beneficial. You know very well now that I am going to say this, and, besides, that we have no adequate knowledge of it. And you also know that, if we don't know it, even the fullest possible knowledge of other things is of no benefit to us, any more than if we acquire any possession without the good of it. Or do you think that it is any advantage to have every kind of possession without the good of it? Or to know everything except the good, thereby knowing nothing fine or good?

Adeimantus:: No, by god, I don't.

Socrates:: Furthermore, you certainly know that the majority believe that pleasure is the good, while the more sophisticated believe that it is knowledge.

Adeimantus:: Indeed I do.

Socrates:: And you know that those who believe this can't tell us what sort of knowledge it is, however, but in the end are forced to say that it is knowledge of the good.

Adeimantus:: And that's ridiculous.

Socrates:: Of course it is. They blame us for not knowing the good and then turn around and talk to us as if we did know it. They say that it is knowledge of the good—as if we understood what they're speaking about when they utter the word "good."

Adeimantus:: That’s completely true.

Socrates:: What about those who define the good as pleasure? Are they any less full of confusion than the others? Aren’t even they forced to admit that there are bad pleasures?

Adeimantus:: Most definitely.

Socrates:: So, I think, they have to agree that the same things are both good and bad. Isn’t that true?

Adeimantus:: Of course.

Socrates:: It’s clear, then, isn’t it, why there are many large controversies about this?

Adeimantus:: How could it be otherwise?

Socrates:: And isn’t this also clear? In the case of just and beautiful things, many people are content with what are believed to be so, even if they aren’t really so, and they act, acquire, and form their own beliefs on that basis. Nobody is satisfied to acquire things that are merely believed to be good, however, but everyone wants the things that really are good and disdains mere belief here.

Adeimantus:: That’s right.

Socrates:: Every soul pursues the good and does whatever it does for its sake. It divines that the good is something but it is perplexed and cannot adequately grasp what it is or acquire the sort of stable beliefs it has about other things, and so it misses the benefit, if any, that even those other things may give. Will we allow the best people in the city, to whom we entrust everything, to be so in the dark about something of this kind and of this importance?

Adeimantus:: That’s the last thing we'd do.

Socrates:: I don’t suppose, at least, that just and fine things will have acquired much of a guardian in someone who doesn’t even know in what way they are good. And I divine that no one will have adequate knowledge of them until he knows this.

Adeimantus:: You've divined well.

Socrates:: But won't our constitution be perfectly ordered, if a guardian who knows these things is in charge of it?

Adeimantus:: Necessarily. But, Socrates, you must also tell us whether you consider the good to be knowledge or pleasure or something else altogether.

Socrates:: What a man! It's been clear for some time that other people's opinions about these matters wouldn't satisfy you.

Adeimantus:: Well, Socrates, it doesn't seem right to me for you to be willing to state other people's convictions but not your own, especially when you've spent so much time occupied with these matters.

Socrates:: What? Do you think it's right to talk about things one doesn't know as if one does know them?

Adeimantus:: Not as if one knows them, but one ought to be willing to state one's opinions as such.

Socrates:: What? Haven't you noticed that opinions without knowledge are shameful and ugly things? The best of them are blind—or do you think that those who express a true opinion without understanding are any different from blind people who happen to travel the right road?

Adeimantus:: They're no different.

Socrates:: Do you want to look at shameful, blind, and crooked things, then, when you might hear illuminating and fine ones from other people?

Adeimantus:: By god, Socrates, don't desert us with the end almost in sight. We'll be satisfied if you discuss the good as you discussed justice, moderation, and the rest.

Socrates:: That, my friend, would satisfy me too, but I'm afraid that I won't be up to it and that I'll disgrace myself and look ridiculous by trying. So let's abandon the quest for what the good itself is for the time being, for even to arrive at my own view about it is too big a topic for the discussion we are now started on. But I am willing to tell you about what is apparently an offspring of the good and most like it. Is that agreeable to you, or would you rather we let the whole matter drop?

Adeimantus:: It is. The story about the father remains a debt you'll pay another time.

Socrates:: I wish that I could pay the debt in full, and you receive it instead of just the interest. So here, then, is this child and offspring of the good. But be careful that I don't somehow deceive you unintentionally by giving you an illegitimate account of the child.

Adeimantus:: We'll be as careful as possible, so speak on.

Socrates:: I will when we've come to an agreement and recalled some things that we've already said both here and many other times.

Adeimantus:: Which ones?

Socrates:: We say that there are many beautiful things and many good things, and so on for each kind, and in this way we distinguish them in words.

Adeimantus:: We do.

Socrates:: And beauty itself and good itself and all the things that we thereby set down as many, reversing ourselves, we set down according to a single form of each, believing that there is but one, and call it "the being" of each.

Adeimantus:: That's true.

Socrates:: And we say that the many beautiful things and the rest are visible but not intelligible, while the forms are intelligible but not visible.

Adeimantus:: That’s completely true.

Socrates:: With what part of ourselves do we see visible things?

Adeimantus:: With our sight.

Socrates:: And so audible things are heard by hearing, and with our other senses we perceive all the other perceptible things.

Adeimantus:: That’s right.

Socrates:: Have you considered how lavish the maker of our senses was in making the power to see and be seen?

Adeimantus:: I can’t say I have.

Socrates:: Well, consider it this way. Do hearing and sound need another kind of thing in order for the former to hear and the latter to be heard, a third thing in whose absence the one won’t hear or the other be heard?

Adeimantus:: No, they need nothing else.

Socrates:: And if there are any others that need such a thing, there can’t be many of them. Can you think of one?

Adeimantus:: I can’t.

Socrates:: You don’t realize that sight and the visible have such a need?

Adeimantus:: How so?

Socrates:: Sight may be present in the eyes, and the one who has it may try to use it, and colors may be present in things, but unless a third kind of thing is present, which is naturally adapted for this very purpose, you know that sight will see nothing, and the colors will remain unseen.

Adeimantus:: What kind of thing do you mean?

Socrates:: I mean what you call light.

Adeimantus:: You're right.

Socrates:: Then it isn't an insignificant kind of link that connects the sense of sight and the power to be seen—it is a more valuable link than any other linked things have got, if indeed light is something valuable.

Adeimantus:: And, of course, it's very valuable.

Socrates:: Which of the gods in heaven would you name as the cause and controller of this, the one whose light causes our sight to see in the best way and the visible things to be seen?

Adeimantus:: The same one you and others would name. Obviously, the answer to your question is the sun.

Socrates:: And isn't sight by nature related to that god in this way?

Adeimantus:: Which way?

Socrates:: Sight isn't the sun, neither sight itself nor that in which it comes to be, namely, the eye.

Adeimantus:: No, it certainly isn't.

Socrates:: But I think that it is the most sun like of the senses.

Adeimantus:: Very much so.

Socrates:: And it receives from the sun the power it has, just like an influx from an overflowing treasury.

Adeimantus:: Certainly.

Socrates:: The sun is not sight, but isn't it the cause of sight itself and seen by it?

Adeimantus:: That's right.

Socrates:: Let's say, then, that this is what I called the offspring of the good, which the good begot as its analogue. What the good itself is in the intelligible realm, in relation to understanding and intelligible things, the sun is in the visible realm, in relation to sight and visible things.

Adeimantus:: How? Explain a bit more.

Socrates:: You know that, when we turn our eyes to things whose colors are no longer in the light of day but in the gloom of night, the eyes are dimmed and seem nearly blind, as if clear vision were no longer in them.

Adeimantus:: Of course.

Socrates:: Yet whenever one turns them on things illuminated by the sun, they see clearly, and vision appears in those very same eyes?

Adeimantus:: Indeed.

Socrates:: Well, understand the soul in the same way: When it focuses on something illuminated by truth and what is, it understands, knows, and apparently possesses understanding, but when it focuses on what is mixed with obscurity, on what comes to be and passes away, it opines and is dimmed, changes its opinions this way and that, and seems bereft of understanding.

Adeimantus:: It does seem that way.

Socrates:: So that what gives truth to the things known and the power to know to the knower is the form of the good. And though it is the cause of knowledge and truth, it is also an object of knowledge. Both knowledge and truth are beautiful things, but the good is other and more beautiful than they. In the visible realm, light and sight are rightly considered sun like, but it is wrong to think that they are the sun, so here it is right to think of knowledge and truth as good-like but wrong to think that either of them is the good—for the good is yet more prized.

Adeimantus:: This is an inconceivably beautiful thing you're talking about, if it provides both knowledge and truth and is superior to them in beauty. You surely don't think that a thing like that could be pleasure.

Socrates:: Hush! Let's examine its image in more detail as follows.

Adeimantus:: How?

Socrates:: You'll be willing to say, I think, that the sun not only provides visible things with the power to be seen but also with coming to be, growth, and nourishment, although it is not itself coming to be.

Adeimantus:: How could it be?

Socrates:: Therefore, you should also say that not only do the objects of knowledge owe their being known to the good, but their being is also due to it, although the good is not being, but superior to it in rank and power.

And Glaucon comically said:

Glaucon:: By Apollo, what a daemonic superiority!

Socrates:: It's your own fault; you forced me to tell you my opinion about it.

Glaucon:: And I don't want you to stop either. So continue to explain its similarity to the sun, if you've omitted anything.

Socrates:: I'm certainly omitting a lot.

Glaucon:: Well, don't, not even the smallest thing.

Socrates:: I think I'll have to omit a fair bit, but, as far as is possible at the moment, I won't omit anything voluntarily.

Glaucon:: Don't.

Socrates:: Understand, then, that, as we said, there are these two things, one sovereign of the intelligible kind and place, the other of the visible (I don't say "of heaven" so as not to seem to you to be playing the sophist with the name). In any case, you have two kinds of thing, visible and intelligible.

Glaucon:: Right.

Socrates:: It is like a line divided into two unequal sections. Then divide each section—namely, that of the visible and that of the intelligible—in the same ratio as the line. In terms now of relative clarity and opacity, one subsection of the visible consists of images. And by images I mean, first, shadows, then reflections in water and in all close-packed, smooth, and shiny materials, and everything of that sort, if you understand.

Glaucon:: I do.

Socrates:: In the other subsection of the visible, put the originals of these images, namely, the animals around us, all the plants, and the whole class of manufactured things.

Glaucon:: Consider them put.

Socrates:: Would you be willing to say that, as regards truth and untruth, the division is in this proportion: As the opinable is to the knowable, so the likeness is to the thing that it is like?

Glaucon:: Certainly.

Socrates:: Consider now how the section of the intelligible is to be divided.

Glaucon:: How?

Socrates:: As follows: In one subsection, the soul, using as images the things that were imitated before, is forced to investigate from hypotheses, proceeding not to a first principle but to a conclusion. In the other subsection, however, it makes its way to a first principle that is not a hypothesis, proceeding from a hypothesis but without the images used in the previous subsection, using forms themselves and making its investigation through them.

Glaucon:: I don’t yet fully understand what you mean.

Socrates:: Let’s try again. You’ll understand it more easily after the following preamble. I think you know that students of geometry, calculation, and the like hypothesize the odd and the even, the various figures, the three kinds of angles, and other things akin to these in each of their investigations, as if they knew them. They make these their hypotheses and don’t think it necessary to give any account of them, either to themselves or to others, as if they were clear to everyone. And going from these first principles through the remaining steps, they arrive in full agreement.

Glaucon:: I certainly know that much.

Socrates:: Then you also know that, although they use visible figures and make claims about them, their thought isn’t directed to them but to those other things that they are like. They make their claims for the sake of square itself and the diagonal itself, not the diagonal they draw, and similarly with the others. These figures that they make and draw, of which shadows and reflections in water are images, they now in turn use as images, in seeking to see those others themselves that one cannot see except by means of thought.

Glaucon:: That’s true.

Socrates:: This, then, is the kind of thing that, on the one hand, I said is intelligible, and, on the other, is such that the soul is forced to use hypotheses in the investigation of it, not travelling up to a first principle, since it cannot reach beyond its hypotheses, but using as images those very things of which images were made in the section below, and which, by comparison to their images, were thought to be clear and to be valued as such.

Glaucon:: I understand that you mean what happens in geometry and related sciences.

Socrates:: Then also understand that, by the other subsection of the intelligible, I mean that which reason itself grasps by the power of dialectic. It does not consider these hypotheses as first principles but truly as hypotheses—but as stepping stones to take off from, enabling it to reach the unhypothetical first principle of everything. Having grasped this principle, it reverses itself and, keeping hold of what follows from it, comes down to a conclusion without making use of anything visible at all, but only of forms themselves, moving on from forms to forms, and ending in forms.

Glaucon:: I understand, if not yet adequately (for in my opinion you're speaking of an enormous task), that you want to distinguish the intelligible part of that which is, the part studied by the science of dialectic, as clearer than the part studied by the so-called sciences, for which their hypotheses are first principles. And although those who study the objects of these sciences are forced to do so by means of thought rather than sense perception, still, because they do not go back to a genuine first principle, but proceed from hypotheses, you don't think that they understand them, even though, given such a principle, they are intelligible. And you seem to me to call the state of the geometers thought but not understanding, thought being intermediate between opinion and understanding.

Socrates:: Your exposition is most adequate. Thus there are four such conditions in the soul, corresponding to the four subsections of our line: Understanding for the highest, thought for the second, belief for the third, and imaging for the last. Arrange them in a ratio, and consider that each shares in clarity to the degree that the subsection it is set over shares in truth.

Glaucon:: I understand, agree, and arrange them as you say.

## Book 7

Socrates:: Next, compare the effect of education and of the lack of it on our nature to an experience like this: Imagine human beings living in an underground, cave-like dwelling, with an entrance a long way up, which is both open to the light and as wide as the cave itself. They’ve been there since childhood, fixed in the same place, with their necks and legs fettered, able to see only in front of them, because their bonds prevent them from turning their heads around. Light is provided by a fire burning far above and behind them. Also behind them, but on higher ground, there is a path stretching between them and the fire. Imagine that along this path a low wall has been built, like the screen in front of puppeteers above which they show their puppets.

Glaucon:: I’m imagining it.

Socrates:: Then also imagine that there are people along the wall, carrying all kinds of artifacts that project above it—statues of people and other animals, made out of stone, wood, and every material. And, as you'd expect, some of the carriers are talking, and some are silent.

Glaucon:: It’s a strange image you’re describing, and strange prisoners.

Socrates:: They’re like us. Do you suppose, first of all, that these prisoners see anything of themselves and one another besides the shadows that the fire casts on the wall in front of them?

Glaucon:: How could they, if they have to keep their heads motionless throughout life?

Socrates:: What about the things being carried along the wall? Isn’t the same true of them?

Glaucon:: Of course.

Socrates:: And if they could talk to one another, don’t you think they’ suppose that the names they used applied to the things they see passing before them?

Glaucon:: They’ have to.

Socrates:: And what if their prison also had an echo from the wall facing them? Don’t you think they’ believe that the shadows passing in front of them were talking whenever one of the carriers passing along the wall was doing so?

Glaucon:: I certainly do.

Socrates:: Then the prisoners would in every way believe that the truth is nothing other than the shadows of those artifacts.

Glaucon:: They must surely believe that.

Socrates:: Consider, then, what being released from their bonds and cured of their ignorance would naturally be like, if something like this came to pass. When one of them was freed and suddenly compelled to stand up, turn his head, walk, and look up toward the light, he'd be pained and dazzled and unable to see the things whose shadows he'd seen before. What do you think he'd say, if we told him that what he'd seen before was inconsequential, but that now—because he is a bit closer to the things that are and is turned towards things that are more—he sees more correctly? Or, to put it another way, if we pointed to each of the things passing by, asked him what each of them is, and compelled him to answer, don’t you think he'd be at a loss and that he'd believe that the things he saw earlier were truer than the ones he was now being shown?

Glaucon:: Much truer.

Socrates:: And if someone compelled him to look at the light itself, wouldn’t his eyes hurt, and wouldn’t he turn around and flee towards the things he’s able to see, believing that they’re really clearer than the ones he’s being shown?

Glaucon:: He would.

Socrates:: And if someone dragged him away from there by force, up the rough, steep path, and didn’t let him go until he had dragged him into the sunlight, wouldn’t he be pained and irritated at being treated that way? And when he came into the light, with the sun filling his eyes, wouldn’t he be unable to see a single one of the things now said to be true?

Glaucon:: He would be unable to see them, at least at first.

Socrates:: I suppose, then, that he'd need time to get adjusted before he could see things in the world above. At first, he'd see shadows most easily, then images of men and other things in water, then the things themselves. Of these, he'd be able to study the things in the sky and the sky itself more easily at night, looking at the light of the stars and the moon, than during the day, looking at the sun and the light of the sun.

Glaucon:: Of course.

Socrates:: Finally, I suppose, he'd be able to see the sun, not images of it in water or some alien place, but the sun itself, in its own place, and be able to study it.

Glaucon:: Necessarily so.

Socrates:: And at this point he would infer and conclude that the sun provides the seasons and the years, governs everything in the visible world, and is in some way the cause of all the things that he used to see.

Glaucon:: It’s clear that would be his next step.

Socrates:: What about when he reminds himself of his first dwelling place, his fellow prisoners, and what passed for wisdom there? Don’t you think that he'd count himself happy for the change and pity the others?

Glaucon:: Certainly.

Socrates:: And if there had been any honors, praises, or prizes among them for the one who was sharpest at identifying the shadows as they passed by and who best remembered which usually came earlier, which later, and which simultaneously, and who could thus best divine the future, do you think that our man would desire these rewards or envy those among the prisoners who were honored and held power? Instead, wouldn’t he feel, with Homer, that he'd much prefer to “work the earth as a serf to another, one without possessions,” and go through any sufferings, rather than share their opinions and live as they do?

Glaucon:: I suppose he would rather suffer anything than live like that.

Socrates:: Consider this too. If this man went down into the cave again and sat down in his same seat, wouldn’t his eyes—coming suddenly out of the sun like that—be filled with darkness?

Glaucon:: They certainly would.

Socrates:: And before his eyes had recovered—and the adjustment would not be quick—while his vision was still dim, if he had to compete again with the perpetual prisoners in recognizing the shadows, wouldn’t he invite ridicule? Wouldn’t it be said of him that he'd returned from his upward journey with his eyesight ruined and that it isn’t worthwhile even to try to travel upward? And, as for anyone who tried to free them and lead them upward, if they could somehow get their hands on him, wouldn't they kill him?

Glaucon:: They certainly would.

Socrates:: This whole image, Glaucon, must be fitted together with what we said before. The visible realm should be likened to the prison dwelling, and the light of the fire inside it to the power of the sun. And if you interpret the upward journey and the study of things above as the upward journey of the soul to the intelligible realm, you'll grasp what I hope to convey, since that is what you wanted to hear about. Whether it's true or not, only the god knows. But this is how I see it: In the knowable realm, the form of the good is the last thing to be seen, and it is reached only with difficulty. Once one has seen it, however, one must conclude that it is the cause of all that is correct and beautiful in anything, that it produces both light and its source in the visible realm, and that in the intelligible realm it controls and provides truth and understanding, so that anyone who is to act sensibly in private or public must see it.

Glaucon:: I have the same thought, at least as far as I'm able.

Socrates:: Come, then, share with me this thought also: It isn't surprising that the ones who get to this point are unwilling to occupy themselves with human affairs and that their souls are always pressing upwards, eager to spend their time above, for, after all, this is surely what we'd expect, if indeed things fit the image I described before.

Glaucon:: It is.

Socrates:: What about what happens when someone turns from divine study to the evils of human life? Do you think it's surprising, since his sight is still dim, and he hasn’t yet become accustomed to the darkness around him, that he behaves awkwardly and appears completely ridiculous if he’s compelled, either in the courts or elsewhere, to contend about the shadows of justice or the statues of which they are the shadows and to dispute about the way these things are understood by people who have never seen justice itself?

Glaucon:: That’s not surprising at all.

Socrates:: No, it isn’t. But anyone with any understanding would remember that the eyes may be confused in two ways and from two causes, namely, when they’ve come from the light into the darkness and when they’ve come from the darkness into the light. Realizing that the same applies to the soul, when someone sees a soul disturbed and unable to see something, he won’t laugh mindlessly, but he’ll take into consideration whether it has come from a brighter life and is dimmed through not having yet become accustomed to the dark or whether it has come from greater ignorance into greater light and is dazzled by the increased brilliance. Then he’ll declare the first soul happy in its experience and life, and he’ll pity the latter—but even if he chose to make fun of it, at least he'd be less ridiculous than if he laughed at a soul that has come from the light above.

Glaucon:: What you say is very reasonable.

Socrates:: If that’s true, then here’s what we must think about these matters: Education isn’t what some people declare it to be, namely, putting knowledge into souls that lack it, like putting sight into blind eyes.

Glaucon:: They do say that.

Socrates:: But our present discussion, on the other hand, shows that the power to learn is present in everyone’s soul and that the instrument with which each learns is like an eye that cannot be turned around from darkness to light without turning the whole body. This instrument cannot be turned around from that which is coming into being without turning the whole soul until it is able to study that which is and the brightest thing that is, namely, the one we call the good. Isn't that right?

Glaucon:: Yes.

Socrates:: Then education is the craft concerned with doing this very thing, this turning around, and with how the soul can most easily and effectively be made to do it. It isn't the craft of putting sight into the soul. Education takes for granted that sight is there but that it isn't turned the right way or looking where it ought to look, and it tries to redirect it appropriately.

Glaucon:: So it seems.

Socrates:: Now, it looks as though the other so-called virtues of the soul are akin to those of the body, for they really aren't there beforehand but are added later by habit and practice. However, the virtue of reason seems to belong above all to something more divine, which never loses its power but is either useful and beneficial or useless and harmful, depending on the way it is turned. Or have you never noticed this about people who are said to be vicious but clever, how keen the vision of their little souls is and how sharply it distinguishes the things it is turned towards? This shows that its sight isn't inferior but rather is forced to serve evil ends, so that the sharper it sees, the more evil it accomplishes.

Glaucon:: Absolutely.

Socrates:: However, if a nature of this sort had been hammered at from childhood and freed from the bonds of kinship with becoming, which have been fastened to it by feasting, greed, and other such pleasures and which, like leaden weights, pull its vision downwards—if, being rid of these, it turned to look at true things, then I say that the same soul of the same person would see these most sharply, just as it now does the things it is presently turned towards.

Glaucon:: Probably so.

Socrates:: And what about the uneducated who have no experience of truth? Isn't it likely—indeed, doesn't it follow necessarily from what was said before— that they will never adequately govern a city? But neither would those who've been allowed to spend their whole lives being educated. The former would fail because they don't have a single goal at which all their actions, public and private, inevitably aim; the latter would fail because they' refuse to act, thinking that they had settled while still alive in the faraway Isles of the Blessed.

Glaucon:: That's true.

Socrates:: It is our task as founders, then, to compel the best natures to reach the study we said before is the most important, namely, to make the ascent and see the good. But when they've made it and looked sufficiently, we mustn't allow them to do what they're allowed to do today.

Glaucon:: What's that?

Socrates:: To stay there and refuse to go down again to the prisoners in the cave and share their labors and honors, whether they are of less worth or of greater.

Glaucon:: Then are we to do them an injustice by making them live a worse life when they could live a better one?

Socrates:: You are forgetting again that it isn't the law's concern to make any one class in the city outstandingly happy but to contrive to spread happiness throughout the city by bringing the citizens into harmony with each other through persuasion or compulsion and by making them share with each other the benefits that each class can confer on the community. The law produces such people in the city, not in order to allow them to turn in whatever direction they want, but to make use of them to bind the city together.

Glaucon:: That's true, I had forgotten.

Socrates:: Observe, then, Glaucon, that we won't be doing an injustice to those who've become philosophers in our city and that what we'll say to them, when we compel them to guard and care for the others, will be just. We'll say: "When people like you come to be in other cities, they're justified in not sharing in their city's labors, for they've grown there spontaneously, against the will of the constitution. And what grows of its own accord and owes no debt for its upbringing has justice on its side when it isn't keen to pay anyone for that upbringing. But we've made you kings in our city and leaders of the swarm, as it were, both for yourselves and for the rest of the city. You're better and more completely educated than the others and are better able to share in both types of life. Therefore each of you in turn must go down to live in the common dwelling place of the others and grow accustomed to seeing in the dark. When you are used to it, you'll see vastly better than the people there. And because you've seen the truth about fine, just, and good things, you'll know each image for what it is and also that of which it is the image. Thus, for you and for us, the city will be governed, not like the majority of cities nowadays, by people who fight over shadows and struggle against one another in order to rule—as if that were a great good—but by people who are awake rather than dreaming, for the truth is surely this: A city whose prospective rulers are least eager to rule must of necessity be most free from civil war, whereas a city with the opposite kind of rulers is governed in the opposite way.”

Glaucon:: Absolutely.

Socrates:: Then do you think that those we’ve nurtured will disobey us and refuse to share the labors of the city, each in turn, while living the greater part of their time with one another in the pure realm?

Glaucon:: It isn’t possible, for we’ll be giving just orders to just people. Each of them will certainly go to rule as to something compulsory, however, which is exactly the opposite of what’s done by those who now rule in each city.

Socrates:: This is how it is. If you can find a way of life that’s better than ruling for the prospective rulers, your well-governed city will become a possibility, for only in it will the truly rich rule—not those who are rich in gold but those who are rich in the wealth that the happy must have, namely, a good and rational life. But if beggars hungry for private goods go into public life, thinking that the good is there for the seizing, then the well-governed city is impossible, for then ruling is something fought over, and this civil and domestic war destroys these people and the rest of the city as well.

Glaucon:: That’s very true.

Socrates:: Can you name any life that despises political rule besides that of the true philosopher?

Glaucon:: No, by god, I can’t.

Socrates:: But surely it is those who are not lovers of ruling who must rule, for if they don’t, the lovers of it, who are rivals, will fight over it.

Glaucon:: Of course.

Socrates:: Then who will you compel to become guardians of the city, if not those who have the best understanding of what matters for good government and who have other honors than political ones, and a better life as well?

Glaucon:: No one.

Socrates:: Do you want us to consider now how such people will come to be in our city and how—just as some are said to have gone up from Hades to the gods—we'll lead them up to the light?

Glaucon:: Of course I do.

Socrates:: This isn't, it seems, a matter of tossing a coin, but of turning a soul from a day that is a kind of night to the true day—the ascent to what is, which we say is true philosophy.

Glaucon:: Indeed.

Socrates:: Then mustn't we try to discover the subjects that have the power to bring this about?

Glaucon:: Of course.

Socrates:: So what subject is it, Glaucon, that draws the soul from the realm of becoming to the realm of what is? And it occurs to me as I'm speaking that we said, didn't we, that it is necessary for the prospective rulers to be athletes in war when they're young?

Glaucon:: Yes, we did.

Socrates:: Then the subject we're looking for must also have this characteristic in addition to the former one.

Glaucon:: Which one?

Socrates:: It mustn't be useless to warlike men.

Glaucon:: If it's at all possible, it mustn't.

Socrates:: Now, prior to this, we educated them in music and poetry and physical training.

Glaucon:: We did.

Socrates:: And physical training is concerned with what comes into being and dies, for it oversees the growth and decay of the body.

Glaucon:: Apparently.

Socrates:: So it couldn’t be the subject we’re looking for.

Glaucon:: No, it couldn’t.

Socrates:: Then, could it be the music and poetry we described before?

Glaucon:: But that, if you remember, is just the counterpart of physical training. It educated the guardians through habits. Its harmonies gave them a certain harmoniousness, not knowledge; its rhythms gave them a certain rhythmical quality; and its stories, whether fictional or nearer the truth, cultivated other habits akin to these. But as for the subject you’re looking for now, there’s nothing like that in music and poetry.

Socrates:: Your reminder is exactly to the point; there’s really nothing like that in music and poetry. But, Glaucon, what is there that does have this? The crafts all seem to be base or mechanical.

Glaucon:: How could they be otherwise? But apart from music and poetry, physical training, and the crafts, what subject is left?

Socrates:: Well, if we can’t find anything apart from these, let’s consider one of the subjects that touches all of them.

Glaucon:: What sort of thing?

Socrates:: For example, that common thing that every craft, every type of thought, and every science uses and that is among the first compulsory subjects for everyone.

Glaucon:: What’s that?

Socrates:: That inconsequential matter of distinguishing the one, the two, and the three. In short, I mean number and calculation, for isn't it true that every craft and science must have a share in that?

Glaucon:: They certainly must.

Socrates:: Then so must warfare.

Glaucon:: Absolutely.

Socrates:: In the tragedies, at any rate, Palamedes is always showing up Agamemnon as a totally ridiculous general. Haven't you noticed? He says that, by inventing numbers, he established how many troops there were in the Trojan army and counted their ships and everything else—implying that they were uncounted before and that Agamemnon (if indeed he didn't know how to count) didn't even know how many feet he had? What kind of general do you think that made him?

Glaucon:: A very strange one, if that's true.

Socrates:: Then won't we set down this subject as compulsory for a warrior, so that he is able to count and calculate?

Glaucon:: More compulsory than anything. If, that is, he's to understand anything about setting his troops in order or if he's even to be properly human.

Socrates:: Then do you notice the same thing about this subject that I do?

Glaucon:: What's that?

Socrates:: That this turns out to be one of the subjects we were looking for that naturally lead to understanding. But no one uses it correctly, namely, as something that is really fitted in every way to draw one towards being.

Glaucon:: What do you mean?

Socrates:: I'll try to make my view clear as follows: I'll distinguish for myself the things that do or don't lead in the direction we mentioned, and you must study them along with me and either agree or disagree, and that way we may come to know more clearly whether things are indeed as I divine.

Glaucon:: Point them out.

Socrates:: I'll point out, then, if you can grasp it, that some sense perceptions don't summon the understanding to look into them, because the judgment of sense perception is itself adequate, while others encourage it in every way to look into them, because sense perception seems to produce no sound result.

Glaucon:: You're obviously referring to things appearing in the distance and to *trompe l'oeil* paintings.

Socrates:: You're not quite getting my meaning.

Glaucon:: Then what do you mean?

Socrates:: The ones that don't summon the understanding are all those that don't go off into opposite perceptions at the same time. But the ones that do go off in that way I call summoners—whenever sense perception doesn't declare one thing any more than its opposite, no matter whether the object striking the senses is near at hand or far away. You'll understand my meaning better if I put it this way: These, we say, are three fingers—the smallest, the second, and the middle finger.

Glaucon:: That's right.

Socrates:: Assume that I'm talking about them as being seen from close by. Now, this is my question about them.

Glaucon:: What?

Socrates:: It's apparent that each of them is equally a finger, and it makes no difference in this regard whether the finger is seen to be in the middle or at either end, whether it is dark or pale, thick or thin, or anything else of that sort, for in all these cases, an ordinary soul isn’t compelled to ask the understanding what a finger is, since sight doesn’t suggest to it that a finger is at the same time the opposite of a finger.

Glaucon:: No, it doesn’t.

Socrates:: Therefore, it isn’t likely that anything of that sort would summon or awaken the understanding.

Glaucon:: No, it isn’t.

Socrates:: But what about the bigness and smallness of fingers? Does sight perceive them adequately? Does it make no difference to it whether the finger is in the middle or at the end? And is it the same with the sense of touch, as regards the thick and the thin, the hard and the soft? And do the other senses reveal such things clearly and adequately? Doesn’t each of them rather do the following: The sense set over the hard is, in the first place, of necessity also set over the soft, and it reports to the soul that the same thing is perceived by it to be both hard and soft?

Glaucon:: That’s right.

Socrates:: And isn’t it necessary that in such cases the soul is puzzled as to what this sense means by the hard, if it indicates that the same thing is also soft, or what it means by the light and the heavy, if it indicates that the heavy is light, or the light, heavy?

Glaucon:: Yes, indeed, these are strange reports for the soul to receive, and they do demand to be looked into.

Socrates:: Then it’s likely that in such cases the soul, summoning calculation and understanding, first tries to determine whether each of the things announced to it is one or two.

Glaucon:: Of course.

Socrates:: If it's evidently two, won't each be evidently distinct and one?

Glaucon:: Yes.

Socrates:: Then, if each is one, and both two, the soul will understand that the two are separate, for it wouldn't understand the inseparable to be two, but rather one.

Glaucon:: That's right.

Socrates:: Sight, however, saw the big and small, not as separate, but as mixed up together. Isn't that so?

Glaucon:: Yes.

Socrates:: And in order to get clear about all this, understanding was compelled to see the big and the small, not as mixed up together, but as separate— the opposite way from sight.

Glaucon:: True.

Socrates:: And isn't it from these cases that it first occurs to us to ask what the big is and what the small is?

Glaucon:: Absolutely.

Socrates:: And, because of this, we called the one the intelligible and the other the visible.

Glaucon:: That's right.

Socrates:: This, then, is what I was trying to express before, when I said that some things summon thought, while others don't. Those that strike the relevant sense at the same time as their opposites I call summoners, those that don't do this do not awaken understanding.

Glaucon:: Now I understand, and I think you're right.

Socrates:: Well, then, to which of them do number and the one belong?

Glaucon:: I don't know.

Socrates:: Reason it out from what was said before. If the one is adequately seen itself by itself or is so perceived by any of the other senses, then, as we were saying in the case of fingers, it wouldn't draw the soul towards being. But if something opposite to it is always seen at the same time, so that nothing is apparently any more one than the opposite of one, then something would be needed to judge the matter. The soul would then be puzzled, would look for an answer, would stir up its understanding, and would ask what the one itself is. And so this would be among the subjects that lead the soul and turn it around towards the study of that which is.

Glaucon:: But surely the sight of the one does possess this characteristic to a remarkable degree, for we see the same thing to be both one and an unlimited number at the same time.

Socrates:: Then, if this is true of the one, won't it also be true of all numbers?

Glaucon:: Of course.

Socrates:: Now, calculation and arithmetic are wholly concerned with numbers.

Glaucon:: That's right.

Socrates:: Then evidently they lead us towards truth.

Glaucon:: Super naturally so.

Socrates:: Then they belong, it seems, to the subjects we're seeking. They are compulsory for warriors because of their orderly ranks and for philosophers because they have to learn to rise up out of becoming and grasp being, if they are ever to become rational.

Glaucon:: That's right.

Socrates:: And our guardian must be both a warrior and a philosopher.

Glaucon:: Certainly.

Socrates:: Then it would be appropriate, Glaucon, to legislate this subject for those who are going to share in the highest offices in the city and to persuade them to turn to calculation and take it up, not as laymen do, but staying with it until they reach the study of the natures of the numbers by means of understanding itself, nor like tradesmen and retailers, for the sake of buying and selling, but for the sake of war and for ease in turning the soul around, away from becoming and towards truth and being.

Glaucon:: Well put.

Socrates:: Moreover, it strikes me, now that it has been mentioned, how sophisticated the subject of calculation is and in how many ways it is useful for our purposes, provided that one practices it for the sake of knowing rather than trading.

Glaucon:: How is it useful?

Socrates:: In the very way we were talking about. It leads the soul forcibly upward and compels it to discuss the numbers themselves, never permitting anyone to propose for discussion numbers attached to visible or tangible bodies. You know what those who are clever in these matters are like: If, in the course of the argument, someone tries to divide the one itself, they laugh and won't permit it. If you divide it, they multiply it, taking care that one thing never be found to be many parts rather than one.

Glaucon:: That's very true.

Socrates:: Then what do you think would happen, Glaucon, if someone were to ask them: "What kind of numbers are you talking about, in which the one is as you assume it to be, each one equal to every other, without the least difference and containing no internal parts?"

Glaucon:: I think they' answer that they are talking about those numbers that can be grasped only in thought and can't be dealt with in any other way.

Socrates:: Then do you see that it's likely that this subject really is compulsory for us, since it apparently compels the soul to use understanding itself on the truth itself?

Glaucon:: Indeed, it most certainly does do that.

Socrates:: And what about those who are naturally good at calculation or reasoning? Have you already noticed that they're naturally sharp, so to speak, in all subjects, and that those who are slow at it, if they're educated and exercised in it, even if they're benefited in no other way, nonetheless improve and become generally sharper than they were?

Glaucon:: That's true.

Socrates:: Moreover, I don't think you'll easily find subjects that are harder to learn or practice than this.

Glaucon:: No, indeed.

Socrates:: Then, for all these reasons, this subject isn't to be neglected, and the best natures must be educated in it.

Glaucon:: I agree.

Socrates:: Let that, then, be one of our subjects. Second, let's consider whether the subject that comes next is also appropriate for our purposes.

Glaucon:: What subject is that? Do you mean geometry?

Socrates:: That's the very one I had in mind.

Glaucon:: Insofar as it pertains to war, it's obviously appropriate, for when it comes to setting up camp, occupying a region, concentrating troops, deploying them, or with regard to any of the other formations an army adopts in battle or on the march, it makes all the difference whether someone is a geometer or not.

Socrates:: But, for things like that, even a little geometry—or calculation for that matter—would suffice. What we need to consider is whether the greater and more advanced part of it tends to make it easier to see the form of the good. And we say that anything has that tendency if it compels the soul to turn itself around towards the region in which lies the happiest of the things that are, the one the soul must see at any cost.

Glaucon:: You're right.

Socrates:: Therefore, if geometry compels the soul to study being, it's appropriate, but if it compels it to study becoming, it's inappropriate.

Glaucon:: So we've said, at any rate.

Socrates:: Now, no one with even a little experience of geometry will dispute that this science is entirely the opposite of what is said about it in the accounts of its practitioners.

Glaucon:: How do you mean?

Socrates:: They give ridiculous accounts of it, though they can't help it, for they speak like practical men, and all their accounts refer to doing things. They talk of "squaring," "applying," "adding," and the like, whereas the entire subject is pursued for the sake of knowledge.

Glaucon:: Absolutely.

Socrates:: And mustn't we also agree on a further point?

Glaucon:: What is that?

Socrates:: That their accounts are for the sake of knowing what always is, not what comes into being and passes away.

Glaucon:: That’s easy to agree to, for geometry is knowledge of what always is.

Socrates:: Then it draws the soul towards truth and produces philosophic thought by directing upwards what we now wrongly direct downwards.

Glaucon:: As far as anything possibly can.

Socrates:: Then as far as we possibly can, we must require those in your fine city not to neglect geometry in any way, for even its by-products are not insignificant.

Glaucon:: What are they?

Socrates:: The ones concerned with war that you mentioned. But we also surely know that, when it comes to better understanding any subject, there is a world of difference between someone who has grasped geometry and someone who hasn’t.

Glaucon:: Yes, by god, a world of difference.

Socrates:: Then shall we set this down as a second subject for the young?

Glaucon:: Let’s do so.

Socrates:: And what about astronomy? Shall we make it the third? Or do you disagree?

Glaucon:: That’s fine with me, for a better awareness of the seasons, months, and years is no less appropriate for a general than for a farmer or navigator.

Socrates:: You amuse me: You’re like someone who’s afraid that the majority will think he is prescribing useless subjects. It’s no easy task—indeed it’s very difficult—to realize that in every soul there is an instrument that is purified and rekindled by such subjects when it has been blinded and destroyed by other ways of life, an instrument that it is more important to preserve than ten thousand eyes, since only with it can the truth be seen. Those who share your belief that this is so will think you're speaking incredibly well, while those who've never been aware of it will probably think you're talking nonsense, since they see no benefit worth mentioning in these subjects. So decide right now which group you're addressing. Or are your arguments for neither of them but mostly for your own sake—though you won't begrudge anyone else whatever benefit he's able to get from them?

Glaucon:: The latter: I want to speak, question, and answer mostly for my own sake.

Socrates:: Then let's fall back to our earlier position, for we were wrong just now about the subject that comes after geometry.

Glaucon:: What was our error?

Socrates:: After plane surfaces, we went on to revolving solids before dealing with solids by themselves. But the right thing to do is to take up the third dimension right after the second. And this, I suppose, consists of cubes and of whatever shares in depth.

Glaucon:: You're right, Socrates, but this subject hasn't been developed yet.

Socrates:: There are two reasons for that: First, because no city values it, this difficult subject is little researched. Second, the researchers need a director, for, without one, they won't discover anything. To begin with, such a director is hard to find, and, then, even if he could be found, those who currently do research in this field would be too arrogant to follow him. If an entire city helped him to supervise it, however, and took the lead in valuing it, then he would be followed. And, if the subject was consistently and vigorously pursued, it would soon be developed. Even now, when it isn't valued and is held in contempt by the majority and is pursued by researchers who are unable to give an account of its usefulness, nevertheless, in spite of all these handicaps, the force of its charm has caused it to develop somewhat, so that it wouldn't be surprising if it were further developed even as things stand.

Glaucon:: The subject has outstanding charm. But explain more clearly what you were saying just now. The subject that deals with plane surfaces you took to be geometry.

Socrates:: Yes.

Glaucon:: And at first you put astronomy after it, but later you went back on that.

Socrates:: In my haste to go through them all, I've only progressed more slowly. The subject dealing with the dimension of depth was next. But because it is in a ridiculous state, I passed it by and spoke of astronomy (which deals with the motion of things having depth) after geometry.

Glaucon:: That's right.

Socrates:: Let's then put astronomy as the fourth subject, on the assumption that solid geometry will be available if a city takes it up.

Glaucon:: That seems reasonable. And since you reproached me before for praising astronomy in a vulgar manner, I'll now praise it your way, for I think it's clear to everyone that astronomy compels the soul to look upward and leads it from things here to things there.

Socrates:: It may be obvious to everyone except me, but that's not my view about it.

Glaucon:: Then what is your view?

Socrates:: As it's practiced today by those who teach philosophy, it makes the soul look very much downward.

Glaucon:: How do you mean?

Socrates:: In my opinion, your conception of “higher studies” is a good deal too generous, for if someone were to study something by leaning his head back and studying ornaments on a ceiling, it looks as though you'd say he’s studying not with his eyes but with his understanding. Perhaps you’re right, and I’m foolish, but I can’t conceive of any subject making the soul look upward except one concerned with that which is, and that which is is invisible. If anyone attempts to learn something about sensible things, whether by gaping upward or squinting downward, I'd claim—since there’s no knowledge of such things—that he never learns anything and that, even if he studies lying on his back on the ground or floating on it in the sea, his soul is looking not up but down.

Glaucon:: You’re right to reproach me, and I’ve been justly punished, but what did you mean when you said that astronomy must be learned in a different way from the way in which it is learned at present if it is to be a useful subject for our purposes?

Socrates:: It’s like this: We should consider the decorations in the sky to be the most beautiful and most exact of visible things, seeing that they’re embroidered on a visible surface. But we should consider their motions to fall far short of the true ones—motions that are really fast or slow as measured in true numbers, that trace out true geometrical figures, that are all in relation to one another, and that are the true motions of the things carried along in them. And these, of course, must be grasped by reason and thought, not by sight. Or do you think otherwise?

Glaucon:: Not at all.

Socrates:: Therefore, we should use the embroidery in the sky as a model in the study of these other things. If someone experienced in geometry were to come upon plans very carefully drawn and worked out by Daedalus or some other craftsman or artist, he'd consider them to be very finely executed, but he'd think it ridiculous to examine them seriously in order to find the truth in them about the equal, the double, or any other ratio.

Glaucon:: How could it be anything other than ridiculous?

Socrates:: Then don’t you think that a real astronomer will feel the same when he looks at the motions of the stars? He’ll believe that the craftsman of the heavens arranged them and all that’s in them in the finest way possible for such things. But as for the ratio of night to day, of days to a month, of a month to a year, or of the motions of the stars to any of them or to each other, don’t you think he’ll consider it strange to believe that they’re always the same and never deviate anywhere at all or to try in any sort of way to grasp the truth about them, since they’re connected to body and visible?

Glaucon:: That’s my opinion anyway, now that I hear it from you.

Socrates:: Then if, by really taking part in astronomy, we’re to make the naturally intelligent part of the soul useful instead of useless, let’s study astronomy by means of problems, as we do geometry, and leave the things in the sky alone.

Glaucon:: The task you’re prescribing is a lot harder than anything now attempted in astronomy.

Socrates:: And I suppose that, if we are to be of any benefit as lawgivers, our prescriptions for the other subjects will be of the same kind. But have you any other appropriate subject to suggest?

Glaucon:: Not offhand.

Socrates:: Well, there isn’t just one form of motion but several. Perhaps a wise person could list them all, but there are two that are evident even to us.

Glaucon:: What are they?

Socrates:: Besides the one we’ve discussed, there is also its counterpart.

Glaucon:: What’s that?

Socrates:: It’s likely that, as the eyes fasten on astronomical motions, so the ears fasten on harmonic ones, and that the sciences of astronomy and harmonics are closely akin. This is what the Pythagoreans say, Glaucon, and we agree, don’t we?

Glaucon:: We do.

Socrates:: Therefore, since the subject is so huge, shouldn’t we ask them what they have to say about harmonic motions and whether there is anything else besides them, all the while keeping our own goal squarely in view?

Glaucon:: What’s that?

Socrates:: That those whom we are rearing should never try to learn anything incomplete, anything that doesn’t reach the end that everything should reach—the end we mentioned just now in the case of astronomy. Or don’t you know that people do something similar in harmonics? Measuring audible consonances and sounds against one another, they labor in vain, just like present-day astronomers.

Glaucon:: Yes, by the gods, and pretty ridiculous they are too. They talk about something they call a “dense interval” or quartertone—putting their ears to their instruments like someone trying to overhear what the neighbors are saying. And some say that they hear a tone in between and that it is the shortest interval by which they must measure, while others argue that this tone sounds the same as a quarter tone. Both put ears before understanding.

Socrates:: You mean those excellent fellows who torment their strings, torturing them, and stretching them on pegs. I won't draw out the analogy by speaking of blows with the plectrum or the accusations or denials and boastings on the part of the strings; instead I'll cut it short by saying that these aren't the people I'm talking about. The ones I mean are the ones we just said we were going to question about harmonics, for they do the same as the astronomers. They seek out the numbers that are to be found in these audible consonances, but they do not make the ascent to problems. They don't investigate, for example, which numbers are consonant and which aren't or what the explanation is of each.

Glaucon:: But that would be a superhuman task.

Socrates:: Yet it's useful in the search for the beautiful and the good. But pursued for any other purpose, it's useless.

Glaucon:: Probably so.

Socrates:: Moreover, I take it that, if inquiry into all the subjects we've mentioned brings out their association and relationship with one another and draws conclusions about their kinship, it does contribute something to our goal and isn't labor in vain, but that otherwise it is in vain.

Glaucon:: I, too, divine that this is true. But you're still talking about a very big task, Socrates.

Socrates:: Do you mean the prelude, or what? Or don't you know that all these subjects are merely preludes to the song itself that must also be learned? Surely you don't think that people who are clever in these matters are dialecticians.

Glaucon:: No, by god, I don’t. Although I have met a few exceptions.

Socrates:: But did it ever seem to you that those who can neither give nor follow an account know anything at all of the things we say they must know?

Glaucon:: My answer to that is also no.

Socrates:: Then isn’t this at last, Glaucon, the song that dialectic sings? It is intelligible, but it is imitated by the power of sight. We said that sight tries at last to look at the animals themselves, the stars themselves, and, in the end, at the sun itself. In the same way, whenever someone tries through argument and apart from all sense perceptions to find the being itself of each thing and doesn’t give up until he grasps the good itself with understanding itself, he reaches the end of the intelligible, just as the other reached the end of the visible.

Glaucon:: Absolutely.

Socrates:: And what about this journey? Don’t you call it dialectic?

Glaucon:: I do.

Socrates:: Then the release from bonds and the turning around from shadows to statues and the light of the fire and, then, the way up out of the cave to the sunlight and, there, the continuing inability to look at the animals, the plants, and the light of the sun, but the newly acquired ability to look at divine images in water and shadows of the things that are, rather than, as before, merely at shadows of statues thrown by another source of light that is itself a shadow in relation to the sun—all this business of the crafts we’ve mentioned has the power to awaken the best part of the soul and lead it upward to the study of the best among the things that are, just as, before, the clearest thing in the body was led to the brightest thing in the bodily and visible realm.

Glaucon:: I accept that this is so, even though it seems very hard to accept in one way and hard not to accept in another. All the same, since we'll have to return to these things often in the future, rather than having to hear them just once now, let's assume that what you've said is so and turn to the song itself, discussing it in the same way as we did the prelude. So tell us: what is the sort of power dialectic has, what forms is it divided into, and what paths does it follow? For these lead at last, it seems, towards that place which is a rest from the road, so to speak, and an end of journeying for the one who reaches it.

Socrates:: You won't be able to follow me any longer, Glaucon, even though there is no lack of eagerness on my part to lead you, for you would no longer be seeing an image of what we're describing, but the truth itself. At any rate, that's how it seems to me. That it is really so is not worth insisting on any further. But that there is some such thing to be seen, that is something we must insist on. Isn't that so?

Glaucon:: Of course.

Socrates:: And mustn't we also insist that the power of dialectic could reveal it only to someone experienced in the subjects we've described and that it cannot reveal it in any other way?

Glaucon:: That too is worth insisting on.

Socrates:: At any rate, no one will dispute it when we say that there is no other inquiry that systematically attempts to grasp with respect to each thing itself what the being of it is, for all the other crafts are concerned with human opinions and desires, with growing or construction, or with the care of growing or constructed things. And as for the rest, I mean geometry and the subjects that follow it, we described them as to some extent grasping what is, for we saw that, while they do dream about what is, they are unable to command a waking view of it as long as they make use of hypotheses that they leave untouched and that they cannot give any account of. What mechanism could possibly turn any agreement into knowledge when it begins with something unknown and puts together the conclusion and the steps in between from what is unknown?

Glaucon:: None.

Socrates:: Therefore, dialectic is the only inquiry that travels this road, doing away with hypotheses and proceeding to the first principle itself, so as to be secure. And when the eye of the soul is really buried in a sort of barbaric bog, dialectic gently pulls it out and leads it upwards, using the crafts we described to help it and cooperate with it in turning the soul around. From force of habit, we've often called these crafts sciences or kinds of knowledge, but they need another name, clearer than opinion, darker than knowledge. We called them thought somewhere before. But I presume that we won't dispute about a name when we have so many more important matters to investigate.

Glaucon:: Of course not.

Socrates:: It will therefore be enough to call the first section knowledge, the second thought, the third belief, and the fourth imaging, just as we did before. The last two together we call opinion, the other two, intellect. Opinion is concerned with becoming, intellect with being. And as being is to becoming, so intellect is to opinion, and as intellect is to opinion, so knowledge is to belief and thought to imaging. But as for the ratios between the things these are set over and the division of either the opinable or the intelligible section into two, let’s pass them by, Glaucon, lest they involve us in arguments many times longer than the ones we’ve already gone through.

Glaucon:: I agree with you about the others in any case, insofar as I’m able to follow.

Socrates:: Then, do you call someone who is able to give an account of the being of each thing dialectical? But insofar as he’s unable to give an account of something, either to himself or to another, do you deny that he has any understanding of it?

Glaucon:: How could I do anything else?

Socrates:: Then the same applies to the good. Unless someone can distinguish in an account the form of the good from everything else, can survive all refutation, as if in a battle, striving to judge things not in accordance with opinion but in accordance with being, and can come through all this with his account still intact, you’ll say that he doesn’t know the good itself or any other good. And if he gets hold of some image of it, you’ll say that it’s through opinion, not knowledge, for he is dreaming and asleep throughout his present life, and, before he wakes up here, he will arrive in Hades and go to sleep forever.

Glaucon:: Yes, by god, I’ll certainly say all of that.

Socrates:: Then, as for those children of yours whom you’re rearing and educating in theory, if you ever reared them in fact, I don’t think that you'd allow them to rule in your city or be responsible for the most important things while they are as irrational as incommensurable lines.

Glaucon:: Certainly not.

Socrates:: Then you’ll legislate that they are to give most attention to the education that will enable them to ask and answer questions most knowledgeably?

Glaucon:: I’ll legislate it along with you.

Socrates:: Then do you think that we’ve placed dialectic at the top of the other subjects like a coping stone and that no other subject can rightly be placed above it, but that our account of the subjects that a future ruler must learn has come to an end?

Glaucon:: Probably so.

Socrates:: Then it remains for you to deal with the distribution of these subjects, with the question of to whom we’ll assign them and in what way.

Glaucon:: That’s clearly next.

Socrates:: Do you remember what sort of people we chose in our earlier selection of rulers?

Glaucon:: Of course I do.

Socrates:: In the other respects, the same natures have to be chosen: we have to select the most stable, the most courageous, and as far as possible the most graceful. In addition, we must look not only for people who have a noble and tough character but for those who have the natural qualities conducive to this education of ours.

Glaucon:: Which ones exactly?

Socrates:: They must be keen on the subjects and learn them easily, for people’s souls give up much more easily in hard study than in physical training, since the pain—being peculiar to them and not shared with their body— is more their own.

Glaucon:: That’s true.

Socrates:: We must also look for someone who has got a good memory, is persistent, and is in every way a lover of hard work. How else do you think he'd be willing to carry out both the requisite bodily labors and also complete so much study and practice?

Glaucon:: Nobody would, unless his nature was in every way a good one.

Socrates:: In any case, the present error, which as we said before explains why philosophy isn’t valued, is that she’s taken up by people who are unworthy of her, for illegitimate students shouldn’t be allowed to take her up, but only legitimate ones.

Glaucon:: How so?

Socrates:: In the first place, no student should be lame in his love of hard work, really loving one half of it, and hating the other half. This happens when someone is a lover of physical training, hunting, or any kind of bodily labor and isn’t a lover of learning, listening, or inquiry, but hates the work involved in them. And someone whose love of hard work tends in the opposite direction is also lame.

Glaucon:: That’s very true.

Socrates:: Similarly with regard to truth, won’t we say that a soul is maimed if it hates a voluntary falsehood, cannot endure to have one in itself, and is greatly angered when it exists in others, but is nonetheless content to accept an involuntary falsehood, isn’t angry when it is caught being ignorant, and bears its lack of learning easily, wallowing in it like a pig?

Glaucon:: Absolutely.

Socrates:: And with regard to moderation, courage, high-mindedness, and all the other parts of virtue, it is also important to distinguish the illegitimate from the legitimate, for when either a city or an individual doesn’t know how to do this, it unwittingly employs the lame and illegitimate as friends or rulers for whatever services it wants done.

Glaucon:: That’s just how it is.

Socrates:: So we must be careful in all these matters, for if we bring people who are sound of limb and mind to so great a subject and training, and educate them in it, even justice itself won't blame us, and we'll save the city and its constitution. But if we bring people of a different sort, we'll do the opposite, and let loose an even greater flood of ridicule upon philosophy.

Glaucon:: And it would be shameful to do that.

Socrates:: It certainly would. But I seem to have done something a bit ridiculous myself just now.

Glaucon:: What's that?

Socrates:: I forgot that we were only playing, and so I spoke too vehemently. But I looked upon philosophy as I spoke, and seeing her undeservedly besmirched, I seem to have lost my temper and said what I had to say too earnestly, as if I were angry with those responsible for it.

Glaucon:: That certainly wasn't my impression as I listened to you.

Socrates:: But it was mine as I was speaking. In any case, let's not forget that in our earlier selection we chose older people but that that isn't permitted in this one, for we mustn't believe Solon when he says that as someone grows older he's able to learn a lot. He can do that even less well than he can run races, for all great and numerous labors belong to the young.

Glaucon:: Necessarily.

Socrates:: Therefore, calculation, geometry, and all the preliminary education required for dialectic must be offered to the future rulers in childhood, and not in the shape of compulsory learning either.

Glaucon:: Why's that?

Socrates:: Because no free person should learn anything like a slave. Forced bodily labor does no harm to the body, but nothing taught by force stays in the soul.

Glaucon:: That's true.

Socrates:: Then don't use force to train the children in these subjects; use play instead. That way you'll also see better what each of them is naturally fitted for.

Glaucon:: That seems reasonable.

Socrates:: Do you remember that we stated that the children were to be led into war on horseback as observers and that, wherever it is safe to do so, they should be brought close and taste blood, like puppies?

Glaucon:: I remember.

Socrates:: In all these things—in labors, studies, and fears—the ones who always show the greatest aptitude are to be inscribed on a list.

Glaucon:: At what age?

Socrates:: When they're released from compulsory physical training, for during that period, whether it's two or three years, young people are incapable of doing anything else, since weariness and sleep are enemies of learning. At the same time, how they fare in this physical training is itself an important test.

Glaucon:: Of course it is.

Socrates:: And after that, that is to say, from the age of twenty, those who are chosen will also receive more honors than the others. Moreover, the subjects they learned in no particular order as children they must now bring together to form a unified vision of their kinship both with one another and with the nature of that which is.

Glaucon:: At any rate, only learning of that sort holds firm in those who receive it.

Socrates:: It is also the greatest test of who is naturally dialectical and who isn't, for anyone who can achieve a unified vision is dialectical, and anyone who can't isn't.

Glaucon:: I agree.

Socrates:: Well, then, you'll have to look out for the ones who most of all have this ability in them and who also remain steadfast in their studies, in war, and in the other activities laid down by law. And after they have reached their thirtieth year, you'll select them in turn from among those chosen earlier and assign them yet greater honors. Then you'll have to test them by means of the power of dialectic, to discover which of them can relinquish his eyes and other senses, going on with the help of truth to that which by itself is. And this is a task that requires great care.

Glaucon:: What's the main reason for that?

Socrates:: Don't you realize what a great evil comes from dialectic as it is currently practiced?

Glaucon:: What evil is that?

Socrates:: Those who practice it are filled with lawlessness.

Glaucon:: They certainly are.

Socrates:: Do you think it's surprising that this happens to them? Aren't you sympathetic?

Glaucon:: Why isn't it surprising? And why should I be sympathetic?

Socrates:: Because it's like the case of a child brought up surrounded by much wealth and many flatterers in a great and numerous family, who finds out, when he has become a man, that he isn't the child of his professed parents and that he can't discover his real ones. Can you divine what the attitude of someone like that would be to the flatterers, on the one hand, and to his supposed parents, on the other, before he knew about his parentage, and what it would be when he found out? Or would you rather hear what I divine about it?

Glaucon:: I'd rather hear your views.

Socrates:: Well, then, I divine that during the time that he didn’t know the truth, he'd honor his father, mother, and the rest of his supposed family more than he would the flatterers, that he'd pay greater attention to their needs, be less likely to treat them lawlessly in word or deed, and be more likely to obey them than the flatterers in any matters of importance.

Glaucon:: Probably so.

Socrates:: When he became aware of the truth, however, his honor and enthusiasm would lessen for his family and increase for the flatterers, he'd obey the latter far more than before, begin to live in the way that they did, and keep company with them openly, and, unless he was very decent by nature, he'd eventually care nothing for that father of his or any of the rest of his supposed family.

Glaucon:: All this would probably happen as you say, but in what way is it an image of those who take up arguments?

Socrates:: As follows. We hold from childhood certain convictions about just and fine things; we’re brought up with them as with our parents, we obey and honor them.

Glaucon:: Indeed, we do.

Socrates:: There are other ways of living, however, opposite to these and full of pleasures, that flatter the soul and attract it to themselves but which don’t persuade sensible people, who continue to honor and obey the convictions of their fathers.

Glaucon:: That’s right.

Socrates:: And then a questioner comes along and asks someone of this sort, “What is the fine?” And, when he answers what he has heard from the traditional lawgiver, the argument refutes him, and by refuting him often and in many places shakes him from his convictions, and makes him believe that the fine is no more fine than shameful, and the same with the just, the good, and the things he honored most. What do you think his attitude will be then to honoring and obeying his earlier convictions?

Glaucon:: Of necessity he won’t honor or obey them in the same way.

Socrates:: Then, when he no longer honors and obeys those convictions and can’t discover the true ones, will he be likely to adopt any other way of life than that which flatters him?

Glaucon:: No, he won’t.

Socrates:: And so, I suppose, from being law-abiding he becomes lawless.

Glaucon:: Inevitably.

Socrates:: Then, as I asked before, isn’t it only to be expected that this is what happens to those who take up arguments in this way, and don’t they therefore deserve a lot of sympathy?

Glaucon:: Yes, and they deserve pity too.

Socrates:: Then, if you don’t want your thirty-year-olds to be objects of such pity, you’ll have to be extremely careful about how you introduce them to arguments.

Glaucon:: That’s right.

Socrates:: And isn’t it one lasting precaution not to let them taste arguments while they’re young? I don’t suppose that it has escaped your notice that, when young people get their first taste of arguments, they misuse it by treating it as a kind of game of contradiction. They imitate those who've refuted them by refuting others themselves, and, like puppies, they enjoy dragging and tearing those around them with their arguments.

Glaucon:: They're excessively fond of it.

Socrates:: Then, when they've refuted many and been refuted by them in turn, they forcefully and quickly fall into disbelieving what they believed before. And, as a result, they themselves and the whole of philosophy are discredited in the eyes of others.

Glaucon:: That's very true.

Socrates:: But an older person won't want to take part in such madness. He'll imitate someone who is willing to engage in discussion in order to look for the truth, rather than someone who plays at contradiction for sport. He'll be more sensible himself and will bring honor rather than discredit to the philosophical way of life.

Glaucon:: That's right.

Socrates:: And when we said before that those allowed to take part in arguments should be orderly and steady by nature, not as nowadays, when even the unfit are allowed to engage in them—wasn't all that also said as a precaution?

Glaucon:: Of course.

Socrates:: Then if someone continuously, strenuously, and exclusively devotes himself to participation in arguments, exercising himself in them just as he did in the bodily physical training, which is their counterpart, would that be enough?

Glaucon:: Do you mean six years or four?

Socrates:: It doesn't matter. Make it five. And after that, you must make them go down into the cave again, and compel them to take command in matters of war and occupy the other offices suitable for young people, so that they won't be inferior to the others in experience. But in these, too, they must be tested to see whether they'll remain steadfast when they're pulled this way and that or shift their ground.

Glaucon:: How much time do you allow for that?

Socrates:: Fifteen years. Then, at the age of fifty, those who've survived the tests and been successful both in practical matters and in the sciences must be led to the goal and compelled to lift up the radiant light of their souls to what itself provides light for everything. And once they've seen the good itself, they must each in turn put the city, its citizens, and themselves in order, using it as their model. Each of them will spend most of his time with philosophy, but, when his turn comes, he must labor in politics and rule for the city's sake, not as if he were doing something fine, but rather something that has to be done. Then, having educated others like himself to take his place as guardians of the city, he will depart for the Isles of the Blessed and dwell there. And, if the Pythia agrees, the city will publicly establish memorials and sacrifices to him as a daemon, but if not, then as a happy and divine human being.

Glaucon:: Like a sculptor, Socrates, you've produced ruling men that are completely fine.

Socrates:: And ruling women, too, Glaucon, for you mustn't think that what I've said applies any more to men than it does to women who are born with the appropriate natures.

Glaucon:: That's right, if indeed they are to share everything equally with the men, as we said they should.

Socrates:: Then, do you agree that the things we've said about the city and its constitution aren't altogether wishful thinking, that it's hard for them to come about, but not impossible? And do you also agree that they can come about only in the way we indicated, namely, when one or more true philosophers come to power in a city, who despise present honors, thinking them slavish and worthless, and who prize what is right and the honors that come from it above everything, and regard justice as the most important and most essential thing, serving it and increasing it as they set their city in order?

Glaucon:: How will they do that?

Socrates:: They'll send everyone in the city who is over ten years old into the country. Then they'll take possession of the children, who are now free from the ethos of their parents, and bring them up in their own customs and laws, which are the ones we've described. This is the quickest and easiest way for the city and constitution we've discussed to be established, become happy, and bring most benefit to the people among whom it's established.

Glaucon:: That's by far the quickest and easiest way. And in my opinion, Socrates, you've described well how it would come into being, if it ever did.

Socrates:: Then, isn't that enough about this city and the man who is like it? Surely it is clear what sort of man we'll say he has to be.

Glaucon:: It is clear. And as for your question, I think that we have reached the end of this topic.

## Book 8

Socrates:: Well, then, Glaucon, we've agreed to the following: If a city is to achieve the height of good government, wives must be in common, children and all their education must be in common, their way of life, whether in peace or war, must be in common, and their kings must be those among them who have proved to be best, both in philosophy and in warfare.

Glaucon:: We have agreed to that.

Socrates:: Moreover, we also agreed that, as soon as the rulers are established, they will lead the soldiers and settle them in the kind of dwellings we described, which are in no way private but common to all. And we also agreed, if you remember, what kind of possessions they will have.

Glaucon:: I remember that we thought that none of them should acquire any of the things that the other rulers now do but that, as athletes of war and guardians, they should receive their yearly upkeep from the other citizens as a wage for their guardianship and look after themselves and the rest of the city.

Socrates:: That's right. But since we have completed this discussion, let's recall the point at which we began the digression that brought us here, so that we can continue on the same path from where we left off.

Glaucon:: That isn't difficult, for, much the same as now, you were talking as if you had completed the description of the city. You said that you would class both the city you described and the man who is like it as good, even though, as it seems, you had a still finer city and man to tell us about. But, in any case, you said that, if this city was the right one, the others were faulty. You said, if I remember, that there were four types of constitution remaining that are worth discussing, each with faults that we should observe, and we should do the same for the people who are like them. Our aim was to observe them all, agree which man is best and which worst, and then determine whether the best is happiest and the worst most wretched or whether it’s otherwise. I was asking you which four constitutions you had in mind when Polemarchus and Adeimantus interrupted. And that’s when you took up the discussion that led here.

Socrates:: That’s absolutely right.

Glaucon:: Well, then, like a wrestler, give me the same hold again, and when I ask the same question, try to give the answer you were about to give before.

Socrates:: If I can.

Glaucon:: I'd at least like to hear what four constitutions you meant.

Socrates:: That won’t be difficult since they’re the ones for which we have names. First, there’s the constitution praised by most people, namely, the Cretan or Laconian. The second, which is also second in the praise it receives, is called oligarchy and is filled with a host of evils. The next in order, and antagonistic to it, is democracy. And finally there is genuine tyranny, surpassing all of them, the fourth and last of the diseased cities. Or can you think of another type of constitution—I mean another whose form is distinct from these? Dynasties and purchased kingships and other constitutions of that sort, which one finds no less among the barbarians than among the Greeks, are somewhere intermediate between these four.

Glaucon:: At any event, many strange ones are indeed talked about.

Socrates:: And do you realize that of necessity there are as many forms of human character as there are of constitutions? Or do you think that constitutions are born “from oak or rock” and not from the characters of the people who live in the cities governed by them, which tip the scales, so to speak, and drag the rest along with them?

Glaucon:: No, I don’t believe they come from anywhere else.

Socrates:: Then, if there are five forms of city, there must also be five forms of the individual soul.

Glaucon:: Of course.

Socrates:: Now, we’ve already described the one that’s like aristocracy, which is rightly said to be good and just.

Glaucon:: We have.

Socrates:: Then mustn’t we next go through the inferior ones, namely, the victory-loving and honor-loving (which corresponds to the Laconian form of constitution), followed by the oligarchic, the democratic, and the tyrannical, so that, having discovered the most unjust of all, we can oppose him to the most just? In this way, we can complete our investigation into how pure justice and pure injustice stand, with regard to the happiness or wretchedness of those who possess them, and either be persuaded by Thrasymachus to practice injustice or by the argument that is now coming to light to practice justice.

Glaucon:: That’s absolutely what we have to do.

Socrates:: Then, just as we began by looking for the virtues of character in a constitution, before looking for them in the individual, thinking that they’ be clearer in the former, shouldn’t we first examine the honor-loving constitution? I don’t know what other name there is for it, but it should be called either timocracy or timarchy. Then shouldn’t we examine an individual who is related to that constitution, and, after that, oligarchy and an oligarchic person, and democracy and a democratic person? And finally, having come to a city under a tyrant and having examined it, shouldn't we look into a tyrannical soul, trying in this way to become adequate judges of the topic we proposed to ourselves?

Glaucon:: That would be a reasonable way for us to go about observing and judging, at any rate.

Socrates:: Well, then, let's try to explain how timocracy emerges from aristocracy. Or is it a simple principle that the cause of change in any constitution is civil war breaking out within the ruling group itself, but that if this group— however small it is—remains of one mind, the constitution cannot be changed?

Glaucon:: Yes, that's right.

Socrates:: How, then, Glaucon, will our city be changed? How will civil war arise, either between the auxiliaries and the rulers or within either group? Or do you want us to be like Homer and pray to the Muses to tell us "how civil war first broke out?" And shall we say that they speak to us in tragic tones, as if they were in earnest, playing and jesting with us as if we were children?

Glaucon:: What will they say?

Socrates:: Something like this. "It is hard for a city composed in this way to change, but everything that comes into being must decay. Not even a constitution such as this will last forever. It, too, must face dissolution. And this is how it will be dissolved. All plants that grow in the earth, and also all animals that grow upon it, have periods of fruitfulness and barrenness of both soul and body as often as the revolutions complete the circumferences of their circles. These circumferences are short for the short-lived, and the opposite for their opposites. Now, the people you have educated to be leaders in your city, even though they are wise, still won't, through calculation together with sense perception, hit upon the fertility and barrenness of the human species, but it will escape them, and so they will at some time beget children when they ought not to do so. For the birth of a divine creature, there is a cycle comprehended by a perfect number. For a human being, it is the first number in which are found root and square increases, comprehending three lengths and four terms, of elements that make things like and unlike, that cause them to increase and decrease, and that render all things mutually agreeable and rational in their relations to one another. Of these elements, four and three, married with five, give two harmonies when thrice increased. One of them is a square, so many times a hundred. The other is of equal length one way but oblong. One of its sides is one hundred squares of the rational diameter of five diminished by one each or one hundred squares of the irrational diameter diminished by two each. The other side is a hundred cubes of three. This whole geometrical number controls better and worse births. And when your rulers, through ignorance of these births, join brides and grooms at the wrong time, the children will be neither good natured nor fortunate. The older generation will choose the best of these children but they are unworthy nevertheless, and when they acquire their fathers' powers, they will begin, as guardians, to neglect us Muses. First, they will have less consideration for music and poetry than they ought, then they will neglect physical training, so that your young people will become less well educated in music and poetry. Hence, rulers chosen from among them won't be able to guard well the testing of the golden, silver, bronze, and iron races, which are Hesiod's and your own. The intermixing of iron with silver and bronze with gold that results will engender lack of likeness and unharmonious inequality, and these always breed war and hostility wherever they arise. Civil war, we declare, is always and everywhere ‘of this lineage’.”

Glaucon:: And we’ll declare that what the Muses say is right.

Socrates:: It must be, since they’re Muses.

Glaucon:: What do the Muses say after that?

Socrates:: Once civil war breaks out, both the iron and bronze types pull the constitution towards money-making and the acquisition of land, houses, gold, and silver, while both the gold and silver types—not being poor, but by nature rich or rich in their souls—lead the constitution towards virtue and the old order. And thus striving and struggling with one another, they compromise on a middle way: They distribute the land and houses as private property, enslave and hold as serfs and servants those whom they previously guarded as free friends and providers of upkeep, and occupy themselves with war and with guarding against those whom they’ve enslaved.

Glaucon:: I think that is the way this transformation begins.

Socrates:: Then, isn’t this constitution a sort of midpoint between aristocracy and oligarchy?

Glaucon:: Absolutely.

Socrates:: Then, if that’s its place in the transformation, how will it be managed after the change? Isn’t it obvious that it will imitate the aristocratic constitution in some respects and oligarchy in others, since it’s between them, and that it will also have some features of its own?

Glaucon:: That’s right.

Socrates:: The rulers will be respected; the fighting class will be prevented from taking part in farming, manual labor, or other ways of making money; it will eat communally and devote itself to physical training and training for war; and in all such ways, won't the constitution be like the aristocratic one?

Glaucon:: Yes.

Socrates:: On the other hand, it will be afraid to appoint wise people as rulers, on the grounds that they are no longer simple and earnest but mixed, and will incline towards spirited and simpler people, who are more naturally suited for war than peace; it will value the tricks and stratagems of war and spend all its time making war. Aren't most of these qualities peculiar to it?

Glaucon:: Yes.

Socrates:: Such people will desire money just as those in oligarchies do, passionately adoring gold and silver in secret. They will possess private treasuries and storehouses, where they can keep it hidden, and have houses to enclose them, like private nests, where they can spend lavishly either on women or on anyone else they wish.

Glaucon:: That's absolutely true.

Socrates:: They'll be mean with their own money, since they value it and are not allowed to acquire it openly, but they'll love to spend other people's because of their appetites. They'll enjoy their pleasures in secret, running away from the law like boys from their father, for since they've neglected the true Muse—that of discussion and philosophy—and have valued physical training more than music and poetry, they haven't been educated by persuasion but by force.

Glaucon:: The constitution you're discussing is certainly a mixture of good and bad.

Socrates:: Yes, it is mixed, but because of the predominance of the spirited element, one thing alone is most manifest in it, namely, the love of victory and the love of honor.

Glaucon:: Very much so.

Socrates:: This, then, is the way this constitution would come into being and what it would be like, for, after all, we're only sketching the shape of the constitution in theory, not giving an exact account of it, since even from a sketch we'll be able to discern the most just and the most unjust person. And, besides, it would be an intolerably long task to describe every constitution and every character without omitting any detail.

Glaucon:: That's right.

Socrates:: Then who is the man that corresponds to this constitution? How does he come to be, and what sort of man is he?

Glaucon:: I think, that he'd be very like Glaucon here, as far as the love of victory is concerned.

Socrates:: In that respect, he might be, but, in the following ones, I don't think his nature would be similar.

Glaucon:: Which ones?

Socrates:: He'd be more obstinate and less well trained in music and poetry, though he's a lover of it, and he'd love to listen to speeches and arguments, though he's by no means a rhetorician. He'd be harsh to his slaves rather than merely looking down on them as an adequately educated person does. He'd be gentle to free people and very obedient to rulers, being himself a lover of ruling and a lover of honor. However, he doesn't base his claim to rule on his ability as a speaker or anything like that, but, as he's a lover of physical training and a lover of hunting, on his abilities and exploits in warfare and warlike activities.

Glaucon:: Yes, that's the character that corresponds to this constitution.

Socrates:: Wouldn’t such a person despise money when he’s young but love it more and more as he grows older, because he shares in the money-loving nature and isn’t pure in his attitude to virtue? And isn’t that because he lacks the best of guardians?

Glaucon:: What guardian is that?

Socrates:: Reason, mixed with music and poetry, for it alone dwells within the person who possesses it as the lifelong preserver of his virtue.

Glaucon:: Well put.

Socrates:: That, then, is a timocratic youth; he resembles the corresponding city.

Glaucon:: Absolutely.

Socrates:: And he comes into being in some such way as this. He’s the son of a good father who lives in a city that isn’t well governed, who avoids honors, office, lawsuits, and all such meddling in other people’s affairs, and who is even willing to be put at a disadvantage in order to avoid trouble.

Glaucon:: Then how does he come to be timocratic?

Socrates:: When he listens, first, to his mother complaining that her husband isn’t one of the rulers and that she’s at a disadvantage among the other women as a result. Then she sees that he’s not very concerned about money and that he doesn’t fight back when he’s insulted, whether in private or in public in the courts, but is indifferent to everything of that sort. She also sees him concentrating his mind on his own thoughts, neither honoring nor dishonoring her overmuch. Angered by all this, she tells her son that his father is unmanly, too easy-going, and all the other things that women repeat over and over again in such cases.

Glaucon:: Yes, it’s like them to have many such complaints.

Socrates:: You know, too, that the servants of men like that—the ones who are thought to be well disposed to the family—also say similar things to the son in private. When they see the father failing to prosecute someone who owes him money or has wronged him in some other way, they urge the son to take revenge on all such people when he grows up and to be more of a man than his father. The boy hears and sees the same kind of things when he goes out: Those in the city who do their own work are called fools and held to be of little account, while those who meddle in other people’s affairs are honored and praised. The young man hears and sees all this, but he also listens to what his father says, observes what he does from close at hand, and compares his ways of living with those of the others. So he’s pulled by both. His father nourishes the rational part of his soul and makes it grow; the others nourish the spirited and appetitive parts. Because he isn’t a bad man by nature but keeps bad company, when he’s pulled in these two ways, he settles in the middle and surrenders the rule over himself to the middle part—the victory-loving and spirited part— and becomes a proud and honor-loving man.

Glaucon:: I certainly think that you’ve given a full account of how this sort of man comes to be.

Socrates:: Then we now have the second constitution and the second man.

Glaucon:: We have.

Socrates:: Then shall we next talk, as Aeschylus says, of “another man ordered like another city,” or shall we follow our plan and talk about the city first?

Glaucon:: We must follow our plan.

Socrates:: And I suppose that the one that comes after the present constitution is oligarchy.

Glaucon:: And what kind of constitution would you call oligarchy?

Socrates:: The constitution based on a property assessment, in which the rich rule, and the poor man has no share in ruling.

Glaucon:: I understand.

Socrates:: So mustn't we first explain how timarchy is transformed into oligarchy?

Glaucon:: Yes.

Socrates:: And surely the manner of this transformation is clear even to the blind.

Glaucon:: What is it like?

Socrates:: The treasure house filled with gold, which each possesses, destroys the constitution. First, they find ways of spending money for themselves, then they stretch the laws relating to this, then they and their wives disobey the laws altogether.

Glaucon:: They would do that.

Socrates:: And as one person sees another doing this and emulates him, they make the majority of the others like themselves.

Glaucon:: They do.

Socrates:: From there they proceed further into money-making, and the more they value it, the less they value virtue. Or aren't virtue and wealth so opposed that if they were set on a scales, they' always incline in opposite directions?

Glaucon:: That's right.

Socrates:: So, when wealth and the wealthy are valued or honored in a city, virtue and good people are valued less.

Glaucon:: Clearly.

Socrates:: And what is valued is always practiced, and what isn't valued is neglected.

Glaucon:: That's right.

Socrates:: Then, in the end, victory-loving and honor-loving men become lovers of making money, or money-lovers. And they praise and admire wealthy people and appoint them as rulers, while they dishonor poor ones.

Glaucon:: Certainly.

Socrates:: Then, don't they pass a law that is characteristic of an oligarchic constitution, one that establishes a wealth qualification—higher where the constitution is more oligarchic, less where it's less so—and proclaims that those whose property doesn't reach the stated amount aren't qualified to rule? And they either put this through by force of arms, or else, before it comes to that, they terrorize the people and establish their constitution that way. Isn't that so?

Glaucon:: Of course it is.

Socrates:: Generally speaking, then, that's the way this kind of constitution is established.

Glaucon:: Yes, but what is its character? And what are the faults that we said it contained?

Socrates:: First of all, the very thing that defines it is one, for what would happen if someone were to choose the captains of ships by their wealth, refusing to entrust the ship to a poor person even if he was a better captain?

Glaucon:: They would make a poor voyage of it.

Socrates:: And isn't the same true of the rule of anything else whatsoever?

Glaucon:: I suppose so.

Socrates:: Except a city? Or does it also apply to a city?

Glaucon:: To it most of all, since it's the most difficult and most important kind of rule.

Socrates:: That, then, is one major fault in oligarchy.

Glaucon:: Apparently.

Socrates:: And what about this second fault? Is it any smaller than the other?

Glaucon:: What fault?

Socrates:: That of necessity it isn't one city but two—one of the poor and one of the rich—living in the same place and always plotting against one another.

Glaucon:: By god, that's just as big a fault as the first.

Socrates:: And the following is hardly a fine quality either, namely, that oligarchs probably aren't able to fight a war, for they' be compelled either to arm and use the majority, and so have more to fear from them than the enemy, or not to use them and show up as true oligarchs—few in number—on the battlefield. At the same time, they' be unwilling to pay mercenaries, because of their love of money.

Glaucon:: That certainly isn't a fine quality either.

Socrates:: And what about the meddling in other people's affairs that we condemned before? Under this constitution, won't the same people be farmers, money-makers, and soldiers simultaneously? And do you think it's right for things to be that way?

Glaucon:: Not at all.

Socrates:: Now, let's see whether this constitution is the first to admit the greatest of all evils.

Glaucon:: Which one is that?

Socrates:: Allowing someone to sell all his possessions and someone else to buy them and then allowing the one who has sold them to go on living in the city, while belonging to none of its parts, for he’s neither a money-maker, a craftsman, a member of the cavalry, or a hoplite, but a poor person without means.

Glaucon:: It is the first to allow that.

Socrates:: At any rate, this sort of thing is not forbidden in oligarchies. If it were, some of their citizens wouldn’t be excessively rich, while others are totally impoverished.

Glaucon:: That’s right.

Socrates:: Now, think about this. When the person who sells all his possessions was rich and spending his money, was he of any greater use to the city in the ways we’ve just mentioned than when he'd spent it all? Or did he merely seem to be one of the rulers of the city, while in truth he was neither ruler nor subject there, but only a squanderer of his property?

Glaucon:: That’s right. He seemed to be part of the city, but he was nothing but a squanderer.

Socrates:: Should we say, then, that, as a drone exists in a cell and is an affliction to the hive, so this person is a drone in the house and an affliction to the city?

Glaucon:: That’s certainly right, Socrates.

Socrates:: Hasn’t the god made all the winged drones stingless, Adeimantus, as well as some wingless ones, while other wingless ones have dangerous stings? And don’t the stingless ones continue as beggars into old age, while those with stings become what we call evildoers?

Adeimantus:: That’s absolutely true.

Socrates:: Clearly, then, in any city where you see beggars, there are thieves, pickpockets, temple-robbers, and all such evildoers hidden.

Adeimantus:: That is clear.

Socrates:: What about oligarchic cities? Don't you see beggars in them?

Adeimantus:: Almost everyone except the rulers is a beggar there.

Socrates:: Then mustn't we suppose that they also include many evildoers with stings, whom the rulers carefully keep in check by force?

Adeimantus:: We certainly must.

Socrates:: And shall we say that the presence of such people is the result of lack of education, bad rearing, and a bad constitutional arrangement?

Adeimantus:: We shall.

Socrates:: This, then, or something like it, is the oligarchic city. It contains all these evils and probably others in addition.

Adeimantus:: That's pretty well what it's like.

Socrates:: Then, let's take it that we've disposed of the constitution called oligarchy—I mean the one that gets its rulers on the basis of a property assessment—and let's examine the man who is like it, both how he comes to be and what sort of man he is.

Adeimantus:: All right.

Socrates:: Doesn't the transformation from the timocrat we described to an oligarch occur mostly in this way?

Adeimantus:: Which way?

Socrates:: The timocrat's son at first emulates his father and follows in his footsteps. Then he suddenly sees him crashing against the city like a ship against a reef, spilling out all his possessions, even his life. He had held a generalship or some other high office, was brought to court by false witnesses, and was either put to death or exiled or was disenfranchised and had all his property confiscated.

Adeimantus:: That’s quite likely.

Socrates:: The son sees all this, suffers from it, loses his property, and, fearing for his life, immediately drives from the throne in his own soul the honor-loving and spirited part that ruled there. Humbled by poverty, he turns greedily to making money, and, little by little, saving and working, he amasses property. Don’t you think that this person would establish his appetitive and money-making part on the throne, setting it up as a great king within himself, adorning it with golden tiaras and collars and girding it with Persian swords?

Adeimantus:: I do.

Socrates:: He makes the rational and spirited parts sit on the ground beneath appetite, one on either side, reducing them to slaves. He won’t allow the first to reason about or examine anything except how a little money can be made into great wealth. And he won’t allow the second to value or admire anything but wealth and wealthy people or to have any ambition other than the acquisition of wealth or whatever might contribute to getting it.

Adeimantus:: There is no other transformation of a young man who is an honor-lover into one who is a money-lover that’s as swift and sure as this.

Socrates:: Then isn’t this an oligarchic man?

Adeimantus:: Surely, he developed out of a man who resembled the constitution from which oligarchy came.

Socrates:: Then let’s consider whether he resembles the oligarchic constitution?

Adeimantus:: All right.

Socrates:: Doesn’t he resemble it, in the first place, by attaching the greatest importance to money?

Adeimantus:: Of course.

Socrates:: And, further, by being a thrifty worker, who satisfies only his necessary appetites, makes no other expenditures, and enslaves his other desires as vain.

Adeimantus:: That's right.

Socrates:: A somewhat squalid fellow, who makes a profit from everything and hoards it—the sort the majority admires. Isn't this the man who resembles such a constitution?

Adeimantus:: That's my opinion, anyway. At any rate, money is valued above everything by both the city and the man.

Socrates:: I don't suppose that such a man pays any attention to education.

Adeimantus:: Not in my view, for, if he did, he wouldn't have chosen a blind leader for his chorus and honored him most.

Socrates:: Good. But consider this: Won't we say that, because of his lack of education, the dronish appetites—some beggarly and others evil—exist in him, but that they're forcibly held in check by his carefulness?

Adeimantus:: Certainly.

Socrates:: Do you know where you should look to see the evildoings of such people?

Adeimantus:: Where?

Socrates:: To the guardianship of orphans or something like that, where they have ample opportunity to do injustice with impunity.

Adeimantus:: True.

Socrates:: And doesn't this make it clear that, in those other contractual obligations, where he has a good reputation and is thought to be just, he's forcibly holding his other evil appetites in check by means of some decent part of himself? He holds them in check, not by persuading them that it’s better not to act on them or taming them with arguments, but by compulsion and fear, trembling for his other possessions.

Adeimantus:: That’s right.

Socrates:: And, by god, you’ll find that most of them have appetites akin to those of the drone, once they have other people’s money to spend.

Adeimantus:: You certainly will.

Socrates:: Then someone like that wouldn’t be entirely free from internal civil war and wouldn’t be one but in some way two, though generally his better desires are in control of his worse.

Adeimantus:: That’s right.

Socrates:: For this reason, he'd be more respectable than many, but the true virtue of a single-minded and harmonious soul far escapes him.

Adeimantus:: I suppose so.

Socrates:: Further, this thrifty man is a poor individual contestant for victory in a city or for any other fine and much-honored thing, for he’s not willing to spend money for the sake of a fine reputation or on contests for such things. He’s afraid to arouse his appetites for spending or to call on them as allies to obtain victory, so he fights like an oligarch, with only a few of his resources. Hence he’s mostly defeated but remains rich.

Adeimantus:: That’s right.

Socrates:: Then have we any further doubt that a thrifty money-maker is like an oligarchic city?

Adeimantus:: None at all.

Socrates:: It seems, then, that we must next consider democracy, how it comes into being, and what character it has when it does, so that, knowing in turn the character of a man who resembles it, we can present him for judgment.

Adeimantus:: That would be quite consistent with what we've been doing.

Socrates:: Well, isn't the city changed from an oligarchy to a democracy in some such way as this, because of its insatiable desire to attain what it has set before itself as the good, namely, the need to become as rich as possible?

Adeimantus:: In what way?

Socrates:: Since those who rule in the city do so because they own a lot, I suppose they're unwilling to enact laws to prevent young people who've had no discipline from spending and wasting their wealth, so that by making loans to them, secured by the young people's property, and then calling those loans in, they themselves become even richer and more honored.

Adeimantus:: That's their favorite thing to do.

Socrates:: So isn't it clear by now that it is impossible for a city to honor wealth and at the same time for its citizens to acquire moderation, but one or the other is inevitably neglected?

Adeimantus:: That's pretty clear.

Socrates:: Because of this neglect and because they encourage bad discipline, oligarchies not infrequently reduce people of no common stamp to poverty.

Adeimantus:: That's right.

Socrates:: And these people sit idle in the city, I suppose, with their stings and weapons—some in debt, some disenfranchised, some both—hating those who've acquired their property, plotting against them and others, and longing for a revolution.

Adeimantus:: They do.

Socrates:: The money-makers, on the other hand, with their eyes on the ground, pretend not to see these people, and by lending money they disable any of the remainder who resist, exact as interest many times the principal sum, and so create a considerable number of drones and beggars in the city.

Adeimantus:: A considerable number indeed.

Socrates:: In any case, they are unwilling to quench this kind of evil as it flares up in the city, either in the way we mentioned, by preventing people from doing whatever they like with their own property or by another law which would also solve the problem.

Adeimantus:: What law?

Socrates:: The second-best one, which compels the citizens to care about virtue by prescribing that the majority of voluntary contracts be entered into at the lender's own risk, for lenders would be less shameless then in their pursuit of money in the city and fewer of those evils we were mentioning just now would develop.

Adeimantus:: Far fewer.

Socrates:: But as it is, for all these reasons, the rulers in the city treat their subjects in the way we described. But as for themselves and their children, don't they make their young fond of luxury, incapable of effort either mental or physical, too soft to stand up to pleasures or pains, and idle besides?

Adeimantus:: Of course.

Socrates:: And don't they themselves neglect everything except making money, caring no more for virtue than the poor do?

Adeimantus:: Yes.

Socrates:: But when rulers and subjects in this condition meet on a journey or some other common undertaking—it might be a festival, an embassy, or a campaign, or they might be shipmates or fellow soldiers—and see one another in danger, in these circumstances are the poor in any way despised by the rich? Or rather isn’t it often the case that a poor man, lean and suntanned, stands in battle next to a rich man, reared in the shade and carrying a lot of excess flesh, and sees him panting and at a loss? And don’t you think that he'd consider that it’s through the cowardice of the poor that such people are rich and that one poor man would say to another when they met in private: “These people are at our mercy; they’re good for nothing”?

Adeimantus:: I know very well that’s what they would do.

Socrates:: Then, as a sick body needs only a slight shock from outside to become ill and is sometimes at civil war with itself even without this, so a city in the same condition needs only a small pretext—such as one side bringing in allies from an oligarchy or the other from a democracy—to fall ill and to fight with itself and is sometimes in a state of civil war even without any external influence.

Adeimantus:: Absolutely.

Socrates:: And I suppose that democracy comes about when the poor are victorious, killing some of their opponents and expelling others, and giving the rest an equal share in ruling under the constitution, and for the most part assigning people to positions of rule by lot.

Adeimantus:: Yes, that’s how democracy is established, whether by force of arms or because those on the opposing side are frightened into exile.

Socrates:: Then how do these people live? What sort of constitution do they have? It’s clear that a man who is like it will be democratic.

Adeimantus:: That is clear.

Socrates:: First of all, then, aren’t they free? And isn’t the city full of freedom and freedom of speech? And doesn’t everyone in it have the license to do what he wants?

Adeimantus:: That’s what they say, at any rate.

Socrates:: And where people have this license, it’s clear that each of them will arrange his own life in whatever manner pleases him.

Adeimantus:: It is.

Socrates:: Then I suppose that it’s most of all under this constitution that one finds people of all varieties.

Adeimantus:: Of course.

Socrates:: Then it looks as though this is the finest or most beautiful of the constitutions, for, like a coat embroidered with every kind of ornament, this city, embroidered with every kind of character type, would seem to be the most beautiful. And many people would probably judge it to be so, as women and children do when they see something multicolored.

Adeimantus:: They certainly would.

Socrates:: It’s also a convenient place to look for a constitution.

Adeimantus:: Why’s that?

Socrates:: Because it contains all kinds of constitutions on account of the license it gives its citizens. So it looks as though anyone who wants to put a city in order, as we were doing, should probably go to a democracy, as to a supermarket of constitutions, pick out whatever pleases him, and establish that.

Adeimantus:: He probably wouldn’t be at a loss for models, at any rate.

Socrates:: In this city, there is no requirement to rule, even if you’re capable of it, or again to be ruled if you don’t want to be, or to be at war when the others are, or at peace unless you happen to want it. And there is no requirement in the least that you not serve in public office as a juror, if you happen to want to serve, even if there is a law forbidding you to do so. Isn’t that a divine and pleasant life, while it lasts?

Adeimantus:: It probably is—while it lasts.

Socrates:: And what about the calm of some of their condemned criminals? Isn’t that a sign of sophistication? Or have you never seen people who’ve been condemned to death or exile under such a constitution stay on at the center of things, strolling around like the ghosts of dead heroes, without anyone staring at them or giving them a thought?

Adeimantus:: Yes, I’ve seen it a lot.

Socrates:: And what about the city’s tolerance? Isn’t it so completely lacking in small-mindedness that it utterly despises the things we took so seriously when we were founding our city, namely, that unless someone had transcendent natural gifts, he'd never become good unless he played the right games and followed a fine way of life from early childhood? Isn’t it magnificent the way it tramples all this underfoot, by giving no thought to what someone was doing before he entered public life and by honoring him if only he tells them that he wishes the majority well?

Adeimantus:: Yes, it’s altogether splendid!

Socrates:: Then these and others like them are the characteristics of democracy. And it would seem to be a pleasant constitution, which lacks rulers but not variety and which distributes a sort of equality to both equals and unequals alike.

Adeimantus:: We certainly know what you mean.

Socrates:: Consider, then, what private individual resembles it. Or should we first inquire, as we did with the city, how he comes to be?

Adeimantus:: Yes, we should.

Socrates:: Well, doesn’t it happen like this? Wouldn’t the son of that thrifty oligarch be brought up in his father’s ways?

Adeimantus:: Of course.

Socrates:: Then he too rules his spendthrift pleasures by force—the ones that aren’t money-making and are called unnecessary.

Adeimantus:: Clearly.

Socrates:: But, so as not to discuss this in the dark, do you want us first to define which desires are necessary and which aren’t?

Adeimantus:: I do.

Socrates:: Aren’t those we can’t desist from and those whose satisfaction benefits us rightly called necessary, for we are by nature compelled to satisfy them both? Isn’t that so?

Adeimantus:: Of course.

Socrates:: So we'd be right to apply the term “necessary” to them?

Adeimantus:: We would.

Socrates:: What about those that someone could get rid of if he practiced from youth on, those whose presence leads to no good or even to the opposite? If we said that all of them were unnecessary, would we be right?

Adeimantus:: We would.

Socrates:: Let's pick an example of each, so that we can grasp the patterns they exhibit.

Adeimantus:: We should do that.

Socrates:: Aren't the following desires necessary: the desire to eat to the point of health and well-being and the desire for bread and delicacies?

Adeimantus:: I suppose so.

Socrates:: The desire for bread is necessary on both counts; it's beneficial, and unless it's satisfied, we die.

Adeimantus:: Yes.

Socrates:: The desire for delicacies is also necessary to the extent that it's beneficial to well-being.

Adeimantus:: Absolutely.

Socrates:: What about the desire that goes beyond these and seeks other sorts of foods, that most people can get rid of, if it's restrained and educated while they're young, and that's harmful both to the body and to the reason and moderation of the soul? Would it be rightly called unnecessary?

Adeimantus:: It would indeed.

Socrates:: Then wouldn't we also say that such desires are spendthrift, while the earlier ones are money-making, because they profit our various projects?

Adeimantus:: Certainly.

Socrates:: And won't we say the same about the desire for sex and about other desires?

Adeimantus:: Yes.

Socrates:: And didn't we say that the person we just now called a drone is full of such pleasures and desires, since he is ruled by the unnecessary ones, while a thrifty oligarch is ruled by his necessary desires?

Adeimantus:: We certainly did.

Socrates:: Let’s go back, then, and explain how the democratic man develops out of the oligarchic one. It seems to me as though it mostly happens as follows.

Adeimantus:: How?

Socrates:: When a young man, who is reared in the miserly and uneducated manner we described, tastes the honey of the drones and associates with wild and dangerous creatures who can provide every variety of multicolored pleasure in every sort of way, this, as you might suppose, is the beginning of his transformation from having an oligarchic constitution within him to having a democratic one.

Adeimantus:: It’s inevitable that this is how it starts.

Socrates:: And just as the city changed when one party received help from like-minded people outside, doesn’t the young man change when one party of his desires receives help from external desires that are akin to them and of the same form?

Adeimantus:: Absolutely.

Socrates:: And I suppose that, if any contrary help comes to the oligarchic party within him, whether from his father or from the rest of his household, who exhort and reproach him, then there’s civil war and counterrevolution within him, and he battles against himself.

Adeimantus:: That’s right.

Socrates:: Sometimes the democratic party yields to the oligarchic, so that some of the young man’s appetites are overcome, others are expelled, a kind of shame rises in his soul, and order is restored.

Adeimantus:: That does sometimes happen.

Socrates:: But I suppose that, as desires are expelled, others akin to them are being nurtured unawares, and because of his father's ignorance about how to bring him up, they grow numerous and strong.

Adeimantus:: That's what tends to happen.

Socrates:: These desires draw him back into the same bad company and in secret intercourse breed a multitude of others.

Adeimantus:: Certainly.

Socrates:: And, seeing the citadel of the young man's soul empty of knowledge, fine ways of living, and words of truth (which are the best watchmen and guardians of the thoughts of those men whom the gods love), they finally occupy that citadel themselves.

Adeimantus:: They certainly do.

Socrates:: And in the absence of these guardians, false and boastful words and beliefs rush up and occupy this part of him.

Adeimantus:: Indeed, they do.

Socrates:: Won't he then return to these lotus-eaters and live with them openly? And if some help comes to the thrifty part of his soul from his household, won't these boastful words close the gates of the royal wall within him to prevent these allies from entering and refuse even to receive the words of older private individuals as ambassadors? Doing battle and controlling things themselves, won't they call reverence foolishness and moderation cowardice, abusing them and casting them out beyond the frontiers like disenfranchised exiles? And won't they persuade the young man that measured and orderly expenditure is boorish and mean, and, joining with many useless desires, won't they expel it across the border?

Adeimantus:: They certainly will.

Socrates:: Having thus emptied and purged these from the soul of the one they’ve possessed and initiated in splendid rites, they proceed to return insolence, anarchy, extravagance, and shamelessness from exile in a blaze of torchlight, wreathing them in garlands and accompanying them with a vast chorus of followers. They praise the returning exiles and give them fine names, calling insolence good breeding, anarchy freedom, extravagance magnificence, and shamelessness courage. Isn’t it in some such way as this that someone who is young changes, after being brought up with necessary desires, to the liberation and release of useless and unnecessary pleasures?

Adeimantus:: Yes, that’s clearly the way it happens.

Socrates:: And I suppose that after that he spends as much money, effort, and time on unnecessary pleasures as on necessary ones. If he’s lucky, and his frenzy doesn’t go too far, when he grows older, and the great tumult within him has spent itself, he welcomes back some of the exiles, ceases to surrender himself completely to the newcomers, and puts his pleasures on an equal footing. And so he lives, always surrendering rule over himself to whichever desire comes along, as if it were chosen by lot. And when that is satisfied, he surrenders the rule to another, not disdaining any but satisfying them all equally.

Adeimantus:: That’s right.

Socrates:: And he doesn’t admit any word of truth into the guardhouse, for if someone tells him that some pleasures belong to fine and good desires and others to evil ones and that he must pursue and value the former and restrain and enslave the latter, he denies all this and declares that all pleasures are equal and must be valued equally.

Adeimantus:: That’s just what someone in that condition would do.

Socrates:: And so he lives on, yielding day by day to the desire at hand. Sometimes he drinks heavily while listening to the flute; at other times, he drinks only water and is on a diet; sometimes he goes in for physical training; at other times, he’s idle and neglects everything; and sometimes he even occupies himself with what he takes to be philosophy. He often engages in politics, leaping up from his seat and saying and doing whatever comes into his mind. If he happens to admire soldiers, he’s carried in that direction, if money-makers, in that one. There’s neither order nor necessity in his life, but he calls it pleasant, free, and blessedly happy, and he follows it for as long as he lives.

Adeimantus:: You’ve perfectly described the life of a man who believes in legal equality.

Socrates:: I also suppose that he’s a complex man, full of all sorts of characters, fine and multicolored, just like the democratic city, and that many men and women might envy his life, since it contains the most models of constitutions and ways of living.

Adeimantus:: That’s right.

Socrates:: Then shall we set this man beside democracy as one who is rightly called democratic?

Adeimantus:: Let’s do so.

Socrates:: The finest constitution and the finest man remain for us to discuss, namely, tyranny and a tyrannical man.

Adeimantus:: They certainly do.

Socrates:: Come, then, how does tyranny come into being? It’s fairly clear that it evolves from democracy.

Adeimantus:: It is.

Socrates:: And doesn’t it evolve from democracy in much the same way that democracy does from oligarchy?

Adeimantus:: What way is that?

Socrates:: The good that oligarchy puts before itself and because of which it is established is wealth, isn’t it?

Adeimantus:: Yes.

Socrates:: And its insatiable desire for wealth and its neglect of other things for the sake of money-making is what destroyed it, isn’t it?

Adeimantus:: That’s true.

Socrates:: And isn’t democracy’s insatiable desire for what it defines as the good also what destroys it?

Adeimantus:: What do you think it defines as the good?

Socrates:: Freedom: Surely you'd hear a democratic city say that this is the finest thing it has, so that as a result it is the only city worth living in for someone who is by nature free.

Adeimantus:: Yes, you often hear that.

Socrates:: Then, as I was about to say, doesn’t the insatiable desire for freedom and the neglect of other things change this constitution and put it in need of a dictatorship?

Adeimantus:: In what way?

Socrates:: I suppose that, when a democratic city, athirst for freedom, happens to get bad cupbearers for its leaders, so that it gets drunk by drinking more than it should of the unmixed wine of freedom, then, unless the rulers are very pliable and provide plenty of that freedom, they are punished by the city and accused of being accursed oligarchs.

Adeimantus:: Yes, that is what it does.

Socrates:: It insults those who obey the rulers as willing slaves and good-for-nothings and praises and honors, both in public and in private, rulers who behave like subjects and subjects who behave like rulers. And isn't it inevitable that freedom should go to all lengths in such a city?

Adeimantus:: Of course.

Socrates:: It makes its way into private households and in the end breeds anarchy even among the animals.

Adeimantus:: What do you mean?

Socrates:: I mean that a father accustoms himself to behave like a child and fear his sons, while the son behaves like a father, feeling neither shame nor fear in front of his parents, in order to be free. A resident alien or a foreign visitor is made equal to a citizen, and he is their equal.

Adeimantus:: Yes, that is what happens.

Socrates:: It does. And so do other little things of the same sort. A teacher in such a community is afraid of his students and flatters them, while the students despise their teachers or tutors. And, in general, the young imitate their elders and compete with them in word and deed, while the old stoop to the level of the young and are full of play and pleasantry, imitating the young for fear of appearing disagreeable and authoritarian.

Adeimantus:: Absolutely.

Socrates:: The utmost freedom for the majority is reached in such a city when bought slaves, both male and female, are no less free than those who bought them. And I almost forgot to mention the extent of the legal equality of men and women and of the freedom in the relations between them.

Adeimantus:: What about the animals? Are we, with Aeschylus, going to "say whatever it was that came to our lips just now" about them?

Socrates:: Certainly. I put it this way: No one who hasn't experienced it would believe how much freer domestic animals are in a democratic city than anywhere else. As the proverb says, dogs become like their mistresses; horses and donkeys are accustomed to roam freely and proudly along the streets, bumping into anyone who doesn't get out of their way; and all the rest are equally full of freedom.

Adeimantus:: You're telling me what I already know. I've often experienced that sort of thing while travelling in the country.

Socrates:: To sum up: Do you notice how all these things together make the citizens' souls so sensitive that, if anyone even puts upon himself the least degree of slavery, they become angry and cannot endure it. And in the end, as you know, they take no notice of the laws, whether written or unwritten, in order to avoid having any master at all.

Adeimantus:: I certainly do.

Socrates:: This, then, is the fine and impetuous origin from which tyranny seems to me to evolve.

Adeimantus:: It is certainly impetuous. But what comes next?

Socrates:: The same disease that developed in oligarchy and destroyed it also develops here, but it is more widespread and virulent because of the general permissiveness, and it eventually enslaves democracy. In fact, excessive action in one direction usually sets up a reaction in the opposite direction. This happens in seasons, in plants, in bodies, and, last but not least, in constitutions.

Adeimantus:: That's to be expected.

Socrates:: Extreme freedom can't be expected to lead to Anything but a change to extreme slavery, whether for a private individual or for a city.

Adeimantus:: No, it can't.

Socrates:: Then I don't suppose that tyranny evolves from any constitution other than democracy—the most severe and cruel slavery from the utmost freedom.

Adeimantus:: Yes, that's reasonable.

Socrates:: But I don't think that was your question. You asked what was the disease that developed in oligarchy and also in democracy, enslaving it.

Adeimantus:: That's true.

Socrates:: And what I had in mind as an answer was that class of idle and extravagant men, whose bravest members are leaders and the more cowardly ones followers. We compared them to stinged and stingless drones, respectively.

Adeimantus:: That's right.

Socrates:: Now, these two groups cause problems in any constitution, just as phlegm and bile do in the body. And it's against them that the good doctor and lawgiver of a city must take advance precautions, first, to prevent their presence and, second, to cut them out of the hive as quickly as possible, cells and all, if they should happen to be present.

Adeimantus:: Yes, by god, he must cut them out altogether.

Socrates:: Then let's take up the question in the following way, so that we can see what we want more clearly.

Adeimantus:: In what way?

Socrates:: Let's divide a democratic city into three parts in theory, this being the way that it is in fact divided. One part is this class of idlers, that grows here no less than in an oligarchy, because of the general permissiveness.

Adeimantus:: So it does.

Socrates:: But it is far fiercer in democracy than in the other.

Adeimantus:: How so?

Socrates:: In an oligarchy it is fierce because it's disdained, but since it is prevented from having a share in ruling, it doesn't get any exercise and doesn't become vigorous. In a democracy, however, with a few exceptions, this class is the dominant one. Its fiercest members do all the talking and acting, while the rest settle near the speaker's platform and buzz and refuse to tolerate the opposition of another speaker, so that, under a democratic constitution, with the few exceptions I referred to before, this class manages everything.

Adeimantus:: That's right.

Socrates:: Then there's a second class that always distinguishes itself from the majority of people.

Adeimantus:: Which is that?

Socrates:: When everybody is trying to make money, those who are naturally most organized generally become the wealthiest.

Adeimantus:: Probably so.

Socrates:: Then they would provide the most honey for the drones and the honey that is most easily extractable by them.

Adeimantus:: Yes, for how could anyone extract it from those who have very little?

Socrates:: Then I suppose that these rich people are called drone-fodder.

Adeimantus:: Something like that.

Socrates:: The people—those who work with their own hands—are the third class. They take no part in politics and have few possessions, but, when they are assembled, they are the largest and most powerful class in a democracy.

Adeimantus:: They are. But they aren’t willing to assemble often unless they get a share of the honey.

Socrates:: And they always do get a share, though the leaders, in taking the wealth of the rich and distributing it to the people, keep the greater part for themselves.

Adeimantus:: Yes, that is the way the people get their share.

Socrates:: And I suppose that those whose wealth is taken away are compelled to defend themselves by speaking before the people and doing whatever else they can.

Adeimantus:: Of course.

Socrates:: And they’re accused by the drones of plotting against the people and of being oligarchs, even if they have no desire for revolution at all.

Adeimantus:: That’s right.

Socrates:: So in the end, when they see the people trying to harm them, they truly do become oligarchs and embrace oligarchy’s evils, whether they want to or not. But neither group does these things willingly. Rather the people act as they do because they are ignorant and are deceived by the drones, and the rich act as they do because they are driven to it by the stinging of those same drones.

Adeimantus:: Absolutely.

Socrates:: And then there are impeachments, judgments, and trials on both sides.

Adeimantus:: That’s right.

Socrates:: Now, aren’t the people always in the habit of setting up one man as their special champion, nurturing him and making him great?

Adeimantus:: They are.

Socrates:: And it’s clear that, when a tyrant arises, this special leadership is the sole root from which he sprouts.

Adeimantus:: It is.

Socrates:: What is the beginning of the transformation from leader of the people to tyrant? Isn’t it clear that it happens when the leader begins to behave like the man in the story told about the temple of the Lycean Zeus in Arcadia?

Adeimantus:: What story is that?

Socrates:: That anyone who tastes the one piece of human innards that’s chopped up with those of other sacrificial victims must inevitably become a wolf. Haven’t you heard that story?

Adeimantus:: I have.

Socrates:: Then doesn’t the same happen with a leader of the people who dominates a docile mob and doesn’t restrain himself from spilling kindred blood? He brings someone to trial on false charges and murders him (as tyrants so often do), and, by thus blotting out a human life, his impious tongue and lips taste kindred citizen blood. He banishes some, kills others, and drops hints to the people about the cancellation of debts and the redistribution of land. And because of these things, isn’t a man like that inevitably fated either to be killed by his enemies or to be transformed from a man into a wolf by becoming a tyrant?

Adeimantus:: It’s completely inevitable.

Socrates:: He’s the one who stirs up civil wars against the rich.

Adeimantus:: He is.

Socrates:: And if he’s exiled but manages, despite his enemies, to return, doesn’t he come back as a full-fledged tyrant?

Adeimantus:: Clearly.

Socrates:: And if these enemies are unable to expel him or to put him to death by accusing him before the city, they plot secretly to kill him.

Adeimantus:: That’s usually what happens at least.

Socrates:: And all who’ve reached this stage soon discover the famous request of the tyrant, namely, that the people give him a bodyguard to keep their defender safe for them.

Adeimantus:: That’s right.

Socrates:: And the people give it to him, I suppose, because they are afraid for his safety but aren’t worried at all about their own.

Adeimantus:: That’s right.

Socrates:: And when a wealthy man sees this and is charged with being an enemy of the people because of his wealth, then, as the oracle to Croesus put it, he;

> Flees to the banks of the many-pebbled Hermus,
> Neither staying put nor being ashamed of his cowardice.

He wouldn’t get a second chance of being ashamed.

Adeimantus:: That’s true, for if he was caught, he'd be executed.

Socrates:: He most certainly would.

But, as for the leader, he doesn’t lie on the ground “mighty in his might,” but, having brought down many others, he stands in the city’s chariot, a complete tyrant rather than a leader.

Adeimantus:: What else?

Socrates:: Then let’s describe the happiness of this man and of the city in which a mortal like him comes to be.

Adeimantus:: Certainly, let’s do so.

Socrates:: During the first days of his reign and for some time after, won’t he smile in welcome at anyone he meets, saying that he’s no tyrant, making all sorts of promises both in public and in private, freeing the people from debt, redistributing the land to them and to his followers, and pretending to be gracious and gentle to all?

Adeimantus:: He'd have to.

Socrates:: But I suppose that, when he has dealt with his exiled enemies by making peace with some and destroying others, so that all is quiet on that front, the first thing he does is to stir up a war, so that the people will continue to feel the need of a leader.

Adeimantus:: Probably so.

Socrates:: But also so that they’ll become poor through having to pay war taxes, for that way they’ll have to concern themselves with their daily needs and be less likely to plot against him.

Adeimantus:: Clearly.

Socrates:: Besides, if he suspects some people of having thoughts of freedom and of not favoring his rule, can’t he find a pretext for putting them at the mercy of the enemy in order to destroy them? And for all these reasons, isn’t it necessary for a tyrant to be always stirring up war?

Adeimantus:: It is.

Socrates:: And because of this, isn't he all the more readily hated by the citizens?

Adeimantus:: Of course.

Socrates:: Moreover, don't the bravest of those who helped to establish his tyranny and who hold positions of power within it speak freely to each other and to him, criticizing what's happening?

Adeimantus:: They probably do.

Socrates:: Then the tyrant will have to do away with all of them if he intends to rule, until he's left with neither friend nor enemy of any worth.

Adeimantus:: Clearly.

Socrates:: He must, therefore, keep a sharp lookout for anyone who is brave, large-minded, knowledgeable, or rich. And so happy is he that he must be the enemy of them all, whether he wants to be or not, and plot against them until he has purged them from the city.

Adeimantus:: That's a fine sort of purge!

Socrates:: Yes, for it's the opposite of the one that doctors perform on the body. They draw off the worst and leave the best, but he does just the opposite.

Adeimantus:: Yet I expect he'll have to do this, if he's really going to rule.

Socrates:: It's a blessedly happy necessity he's bound by, since it requires him either to live with the inferior majority, even though they hate him, or not to live at all.

Adeimantus:: Yet that's exactly his condition.

Socrates:: And won't he need a larger and more loyal bodyguard, the more his actions make the citizens hate him?

Adeimantus:: Of course.

Socrates:: And who will these trustworthy people be? And where will he get them from?

Adeimantus:: They'll come swarming of their own accord, if he pays them.

Socrates:: Drones, by the dog! All manner of foreign drones! That's what I think you're talking about.

Adeimantus:: You're right.

Socrates:: But what about in the city itself? Wouldn't he be willing…

Adeimantus:: Willing to what?

Socrates:: To deprive citizens of their slaves by freeing them and enlisting them in his bodyguard?

Adeimantus:: He certainly would, since they' be likely to prove most loyal to him.

Socrates:: What a blessedly happy sort of fellow you make the tyrant out to be, if these are the sort of people he employs as friends and loyal followers after he's done away with the earlier ones.

Adeimantus:: Nonetheless, they're the sort he employs.

Socrates:: And these companions and new citizens admire and associate with him, while the decent people hate and avoid him.

Adeimantus:: Of course.

Socrates:: It isn't for nothing, then, that tragedy in general has the reputation of being wise and that Euripides is thought to be outstandingly so.

Adeimantus:: Why's that?

Socrates:: Because among other shrewd things he said that "tyrants are wise who associate with the wise." And by "the wise" he clearly means the sort of people that we've seen to be the tyrant's associates.

Adeimantus:: Yes. And he and the other poets eulogize tyranny as godlike and say lots of other such things about it.

Socrates:: Then, surely, since the tragic poets are wise, they'll forgive us and those whose constitutions resemble ours, if we don't admit them into our city, since they praise tyranny.

Adeimantus:: I suppose that the more sophisticated among them will.

Socrates:: And so I suppose that they go around to other cities, draw crowds, hire people with fine, big, persuasive voices, and lead their constitutions to tyranny and democracy.

Adeimantus:: They do indeed.

Socrates:: And besides this, they receive wages and honors, especially—as one might expect—from the tyrants and, in second place, from the democracies, but the higher they go on the ascending scale of constitutions, the more their honor falls off, as if unable to keep up with them for lack of breath.

Adeimantus:: Absolutely.

Socrates:: But we digress. So let's return to that fine, numerous, diverse, and ever-changing bodyguard of the tyrant and explain how he'll pay for it.

Adeimantus:: Clearly, if there are sacred treasuries in the city, he'll use them for as long as they last, as well as the property of the people he has destroyed, thus requiring smaller taxes from the people.

Socrates:: What about when these give out?

Adeimantus:: Clearly, both he and his fellow revelers—his companions, male or female—will have to feed off his father's estate.

Socrates:: I understand. You mean that the people, who fathered the tyrant, will have to feed him and his companions.

Adeimantus:: They'll be forced to do so.

Socrates:: And what would you have to say about this? What if the people get angry and say, first, that it isn't just for a grown-up son to be fed by his father but, on the contrary, for the father to be fed by his son; second, that they didn't father him and establish him in power so that, when he'd become strong, they' be enslaved to their own slave and have to feed both him and his slaves, along with other assorted rabble, but because they hoped that, with him as their leader, they' be free from the rich and the so-called fine and good people in the city; third, that they therefore order him and his companions to leave the city, just as a father might drive a son and his troublesome fellow revelers from his house?

Adeimantus:: Then, by god, the people will come to know what kind of creature they have fathered, welcomed, and made strong and that they are the weaker trying to drive out the stronger.

Socrates:: What do you mean? Will the tyrant dare to use violence against his father or to hit him if he doesn't obey?

Adeimantus:: Yes—once he's taken away his father's weapons.

Socrates:: You mean that the tyrant is a parricide and a harsh nurse of old age, that his rule has become an acknowledged tyranny at last, and that—as the saying goes—by trying to avoid the frying pan of enslavement to free men, the people have fallen into the fire of having slaves as their masters, and that in the place of the great but inappropriate freedom they enjoyed under democracy, they have put upon themselves the harshest and most bitter slavery to slaves.

Adeimantus:: That’s exactly what I mean.

Socrates:: Well, then, aren’t we justified in saying that we have adequately described how tyranny evolves from democracy and what it’s like when it has come into being?

Adeimantus:: We certainly are.

## Book 9

Socrates:: It remains, to consider the tyrannical man himself, how he evolves from a democrat, what he is like when he has come into being, and whether he is wretched or blessedly happy.

Adeimantus:: Yes, he is the one who is still missing.

Socrates:: And do you know what else I think is still missing?

Adeimantus:: What?

Socrates:: I don’t think we have adequately distinguished the kinds and numbers of our desires, and, if that subject isn’t adequately dealt with, our entire investigation will be less clear.

Adeimantus:: Well, isn’t now as fine a time as any to discuss the matter?

Socrates:: It certainly is. Consider, then, what I want to know about our desires. It’s this: Some of our unnecessary pleasures and desires seem to me to be lawless. They are probably present in everyone, but they are held in check by the laws and by the better desires in alliance with reason. In a few people, they have been eliminated entirely or only a few weak ones remain, while in others they are stronger and more numerous.

Adeimantus:: What desires do you mean?

Socrates:: Those that are awakened in sleep, when the rest of the soul—the rational, gentle, and ruling part—slumbers. Then the beastly and savage part, full of food and drink, casts off sleep and seeks to find a way to gratify itself. You know that there is nothing it won’t dare to do at such a time, free of all control by shame or reason. It doesn’t shrink from trying to have sex with a mother, as it supposes, or with anyone else at all, whether man, god, or beast. It will commit any foul murder, and there is no food it refuses to eat. In a word, it omits no act of folly or shamelessness.

Adeimantus:: That's completely true.

Socrates:: On the other hand, I suppose that someone who is healthy and moderate with himself goes to sleep only after having done the following: First, he rouses his rational part and feasts it on fine arguments and speculations; second, he neither starves nor feasts his appetites, so that they will slumber and not disturb his best part with either their pleasure or their pain, but they'll leave it alone, pure and by itself, to get on with its investigations, to yearn after and perceive something, it knows not what, whether it is past, present, or future; third, he soothes his spirited part in the same way, for example, by not falling asleep with his spirit still aroused after an outburst of anger. And when he has quieted these two parts and aroused the third, in which reason resides, and so takes his rest, you know that it is then that he best grasps the truth and that the visions that appear in his dreams are least lawless.

Adeimantus:: Entirely so.

Socrates:: However, we've been carried away from what we wanted to establish, which is this: Our dreams make it clear that there is a dangerous, wild, and lawless form of desire in everyone, even in those of us who seem to be entirely moderate or measured. See whether you think I'm talking sense and whether or not you agree with me.

Adeimantus:: I do agree.

Socrates:: Recall, then, what we said a democratic man is like. He was produced by being brought up from youth by a thrifty father who valued only those desires that make money and who despised the unnecessary ones that aim at frivolity and display. Isn't that right?

Adeimantus:: Yes.

Socrates:: And by associating with more sophisticated men, who are full of the latter desires, he starts to indulge in every kind of insolence and to adopt their form of behavior, because of his hatred of his father's thrift. But, because he has a better nature than his corrupters, he is pulled in both directions and settles down in the middle between his father's way of life and theirs. And enjoying each in moderation, as he supposes, he leads a life that is neither slavish nor lawless and from having been oligarchic he becomes democratic.

Adeimantus:: That was and is our opinion about this type of man.

Socrates:: Suppose now that this man has in turn become older and that he has a son who is brought up in his father's ethos.

Adeimantus:: All right.

Socrates:: And further suppose that the same things that happened to his father now happen to him. First, he is led to all the kinds of lawlessness that those who are leading him call freedom. Then his father and the rest of the household come to the aid of the middle desires, while the others help the other ones. Then, when those clever enchanters and tyrant-makers have no hope of keeping hold of the young man in any other way, they contrive to plant in him a powerful erotic love, like a great winged drone, to be the leader of those idle desires that spend whatever is at hand. Or do you think that erotic love is anything other than an enormous drone in such people?

Adeimantus:: I don't think that it could be anything else.

Socrates:: And when the other desires—filled with incense, myrrh, wreaths, wine, and the other pleasures found in their company—buzz around the drone, nurturing it and making it grow as large as possible, they plant the sting of longing in it. Then this leader of the soul adopts madness as its bodyguard and becomes frenzied. If it finds any beliefs or desires in the man that are thought to be good or that still have some shame, it destroys them and throws them out, until it's purged him of moderation and filled him with imported madness.

Adeimantus:: You've perfectly described the evolution of a tyrannical man.

Socrates:: Is this the reason that erotic love has long been called a tyrant?

Adeimantus:: It looks that way.

Socrates:: Then doesn't a drunken man have something of a tyrannical mind?

Adeimantus:: Yes, he has.

Socrates:: And a man who is mad and deranged attempts to rule not just human beings, but gods as well, and expects that he will be able to succeed.

Adeimantus:: He certainly does.

Socrates:: Then a man becomes tyrannical in the precise sense of the term when either his nature or his way of life or both of them together make him drunk, filled with erotic desire, and mad.

Adeimantus:: Absolutely.

Socrates:: This, then, it seems, is how a tyrannical man comes to be. But what way does he live?

Adeimantus:: No doubt you're going to tell me, just as posers of riddles usually do.

Socrates:: I am. I think that someone in whom the tyrant of erotic love dwells and in whom it directs everything next goes in for feasts, revelries, luxuries, girlfriends, and all that sort of thing.

Adeimantus:: Necessarily.

Socrates:: And don't many terrible desires grow up day and night beside the tyrannical one, needing many things to satisfy them?

Adeimantus:: Indeed they do.

Socrates:: Hence any income someone like that has is soon spent.

Adeimantus:: Of course.

Socrates:: Then borrowing follows, and expenditure of capital.

Adeimantus:: What else?

Socrates:: And when everything is gone, won't the violent crowd of desires that has nested within him inevitably shout in protest? And driven by the stings of the other desires and especially by erotic love itself (which leads all of them as its bodyguard), won't he become frenzied and look to see who possesses anything that he could take, by either deceit or force?

Adeimantus:: He certainly will.

Socrates:: Consequently, he must acquire wealth from every source or live in great pain and suffering.

Adeimantus:: He must.

Socrates:: And just as the pleasures that are latecomers outdo the older ones and steal away their satisfactions, won't the man himself think that he deserves to outdo his father and mother, even though he is younger than they are— to take and spend his father's wealth when he's spent his own share?

Adeimantus:: Of course.

Socrates:: And if they won’t give it to him, won’t he first try to steal it from them by deceitful means?

Adeimantus:: Certainly.

Socrates:: And if that doesn’t work, wouldn’t he seize it by force?

Adeimantus:: I suppose so.

Socrates:: And if the old man and woman put up a fight, would he be careful to refrain from acting like a tyrant?

Adeimantus:: I’m not very optimistic about their fate, if they do.

Socrates:: But, good god, Adeimantus, do you think he'd sacrifice his long-loved and irreplaceable mother for a recently acquired girlfriend whom he can do without? Or that for the sake of a newfound and replaceable boyfriend in the bloom of youth, he'd strike his aged and irreplaceable father, his oldest friend? Or that he'd make his parents the slaves of these others, if he brought them under the same roof?

Adeimantus:: Yes, indeed he would.

Socrates:: It seems to be a very great blessing to produce a tyrannical son!

Adeimantus:: It certainly does!

Socrates:: What about when the possessions of his father and mother give out? With that great swarm of pleasures inside him, won’t he first try to break into someone’s house or snatch someone’s coat late at night? Then won’t he try to loot a temple? And in all this, the old traditional opinions that he had held from childhood about what is fine or shameful—opinions that are accounted just—are overcome by the opinions, newly released from slavery, that are now the bodyguard of erotic love and hold sway along with it. When he himself was subject to the laws and his father and had a democratic constitution within him, these opinions used only to be freed in sleep. Now, however, under the tyranny of erotic love, he has permanently become while awake what he used to become occasionally while asleep, and he won't hold back from any terrible murder or from any kind of food or act. But, rather, erotic love lives like a tyrant within him, in complete anarchy and lawlessness as his sole ruler, and drives him, as if he were a city, to dare anything that will provide sustenance for itself and the unruly mob around it (some of whose members have come in from the outside as a result of his keeping bad company, while others have come from within, freed and let loose by his own bad habits). Isn't this the life that a tyrannical man leads?

Adeimantus:: It is indeed.

Socrates:: Now, if there are only a few such men in a city, and the rest of the people are moderate, this mob will leave the city in order to act as a bodyguard to some other tyrant or to serve as mercenaries if there happens to be a war going on somewhere. But if they chance to live in a time of peace and quiet, they'll remain in the city and bring about lots of little evils.

Adeimantus:: What sort of evils do you mean?

Socrates:: They steal, break into houses, snatch purses, steal clothes, rob temples, and sell people into slavery. Sometimes, if they are good speakers, they become sycophants and bear false witness and accept bribes.

Adeimantus:: These evils are small, provided that there happen to be only a few such people.

Socrates:: Yes, for small things are small by comparison to big ones. And when it comes to producing wickedness and misery in a city, all these evils together don't, as the saying goes, come within a mile of the rule of a tyrant. But when such people become numerous and conscious of their numbers, it is they—aided by the foolishness of the people—who create a tyrant. And he, more than any of them, has in his soul the greatest and strongest tyrant of all.

Adeimantus:: Naturally, for he'd be the most tyrannical.

Socrates:: That’s if the city happens to yield willingly, but if it resists him, then, just as he once chastised his mother and father, he’ll now chastise his fatherland, if he can, by bringing in new friends and making his fatherland and his dear old motherland (as the Cretans call it) their slaves and keeping them that way, for this is surely the end at which such a man’s desires are directed.

Adeimantus:: It most certainly is.

Socrates:: Now, in private life, before a tyrannical man attains power, isn’t he this sort of person—one who associates primarily with flatterers who are ready to obey him in everything? Or if he himself happens to need anything from other people, isn’t he willing to fawn on them and make every gesture of friendship, as if he were dealing with his own family? But once he gets what he wants, don’t they become strangers again?

Adeimantus:: Yes, they certainly do.

Socrates:: So someone with a tyrannical nature lives his whole life without being friends with anyone, always a master to one man or a slave to another and never getting a taste of either freedom or true friendship.

Adeimantus:: That’s right.

Socrates:: Wouldn’t we be right to call someone like that untrustworthy?

Adeimantus:: Of course.

Socrates:: And isn't he as unjust as anyone can be? If indeed what we earlier agreed about justice was right.

Adeimantus:: And it certainly was right.

Socrates:: Then, let's sum up the worst type of man: His waking life is like the nightmare we described earlier.

Adeimantus:: That's right.

Socrates:: And he evolves from someone by nature most tyrannical who achieves sole rule. And the longer he remains tyrant, the more like the nightmare he becomes.

Glaucon taking over the argument said;

Glaucon:: That's inevitable, taking over the argument.

Socrates:: Well, then, isn't the man who is clearly most vicious also clearly most wretched? And isn't the one who for the longest time is most of all a tyrant, most wretched for the longest time? If, that is to say, truth rather than majority opinion is to settle these questions.

Glaucon:: That much is certain, at any rate.

Socrates:: And isn't a tyrannical man like a city ruled by a tyrant, a democratic man like a city ruled by a democracy, and similarly with the others?

Glaucon:: Of course.

Socrates:: And won't the relations between the cities with respect to virtue and happiness be the same as those between the men?

Glaucon:: Certainly.

Socrates:: Then how does the city ruled by a tyrant compare to the city ruled by kings that we described first?

Glaucon:: They are total opposites: one is the best, and the other the worst.

Socrates:: I won't ask you which is which, since it's obvious. But is your judgment the same with regard to their happiness and wretchedness? And let's not be dazzled by looking at one man—a tyrant—or at the few who surround him, but since it is essential to go into the city and study the whole of it, let’s not give our opinion, till we’ve gone down and looked into every corner.

Glaucon:: That’s right, for it’s clear to everyone that there is no city more wretched than one ruled by a tyrant and none more happy than one ruled by kings.
